# 3. Raw Data

For each reported value, the laboratory shall include in the data package all raw data used to obtain that value. This applies to all required QA/QC measurements, instrument standardization, as well as all sample analysis results. This does not apply to the quarterly verification of method and instrument parameters submitted as a part of each data package.

The order of the raw data in the data package shall be: ICP-AES, ICP-MS, mercury, and cyanide (if a target analyte).

Raw data shall be labeled with Client Identification numbers and appropriate codes in order to identify:

- calibration standards, including source and preparation date
- initial and continuing calibration blanks and preparation blanks
- initial and continuing calibration verification standards, interference check samples, serial dilution samples, LRS check standard, Laboratory Control Sample, and post digestion spike
- diluted and undiluted sample and all weights, dilutions, and volumes used to obtain the reported values
- duplicates
- spikes (indicating standard solutions used, final spike concentrations, and volumes involved).
- instrument used, any instrument adjustments, data corrections or other apparent anomalies on the measurement record, including all data voided or data not used and a brief written explanation
- time and date of each analysis (instrument run logs can be submitted if they contain this information)

**Daily Instrument Profile**

Detector Cross Cal: 081310

The presence of the Chemist's/Analyst's employee ID number, or signature, on this run log attests that strict compliance with the method's SOP has occurred. Any SOP deviations require documentation by the responsible chemist/analyst together with the chemist's/analyst's initials and the initials of the lab supervisor and a QA department representative, signifying approval of the deviation.

# EPA 6020 & EPA 6020A - Summary Report

## Sample ID: LLCCV

Sample Date/Time: Monday, August 01, 2011 16:32:40
Sample Type: Sample
Sample Description:
Number of Replicates: 3
Batch ID:
Method File: C:\Elandata1\Method\6020\6020AAAMETHOD.mth
Dataset File: C:\Elandata1\Dataset\default\LLCCV.1446

## *Concentration Results*

# EPA 6020 & EPA 6020A - Summary Report

## Sample ID: 1072905-BS1

Sample Date/Time: Monday, August 01, 2011 16:54:37
Sample Type: Sample
Sample Description: LCSW
Number of Replicates: 3
Batch ID: 1107162
Method File: C:\Elandata1\Method\6020\6020AAAMETHOD.mth
Dataset File: C:\Elandata1\Dataset\default\1072905-BS1.1450

# EPA 6020 & EPA 6020A - Summary Report

## Sample ID: 1072905-PS4

Sample Date/Time: Monday, August 01, 2011 17:20:22
Sample Type: Sample
Sample Description: 5WC21A
Number of Replicates: 3
Batch ID: 1107165
Method File: C:\Elandata1\Method\6020\6020AAAMETHOD.mth
Dataset File: C:\Elandata1\Dataset\default\1072905-PS4.1468

# 4. Digestion and Distillation Logs

The following logs shall be submitted, as appropriate, for each preparation procedure: digestion logs for ICP-AES, ICP-MS, mercury preparations, and cyanide. The logs shall include: (1) date; (2) sample weights and volumes, with initial sample weight/volume and final volume clearly indicated; (3) sufficient information to unequivocally identify which QC samples (i.e., LCS, PB) correspond to each batch digested; (4) comments describing any significant sample changes or reactions which occur during preparation shall be entered in the log and noted in the SDG Narrative; (5) indication of pH less than 2 or greater than 12, as applicable; (6) identification of the sample preparer(s) [signature (s)].

[2]Standard Lot Number consists of standard ID, date prepared, and initials of preparer.

[3]Raw Material sub-boiled from specified lot # in accordance with SOP SPP.9.10

The presence of the Chemist's/Analyst's employee ID number, or signature, on this log attests that strict compliance with the method's SOP has occurred. Any SOP deviations require documentation by the responsible chemist/analyst together with the chemist's/analyst's initials and the initials of the lab supervisor and a QA department representative, signifying approval of the deviation.

# Data Validation Report

## INORGANIC DATA REVIEW SUMMARY

Draper Aden Associates performed a manual comprehensive review of the inorganic analytical results for the July 27, 2011 groundwater monitoring event at RFAAP HWMU7. Draper Aden Associates, of Blacksburg, Virginia, collected a groundwater sample and blind field duplicate from monitoring well 7W13. Monitoring well re-development was performed prior to June 30, 2011 sample collection. This event represents the second of two monitoring events to be conducted subsequent to the well re-development. These samples were analyzed for total and dissolved arsenic and cobalt by SW-846 Method 6020A - inductively coupled plasma-mass spectrometry (ICP-MS). The following information and attached table summarize the inorganic data validation results.

Draper Aden Associates sent the samples to CompuChem (CompuChem), a Division of Liberty Analytical, of Cary, North Carolina, for the inorganic analyses. On behalf of RFAAP, CompuChem submitted results to Draper Aden Associates in a final certificate of analysis which included sample analytical results as well as relevant documentation to verify and validate the results.

The evaluation of CompuChem's compliance with the method and validation of results presented here are based upon a limited review of QA/QC information including holding times, preservation procedures, instrument tuning, calibration and calibration verification data, QL standards, blank samples (method, calibration, and other blanks), interference check sample, pre-digestion matrix spike and matrix spike duplicate (MS/MSD), laboratory control sample (LCS), internal standard, and serial dilution results, where applicable. A review of transcriptions from instrument data to sample summary sheets was performed. Calculation checks were performed on a minimum ten percent of the data set. The following information is intended to summarize data review results and any observed significant deviations from method and/or contractual requirements.

CompuChem received the samples in good condition, with custody seals intact. Each sample aliquot requiring dissolved analysis was field filtered using a 0.45 micron filter and the filtrate was preserved in the field. Applicable holding time and preservation criteria were met. The chain of custody was appropriately signed and data by field and laboratory personnel.

### *Method 6020A (ICP-MS)*

The revised certificate of analysis for Method 6020A was complete in its presentation and the data were of acceptable quality. The data set exhibited the laboratory's ability to achieve the reported QL for arsenic and cobalt, as outlined by the precision and accuracy data. QLs were equal to or less than the permit QL.

QC documentation criteria were met. Instrument tuning, calibration and calibration verification criteria were met. QL standards, blank samples, interference check sample (ICSAB),

pre-digestion MS/MSD, LCS, internal standard and serial dilution results recovered within control limits, except where noted below. No deviations from specific control limits and QA/QC controls were identified during the data review process.

The laboratory report was revised to correctly report results to at or above the permit QL for arsenic (10 µg/l) and cobalt (4 µg/l).

Arsenic and cobalt detections reported at or above the permit QL and/or results that required a data validation qualifier due to quality control deviations noted above are summarized below.

No results were rejected based on the data validation criteria.

***Summary of Detections:***

| ANALYTE | METHOD | SAMPLE ID | LAB RESULT | VALIDATED RESULT | QL | UNITS | DATA VALIDATION NOTES |
|---|---|---|---|---|---|---|---|
| Arsenic, Total | 6020A | 7W13 | U | U | 10 | µg/l | Result < Permit QL. |
| Cobalt, Total | 6020A | 7W13 | 14.5 | 14.5 | 4 | µg/l | No action taken. |
| Arsenic, Dissolved | 6020A | 7W13 | U | U | 10 | µg/l | Result < Permit QL. |
| Cobalt, Dissolved | 6020A | 7W13 | 13.7 | 13.7 | 4 | µg/l | No action taken. |
| Arsenic, Total | 6020A | 7DUP | U | U | 10 | µg/l | Result < Permit QL. |
| Cobalt, Total | 6020A | 7DUP | 14.1 | 14.1 | 4 | µg/l | No action taken. RPD <10. |
| Arsenic, Dissolved | 6020A | 7DUP | U | U | 10 | µg/l | Result < Permit QL. |
| Cobalt, Dissolved | 6020A | 7DUP | 13.9 | 13.9 | 4 | µg/l | No action taken. RPD <10. |

**Data Validation Qualifiers:**
**QL** Denotes permit quantitation limit.
**U** Denotes analyte not detected at or above QL.
**J** Denotes analyte reported above QL and associated result is estimated.
**UJ** Denotes analyte not detected at or above the QL and associated QL is estimated.
**UA** Denotes analyte detected above QL, but attributed to laboratory contamination. Sample QL adjusted to sample concentration. Final result not detected at or above adjusted sample QL.

## INORGANIC DATA EVALUATION FOR ICP-MS SW-846 METHOD 6020A

**Sample ID:** 7W13
**QC Samples:** Lab blanks, LCS/LCSD, serial dilution (7W13-T&D), Field duplicate of 7W13: (7DUP)
**Laboratory:** CompuChem, Cary, NC; SDG: 1107162 (T), 1107163 (D)

Does Laboratory analyte list correspond to analyte list requested? _X_ yes ___ no
Corresponds to As and Co, total and dissolved, Preparation method: 3005A

"☑" denotes items reviewed. NR Denotes not reviewed.
See Data Validation Summary for additional comments.

### A. DOCUMENTION COMPLETENESS CRITERIA:

*Data Quality Objective: Representativeness*

- ☑ Chain of custody – Custody transfers must be signed and dated
- ☑ Chain of custody properly and completely filled out including sampler signatures, date and time of sampling, sample ID, analysis requested

### B. DETECTION LIMIT AND QUANTITATION LIMIT CRITERIA:

*Data Quality Objective: Analytical Sensitivity*

- ☑ Specific detection limit reported
- ☑ Specific quantitation limit reported
- ☑ Standard analyzed at the QL (LLQC), digested, 70-130% recovery, analyzed after MDL determination and as needed
- ☑ Method detection limit (MDL) less than QL
- ☑ Performance evaluation sample analyzed within 12 months

### C. INITIAL DEMONSTRATION OF CAPABILITY (IDOC) CRITERIA:

*Data Quality Objective: Laboratory Method Sensitivity*

- ☑ Analyst IDOC for J. Feldhaus submitted previously

### D. SAMPLE AND STANDARD PREPARATION CRITERIA:

*Data Quality Objective: Accuracy and Representativeness*

- ☑ Digestion prior to analysis
- ☑ Digestion method: 3005A
- ☑ Samples and standards matrix matched

### E. TECHNICAL HOLDING TIME / PRESERVATION REQUIREMENTS:

*Data Quality Objective: Representativeness*

- ☑ 6 month holding time, pH<2 with Nitric Acid ($HNO_3$)

### F. INSTRUMENT TUNE CRITERIA:

*Data Quality Objective: Verify Operating Conditions*

- ☑ Prior to calibration
- ☑ Relative Standard Deviation (RSD) </=5%

- ☑ Resolution < 0.9 amu full width at 10% peak height (or lower)
- ☑ Mass calibration </=0.1 amu difference from true value

## G. INITIAL CALIBRATION CRITERIA:

***Data Quality Objective: Laboratory Accuracy***

- ☑ 1 calibration blank and 3 standards,
- ☑ Linear curve fit with correlation coefficient $r \geq 0.998$
- ☑ Daily calibration following tuning and prior to sample analysis

## H. INITIAL CALIBRATION VERIFICATION (ICV) CRITERIA:

***Data Quality Objective: Laboratory Accuracy***

- ☑ Daily following initial calibration, independent/second source used for ICV
- ☑ ICV concentration near mid-point of calibration curve, 90-110% recovery
- ☑ Low level ICV (LLICV) – prior to analysis, at QL concentration, 70-130% recovery

## I. INITIAL CALIBRATION BLANK CRITERIA:

***Data Quality Objective: Laboratory Analytical Sensitivity/Instrument Drift/Contamination Evaluation***

- ☑ Daily following ICV
- ☑ Interference free

## J. CONTINUING CALIBRATION VERIFICATION (CCV) CRITERIA:

***Data Quality Objective: Laboratory Analytical Accuracy***

- ☑ CCV, prior to analysis, after every 10 samples, at end of analysis
- ☑ CCV recovery within 90-110%, mid-point of curve concentration
- ☑ Low level CCV (LLCCV), concentration at QL, prior to analysis, after every 10 samples, end of analysis (70-130% R)

## K. CONTINUING CALIBRATION BLANK CRITERIA:

***Data Quality Objective: Laboratory Analytical Sensitivity/Instrument Drift/Contamination Evaluation***

- ☑ Immediately after the CCV, 10 sample frequency
- ☑ Interference free

## L. BLANK CRITERIA:

***Data Quality Objective: Sensitivity/Instrument Drift/Contamination Evaluation***

- N/A Trip Blank (check only if analyzed)
- ☑ Method/Other Lab Blanks (check only if analyzed), one per digestion batch
- ☑ Interference free

## M. INTERFERENCE CHECK SAMPLE (ICS) CRITERIA:

***Data Quality Objective: Analytical Accuracy/Verification of Isobaric Interference Corrections***

- ☑ At beginning of analytical run
- ☑ Recovery: 80-120% (ICSAB)

## N. MATRIX SPIKE DUPLICATE (MSD) CRITERIA:

***Data Quality Objective: Method Precision in Sample Matrix***

- ☑ All analytes, one MSD or sample duplicate per batch of 20 samples
- ☑ Spiked prior to sample preparation
- ☑ RPD $\leq 20$ between MS and MSD results or sample and duplicate results
- ☑ MSD analyte recovery 75-125%

## O. MATRIX SPIKE (MS) CRITERIA:

***Data Quality Objective: Method Accuracy in Sample Matrix***

- ☑ All analytes, one MS per digestion batch of 20 samples
- ☑ Spiked prior to sample preparation
- ☑ Recovery: 75-125%
- ☑ Post digestion spike if MS/MSD recoveries fail
- ☑ Recovery of post digestion spike analytes within 80-120%

## P. LABORATORY CONTROL SAMPLE (LCS) CRITERIA:

***Data Quality Objective: Laboratory Method Accuracy, Laboratory Performance***

- ☑ LCS for all target analytes, one LCS per 20 sample batch
- ☑ LCS concentration at approximately mid-point of analytical curve
- ☑ Recovery within 80-120% for all analytes

## Q. INTERNAL STANDARDS (IS) CRITERIA:

***Data Quality Objective: Analytical Accuracy in Sample Matrix***

- ☑ IS (Li6, **Sc45**, In115, Tb159, Bi209) intensities, IS added to each sample and QC sample
- ☑ % Relative intensity (RI) within 70-125%

## R. SERIAL DILUTION (DILUTION TEST) TEST CRITERIA:

***Data Quality Objective: Accuracy in Sample Matrix***

- ☑ <10% Difference (applicable when sample concentration >10X QL)

## S. SAMPLE QUANTITATION AND GENERAL REPORTING CRITERIA:

***Data Quality Objective: n/a***

- ☑ Sample results reported within instrument linear dynamic range
- ☑ Sample results reported to the detection limit
- ☑ Sample/blind field duplicate results <10 RPD

---

Draper Aden Associates conducted a limited data validation of the above noted data set using the data package provided by the analyzing laboratory. Data evaluation was conducted using SW-846 (Test Methods for Evaluating Solid Waste-Physical/Chemical Methods, USEPA, SW-846, 3rd Edition-Final Update I, II/IIA and III) method requirements and CLP data validation guidelines (USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, October 2004 USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, January 2010). Validation of this data set is limited to review of items detailed in this data review report.

**LIMITATIONS:**

Draper Aden Associates prepared this document (which may include drawings, specifications, reports, studies and attachments) in accordance with the agreement between Draper Aden Associates and the client.

The standard of care for all professional engineering, environmental and surveying and related services performed or furnished by Draper Aden Associates under this Agreement are the care and skill ordinarily used by members of these professions practicing under similar circumstances at the same time and in the same locality. Draper Aden Associates makes no warranties, express or implied, under this Agreement in connection with Draper Aden Associates' services.

Conclusions presented are based upon a review of available information, the results of our field studies, and/or professional judgment. To the best of our knowledge, information provided by others is true and accurate, unless otherwise noted. Draper Aden Associates' liability, hereunder, shall be limited to amounts due Draper Aden Associates for services actually rendered, or reimbursable expenses actually incurred. Any reuse or modification of any of the aforementioned documents (whether hard copies or electronic transmittals) prepared by Draper Aden Associates without written verification or adaptation by Draper Aden Associates will be at the sole risk of the individual or entity utilizing said documents and such use is without the authorization of Draper Aden Associates. Draper Aden Associates shall have no legal liability resulting from any and all claims, damages, losses, and expenses, including attorney's fees arising out of the unauthorized reuse or modification of these documents. Client shall indemnify Draper Aden Associates from any claims arising out of unauthorized use or modification of the documents whether hard copy or electronic.

# SDG NARRATIVE
# SDG # 1107162
## Client: DRAPER
## Project: RAAP UNIT 7/2011 POST DEV. 2nd EVENT/B03204-304B

The indicated Sample Delivery Group (SDG) consisting of two (2) water samples was received into the laboratory information management system (LIMS) on July 28, 2011 intact and in good condition with the Chain of Custody (COC) Records in order, unless otherwise noted in any attachments or Quality Assurance Notices. The cooler temperature indicator bottle was not found with the samples and the samples temperature was 26.7 degrees Celsius. Temperature was recorded by IR temperature gun.

The samples were prepared and analyzed in accordance with SW846 and 6020A methodology for the requested total metals arsenic and cobalt. All non-detects are reported to the reporting limit (RL) with a "U" flag qualifier.

### EQUATIONS FOR LIQUID SAMPLE CALCULATIONS:

Equation for obtaining metals sample results in µg/L as presented on Analysis Data Sheet data sheets from ICP/MS instrument acquired results in µg/L (ppb).

$$\frac{C \times F}{I}$$

Where

C = concentration (µg/L)

F = final volume in liters after sample preparation

I = initial volume in liters

Example: Cobalt for sample 7DUP

$$\frac{14.08144\ \mu g/L\ (C) \times 0.10\ L\ (F)}{0.10\ L\ (I)} = 14.08\ \mu g/L \text{ reported as } 14.1\ \mu g/L$$

### INSTRUMENTAL QUALITY CONTROL:

All calibration verification solutions (LLICV, LLCCV, ICV & CCV), blanks (ICB, & CCB), and interference check samples (ICSA & ICSAB) associated with this data were confirmed to be within SW-846 methodology.

AMENDED DATA

## SAMPLE PREPARATION QUALITY CONTROL:

The sample preparation procedure verifications (LCSW, LCSWD, & PBW) were found to be within acceptable ranges and the field samples were prepared and analyzed within the contract specified holding times.

## MATRIX RELATED QUALITY CONTROL:

No matrix spikes were requested for this sample.

A five-fold serial dilution of sample, CCN = SDI1107162-01 (7DUPL) was performed in accordance with SW-846 requirements for ICP/MS analysis.

The adjusted sample concentrations were inside control limits.

The ICP/MS sample post digestion spike, CCN =1072905-PSI (7DUPA) was performed and passed criteria except arsenic.

I certify that the tests used in this report meet all requirements of the NELAC standards unless otherwise stated in the SDG narrative or QA notice.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on CD has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

# 2. SDG Narrative

The SDG Narrative contains laboratory information, SDG number, and detailed documentation of any QC, sample, shipment, and/or analytical problems encountered in processing the samples. This will include any technical and administrative problems encountered and the resolution or corrective actions taken. The SDG Narrative will also document the alternative means of determining the cooler temperature when a cooler's temperature indicator bottle is absent. The SDG Narrative also provides equations or curves and utilizes raw data from the SDG being reported to demonstrate how sample results are obtained from raw instrument output. Finally, the SDG Narrative will identify and explain any differences between results being provided in the data package and those provided previously as Preliminary Results.

# SDG NARRATIVE
# SDG # 1107004
## Client: **DRAPER**
## Project: **RAAP 2nd QTR.2011 UNIT 7/RE-DEVELOPMENT EVENT**

The indicated Sample Delivery Group (SDG) consisting of two (2) water samples was received into the laboratory information management system (LIMS) on July 1, 2011 intact and in good condition with the Chain of Custody (COC) Records in order, unless otherwise noted in any attachments or Quality Assurance Notices. The cooler temperature indicator bottle was found with the samples and the samples temperature was 1.6 degrees Celsius. Temperature was recorded by IR temperature gun.

The samples were prepared and analyzed in accordance with SW846 and 6020A methodology for the requested metals arsenic and cobalt.

### EQUATIONS FOR LIQUID SAMPLE CALCULATIONS:

Equation for obtaining metals sample results in µg/L as presented on Analysis Data Sheet data sheets from ICP/MS instrument acquired results in µg/L (ppb).

$$\frac{C \times F}{I}$$

Where

C = concentration (µg/L)

F = final volume in liters after sample preparation

I = initial volume in liters

Example: Cobalt for sample 7W13

$$\frac{12.40392\ \mu g/L\ (C) \times 0.10\ L\ (F)}{0.10\ L\ (I)} = 12.404\ \mu g/L \text{ reported as } 12.4\ \mu g/L$$

### INSTRUMENTAL QUALITY CONTROL:

All calibration verification solutions (LLICV, LLCCV, ICV & CCV), blanks (ICB, & CCB), and interference check samples (ICSA & ICSAB) associated with this data were confirmed to be within SW-846 methodology.

## SAMPLE PREPARATION QUALITY CONTROL:

The sample preparation procedure verifications (LCSW, LCSWD, & PBW) were found to be within acceptable ranges and the field samples were prepared and analyzed within the contract specified holding times.

## MATRIX RELATED QUALITY CONTROL:

No matrix spikes were requested for this sample.

A five-fold serial dilution of sample, CCN = SDI1107005-01 (7W13L) was performed in accordance with SW-846 requirements for ICP/MS analysis.

The adjusted sample concentrations were outside control limits.

The ICP/MS sample post digestion spike, CCN =1070509-PS1 (7W13A) was performed and passed criteria.

I certify that the tests used in this report meet all requirements of the NELAC standards unless otherwise stated in the SDG narrative or QA notice.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on CD has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

# INORGANIC DATA REPORTING QUALIFIERS

On the Form I, under the column labeled "Q" for qualifier, each result is flagged with the specific data reporting qualifiers listed below, as appropriate. The qualifiers used are:

U : This flag indicates the compound was analyzed for, not detected and is reported as less than the Method Detection Limit (MDL) (or as defined by the client). The Reporting Limit (RL), or Limit of Quantitation (LOQ), and the MDL will be adjusted to reflect any dilution or concentration of the sample and, for soils, the percent moisture.

J : This flag indicates the reported result is an estimated value. The flag is used when an analyte is detected and the result is less than the adjusted RL/LOQ but equal to or greater than the MDL.

Q : This flag denotes that one or more quality control criteria have failed (e.g., LCS recovery, Continuing Calibration Verification, CCV, and interference check standards for ICP-AES/ICP-MS) and reanalyses can't be performed. The Q flag is applied to all specific analyte(s) in all samples associated with the failed quality control criteria.

B : This flag is used when the analyte is found in the associated method or calibration blank as well as in the sample. It indicates probable blank contamination and warns the data user to take appropriate action. The combination of flags BU or UB is not an allowable policy. Blank contaminants are flagged B only when they are detected in the sample.

D: This flag is applied to an analyte when the reported result is based on a dilution.

X/Y/Z : Other specific flags may be required to properly define the results. If used, the flags will be fully described in the SDG Narrative. The laboratory-defined flags are limited to X, Y, and Z.

**The extensions: D, S, SD, L, and A are added to the end of the Client ID and represent the following:**

**D – Matrix Duplicate**
**S – Matrix Spike**
**SD – Matrix Spike Duplicate**
**L – Serial Dilution**
**A – Post Digestion Spike**

# 3. Raw Data

For each reported value, the laboratory shall include in the data package all raw data used to obtain that value. This applies to all required QA/QC measurements, instrument standardization, as well as all sample analysis results. This does not apply to the quarterly verification of method and instrument parameters submitted as a part of each data package.

The order of the raw data in the data package shall be: ICP-AES, ICP-MS, mercury, and cyanide (if a target analyte).

Raw data shall be labeled with Client Identification numbers and appropriate codes in order to identify:

- calibration standards, including source and preparation date
- initial and continuing calibration blanks and preparation blanks
- initial and continuing calibration verification standards, interference check samples, serial dilution samples, LRS check standard, Laboratory Control Sample, and post digestion spike
- diluted and undiluted sample and all weights, dilutions, and volumes used to obtain the reported values
- duplicates
- spikes (indicating standard solutions used, final spike concentrations, and volumes involved).
- instrument used, any instrument adjustments, data corrections or other apparent anomalies on the measurement record, including all data voided or data not used and a brief written explanation
- time and date of each analysis (instrument run logs can be submitted if they contain this information)

The presence of the Chemist's/Analyst's employee ID number, or signature, on this run log attests that strict compliance with the method's SOP has occurred. Any SOP deviations require documentation by the responsible chemist/analyst together with the chemist's/analyst's initials and the initials of the lab supervisor and a QA department representative, signifying approval of the deviation.

The presence of the Chemist's/Analyst's employee ID number, or signature, on this run log attests that strict compliance with the method's SOP has occurred. Any SOP deviations require documentation by the responsible chemist/analyst together with the chemist's/analyst's initials and the initials of the lab supervisor and a QA department representative, signifying approval of the deviation.

# EPA 6020 & EPA 6020A - Summary Report

## Sample ID: SDI1107004-01

Sample Date/Time: Wednesday, July 06, 2011 15:40:27
Sample Type: Sample
Sample Description: 7W13L 5X
Number of Replicates: 3
Batch ID:
Method File: C:\Elandata1\Method\6020\6020AAAMETHOD.mth
Dataset File: C:\Elandata\DataSet\PEMSJCF062311\7W13L 5X.429

# EPA 6020 & EPA 6020A - Summary Report

## Sample ID: 1070509-PS2

Sample Date/Time: Wednesday, July 06, 2011 15:47:37
Sample Type: Sample
Sample Description: 5WC21A
Number of Replicates: 3
Batch ID:
Method File: C:\Elandata1\Method\6020\6020AAAMETHOD.mth
Dataset File: C:\Elandata\DataSet\PEMSJCF062311\5WC21A.434

# EPA 6020 & EPA 6020A - Summary Report

## Sample ID: LLCCV

Sample Date/Time: Wednesday, July 06, 2011 15:53:26
Sample Type: Sample
Sample Description:
Number of Replicates: 3
Batch ID:
Method File: C:\Elandata1\Method\6020\6020AAAMETHOD.mth
Dataset File: C:\Elandata\DataSet\PEMSJCF062311\LLCCV.438

# 4. Digestion and Distillation Logs

The following logs shall be submitted, as appropriate, for each preparation procedure: digestion logs for ICP-AES, ICP-MS, mercury preparations, and cyanide. The logs shall include: (1) date; (2) sample weights and volumes, with initial sample weight/volume and final volume clearly indicated; (3) sufficient information to unequivocally identify which QC samples (i.e., LCS, PB) correspond to each batch digested; (4) comments describing any significant sample changes or reactions which occur during preparation shall be entered in the log and noted in the SDG Narrative; (5) indication of pH less than 2 or greater than 12, as applicable; (6) identification of the sample preparer(s) [signature (s)].

# Data Validation Report

## INORGANIC DATA REVIEW SUMMARY

Draper Aden Associates performed a manual comprehensive review of the inorganic analytical results for the June 30, 2011 groundwater monitoring event at RFAAP HWMU7. Draper Aden Associates, of Blacksburg, Virginia, collected a groundwater sample and blind field duplicate from monitoring well 7W13. Monitoring well re-development was performed prior to sample collection. This event represents the first of two monitoring events to be conducted subsequent to the well re-development. These samples were analyzed for total arsenic and cobalt by SW-846 Method 6020A - inductively coupled plasma-mass spectrometry (ICP-MS). The following information and attached table summarize the inorganic data validation results.

Draper Aden Associates sent samples to CompuChem (CompuChem), a Division of Liberty Analytical, of Cary, North Carolina, for the inorganic analyses. On behalf of RFAAP, CompuChem submitted results to Draper Aden Associates in a final certificate of analysis which included sample analytical results as well as relevant documentation to verify and validate the results.

The evaluation of CompuChem's compliance with the method and validation of results presented here are based upon a limited review of QA/QC information including holding times, preservation procedures, instrument tuning, calibration and calibration verification data, QL standards, blank samples (method, calibration, and other blanks), interference check sample, pre-digestion matrix spike and matrix spike duplicate (MS/MSD), laboratory control sample (LCS), internal standard, and serial dilution results, where applicable. A review of transcriptions from instrument data to sample summary sheets was performed. Calculation checks were performed on a minimum ten percent of the data set. The following information is intended to summarize data review results and any observed significant deviations from method and/or contractual requirements.

CompuChem received the samples on ice and in good condition, with custody seals intact. Applicable holding time and preservation criteria were met. The chain of custody was appropriately signed and data by field and laboratory personnel.

### *Method 6020A (ICP-MS)*

The revised certificate of analysis for Method 6020A was complete in its presentation and the data were of acceptable quality. The data set exhibited the laboratory's ability to achieve the reported QL for arsenic and cobalt, as outlined by the precision and accuracy data. QLs were equal to or less than the permit QL.

QC documentation criteria were met. Instrument tuning, calibration and calibration verification criteria were met. QL standards, blank samples, interference check sample (ICSAB), pre-digestion MS/MSD, LCS, internal standard and serial dilution results recovered within

control limits, except where noted below. No deviations from specific control limits and QA/QC controls were identified during the data review process.

The laboratory report was revised to correctly report results to at or above the permit QL for arsenic (10 µg/l) and cobalt (4 µg/l).

Arsenic and cobalt detections reported at or above the permit QL and/or results that required a data validation qualifier due to quality control deviations noted above are summarized on the attached table.

No results were rejected based on the data validation criteria.

***Summary of Detections:***

| ANALYTE | METHOD | SAMPLE ID | LAB RESULT | VALIDATED RESULT | QL | UNITS | DATA VALIDATION NOTES |
|---|---|---|---|---|---|---|---|
| Arsenic, Total | 6020A | 7W13 | U | U | 10 | µg/l | Result < Permit QL.. |
| Cobalt, Total | 6020A | 7W13 | 12.4 | 12.4 | 4 | µg/l | No action taken. |
| Arsenic, Total | 6020A | 7DUP | U | U | 10 | µg/l | Result < Permit QL. |
| Cobalt, Total | 6020A | 7DUP | 12.9 | 12.9 | 4 | µg/l | No action taken. RPD <10. |

**Data Validation Qualifiers:**
**QL** Denotes project quantitation limit.
**U** Denotes analyte not detected at or above QL.
**J** Denotes analyte reported above QL and associated result is estimated.
**UJ** Denotes analyte not detected at or above the QL and associated QL is estimated.
**UA** Denotes analyte detected above QL, but attributed to laboratory contamination. Sample QL adjusted to sample concentration. Final result not detected at or above adjusted sample QL.

## INORGANIC DATA EVALUATION FOR ICP-MS SW-846 METHOD 6020A

**Sample ID:** 7W13
**QC Samples:** Lab blanks, LCS/LCSD, serial dilution (7W13), Field duplicate (7DUP)
**Laboratory:** CompuChem, Cary, NC; SDG: 1107004

Does Laboratory analyte list correspond to analyte list requested? _X_yes ___no
Corresponds to As and Co, total, Preparation method: 3005A

"☑" denotes items reviewed. NR Denotes not reviewed.
See Data Validation Summary for additional comments.

### A. DOCUMENTION COMPLETENESS CRITERIA:

*Data Quality Objective: Representativeness*

- ☑ Chain of custody – Custody transfers must be signed and dated
- ☑ Chain of custody properly and completely filled out including sampler signatures, date and time of sampling, sample ID, analysis requested

### B. DETECTION LIMIT AND QUANTITATION LIMIT CRITERIA:

*Data Quality Objective: Analytical Sensitivity*

- ☑ Specific detection limit reported
- ☑ Specific quantitation limit reported
- ☑ Standard analyzed at the QL (LLQC), digested, 70-130% recovery, analyzed after MDL determination and as needed
- ☑ Method detection limit (MDL) less than QL
- ☑ Performance evaluation sample analyzed within 12 months

### C. INITIAL DEMONSTRATION OF CAPABILITY (IDOC) CRITERIA:

*Data Quality Objective: Laboratory Method Sensitivity*

- ☑ Analyst IDOC for J. Feldhaus submitted previously

### D. SAMPLE AND STANDARD PREPARATION CRITERIA:

*Data Quality Objective: Accuracy and Representativeness*

- ☑ Digestion prior to analysis
- ☑ Digestion method: 3005A
- ☑ Samples and standards matrix matched

### E. TECHNICAL HOLDING TIME / PRESERVATION REQUIREMENTS:

*Data Quality Objective: Representativeness*

- ☑ 6 month holding time, pH<2 with Nitric Acid ($HNO_3$)

### F. INSTRUMENT TUNE CRITERIA:

*Data Quality Objective: Verify Operating Conditions*

- ☑ Prior to calibration
- ☑ Relative Standard Deviation (RSD) </=5%
- ☑ Resolution < 0.9 amu full width at 10% peak height (or lower)

☑ Mass calibration </=0.1 amu difference from true value

## G. INITIAL CALIBRATION CRITERIA:

***Data Quality Objective: Laboratory Accuracy***

- ☑ 1 calibration blank and 3 standards,
- ☑ Linear curve fit with correlation coefficient $r \geq 0.998$
- ☑ Daily calibration following tuning and prior to sample analysis

## H. INITIAL CALIBRATION VERIFICATION (ICV) CRITERIA:

***Data Quality Objective: Laboratory Accuracy***

- ☑ Daily following initial calibration, independent/second source used for ICV
- ☑ ICV concentration near mid-point of calibration curve, 90-110% recovery
- ☑ Low level ICV (LLICV) – prior to analysis, at QL concentration, 70-130% recovery

## I. INITIAL CALIBRATION BLANK CRITERIA:

***Data Quality Objective: Laboratory Analytical Sensitivity/Instrument Drift/Contamination Evaluation***

- ☑ Daily following ICV
- ☑ Interference free

## J. CONTINUING CALIBRATION VERIFICATION (CCV) CRITERIA:

***Data Quality Objective: Laboratory Analytical Accuracy***

- ☑ CCV, prior to analysis, after every 10 samples, at end of analysis
- ☑ CCV recovery within 90-110%, mid-point of curve concentration
- ☑ Low level CCV (LLCCV), concentration at QL, prior to analysis, after every 10 samples, end of analysis (70-130% R)

## K. CONTINUING CALIBRATION BLANK CRITERIA:

***Data Quality Objective: Laboratory Analytical Sensitivity/Instrument Drift/Contamination Evaluation***

- ☑ Immediately after the CCV, 10 sample frequency
- ☑ Interference free

## L. BLANK CRITERIA:

***Data Quality Objective: Sensitivity/Instrument Drift/Contamination Evaluation***

- N/A Trip Blank (check only if analyzed)
- ☑ Method/Other Lab Blanks (check only if analyzed), one per digestion batch
- ☑ Interference free

## M. INTERFERENCE CHECK SAMPLE (ICS) CRITERIA:

***Data Quality Objective: Analytical Accuracy/Verification of Isobaric Interference Corrections***

- ☑ At beginning of analytical run
- ☑ Recovery: 80-120% (ICSAB)

## N. MATRIX SPIKE DUPLICATE (MSD) CRITERIA:

***Data Quality Objective: Method Precision in Sample Matrix***

- ☑ All analytes, one MSD or sample duplicate per batch of 20 samples
- ☑ Spiked prior to sample preparation
- ☑ RPD $\leq 20$ between MS and MSD results or sample and duplicate results
- ☑ MSD analyte recovery 75-125%

## O. MATRIX SPIKE (MS) CRITERIA:

***Data Quality Objective: Method Accuracy in Sample Matrix***

- ☑ All analytes, one MS per digestion batch of 20 samples
- ☑ Spiked prior to sample preparation
- ☑ Recovery: 75-125%
- ☑ Post digestion spike if MS/MSD recoveries fail
- ☑ Recovery of post digestion spike analytes within 80-120%

## P. LABORATORY CONTROL SAMPLE (LCS) CRITERIA:

***Data Quality Objective: Laboratory Method Accuracy, Laboratory Performance***

- ☑ LCS for all target analytes, one LCS per 20 sample batch
- ☑ LCS concentration at approximately mid-point of analytical curve
- ☑ Recovery within 80-120% for all analytes

## Q. INTERNAL STANDARDS (IS) CRITERIA:

***Data Quality Objective: Analytical Accuracy in Sample Matrix***

- ☑ IS (Li6, Sc45, In115, Tb159, Bi209) intensities, IS added to each sample and QC sample
- ☑ % Relative intensity (RI) within 70-125%

## R. SERIAL DILUTION (DILUTION TEST) TEST CRITERIA:

***Data Quality Objective: Accuracy in Sample Matrix***

- ☑ <10% Difference (applicable when sample concentration >10X QL)

## S. SAMPLE QUANTITATION AND GENERAL REPORTING CRITERIA:

***Data Quality Objective: n/a***

- ☑ Sample results reported within instrument linear dynamic range
- ☑ Sample results reported to the detection limit
- ☑ Sample results/blind field duplicate RPD<10.

---

Draper Aden Associates conducted a limited data validation of the above noted data set using the data package provided by the analyzing laboratory. Data evaluation was conducted using SW-846 (Test Methods for Evaluating Solid Waste-Physical/Chemical Methods, USEPA, SW-846, 3rd Edition-Final Update I, II/IIA and III) method requirements and CLP data validation guidelines (USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, October 2004 USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, January 2010). Validation of this data set is limited to review of items detailed in this data review report.

**LIMITATIONS:**

Draper Aden Associates prepared this document (which may include drawings, specifications, reports, studies and attachments) in accordance with the agreement between Draper Aden Associates and the client.

The standard of care for all professional engineering, environmental and surveying and related services performed or furnished by Draper Aden Associates under this Agreement are the care and skill ordinarily used by members of these professions practicing under similar circumstances at the same time and in the same locality. Draper Aden Associates makes no warranties, express or implied, under this Agreement in connection with Draper Aden Associates' services.

Conclusions presented are based upon a review of available information, the results of our field studies, and/or professional judgment. To the best of our knowledge, information provided by others is true and accurate, unless otherwise noted. Draper Aden Associates' liability, hereunder, shall be limited to amounts due Draper Aden Associates for services actually rendered, or reimbursable expenses actually incurred. Any reuse or modification of any of the aforementioned documents (whether hard copies or electronic transmittals) prepared by Draper Aden Associates without written verification or adaptation by Draper Aden Associates will be at the sole risk of the individual or entity utilizing said documents and such use is without the authorization of Draper Aden Associates. Draper Aden Associates shall have no legal liability resulting from any and all claims, damages, losses, and expenses, including attorney's fees arising out of the unauthorized reuse or modification of these documents. Client shall indemnify Draper Aden Associates from any claims arising out of unauthorized use or modification of the documents whether hard copy or electronic.

# SDG NARRATIVE
# SDG # 1107004
## Client: DRAPER
## Project: RAAP 2nd QTR.2011 UNIT 7/RE-DEVELOPMENT EVENT

The indicated Sample Delivery Group (SDG) consisting of two (2) water samples was received into the laboratory information management system (LIMS) on July 1, 2011 intact and in good condition with the Chain of Custody (COC) Records in order, unless otherwise noted in any attachments or Quality Assurance Notices. The cooler temperature indicator bottle was found with the samples and the samples temperature was 1.6 degrees Celsius. Temperature was recorded by IR temperature gun.

The samples were prepared and analyzed in accordance with SW846 and 6020A methodology for the requested total metals arsenic and cobalt. All non-detects are reported to the reporting limit (RL) with a "U" flag qualifier.

### EQUATIONS FOR LIQUID SAMPLE CALCULATIONS:

Equation for obtaining metals sample results in µg/L as presented on Analysis Data Sheet data sheets from ICP/MS instrument acquired results in µg/L (ppb).

$$\frac{C \times F}{I}$$

Where

C = concentration (µg/L)

F = final volume in liters after sample preparation

I = initial volume in liters

Example: Cobalt for sample 7W13

$$\frac{12.40392\ \mu g/L\ (C) \times 0.10\ L\ (F)}{0.10\ L\ (I)} = 12.404\ \mu g/L \text{ reported as } 12.4\ \mu g/L$$

### INSTRUMENTAL QUALITY CONTROL:

All calibration verification solutions (LLICV, LLCCV, ICV & CCV), blanks (ICB, & CCB), and interference check samples (ICSA & ICSAB) associated with this data were confirmed to be within SW-846 methodology.

AMENDED DATA

6

## SAMPLE PREPARATION QUALITY CONTROL:

The sample preparation procedure verifications (LCSW, LCSWD, & PBW) were found to be within acceptable ranges and the field samples were prepared and analyzed within the contract specified holding times.

## MATRIX RELATED QUALITY CONTROL:

No matrix spikes were requested for this sample.

A five-fold serial dilution of sample, CCN = SDI1107005-01 (7W13L) was performed in accordance with SW-846 requirements for ICP/MS analysis.

The adjusted sample concentrations were outside control limits.

The ICP/MS sample post digestion spike, CCN =1070509-PS1 (7W13A) was performed and passed criteria.

I certify that the tests used in this report meet all requirements of the NELAC standards unless otherwise stated in the SDG narrative or QA notice.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on CD has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

| | | | | | | | | | | **Total Number of Signs** | 7 | 17 |

From the Table Above, S = -10
From Table A-12a of Appendix A (Reference Document), critical value for sample size of 10 for $\alpha = 0.05$ is 21
The calculated S value is not greater than the critical value.
From Table A-12b of Appendix A for n=10, S=-10, p=0.216
Since S<0, but p=0.216 ≥ 0.05, the null hypothesis is not rejected.
Therefore there is not enough evidence to conclude that there is a decreasing trend in the data. Also, there is no evidence of an increasing trend.
**Trend Analysis shows evidence that the data are stable.**
The QL of 5 was substituted for data reported less than QL

From the Table Above, S = 19
From Table A-12a of Appendix A (Reference Document), critical value for sample size of 10 for $\alpha = 0.05$ is 21
The calculated S value is not greater than the critical value.
From Table A-12b of Appendix A for n=10, S=19, p=0.054
Since S>0, but p=0.054 ≥ 0.05, the null hypothesis is not rejected.
Therefore there is not enough evidence to conclude that there is a decreasing trend in the data. Also, there is no evidence of an increasing trend.
**Trend Analysis shows evidence that the data are stable.**

EPA/240/B-06/003, February 2006

flow line vectors over the Potentiometric Surface Map, measuring their lengths, calculating the head differential over the distances measured, and dividing the head differential by the length of the flow line vectors. The three calculated gradients were then averaged to a single value. Using this method, the average groundwater hydraulic gradient across the site based on First Quarter 1999 groundwater elevations was calculated to be 0.017 ft/ft. Historical slug test data for the site yielded an average hydraulic conductivity of $5.25 \times 10^{-5}$ ft/second. This value is consistent with literature values for karst carbonate rock and for clayey, silty sand and gravel alluvium and residuum (Domenico and Schwartz, 1990).

The estimated groundwater velocity across the site was calculated to be approximately 0.193 ft/day or 70.4 ft/year, based on the following:

- an average hydraulic conductivity of $5.25 \times 10^{-5}$ ft/second;
- an average hydraulic gradient of 0.017 ft/ft; and
- an assumed effective porosity of 0.40, based on a representative range of porosities for karst carbonate rock, weathered residuum, and clayey, silty sand and gravel alluvium (Domenico and Schwartz, 1990).

The actual groundwater flow velocities in the carbonate bedrock may vary as much as one to two orders of magnitude from the velocity presented above, depending on water level conditions and the distribution of karst conduits.

## 3.3 HWMU-5 GROUNDWATER MONITORING ANALYTE LIST

The groundwater monitoring analyte list for HWMU-5 is presented in **Table 1 (Appendix B)**. The list represents the subset of the constituents listed in Appendix VIII of 40 CFR Part 261 that previously have been detected in the groundwater and/or that are reasonably expected to be in or derived from waste contained in HWMU-5. As discussed in Section 3.5.2 below, 11 inorganic constituents, three volatile organic constituents, and two explosive/ propellant constituents have been detected in the groundwater monitoring network for HWMU-5 at statistically significant concentrations above the Unit's calculated background concentrations.

The concentration limits established for the hazardous constituents also are listed in **Table 1**. The concentration limits represent either background concentrations calculated for the constituents in this GWQAR, Maximum Concentrations of Constituents for Ground-water Protection listed in Table 1 of 40 CFR 264.94, USEPA Drinking Water Standard Maximum Contaminant Levels (MCLs), or alternate concentration limits (ACLs) established by the VDEQ (July 1998).

As Alliant discussed with the VDEQ in the past, the reliability of previous laboratory analytical data - particularly dissolved metals data - appeared to be questionable in some cases. In an April 9, 1996 letter to C. Jake (Alliant), the VDEQ agreed that only total metals concentrations in groundwater would be measured, as described in a USEPA Region III guidance on groundwater sampling in karst terrain. Therefore, all references to metals concentrations in this GWQAR refer to <u>total</u> metals concentrations.

## 3.4 HWMU-5 GROUNDWATER BACKGROUND CONCENTRATIONS

Background concentrations were calculated for each constituent in the groundwater monitoring program using the analytical data from First Quarter 1996 through First Quarter 1999 for upgradient well 5W8B. The background concentration calculations were based on site wide 95% confidence, 95% coverage upper prediction intervals. The calculated background

concentrations are listed in **Table 2 (Appendix B)**. The background concentrations were used to construct the outermost closing contours on the Isoconcentration Maps (**Appendix A**).

## 3.5 HWMU-5 STATISTICAL ANALYSIS

Statistical evaluations for HWMU-5 are performed annually and submitted to the VDEQ in accordance with the annual reporting requirements specified in 40 CFR 265.94. As part of this GWQAR, statistical evaluations were performed on First Quarter 1999 analytical data in accordance with the procedures and guidance provided in the following documents:

- Title 40 of the Code of Federal Regulations, 40 CFR 264.97 and 264.98;
- VDEQ Guidance for statistical analysis titled "Data Analysis Plan," undated;
- Interim Final Guidance for Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities, USEPA, April 1989;
- Addendum to Interim Final Guidance for Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities, USEPA, July 1992; and
- Statistical Methods for Groundwater Monitoring, Gibbons, R.D., 1994.

Statistical threshold values were computed for the 40 constituents for which HWMU-5 is currently monitored based on the concentrations of those constituents in upgradient (background) well 5W8B. All data starting with First Quarter 1996 to First Quarter 1999 were used for this purpose. The 1996 through 1999 monitoring data have been submitted previously to the VDEQ by Alliant in quarterly monitoring reports; therefore, the data are not listed in this GWQAR. Statistical comparisons were performed for the First Quarter 1999 data set. Comparison statistical analyses were performed for all constituents which were detected in any downgradient well during that event.

### 3.5.1 Background Data and Statistical Comparisons

Statistical analyses were performed using the analytical results from upgradient well 5W8B as background data. Based on the percentage of non-detects and the distribution of the background data, methods of statistical comparisons varied. Background average, standard deviation and other descriptive statistical data were computed for all constituents and are presented in **Appendix C**.

The constituents listed below were 100% non-detected in the background data. The background threshold levels (BTLs) for these constituents were established as equal to their detection limits (DL). Detections of these constituents in the downgradient wells during First Quarter 1999 were compared to these BTLs.

| Background Threshold Level (BTL) = Detection Limit (DL) | | | | |
|---|---|---|---|---|
| Parameter | Sample Size | % Non-Detects | DL (µg/l) | BTL (µg/l) |
| Antimony | 13 | 100 | 3 | 3 |
| Arsenic | 13 | 100 | 1 | 1 |
| Selenium | 13 | 100 | 1 | 1 |
| Benzene | 13 | 100 | 0.1 | 0.1 |
| Chloromethane | 13 | 100 | 0.3 | 0.3 |
| 1,2-Dichloroethane | 13 | 100 | 0.1 | 0.1 |
| Tetrachloroethene | 13 | 100 | 0.1 | 0.1 |
| Toluene | 13 | 100 | 0.1 | 0.1 |
| trans-1,2-Dichloroethene | 13 | 100 | 0.1 | 0.1 |

| Background Threshold Level (BTL) = Detection Limit (DL) | | | | |
|---|---|---|---|---|
| Parameter | Sample Size | % Non-Detects | DL (µg/l) | BTL (µg/l) |
| 1,1,2-Trichloroethane | 13 | 100 | 0.5 | 0.5 |
| Trichlorofluoromethene | 13 | 100 | 0.5 | 0.5 |
| Vinyl chloride | 13 | 100 | 0.1 | 0.1 |
| Xylenes (total) | 13 | 100 | 0.1 | 0.1 |
| Bis (2-ethylhexyl) phthalate | 13 | 100 | 10 | 10 |
| Di-n-butyl phthalate | 9 | 100 | 5 | 5 |
| Diethyl phthalate | 13 | 100 | 5 | 5 |
| Diphenylamine | 13 | 100 | 10 | 10 |
| 2,6-Dinitrotoluene | 13 | 100 | 0.08 | 0.08 |

Non-parametric prediction intervals were computed for all of the constituents for which the data from background well 5W8B satisfied one of the following two criteria, per VDEQ regulations and guidance as well as USEPA guidance:

- Percentage of non-detects was greater than or equal to 50 and less than 100; or
- Percentage of non-detects was less than 50, but data was not normally distributed in original or log-transformed mode.

The background threshold levels for these constituents were set as equal to their upper prediction limits (UPLs). The background and relevant statistical data for these constituents are summarized below. The confidence level and false positive rate were calculated based on the number of background data points available and number of future comparisons. For all constituents, the confidence level was determined to be equal to 0.920, and the false positive rate was equal to 0.080. Since the upper control limit of a non-parametric interval cannot be adjusted for multiple comparisons and inadequate number of background data, the number of resampling events required was adjusted to account for the high error rates inherent in those situations. The number of confirmation resamples required for all constituents is 2. The background and relevant statistical data for these constituents are summarized below. Associated statistical computations are presented in **Appendix C**.

| BTL = Upper Prediction Limit of Non-parametric Prediction Interval w/false positive rate=0.067 | | | | |
|---|---|---|---|---|
| Parameter | Sample Size | % Non-Detects | DL (µg/l) | BTL (µg/l) |
| Beryllium | 13 | 54 | 0.2 | 0.7 |
| Cobalt | 13 | 46 | 1 | 7 |
| Copper | 13 | 54 | 1 | 18 |
| Lead | 13 | 69 | 1 | 10 |
| Mercury | 13 | 85 | 0.2 | 0.9 |
| Nickel | 13 | 69 | 15 | 106 |
| Silver | 13 | 85 | 0.2 | 2.3 |
| Thallium | 13 | 85 | 1 | 2 |
| Vanadium | 13 | 62 | 4 | 17 |
| Zinc | 13 | 38 | 5 | 75 |
| Acetone | 13 | 92 | 10.0 | 89 |
| Chloroform | 13 | 77 | 0.3 | 0.5 |
| Methylene chloride | 13 | 92 | 0.7 | 0.7 |
| Methylethyl ketone | 13 | 92 | 1.1 | 21.3 |
| Trichloroethene | 13 | 85 | 0.1 | 0.8 |
| 2,4-Dinitrotoluene | 13 | 92 | 0.08 | 0.18 |
| Total Organic Carbon | 13 | 69 | 1,000 | 253,000 |
| Total Organic Halides | 13 | 46 | 5 | 13.4 |

The following constituents exhibited normally distributed background data with less than 25% non-detects. One sided parametric prediction intervals were computed on the background data for all of these constituents. The UPLs for these constituents were set as their respective BTLs, with one exception. For pH, a two-sided parametric prediction interval was computed; therefore, the BTL for pH consisted of a range between the lower prediction limit (LPL) and the upper prediction limit. The background concentration calculations were based on a site wide 95% confidence, 95% coverage upper prediction intervals. When adjusted for multiple comparisons of the background data, the minimum required false positive rate was below 1% (0.01). A 99% confidence level (0.01 false positive rate) was used for all individual comparisons, which with the most conservative assumptions provided a site-wide false positive rate of >0.05 for all constituents. The background and relevant statistical data for these constituents are summarized below. The prediction interval computations for these constituents are presented in **Appendix C**.

| **BTL = UPL of one-sided Prediction Interval (exception pH) w/site-wide false positive rate>0.05 (individual comparisons false positive rate=0.01) BTL for pH = LPL – UPL of two-sided Prediction Interval** | | | | |
|---|---|---|---|---|
| **Parameter** | **Sample Size** | **% Non-Detects** | **DL (µg/l)** | **BTL (µg/l)** |
| Barium | 13 | 0 | 2 | 172.87 |
| Cadmium | 13 | 23 | 0.1 | 1.45 |
| Specific Conductivity | 8 | 0 | 1 µS/cm | 450 µS/cm |
| pH | 8 | 0 | 0.1 pH units | 2.79 - 7.47 pH units |

### 3.5.2 Results of Statistical Comparisons

The following table lists the constituents which were detected during the First Quarter 1999 event at concentrations exceeding their respective background threshold levels (BTLs), and the downgradient wells in which they were detected.

| Parameter | Monitoring Well(s) |
|---|---|
| Arsenic | S5W5 |
| Beryllium | 5W7B, 5WC21, S5W5 |
| Cadmium | 5WC21 |
| Cobalt | 5W5B, 5W7B, 5WC21, 5WC22, S5W7, 5W11A |
| Copper | 5W7B, 5WC21 |
| Lead | 5W7B, S5W5 |
| Nickel | 5WC21 |
| Selenium | 5W5B |
| Silver | 5W5B |
| Vanadium | 5W5B, 5W7B, S5W5 |
| Zinc | 5W7B, 5WC21, 5W11A |
| Chloroform | 5WC21 |
| Trichloroethene | 5W5B, 5WC21, 5WC22, 5WC23, 5W10A |
| Xylenes (total) | 5W5B |
| 2,4-Dinitrotoluene | 5W5B, 5W7B, 5WC21, 5WC22, 5WC23 |
| 2,6-Dinitrotoluene | 5W5B, 5W7B, 5WC21, 5WC22, 5WC23, 5W9A |
| Specific Conductivity | 5W5B, 5W7B, 5WC21, 5WC22, 5WC23, S5W7, 5W9A, 5W11A |
| pH | 5WC23, 5W10A, 5W11A |

**TABLE 2**
**HWMU-5**
**CALCULATED BACKGROUND VALUES**

| Constituent | Background Concentration (µg/l unless otherwise noted) |
|---|---|
| Antimony | 3 |
| Arsenic | 1 |
| Barium | 172.87 |
| Beryllium | 0.7 |
| Cadmium | 1.45 |
| Cobalt | 7 |
| Copper | 18 |
| Lead | 10 |
| Mercury | 0.9 |
| Nickel | 106 |
| Selenium | 1 |
| Silver | 2.3 |
| Thallium | 2 |
| Vanadium | 17 |
| Zinc | 75 |
| Acetone | 89 |
| Benzene | 0.1 |
| Chloroform | 0.5 |
| Chloromethane | 0.3 |
| 1,2-Dichloroethane | 0.1 |
| Methylene chloride | 0.7 |
| Methylethylketone | 21.3 |
| Tetrachloroethene | 0.1 |
| Toluene | 0.1 |
| trans-1,2-Dichloroethene | 0.1 |
| 1,1,2-Trichloroethane | 0.5 |
| Trichloroethene | 0.8 |
| Trichlorofluoromethane | 0.5 |
| Vinyl chloride | 0.1 |
| Xylenes (total) | 0.1 |
| Bis (2-ethylhexyl) phthalate | 10 |
| Di-n-butylphthalate | 5 |
| Diethyl phthalate | 5 |
| Diphenylamine | 10 |
| 2,4-Dinitrotoluene | 0.18 |
| 2,6-Dinitrotoluene | 0.08 |
| Total Organic Carbon | 253,000 |
| Total Organic Halides | 13.4 |
| Specific Conductivity | 450 µS/cm |
| pH | 2.79 to 7.47 pH units |

April 1995 letter from the DEQ to J. Redder, Hercules, Inc. (now Alliant TechSystems, Inc.). The lists incorporate requirements outlined in the Virginia Hazardous Waste Management Regulations (VR 672-10-1) Sections 9.5.C and 9.5.D. These include the Indicator Parameters, Ground Water Quality Parameters, EPA Interim Primary Drinking Water Standards, Known Hazardous Waste Constituents, and Detected VHWMR Appendix 10.6 Constituents. A demonstration was made to the DEQ that several hazardous waste constituents had not been detected for six consecutive quarters. As a result, these constituents have not been analyzed for on a regular basis. These are highlighted in the **Table 3-1.**

Additional parameters have not been detected in any of the wells. During the meeting between Alliant and DEQ on 21 May 1996, DEQ suggested that the recommendations to temporarily cease sampling additional constituents that had not been detected in six or more consecutive sampling events made in the GWQAP addendum submitted 3 November 1995 would better be addressed in the post closure permitting process. Therefore, those additional constituents will not be addressed in this report.

## 3.4 *UNIT 7 GROUND WATER BACKGROUND VALUES*

As requested in the DEQ's 23 July letter, background values were calculated for each parameter .

As discussed with DEQ, Alliant believes the analytical data to be questionable in some cases. DEQ has agreed in a 9 April 1996 letter to C. Jake (Alliant) that only total metals will be measured, as described in an EPA Region III guidance on ground water sampling in karst terrain. Another case of questionable data involves an increase in Total Organic Carbon (TOC) concentrations by a factor of 10. As such, the TOC concentrations from 1995 through 1997 were used to calculate the background values. **Table 3-2** presents the *Historical Maximum Values,* which were used to develop the isocontour maps.

As requested in the DEQ's 23 July 1998 letter, using the data from well 7W12B, background values were calculated for each parameter in the ground water monitoring program. However, as a result of the 21 May 1996 meeting and subsequent telephone conversations, these background values are being submitted in accordance with the regulations and shown on the isocontour maps but were not utilized for purposes of this report.

Additionally, calculations of background values based on the 95% confidence, 95% coverage upper tolerance limit require that data distributions be normal or lognormal. Some of the data do not fulfill this requirement

## 3.5 *UNIT 7 STATISTICAL ANALYSIS*

Statistical evaluations for Unit 7 are performed annually and submitted as part of the Annual Reporting requirements found in the VHWMR Section 9.5. As a result of the 21 May 1996 meeting between Alliant and DEQ, Alliant has established background ground water concentrations for the upgradient well, 7W12B utilizing the Virginia DEQ "*Guidance on Statistical Methods for Ground Water Data Analysis at a Solid Waste or Hazardous Waste Site, Version 2.0, 1995*". In response to Mr. Glenn von Gonten's letter dated 23 July, 1998, Alliant has revised the background concentrations to include sample data collected in 1997. These values can be found in **Table 3-3.** Methods used for background concentration computation and statsistical analysis are described below.

The following parameters were 100% Non-Detected in 20 or more sampling events. The downgradient well data points were compared to the laboratory PQLs in a nonparametric statistical manner or to the applicable MCL or VGWPS (if one exists). Background values were then estimated by using the laboratory PQL for that constituent.

| *Parameter* | *PQL (ppb)* | *Sample Size* | *% Non-Detect* | *MCL or VGWPS (ppb)* |
|---|---|---|---|---|
| 2,4-DNT | 0.2 | 22 | 100 | None |
| 2,6-DNT | 0.1 | 22 | 100 | None |
| 2,4 Dinitrophenol | 11 | 11 | 100 | None |
| Benzyl Alcohol | 8 | 8 | 100 | None |
| Cyanide | 20 | 20 | 100 | 5 |
| Bis(2- ethyl hexyl) phthalate | 9 | 9 | 100 | None |
| 2 – Nitrophenol | 9 | 9 | 100 | None |
| 4 – Nitrophenol | 9 | 9 | 100 | None |
| Acetone | 100 | 14 | 100 | None |
| Antimony | 30 | 14 | 100 | None |
| Vanadium | 40 | 20 | 100 | None |

The following parameter has log-normally distributed data with between 15 and 50 percent Non-Detect values. As such, Cohen's Method was used as an adjustment for the mean and standard deviation, as recommended in the DEQ guidance. Results of the background analysis are summarized in **Table 3-4**

| *Parameter* | *Sample Size* | *% Non-Detect* |
|---|---|---|
| Lead | 23 | 34 |

The following parameters have data with greater than 50% Non-Detects, a minimum sample size of twenty (20). The data were non-normally distributed as indicated using a data distribution statistical method. According to Mr. Glenn von Gonten, DEQ in a 30 July 1996 telephone conversation, the maximum value detected will be used for plume delineation purposes for those constituents with greater than 50% non-detected values. An isocontour map for Total Organic Halides could not

be created because only one sampling point maximum concentration exceeded the background value.

| *Parameter* | *Sample Size* | *% Non-Detect* |
|---|---|---|
| **Arsenic** | 23 | 91.3 |
| **Cadmium** | 23 | 60.9 |
| **Chromium** | 23 | 56.5 |
| **Cobalt** | 20 | 65.5 |
| **Mercury** | 23 | 82.6 |
| **Nickel** | 20 | 85 |
| **Selenium** | 23 | 82.6 |
| **Thallium** | 20 | 70 |
| **Total Organic Halides** | 48 | 62.5 |

The following parameters do not have greater than four (4) sampling events and therefore could not be included in this (plume) evaluation:

- 2,4-D
- Gross Beta
- Radium
- Sulfate

The following parameters have between 15 and 50 percent Non-Detect values, and do not have normal or log-normal data distributions. Thus, Cohen's Method could not be used. Per the DEQ's 23 July letter, background concentrations were computed by calculating an upper tolerance limit based on 95% coverage, at a 95% confidence level. It should be noted that upper tolerance limits are not typically used unless the data are normally or log-normally distributed. Background concentration analysis data is summarized in **Table 3-4.**

| *Parameter* | *Sample Size* | *% Non-Detects* |
|---|---|---|
| **Total Organic Carbon** | 36 | 27.2% |
| **Silver** | 23 | 47.8% |

The remaining parameters have less than 15% Non-Detect values and no data manipulation was required. Computation data for barium, copper, specific conductivity, and zinc are summarized in **Table 3-4**

| *Parameter* | *Sample Size* | *% Non-Detect* |
|---|---|---|
| **Copper** | 20 | 0 |
| **PH** | 92 | 0 |
| **Barium** | 23 | 13 |
| **Specific Conductivity** | 92 | 0 |
| **Zinc** | 20 | 0 |

ULT = Upper Tolerance Limit

# RADFORD ARMY AMMUNITION PLANT, VIRGINIA

# Former Lead Furnace Area
# RCRA Facility Investigation/
# Corrective Measures Study Report

**Prepared for:**

USACE Baltimore District
10 S. Howard St.
Baltimore, MD 21201

**Prepared by:**

Shaw Environmental, Inc.
2113 Emmorton Park Rd.
Edgewood, MD 21040

**Final Document** **November 2008**

## LEGEND

- Soil Sample Location
- Monitoring Well
- Dirt Road
- Paved Road
- Fence Line
- Geologic Cross Section Line
- Former Lead Furnace Area Boundary

Notes:
1) Aerial photo, dated 2005, was obtained from Montgomery County, VA Planning & GIS Services.

N

Scale:

0 37.5 75 150 Feet

U.S. Army Corps of Engineers

HORIZ. SCALE: 0 50 100

VERT. SCALE: 0 15 30 45 60 75

LEGEND

- CLAY AND SILT, LITTLE SAND, RED-BROWN (CL)
- SILT AND CLAY (ML/CL)
- WEATHERED BEDROCK
- LIMESTONE, GRAY-BROWN, ARGILLACEOUS (LMSN)
- STATIC GROUNDWATER LEVEL

NOTES

1) WATER LEVELS MEASURED DECEMBER 2007 (17MW2 AND 17PZ1) AND AUGUST 2007 (LFMW01)
2) SOME DATA POINTS ARE PROJECTED ONTO PROFILE.
3) 40MW1A AND 17PZ1 LITHOLOGY FROM DAMES AND MOORE.
4) 40MW1A IS A BORING.
5) INJECTION WELL IS AN OPEN HOLE AT THE BEDROCK INTERFACE.

## LEGEND

- Monitoring Well Location
- Dirt Road
- Paved Road
- Fence Line
- Former Lead Furnace Area Boundary
- Other Site Boundary

Notes:
1) Aerial photo, dated 2005, was obtained from Montgomery County, VA Planning & GIS Services.
2) All water levels measured in December 2007, except LFMW01, which was measured in August 2007.
3) Water levels are expressed in feet above mean sea level.
4) Groundwater flow direction is based on the 1994 dye trace study results (Engineering Science, 1994).

**Refer to legend immediately following this table for a list of definitions and table notes

# Table 4-7
# Legend

| | | |
|---|---|---|
| 12 | J | Shading and black font indicate an MCL exceedance. |
| 12 | J | Bold outline indicates a tw-RBC exceedance. |
| *12* | *12* | Shading in the MDL/MRL columns indicates the MDL exceeds a criterion. |

tw-RBCs for non-Carcinogenic compounds have been recalculated to an HI of 0.1.
The pyrene tw-RBCs were used for acenaphthylene, benzo(g,h,i)perylene and phenanthrene.
Secondary MCLs were used for aluminum, iron, manganese, silver, and zinc.
MCL Action Levels were used for copper and lead.
MCL = Maximum Contaminant Level (USEPA, 2006).
tw-RBC = Tap Water Risk-Based Concentration (USEPA, October 2007).
tw-RBC value in table is for the more conservative chromium VI.
tw-RBC value for chromium III is 5,500, which was not exceeded.
ng/L = nanograms per liter (parts per trillion).
µg/L = micrograms per liter (parts per billion).
NA = not applicable.
NT = analyte not tested.

**LQ = Lab Data Qualifiers**

B = (organics) Blank contamination. Value detected in sample and associated blank.
A (Dioxins) = B = (metals) Value <MRL and >MDL and is considered estimated.
E (metals) = Reported value is estimated because of the presence of interferences.
EMPC (Dioxins) = The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
J = (organics) Value <MRL and >MDL and is considered estimated.
U = Analyte not-detected at the method reporting limit.
X = (dioxins) Ion abundance ratio outside acceptable range. Value reported is EMPC.

**VQ = Validation Data Qualifiers:**

B = blank contamination. Value detected in sample and associated blank.
J = estimated concentration
K = estimated concentration bias high
L = estimated concentration bias low
N = presumptive evidence for tentatively identified compounds using a library search
U = analyte not detected
UJ = estimated concentration non-detect
UL = estimated concentration non-detect bias low

| | | | | | | | | | | |

Key:
< = Not detected (lab reporting limit shown).
/D = Field duplicate sample.
J = Estimated value
ug/L = micrograms per liter
mg/L = milligrams per liter
For blank cells the samples were not analyzed
Shaded/bolded cells indicate concentration or reporting limit greater than residential RBC.

Note:
Perchlorate –O(18) is a perchlorate isotope using oxygen with a molecular weight of 18 instead of 16. It is a marker added to the sample during analysis. The laboratory is required to report it since it determines matrix effects and data quality issues. Perchlorate –O(18) is shown in the laboratory reports in Appendix E; however, it is not reported in the final data table.

# DRILLING LOG FOR MW-01

Project Name RADFORD ARMY AMMUNITION PLANT

Site Location RADFORD, VA.

Date Started/Finished 05/03/07 - 05/03/07

Drilling Company BEDFORD WELL DRILLING Co

Driller's Name STEPHEN RIPLEY

Geologist's Name HUSSEIN ALDIS

Geologist's Signature Hussein Aldis

Rig Type (s) INGERSOLL RAND T3W TRUCK MOUNTED

Drilling Method (s) AIR ROTARY

Bit Size (s) 6 INCH Auger Size (s) N/A

Auger/Split Spoon Refusal N/A

Total Depth of Borehole Is 50 ft

Total Depth of Corehole Is 20 ft (SB-17)

# DRILLING LOG FOR MW-06

Project Name RADFORD ARMY AMMUNITION PLANT

Site Location RADFORD, VA

Date Started/Finished 05/03/07 - 05/03/07

Drilling Company Bedford Well Drilling Co.

Driller's Name Stephen Ripley

Geologist's Name Hussein Aldis

Geologist's Signature Hussein Aldis.

Rig Type (s) Ingersoll Rand T3W Truck Mounted

Drilling Method (s) AIR ROTARY

Bit Size (s) 6 inch Auger Size (s) N/A.

Auger/Split Spoon Refusal N/A.

Total Depth of Borehole Is 8 ft bgs.

Total Depth of Corehole Is 20 ft (SB-12)

| Water Level (TOIC) | | |
|---|---|---|
| Date | Time | Level( Feet) |
| 05/08/07 | 1400 | 40.14 ft |

**Notes:**

CAS = Chemical Abstracts Service
µg/L = Microgram Per Liter
TAL = Target Analyte List
TCL = Target Compound List
VOC = Volatile Organic Compound
MDL = Method Detection Limit
RL = Reporting Limit
LQ = Laboratory Qualifier
VQ = Validation Qualifier
r = Reason Code
NT = Not Tested

mg/L = Milligram Per Liter
mV = millivolt
SU = Standard Units
mS = milliSiemen
°C = degrees Celcius
ntu = Nephelometric Turbidity
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
C = Carcinogenic per EPA RBC Table (October 2007)
N = Noncarcinogenic per EPA RBC Table (October 2007)
MCL = Maximum Contaminant Level

* Re-sampled 6/24/08 for Pesticides only

[1] = Chromium VI RBC used for screening
[2] = USEPA Action Level used for screening
[3] = Chlordane RBC used for screening
[4] = alpha-BHC RBC used for screening
[5] = Endosulfan RBC used for screening

=Exceeds MCL

=Exceeds Adjusted T-RBC

Data Qualifiers:
B = Not detected substantially above the level reported in laboratory or field blanks.
J = Analyte present. Reported value may not be accurate or precise.
,J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
UJ = Not detected, quantitation limit may be inaccurate or imprecise.
c = Calibration failure; poor or unstable response
m = MS/MSD recovery failure.
p = Preparation blank contamination
x = Trip blank contamination
z = Method blank and/or storage blank contamination

URS

- It was not understood why the majority of fluorescein detections were considered false positive detections. The basis of this observation is unclear considering a lack of background and laboratory confirmation results.

- It was not apparent why certain samples were selected for laboratory confirmation and others were not. There was no apparent consistency in the selection of samples for laboratory confirmation.

- Samples were submitted for confirmation laboratory analyses three months or more following the collection of the samples in the field. No information was provided regarding the custody and/or storage of the samples. The samples were submitted to the analytical laboratory with incomplete chain-of-custody (COC), and the COC documentation was not completed by the laboratory.

In summary, the data from the study do not provide the basis for meaningful interpretation. Any attempt to formulate conclusions from the data as presented regarding the presence of preferred or predominant groundwater flow patterns is not warranted or recommended.

## 3.3 HWMU-16 GROUNDWATER MONITORING ANALYTE LIST

The groundwater monitoring analyte list for HWMU-16 is presented in **Table 1 (Appendix B)**. The list represents the subset of the constituents listed in Appendix III of 40 CFR Part 261 that previously have been detected in the groundwater and/or that are reasonably expected to be in or derived from waste contained in HWMU-16. As discussed in Section 3.5.2 below, 12 inorganic constituents and two explosive/propellant constituents have been detected in the groundwater monitoring network for HWMU-16 at statistically significant concentrations above the Unit's calculated background concentrations. The inorganic constituents may be derived from the aquifer formation materials; however, the two explosive/propellant constituents (2,4-Dinitrotoluene and 2,6-Dinitrotoluene) are byproducts of wastes derived from explosives. Therefore, the two explosive/propellant constituents detected could only be from HWMU-16.

The concentration limits established for the hazardous constituents also are listed in **Table 1**. The concentration limits represent either background concentrations calculated for the constituents in this GWQAR, Maximum Concentrations of Constituents for Ground-water Protection listed in Table 1 of 40 CFR 264.94, USEPA Drinking Water Standard Maximum Contaminant Levels (MCLs), or alternate concentration limits (ACLs) established by the VDEQ (July 1998). Certain organic constituents on the list do not have USEPA MCLs or VDEQ ACLs; they also do not have calculated background concentrations because they have not been detected in the Unit's upgradient well. Therefore, the concentration limits for these constituents are equal to their respective method detection limits.

As Alliant discussed with the VDEQ in the past, the reliability of previous laboratory analytical data - particularly dissolved metals data - appeared to be questionable in some cases. In an April 9, 1996 letter to C. Jake (Alliant), the VDEQ agreed that only total metals concentrations in groundwater would be measured, as described in a USEPA Region III guidance on groundwater sampling in karst terrain. Therefore, all references to metals concentrations in this GWQAR refer to <u>total</u> metals concentrations.

## 3.4 HWMU-16 GROUNDWATER BACKGROUND CONCENTRATIONS

Background concentrations were calculated for each constituent in the groundwater monitoring program using the analytical data from 1996 through 1998 for upgradient well 16C1.

The background concentration calculations were based on site wide 95% confidence, 95% coverage upper prediction intervals. The calculated background concentrations are listed in **Table 2 (Appendix B)**. The background concentrations were used to construct the outermost closing contours on the Isoconcentration Maps (**Appendix A**).

## 3.5 HWMU-16 STATISTICAL ANALYSIS

Statistical evaluations for HWMU-16 are performed annually and submitted to the VDEQ in accordance with the annual reporting requirements specified in 40 CFR 265.94. As part of this GWQAR, statistical evaluations were performed on Fourth Quarter 1998 analytical data in accordance with the procedures and guidance provided in the following documents:

- Title 40 of the Code of Federal Regulations, 40 CFR 264.97 and 264.98;
- VDEQ Guidance for statistical analysis titled "Data Analysis Plan," undated;
- Interim Final Guidance for Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities, USEPA, April 1989;
- Addendum to Interim Final Guidance for Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities, USEPA, July 1992; and
- Statistical Methods for Groundwater Monitoring, Gibbons, R.D., 1994.

Statistical threshold values were computed for the 54 constituents for which HWMU-16 is currently monitored based on the concentrations of those constituents in upgradient (background) well 16C1. All data starting with First Quarter 1996 to Fourth Quarter 1998 were used for this purpose. The 1996 through 1998 monitoring data have been submitted previously to the VDEQ by Alliant in quarterly monitoring reports; therefore, the data are not listed in this GWQAR. Statistical comparisons were performed for the Fourth Quarter 1998 data set. Comparison statistical analyses were performed for all constituents which were detected in any downgradient well during that event.

### 3.5.1 Background Data and Statistical Comparisons

Statistical analyses were performed using the analytical results from upgradient well 16C1 data as background data. Based on the percentage of non-detects and the distribution of the background data, methods of statistical comparisons varied. Background average, standard deviation and other descriptive statistical data were computed for all constituents and are presented in **Appendix C**.

The constituents listed below were 100% non-detected in the background data. The background threshold levels (BTLs) for these constituents were established as equal to their detection limits (DL). Detections of these constituents in the downgradient wells during Fourth Quarter 1998 were compared to these BTLs.

| Background Threshold Level (BTL) = Detection Limit (DL) | | | | |
|---|---|---|---|---|
| Parameter | Sample Size | % Non-Detects | DL (µg/l) | BTL (µg/l) |

| OCDF | 12 | 100 | 0.1307 ppt | 0.1307 ppt |

Non-parametric prediction intervals were computed for all of the constituents for which the data from background well 16C1 satisfied one of the following two criteria, per VDEQ regulations and guidance as well as USEPA guidance:

- Percentage of non-detects was greater than or equal to 50 and less than 100; or
- Percentage of non-detects was less than 50, but data was not normally distributed in original or log-transformed mode.

The background threshold levels for these constituents were set as equal to their upper prediction limits (UPLs). The background and relevant statistical data for these constituents are summarized below. The confidence level and false positive rate were calculated based on the number of background data points available and number of future comparisons. For all constituents, the confidence level was determined to be equal to 0.933, and the false positive rate was equal to 0.067. Since the upper control limit of a non-parametric interval cannot be adjusted for multiple comparisons and inadequate number of background data, the number of resampling events required was adjusted to account for the high error rates inherent in those situations. The number of confirmation resamples required for all constituents is 2. The background and relevant statistical data for these constituents are summarized below. Associated statistical computations are presented in **Appendix C**.

| BTL = Upper Prediction Limit of Non-parametric Prediction Interval w/false positive rate=0.067 | | | | |
|---|---|---|---|---|
| Parameter | Sample Size | % Non-Detects | DL (µg/l) | BTL (µg/l) |
| Beryllium | 12 | 75 | 0.2 | 0.7 |
| Cadmium | 12 | 75 | 0.1 | 0.2 |
| Cobalt | 12 | 75 | 1 | 5 |
| Copper | 12 | 50 | 1 | 13 |
| 1,1-Dichloroethane | 12 | 0 | 0.2 | 9.5 |
| 2,4-Dinitrotoluene | 12 | 92 | 0.08 | 0.10 |

| BTL = Upper Prediction Limit of Non-parametric Prediction Interval w/false positive rate=0.067 | | | | |
|---|---|---|---|---|
| Parameter | Sample Size | % Non-Detects | DL (µg/l) | BTL (µg/l) |
| 2,6-Dinitrotoluene | 12 | 75 | 0.08 | 0.11 |
| Lead | 12 | 42 | 1 | 10 |
| Nickel | 12 | 92 | 15 | 16 |
| Silver | 12 | 75 | 0.2 | 0.5 |
| Thallium | 12 | 67 | 1 | 6 |
| TOC | 12 | 75 | 1000 | 7000 |
| 1,1,1-Trichloroethane | 12 | 17 | 0.3 | 9.2 |
| Vanadium | 12 | 83 | 4 | 151 |
| Vinyl Chloride | 12 | 92 | 0.1 | 0.1 |
| Xylene (total) | 12 | 92 | 0.1 | 0.2 |
| Zinc | 12 | 50 | 5 | 51 |

Chromium exhibited normally distributed data (excluding non-detects) with between 25% and 50% non-detects in the background well. The mean and standard deviation of the background data for chromium were adjusted using Cohen's Maximum Likelihood Estimator Method (1959, 1961). A one-sided parametric prediction interval was then computed for chromium based on the adjusted mean and standard deviation. The Upper Prediction Limit was set as the BTL for chromium. The background and relevant statistical data for chromium are summarized below. Cohen's adjustment computations and prediction interval computations are presented in **Appendix C**.

| BTL = Upper Prediction Limit of Prediction Interval w/false positive rate=0.05<br>Original Mean = 3.54, Original SD = 1.933<br>Adjusted Mean = 3.642. Adjusted SD = 1.95 | | | | |
|---|---|---|---|---|
| Parameter | Sample Size | % Non-Detects | DL (µg/l) | BTL (µg/l) |
| Chromium | 12 | 25 | 1 | 6.2 |

The following constituents exhibited normally distributed background data with less than 25% non-detects. One sided parametric prediction intervals were computed on the background data for all of these constituents. The UPLs for these constituents were set as their respective BTLs, with one exception. For pH, a two-sided parametric prediction interval was computed; therefore, the BTL for pH consisted of a range between the lower prediction limit (LPL) and the upper prediction limit. The background concentration calculations were based on a site wide 95% confidence, 95% coverage upper prediction intervals. When adjusted for multiple comparisons of the background data, the minimum required false positive rate was below 1% (0.01). A 99% confidence level (0.01 false positive rate) was used for all individual comparisons, which with the most conservative assumptions provided a site-wide false positive rate of >0.05 for all constituents. The background and relevant statistical data for these constituents are summarized below. The prediction interval computations for these constituents are presented in **Appendix C**.

| BTL = UPL of one-sided Prediction Interval (exception pH) w/site-wide false positive rate>0.05<br>(individual comparisons false positive rate=0.01)<br>BTL for pH = LPL – UPL of two-sided Prediction Interval | | | | |
|---|---|---|---|---|
| Parameter | Sample Size | % Non-Detects | DL (µg/l) | BTL (µg/l) |

| pH | 8 | 0 | 0.1 pH units | 5.7 to 7.9 pH units |

### 3.5.2 Results of Statistical Comparisons

The following table lists the constituents which were detected during the Fourth Quarter 1998 event at concentrations exceeding their respective background threshold levels (BTLs), and the downgradient wells in which they were detected.

| Parameter | Monitoring Well(s) |
|---|---|
| Arsenic | 16-5, 16WC2B |
| Barium | 16-2, 16-3, 16-5, 16WC1A, 16WC1B, 16WC2B, 16SPRING |
| Beryllium | 16WC1B, 16WC2B |
| Cadmium | 16WC1B |
| Chromium | 16-3, 16-5, 16WC1B, 16WC2B |
| Cobalt | 16-5, 16WC1B, 16WC2B |
| Copper | 16-5, 16WC1B, 16WC2B |
| Lead | 16WC1B |
| Mercury | 16WC1B |
| Nickel | 16-5, 16WC1A, 16WC2B |
| Selenium | 16-5, 16WC1B, 16WC2B |
| Zinc | 16WC1B |
| 2,4-Dinitrotoluene | 16-3, 16-5, 16WC1B, 16WC2B, 16SPRING |
| 2,6-Dinitrotoluene | 16WC1A, 16WC1B |

Any HWMU-16 target constituents not listed above were not detected in the downgradient monitoring wells at concentrations exceeding their respective BTLs.

## 3.6 HWMU-16 PLUME DELINEATIONS

In accordance with VDEQ instructions presented during the May 19, 1999 meeting between Alliant and the VDEQ, Isoconcentration Maps were produced to depict constituent plumes in the groundwater beneath the site (**Appendix A**). In order to evaluate the shape and position of constituent plumes over time, historical Isoconcentration Maps were developed using the historical maximum concentrations for the constituents monitored at the site for the time periods of 1992 through 1995 and 1996 through 1998. The historical maximum concentrations for these time periods are listed in **Tables 3** and **4**, respectively (**Appendix B**).

Groundwater analytical data collected prior to 1992 were not included in the evaluation of historical maximum concentrations. The data collected prior to 1992 are considered unreliable due to "order-of-magnitude" variations in parameter concentrations from quarter to quarter, as well as a general lack of laboratory QA/QC. Additionally, the groundwater monitoring analyte lists prior to 1992 did not include many of the parameters on the current groundwater monitoring analyte list for HWMU-16.

**TABLE 2**

## *Target Analyte Monitoring Results - HWMU-16 Point of Compliance Wells*
## *Radford Army Ammunition Plant, Radford, Virginia*

*Upgradient well = 16C1* *All Results in ug/L.*

| *Analtye/Quarter* | *16C1* | *16MW8* | *16MW9* | *16WC1A* | *16WC1B* | *QL* | *GPS* | *Method* |
|---|---|---|---|---|---|---|---|---|
| Second Quarter 2011 | U | U | 2.77 J | 9.24 | U | 5 | 313 | 6020A |
| Fourth Quarter 2011 | U | U | U | U | 6.09 | 5 | 313 | 6020A |

**Definitions:**

***The following definitions apply to results reported for Appendix IX monitoring events. All Appendix IX monitoring results for compliance wells are reported to the detection limit.***

*Appendix IX Monitoring Events: 3Q2003, 2Q-2004, 2Q-2005, 3Q2006, 2Q2007, 2Q2008, 2Q2009, 2Q 2010, 2Q 2011*

**QL** Denotes permit required quantitation limit.
**U** denotes not detected at or above the detection limit.
**UA** denotes not detected at or above the adjusted detection limit.
**J** Denotes result is estimated. When used with "U" (i.e., "UJ"), denotes analyte not detected at or above the detection limit and detection limit and QL are estimated. When used with "UA" (i.e., "UAJ"), denotes analyte not detected at or above adjusted detection limit and adjusted detection limit and QL are estimated.
**UN** Denotes analyte concentration is less than the quantitation limit and/or five times the blank concentration. Not reliably detected due to blank contamination. This qualifier used only for Appendix IX monitoring event when compliance well results are reported to at or above the project detection limit.
**R** Denotes result rejected.
**Q** Denotes data validation qualifier. **X** Denotes mass spectral confirmation not obtained-result suspect.
Background Denotes background concentrations listed in Appendix F to Attachment 5 in the Final Hazardous Waste Post-Closure Care Permit for Hazardous Waste Units 5, 7, 10, and 16 (October 4, 2002), where applicable.
**CAS#** Denotes Chemical Abstract Services registration number.
**GPS** Denotes Groundwater Protection Standards listed in Appendix G to Attachment 5 in the Final Hazardous Waste Post-Closure Care Permit for Hazardous Waste Units 5, 7, 10, and 16 (October 4, 2002).
**NS** denotes not sampled. **NA** denotes not analyzed.
"–" denotes not detected (pre-2nd Quarter 2003) or not available / not sampled (beginning 2nd Quarter 2003).

***The following definitions apply to results reported for non-Appendix IX monitoring events. All non-Appendix IX monitoring results for compliance wells are reported at or above the quantitation limit.***

**QL** Denotes permit required quantitation limit.
**U** Denotes analyte not detected at or above QL.
**UA** Denotes analyte not detected at or above adjusted sample QL.
**J** Denotes result is estimated. When used with "U" (i.e., "**UJ**"), denotes analyte not detected at or above QL and QL is estimated. When used with "UA" (i.e., "**UAJ**"), denotes analyte not detected at or above adjusted QL and adjusted QL is estimated.
**R** Denotes result rejected.
**Q** Denotes data validation qualifier.
**Background** Denotes background concentrations listed in Appendix F to Attachment 5 in the Final Hazardous Waste Post-Closure Care Permit for Hazardous Waste Units 5, 7, 10, and 16 (October 4, 2002), where applicable.
**CAS#** Denotes Chemical Abstract Services registration number.
**GPS** Denotes Groundwater Protection Standards listed in Appendix G to Attachment 5 in the Final Hazardous Waste Post-Closure Care Permit for Hazardous Waste Units 5, 7, 10, and 16 (October 4, 2002).

**NOTE:**

Fourth Quarter 2008:
Due to laboratory error all HWMU 16 samples were analyzed using Method 8260B 5 ml purge instead of a 25 ml purge which resulted in a higher QL. For these samples, all results were evaluated to the detection limit, which is comparable to the permit QL. Results below the laboratory QL but at or above the permit QL are reported and qualified as estimated.
Second Quarter 2009:
Verification event 6/11/2009 - 16MW8 for acetone. Verification result reported as not detected.
4/ 2010 event -Per DEQ, tin analyzed by Method 6010B instead of Method 6020. Verification event: 16MW9 1,1-dichloroethene and benzene. 16WC1B 4,4-DDD. Verification result reported as not detected.

|---|---|---|---|---|---|---|---|---|

**Definitions:**

**QL** Denotes permit required quantitation limit.
**U** Denotes analyte not detected at or above QL.
**UA** Denotes analyte not detected at or above adjusted sample QL.
**J** Denotes associated result is estimated. When used with "U" (i.e., "**UJ**"), denotes analyte not detected at or above QL and QL is estimated. When used with "UA" (i.e., "**UAJ**"), denotes analyte not detected at or above adjusted QL and adjusted QL is estimated.
**UN** Denotes analyte concentration is less than the quantiation limit and five times the blank concentration. Not reliably detected due to blank contamination. This qualifier used only for Appendix IX monitoring event when results are reported to at or above the detection limit.
**R** Denotes result rejected.
**Q** Denotes data validation qualifier.
**CAS#** Denotes Chemical Abstract Services registration number.
**GPS** Denotes Groundwater Protection Standards listed in Appendix G to Attachment 4 in the Final Hazardous Waste Post-Closure Care Permit for Hazardous Waste Units 5, 7, 10, and 16 (October 4, 2002). For cobalt, vanadium, acetone and 2-propanol, these analytes are not listed in Appendix VIII to 40 CFR Part 261; therefore, GPSs will not be established for these constituents.
**NS** denotes not sampled.
**NA** denotes not analyzed.
**"–"** denotes not detected (pre-2nd Quarter 2003) or not available / not sampled (beginning 2nd Quarter 2003).

**Appendix IX Monitoring Events:**
***First Quarter 2003,***
***Second Quarter: 2004, 2005, 2007, 2008, 2009, 2010, 2011***
***Third Quarter 2006***

For Appendix IX monitoring, compliance well results reported/evaluated to detection limit. See data validation Qualifier definitions noted below.

***The following definitions apply to results reported for Appendix IX monitoring events.***
***All Appendix IX monitoring results for compliance wells are reported to the detection limit.***

**QL** Denotes permit required quantitation limit.
**U** denotes not detected at or above the detection limit or QL.
**UA** denotes not detected at or above the adjusted detection limit or adjusted QL.
**J** Denotes result is estimated. When used with "U" (i.e., "UJ"), denotes analyte not detected at or above the detection limit or QL and detection limit and QL are estimated. When used with "UA" (i.e., "UAJ"), denotes analyte not detected at or above adjusted detection limit or adjusted QL and adjusted detection limit and adjusted QL are estimated.
**UN** Denotes analyte concentration is less than the quantitation limit and/or five times the blank concentration. Not reliably detected due to blank contamination. This qualifier used only for Appendix IX monitoring event when compliance well results are reported to at or above the project detection limit.

Verification events: 12/12/03, 06/17/04, 7/25/2005.
6/17/04. Verification event. Acetone: 10D3D was not detected during verification event. Verification event result reported.
7/25/05. Verification event. All wells: ethyl acetate. 10D3D: alpha-BHC, acetone and 2-propanol. All verification results: Not detected except for acetone and 2-propanol. Verification results presented in table.
7/17/2008. Verification event. 10MW1. Technical chlordane, diethyl phthalate. Verification results reported-all not detected.
6/11/2009 – Verification event, 10DDH2R, Diethyl ether, Verification results reported in table-all not detected.

**RE:** Alternate Source Demonstration for Cobalt in monitoring wells 7WCA and 7W13
HWMU #7, Radford Army Ammunition Plant, Radford, Virginia
Radford Army Ammunition Plant, Radford, VA
EPA ID# VA1210020730

Dear Ms. Holt:

The above-noted Alternate Source Demonstration (ASD) investigation, submitted on behalf of Radford Army Ammunition Plant, by Alliant Techsystems Inc., dated December 2011, has been reviewed for technical content and consistency with the requirements of 40 CFR 264.99.(i). The need to submit an ASD was triggered by an exceedance of the Cobalt Groundwater Protection standard reported to the Department for monitoring wells 7WCA and 7W13.

As defined under 40 CFR 264.99.(i), the Alternate Source Demonstration (ASD) report must show one of the following in order to obtain approval:

1) The contamination was caused by natural variation in groundwater.
2) The contamination was a result of an error in field sampling.
3) The contamination was the result of an error in lab analysis.
4) The SSI contamination was result of an error in statistical analysis.

The ASD report focused on proving the applicability of item #1 by presenting a statistical trend analysis that shows no increasing trends of total cobalt concentrations in groundwater, presenting data showing that cobalt is widely observed at significant concentrations in non-waste derived materials and native soils at the site, and providing data that shows cobalt present at similar levels in other upgradient wells serving other waste management units at the site. The report concluded that the total cobalt

concentrations observed in groundwater monitoring wells 7WCA and 7W13 are derived from ambient, naturally-occurring and naturally variable trace elements in the aquifer matrix, and not from a temporally-varying source such as a release from the closed hazardous waste management unit (HWMU-7).

Based on the above discussion and the body of evidence presented to the Department, the content of the ASD is determined to be sufficient to meet the Regulatory criteria for approval and as a result, the facility does not have to remediate the cobalt GPS exceedances observed in wells 7WCA and 7W13. Please note that future exceedances of the GPS for Cobalt noted in 7WCA and 7W13 will not require the submittal of a separate ASD unless the monitoring results reveal a change in site conditions that may indicate a release from HWMU-7. Please make sure that this approval is reflected in future correspondence to the Department where appropriate.

If you have any additional technical questions, you may contact me at 276-676-4867 or by email at Vincent.Maiden@deq.virginia.gov.

Sincerely,

Vincent Maiden

**Subject:** Closure Report Addendum for HWMU-7 – Notification of Verification Soil Sample Results
Post Closure Care Permit HWMUs 5, 7, 10, & 16
Radford Army Ammunition Plant, Radford, Virginia
EPA ID#: VA1210020730

Dear Ms. Schneider:

On 18 October 2012 the Radford Army Ammunition Plant (RFAAP) conducted verification soil sampling to confirm or refute the presence of Aroclor 1254 in the underlying clay liner and native soils beneath Hazardous Waste Management Unit 7 (HWMU-7) in support of the pending Closure Report Addendum for the Unit. During a meeting between RFAAP and the Virginia Department of Environmental Quality (VDEQ) on 20 September 2012, the VDEQ indicated that clean closure for the residual material within HWMU-7 and the underlying native soils could be achieved if additional soil sampling refuted suspect Aroclor 1254 concentrations detected in the underlying clay liner and native soils during the February 2004 subsurface investigation.

RFAAP conducted the 18 October 2012 verification soil sampling in accordance with the procedures specified in the VDEQ-approved Closure Plan Amendment for HWMU-7. The verification soil samples were collected from the same locations, depths, and soil materials as the February 2004 soil samples; specifically, the soil samples were collected from the base of the clay liner underlying the Unit, from the top of the native soils underlying the clay liner, or from the interface between the clay liner and the native soils. The laboratory analytical results for the 18 October 2012 verification soil samples confirmed the presence of Aroclor 1254 in the clay liner and underlying native soils at concentrations comparable to the February 2004 results.

During the 20 September 2012 meeting, the VDEQ stated that if the verification soil samples confirmed the presence of Aroclor 1254, RFAAP could perform a risk assessment with fate-and-transport modeling of the transfer from soil to groundwater using the verification soil sample data or by the collection and analysis of one round of groundwater samples for Aroclor 1254 to request closure for soil based on risk-based endpoints with land use restrictions. Furthermore, the VDEQ indicated that if Aroclor 1254 was not detected in groundwater samples, then RFAAP could request clean closure for groundwater. Therefore, RFAAP will collect one round of groundwater samples from the compliance monitoring well network for analysis of Aroclor 1254.

The groundwater samples for Aroclor 1254 analysis will be collected during the week ending November 30, 2012. RFAAP will notify the VDEQ of the groundwater analytical results for Aroclor 1254 following receipt from the laboratory. Complete details regarding the verification soil sampling and groundwater sampling for Aroclor 1254 will be forwarded to the VDEQ in the forthcoming *Closure Report Addendum for HWMU-7*.

If you have any questions or concerns, please contact me at (540) 639-7785 or jay.stewart@baesystems.com.

**Subject:** Radford Army Ammunition Plant, Radford, VA EPA ID No.VA1210020730, Review of the HWMU 7 Closure Report Post Closure Care Permit

Wednesday, August 16, 2012

Dear Mr. Winstead:

The Virginia Department of Environmental Quality (DEQ) has reviewed the Closure Report addressing the Hazardous Waste Management Unit (HWMU) 7 at the Radford Army Ammunition Plant (RAAP). The closure report by Draper Aden Associates was received by the DEQ on February 15, 2012. The report was reviewed by the hazardous waste risk assessor – Sonal Iyer (memorandum attached), the hazardous waste statistician - Hasan Keceli (memorandum attached), and the ground water specialist – Vince Maiden (memorandum attached) and myself.

The hazardous waste risk assessor's comments included a discussion of deficiencies found in the risk assessment/fate and transport section associated with the closure report. The hazardous waste statistician's finding was that the background soils hazardous constituent concentrations utilized by the facility as the closure performance standard were acceptable. The hazardous waste ground water specialist's review of the Closure Report for HWMU-7 stated that the facility appears to have met the groundwater clean closure standards set forth in the Amended Closure Plan dated July 2010, however as described in Section 2.2 of the Closure Plan, the clean closure of groundwater is contingent on the facility meeting clean closure requirements for the residual material and the underlying soils at HWMU-7. My main comment is that at least some of the detected hazardous constituents of concern in soils and the residual material were treated in the closure report as undetected and should be carried forward in the process to achieve the closure performance standard – this is discussed in more detail under item 1 below.

Conclusions and recommendations reached are reflective of the attached comments and my comment and are summarized below.

1. In order to get clean closure for soils and ground water – RAAP needs to run the fate and transport (i. e. the DEQ's REAMS model methodology) model/analysis (with all the detected constituents). If the analysis shows no impact to the ground water then the groundwater is clean closed. Since the soils

analysis shows the performance standards are not met, RAAP would need to do additional soil sampling/analyses and removal as required to demonstrate clean closure for soils.

Under this option, closure of Arochlor 1254 in the groundwater would need to be demonstrated, since it was detected in the soils/residual material and has not been previously monitored for in the ground water. Any other hazardous chemical constituents detected in soils/residual material that have not been monitored for in the groundwater would need to monitored and/or otherwise determined to not be a threat to human health and the environment. Some or all of the detected HCOCs that had concentrations that were greater than the method detection limits (MDLs) in soils and the residual material and less than estimated quantitation limits (EQLs) were treated in the closure report as undetected. Some examples are benzene, carbon disulfide, xylenes and acetone. Implementing this option might delay the issuance of the renewal Post Closure-Care Permit significantly.

2. In order to get clean closure for ground water – RAAP needs to run the fate and transport model/analysis (with all the detected constituents). If the fate and transport model/analysis shows no impact to the ground water then the ground water is clean closed. If RAAP does not want to do additional soils sampling and analysis and removal as necessary, they can continue with requirements for the maintenance of the capping system and benchmarks and other non-groundwater related items in accordance with the Post Closure-Care Permit.

   The Post Closure-Care Permit, which expires on November 4, 2012 – continues in effect after that date since a timely renewal application was submitted at least 180 days prior to the expiration date. Obviously a new permit will not be in effect until after the expiration date. The Post Closure-Care Permit was modified on September 27, 2012, to state that the post-closure care period may end when the DEQ's Director approves the closure of the unit in accordance with the closure plan amendment. It is noted that a new permit will not be issued until after November 4, 2012. If additional soils work is not pursued, the integrity of the capping system would be required to be maintained under the new permit (until January 4, 2020 as in the continued permit).

3. If the fate and transport model/analysis shows potential impact to the ground water – RAAP would need to conduct additional soil sampling/removal to levels protective of the ground water to achieve clean closure for soils and ground water. If RAAP does not want to do any more soils work, then they need to maintain the capping system and benchmarks and other non-groundwater related items in accordance with the Post Closure-Care Permit and continue ground water monitoring unless existing ground water data and/or newly collected ground water data demonstrate that risk-based levels are not exceeded.

An additional recommendation is as follows. It would be very helpful if all of the relevant soils and residual material data were included in an EXCEL file to facilitate ease of use and allow 3rd parties to audit the administrative record with a minimum of inconvenience.

Please advise as to your thoughts/preferences regarding this e-mail. A meeting or teleconference may be arranged to discuss these issues and develop a path forward.

Thanks,

Russ

Closure Report for HWMU-7 – Post Closure Care Permit
Clean Closure Evaluation of Groundwater – Technical Review Comments

To: Russ McAvoy, Environmental Engineer Senior
Office of Waste Permitting and Compliance

Trough: Jutta Schneider, Corrective Action Program Manager

From: Vincent Maiden, Corrective Action Project Manager

Date: March 19, 2012

Copies: Central Hazardous Waste File, DEQ

The purpose of this memorandum is to document the review of the groundwater related sections of the Closure Report for HWMU-7 dated February 2012 and approved September 27, 2011. This review focused specifically on the Executive Summary, Sections 1.0-1.3, Sections 5.0-5.6, and the referenced attachments. Please accept the following observations and comments.

1. **Section 5.0 Clean Closure of Groundwater**

   - The report indicates that the clean closure evaluation for groundwater was carried out as stipulated in the approved Closure Plan Amendment for HWMU-7 dated July 2010, which was incorporated in to the permit on September 27, 2011 as part of a Class 3 permit modification.

   - A review of the approved Closure Plan Amendment for HWMU-7 was conducted to confirm. The Closure Plan Amendment states in Section 2.2 that "In the event that the residual material and underlying soils at HWMU-7 meet the clean closure standards specified by the VDEQ, Radford AAP will attempt to demonstrate clean closure for groundwater at HWMU-7 as well. Clean closure for groundwater at HWMU-7 will be demonstrated by comparing the most recent groundwater sample analytical results at the time that the Closure Report is prepared to the Groundwater

Protection Standards (GPSs) for the Unit." This was also described in Section 7.0 and Section 8.3 of the Closure Plan Amendment.

- The groundwater clean closure evaluation focused on data collected during the 4th Quarter 2011 Semi-Annual Compliance Monitoring Event and the 2nd Quarter 2011 Annual Groundwater Monitoring Event. This would be the most recent data and is acceptable for this evaluation.

- For the purpose of this evaluation the groundwater data was compared to the current Groundwater Protection Standards (GPS) for the facility, last revised September 27, 2011, and presented in Appendix H of the report.

2. **Section 5.2 Constituents Detected Above Quantitation Limits & Section 5.3 Comparison to Groundwater Protection Standards.**

- The report indicated that no organic Hazardous Constituent of Concern (HCOC) were detected and concentrations equal to or greater than their respective QLs in the groundwater at HWMU-7 during the Second Quarter 2011 and Fourth Quarter 2011 monitoring events. Please note that Chloroform was observed but this exceedance was resolved by a June, 2007 ASD approval (details provided in item 3).

- The report did reveal that five inorganic HCOC were detected at concentrations above their respective QLs in the Second Quarter 2011 and Fourth Quarter 2011 monitoring events. These detections include barium, chromium, cobalt, nickel, and zinc.

- The facility compared the monitoring results, as discussed above, against the approved GPS (Appendix H) for the unit. This comparison is consistent with the approved Closure Plan.

- Cobalt was the only detected constituent observed at concentrations above its approved GPS. The cobalt GPS for the Unit is a site-specific background GPS of 5µg/l. Cobalt was detected in plume well 7W13 at a concentration of 11.7µg/l during the events evaluated. This concentration is consistent with the historical cobalt concentrations in this well (5.3µg/l to 16.4µg/l).

- Radford AAP submitted an Alternate Source Demonstration (ASD) for Cobalt to the Department on December 15, 2011. The results of the ASD concluded that the total cobalt concentrations observed in groundwater at HWMU-7 are derived from ambient, naturally-occurring and naturally variable sources. The Department approved the ASD in correspondence dated January 5, 2012. Based on the ASD approval the facility was not required to remediate cobalt in groundwater at HWMU-7 and no additional action was required in response to the observed exceedance.

3. **Section 5.4 Alternate Source Demonstration for Additional Detected Constituents**

DRAFT

- Chloroform, which is not an HCOC for HWMU-7, was detected during the Second Quarter 2011 monitoring event and in historical monitoring events at concentrations ranging from below the QL of 1µg/l to a maximum of 3µg/l. These detections are orders of magnitude below the drinking water MCLG of 70µg/l for Chloroform and the Total Trihalomethanes MCL of 80µg/l.

- Radford AAP prepared an ASD for chloroform at HWMU-7 which was received by the on January 31, 2007 and approved by the Department in a letter dated June 14, 2007.

- Chloroform is not a HCOC for HWMU-7 and the Department approved an ASD resolving the noted exceedances. Therefore, the detection of chloroform does not impact the eligibility for groundwater clean closure at this unit.

4. **Section 5.5 Evaluation of Potential for Aroclor-1254 Migration to Groundwater**

- The Post Closure Care Permit for HWMU-7 did not require that the facility analyze groundwater for Aroclor-1254. Therefore, this constituent is not a listed as a groundwater HCOC and groundwater data was not collected or submitted for consideration in the closure report.

5. **Section 5.6 Results of Clean Closure Evaluation for Groundwater**

- The report concludes that the results of the clean closure evaluation reveal that HCOCs are not currently present in groundwater at HWMU-7 at concentrations greater than their respective GPS or the exceedances have been demonstrated (through ASD approval) to be consistent with site-wide background (cobalt) or derived from a source other than HWMU-7 (chloroform).

- The report states that Radford AAP has met the criteria, detailed in the approved Closure Plan Amendment, for clean closure of groundwater at HWMU-7.

In conclusion, a review of the Closure Report for HWMU-7 revealed that the facility appears to have met the groundwater clean closure standards set forth in the Amended Closure Plan dated July 2010. However, please note that as described in Section 2.2 of the Closure Plan, the clean closure of groundwater is contingent on the facility meeting clean closure requirements for the residual material and the underlying soils at HWMU-7.

# MEMO

TO: Russ McAvoy

Thru: Pat McMurray PM

FROM: Sonal Iyer SI

DATE: June 08, 2012

SUBJECT: Technical Risk Assessment Review: Closure Report for HWMU 7 at Radford Army Ammunition Plant. Dated February 9, 2012
EPA ID: VA1210020730

Per our internal meeting on May 24, 2012, this memorandum provides review comments for risk assessment portion of the closure report mentioned above. This review does not include comparing protocols and approaches for evaluating the unit against those in approved closure plan. The review also does not include list of HCOCs analyzed in soils and groundwater, facility-wide background concentrations, Laboratory data validation, statistical evaluation, groundwater data and evaluation, permit conditions and/or exemptions, and any other information besides risk assessment calculations. Furthermore, the method detection limits for soil and groundwater samples is assumed to be below applicable risk based levels. If such is not the case, the risk assessment outcomes may be different than discussed herein and may need to be revisited. The risk assessment is carried out to demonstrate that 'the unit no longer meets the definition of waste.'

Comments:

1. Section 3.3.2. Soil Sample Collection and Analytical Results, page 13: The 2004 samples show Aroclor in a few samples and the facility has provided some rationale about possibility of overestimation. However, in absence of confirmatory samples DEQ will consider the results as reported for risk assessment. Over/underestimation of potential risk due

to data limitation may be discussed qualitatively in the uncertainties section.

2. It is noted that the chromium analysis in soils is only for total chromium and data for hexavalent chromium is not available.

3. Section 4.3.2.1. Comparison to Risk-Based Concentrations (residential Screen), page 17: DEQ does not understand the purpose of including this section, corresponding tables, and any conclusions because risk based screening is not considered to demonstrate closure. All detected chemicals above the background must be included in quantitative risk assessment for residential receptor and for fate-and-transport evaluation. The facility has included all detected chemicals in risk assessment. To avoid confusion, please remove this section and corresponding table.

4. Table 6: This table uses maximum detected concentration for all chemicals, except Aroclor. Only for this chemical, average concentration is used. If 95% UCL of the mean cannot be calculated due to data set limitation, maximum detected concentrations must be used. The facility is advised to either exclude this table or recalculate using 95% UCL of the mean for Aroclor-1254.

5. Section 4.3.2.5. Uncertainty Analysis, page 19: Please remove the statements relating to Radford's intention to leave the soil 'in-place' unless Radford AAP is willing to develop a deed restriction that will prohibit any surface disturbance of the soil in future.

6. Section 4.4. Results of Clean Closure Evaluation for Residual Material and Soil, page 20: This evaluation does not include fate-and-transport assessment. However, please see comment # 7 below.

7. Section 5.0. Clean Closure Evaluation for Groundwater, pages 22 through 26: For a land based unit with interrupted bottom liner, ideally, the groundwater data would be included in quantitative risk assessment for residential receptor using same protocols as described in REAMS user's manual and cumulative risk would be calculated from soil and groundwater. Also, all the detected HCOCs in soils must be evaluated via fate-and-transport modeling. However, the unit has had a post-closure groundwater monitoring permit for many years and based on internal DEQ discussion, this review takes the position that groundwater water data evaluation per permit conditions may be sufficient to meet clean closure requirements for groundwater as well as fate-and-transport

evaluation. Therefore current review does not include this entire section and potential for impact to surface water or vapor intrusion and Groundwater/ Permitting Staff may provide comments/decisions regarding groundwater condition, monitoring requirements, and clean closure status.

8. Appendix E. Chronic Daily Intake Calculations, Toxicity Factors: The facility has not used REAMS software to calculate risk and hazard even though the closure plan clearly required the use of it. However, the information provided by the facility reflects REAMS methodology, assumptions, default values, and calculation protocols. Therefore these calculations are deemed acceptable. The facility needs to add carcinogenic risk-adults and carcinogenic risk-child to obtain life-time cancer risk (in line with REAMS methodology). Please add the risk for each chemical, each pathway, and cumulative risk. For non-carcinogenic hazard index, please use assessment results for child receptor. Please provide a summary table showing these calculations.

Based on the information provided in the above submittal and review conducted as specified in the opening paragraph, the soil/stabilized waste mass, bottom clay liner and soils beneath the HWMU 7:

- Fail current individual risk based performance criteria-residential receptor for Aroclor 1254;
- Pass current risk based performance criteria-residential receptor of cumulative risk within 1E-4 to1E-6 and hazard index at or below 1.

This report and review did not include results of fate-and transport evaluation.

If there are any questions pertaining to this memorandum, I can be contacted at 698-4259.

**RE:** Request to Establish Background and Groundwater Protection Standard for Diethyl Ether
Post Closure Care Permit HWMU 5, 7, 10 & 16
Radford Army Ammunition Plant, Radford, VA
EPA ID# VA1210020730

Dear Mr. Stewart:

The Department of Environmental Quality (Department) has received your request, dated October 22, 2012, to establish the background value and Groundwater Protection Standard (GPS) for diethyl ether in groundwater. This document was submitted on behalf of Radford Army Ammunition Plant, by BAE Systems, Ordinance Systems Inc. The Department has reviewed this request and concurs as follows:

- The facility detected diethyl ether in HWMU-7 at point of compliance well 7MW6 at an estimated concentration of 1.2µg/l during the 2nd quarter of 2012. The post closure care permit requires the facility to conduct four quarters of monitoring and establish background for the detected constituent. However, the facility previously has collected ten independent samples from the upgradient well at HWMU-7 and none of these samples have detected diethyl ether. The Department concurs with the facility's recommendation for forgo additional quarterly sampling and establish the background value for diethyl ether at the quanitation limit (QL) of 13µg/l.

- The facility recommends that the GPS for diethyl ether be established at the April 2012 EPA Mid-Atlantic Risk Assessment Regional Screening Level (RSL) for

tap water of 3,100µg/l. This recommendation is based on the absence a USEPA maximum contaminant level (MCL) and VDEQ alternate concentration limit (ACL) for diethyl ether. The Department concurs with this recommendation.

- The Department agrees with the facility's plan to add diethyl ether to the Groundwater Monitoring Constituent List for HWMU-7 beginning with the Fourth Quarter 2012 semi-annual monitoring event and to evaluate this constituent of concern further in the forthcoming Closure Report Addendum for HWMU-7.

If you have any questions or concerns, you may contact me at 276-676-4867 or by email at Vincent.Maiden@deq.virginia.gov.

Sincerely,

Vincent Maiden

## SDG NARRATIVE
## SDG # 1210140
## PROTOCOL: SW-846

## SAMPLE IDENTIFICATIONS: EQ-1

The one water sample listed above was received intact at 0.1°C, with proper documentation, in sealed shipping containers, on October 24, 2012. The samples were scheduled for the requested analysis of the PCB fraction. The requested SW-846, 3rd Edition, Update 4, Method 8082A was used to prepare and analyze the sample, with the exceptions and/or additions requested by the client. All pertinent Quality Assurance notices are included in the narrative section and all pertinent Laboratory notices are included in the sample data sections.

## PCBs

Extraction and analysis holding time requirements were met for the sample.

No target analytes confirmed above the reporting limits in the sample. All non-detects are reported to the reporting limit (RL) with a "U" flag qualifier.

All QC criteria were met for all initial and continuing calibration standards associated to this SDG.

All of the surrogates met recovery criteria.

The method blank associated with the samples met all quality control criteria.

Per client's request, duplicate matrix spikes were not performed with this SDG.

The Laboratory Control Samples (LCS/LCSD) prepared and analyzed with the sample met recovery and precision criteria.

An uncertainty of these test results may be estimated from the recovery of the surrogates added to the sample prior to sample preparation or from the recovery of spiked compound(s) in the associated laboratory control sample. Further information is available upon request.

I certify that the tests used in this report meet all requirements of the NELAC standards unless otherwise stated in the SDG narrative or QA notice.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on CD has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

## CompuChem's Pagination Convention

As required by the EPA CLP Statement of Work (SOW) documents, data to be delivered must be paginated (by machine or hand). In the event that the initial numbering is incorrect (a page numbered twice or a page skipped, for example), it is CompuChem's policy to add an alphabetic suffix to a page number when necessary (e.g., 100A, 100B, etc.). This policy is also applicable to non-CLP data packages.

Revision 7 (01/12/2011)

# Notification Regarding Manual Editing/Integration Flags

In some instances, manual adjustments to the software output are necessary to provide accurate data. These manual integrations are performed by the data reviewers, GC/MS operators, or GC/HPLC chemists. An Extracted Ion Current Profile (EICP) or a GC/HPLC chromatographic peak has been provided for the manual integration performed on each compound to demonstrate the accuracy of that process. The manual integrations are flagged on the quantitation report in the far right column beyond the FINAL concentration for GC/MS analysis, and in the "Flags" column for GC/HPLC analysis. The manual editing/integration flags are:

**M** - Denotes that a manual integration has been performed for this compound. The manual integration was performed in order to provide the most accurate area count possible for the peak. The most common reasons for performing manual integrations/editing are: the compound was not found by the automatic integration routine, the compound was incorrectly integrated by the automatic integration routine, and the co-eluting compounds were incorrectly integrated by the automatic integration routine.

**H** - Denotes that the data reviewer, GC/MS operator, or GC/HPLC Chemist has chosen an alternate peak within the retention time window from that chosen by the software for that compound. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

**MH** - Denotes that an alternate peak has been chosen within the retention time window from that chosen by the software for that compound and also a manual integration of the chosen peak has been performed. The manual integration was performed in order to provide the most accurate area count possible for the peak.

**L** - Denotes that a data reviewer or GC/MS operator has selected an alternate library search. This is typically done when an additional tentatively identified compound (TIC) has been added to the number of peaks searched. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

**ML** - Denotes that an alternate GC/MS library search has been selected and a manual integration has also been performed. This is typically done when an additional TIC has been added and the TIC peak also required a manual integration.

These codes will appear in the GC/MS and GC/HPLC raw data.

Revision 8 (01/29/2011)

A division of Liberty Analytical Corporation

## DATA REPORTING QUALIFIERS

On the appropriate reporting form, under the column labeled "Q" for qualifier, each result is flagged with the specific data reporting qualifiers listed below, as appropriate. Up to five qualifiers may be reported on the appropriate reporting form for each compound. The qualifiers used are:

U : This flag indicates the compound was analyzed for but not detected. The Contract Required Quantitation Limit (CRQL), or reporting limit, will be adjusted to reflect any dilution and, for soils, the percent moisture.

J : This flag indicates an estimated value. The flag is used as detailed below:

1. When estimating a concentration for tentatively identified compounds (TICs) where a response factor of 1:1 is assumed for the TIC analyte,

2. When the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the adjusted CRQL (or Reporting Limit) but greater than zero, and

3. When the retention time data indicate the presence of a compound that meets the pesticide and/or Aroclor or other GC or HPLC identification criteria, and the result is less than the adjusted CRQL (or Reporting Limit) but greater than zero. For example, if the CRQL (or Reporting Limit) is 10 µg/L, but a concentration of 3 µg/L is calculated, it is reported as 3J.

N : This flag indicates presumptive evidence of a compound. This flag is only used for TICs, where the identification is based on a mass spectral library search and must be used with the J flag. For generic characterization of a TIC such as "chlorinated hydrocarbon" (or for an "unknown," with no matches ≥ 85%), the N flag is not used.

P : In the EPA's Contract Laboratory Program (CLP), this flag is used for a pesticide/Aroclor target analyte, when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the Form I and flagged with a P.
For SW-846 GC and HPLC analyses, when the Relative Percent Difference (RPD) is greater than 40% and there is no evidence of chromatographic anomalies or interferences, then the lower of the two values is reported and flagged with a P on the reporting form. When the RPD is equal to or less than 40%, our policy is to also report the lower of the two values, although the choice could be a project specific issue. These SW-846 policies are consistent with Method 8000C. If Method 8000B is required, the higher of the two values is reported. For certain HPLC analyses, if one of the HPLC columns displays co-elution of target analytes, all results are reported from a primary column displaying no co-elution. Results are still flagged with a P if the RPD between columns is greater than 40%.

C : This flag applies to GC or HPLC results where the identification has been confirmed by GC/MS. If GC/MS confirmation was attempted but was unsuccessful, this flag is not applied; a laboratory-defined flag is used instead (see the X/Y/Z qualifier.)

# DATA REPORTING QUALIFIERS (continued)

B : This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates probable blank contamination and warns the data user to take appropriate action. This flag is used for a TIC as well as for a positively identified target compound. The combination of flags BU or UB is not an allowable policy. Blank contaminants are flagged B only when they are detected in the sample.

E : This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis. If one or more compounds have a concentration greater than the upper level of the calibration range, the sample or extract will be diluted and reanalyzed. All such compounds with a concentration greater than the upper level of the calibration range will have the result flagged with an E on the appropriate reporting form for the original analysis.

D : If a sample or extract is reanalyzed at a higher dilution factor, for example when the concentration of an analyte exceeds the upper calibration range, the DL suffix is appended to the sample number on the appropriate reporting form for the more diluted sample, and **all** reported concentrations on that form are flagged with the D flag. This flag alerts data users that any discrepancies between the reported concentrations may be due to dilution of the sample or extract.

NOTE 1: The D flag is not applied to compounds which are not detected in the sample analysis i.e. compounds reported with the CRQL (or Reporting Limit) and the U flag.

NOTE 2: Separate reporting forms are used for reporting the original analysis (Client Sample No. XXXXX) and the more diluted sample analysis (Client Sample No. XXXXXDL) i.e. the results from both analyses <u>are not combined</u> on a single reporting form.

A: This flag indicates that a TIC is a suspected aldol-condensation product.

S: In the SOM01.2 SOW document, this flag is used to indicate an estimated value for Aroclor target compounds where a valid 5-point initial calibration was not performed prior to the analytes detection in a sample. If an "S" flag is used for a specific Aroclor, then a reanalysis of the sample is required after a valid 5-point calibration is performed for the detected Aroclor. The "S" flag is not utilized for non CLP analyses.

X/Y/Z : Other specific flags may be required to properly define the results. If used, the flags will be fully described in the SDG Narrative. The laboratory-defined flags are limited to X, Y, and Z.

# B. Chain of Custody Records

The laboratory shall include a copy of the Chain-of-Custody (CoC) documentation for all of the samples in the Work Order/SDG. The CoC documents shall be arranged in increasing Client Sample ID number order, considering both letters and numbers.

## (ANALYSIS DATA SHEETS)

### Analysis Data Sheets (ADS) and Surrogate Recovery Results

Sample data shall be arranged in packets with the Analysis Data Sheet (ANALYSIS DATA SHEET), followed by the raw data for the sample. These sample packets shall be placed in increasing Client Sample ID number order, considering both letters and numbers.

a. Target Analyte Results (ANALYSIS DATA SHEET)
Tabulated results (identification and quantitation) shall be included.

b. Copies of Chromatograms
Positively identified compounds shall be labeled with the names of compounds, either directly out from the peak on the chromatogram, or on a printout of retention times on the data system printout if retention times are printed over the peak on the chromatogram. Included for each sample or sample extract, dilutions and reanalyses. The chromatogram shall contain the following header information: Client Sample ID Number, volume injected (uL), date and time of injection, GC column ID, GC instrument ID, Lab file ID and analyst ID.

c. Copies of Chromatograms from the Second Column
(where required)

d. Data System Printout
A printout of retention time and corresponding peak height or peak area shall accompany each chromatogram. Where edits have been made, initialing, dating and integration time range are required.

# J. Initial Calibration Data

## (INITIAL CALIBRATION DATA)

For all GC columns, all instruments, in chronological order by GC column and instrument. If more than one instrument is used, forms shall be arranged in order by instrument. Multiple initial calibrations from the same instrument shall be in chronological order. Within each initial calibration, the standards are in order by level, from lowest to highest.

1. Quantitation reports and chromatograms for the initial calibration.

2. Chromatogram peak displaying each manual integration, depicting integration time range.

# K. Continuing Calibration Data

## (CONTINUING CALIBRATION CHECK)

For all performance evaluation mixtures (if applicable) and continuing calibration verification standards, on all GC columns and instruments, in chronological order by GC column and instrument. If more than one instrument is used, forms shall be arranged in order by instrument. If multiple continuing calibrations from the same instrument are used, they shall be in chronological order.

(1) Quantitation reports and chromatogram for all continuing calibrations.

(2) Chromatogram peak displaying each manual integration, depicting integration time range.

# M. Blank Data

Arranged by type of blank (method, instrument or sulfur cleanup where applicable) in chronological order, by instrument.
Shall include:

1) Method blanks shall be in chronological order, by extraction date.
2) Instrument blanks shall be in chronological order, by GC column and instrument.
3) Sulfur cleanup blanks (if needed) shall be in chronological order, by date of analysis.

- Tabulated Results (ANALYSIS DATA SHEET)
- Chromatograms and date system printout(s) for each GC column and instrument used for analysis.

The presence of the Chemist's/Analyst's employee ID number, or signature, on this run log attests that strict compliance with the method's SOP has occurred. Any SOP deviations require documentation by the responsible chemist/analyst together with the chemist's/analyst's initials and the initials of the lab supervisor and a QA department representative, signifying approval of the deviation.

Diane Shaffer
Diane Shaffer - QA Analyst

**Date Passed:** 20-Oct-2010 **Balance:** 1128342313

Manufactured under Restek's ISO 9001:2008
Registered Quality System
Certificate #FM 80397

1 Expiration date of the unopened ampule stored at the recommended storage condition.

2A Purity is determined by one or more of the following techniques: GC/FID, HPLC, GC/ECD, GC/MS. Value is rounded to the nearest whole number. Chemical identity is confirmed using GC/MS. See data pack or contact provider for further details.

2B Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities.

2C The following types of compounds will have a listed purity of less than 99%: Aldehyde/Ketone-DNPH compounds, Bromides, Chlorides, HCL salts, HBR salts, sulfates, hydrates, and other compounds as necessary. The listed purity is a correction factor that is equivalent to the percentage of parent compound in the molecule. This correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution. The concentration listed on the certificate is the concentration of the parent compound in the solution.

2D Purity of isomeric compounds is reported as the sum of the isomers. Value is rounded to the nearest whole number after summation.

3 Based upon gravimetric preparation with balance calibration verified using NIST traceable weights (seven mass levels) and/or class A glassware used for dilutions.

4 Uncertainties determined using data for balances and glassware from measurement systems analysis methodology, raw material purity, and, when significant, equipment tolerances or calibration results.

Valerie N. Walters - QA Analyst  Date Passed: 07-Oct-2011  Balance: 1128353505

Manufactured under Restek's ISO 9001:2008
Registered Quality System
Certificate #FM 80397

1 Expiration date of the unopened ampule stored at the recommended storage condition is the last day of the month listed.

2A Purity and chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ECD, GC/MS. Purity value is rounded to the nearest whole number. See data pack or contact Restek for further details.

2B Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities.

2C The following types of compounds will have a listed purity of less than 99%: Aldehyde/Ketone-DNPH compounds, Bromides, Chlorides, HCL salts, HBR salts, sulfates, hydrates, and other compounds as necessary. The listed purity is a correction factor that is equivalent to the percentage of parent compound in the molecule. This correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution. The concentration listed on the certificate is the concentration of the parent compound in the solution.

2D Purity of isomeric compounds is reported as the sum of the isomers. Value is rounded to the nearest whole number after summation.

3 Based upon gravimetric preparation with balance calibration verified using NIST traceable weights (seven mass levels) and/or class A glassware used for dilutions.

4 Uncertainties determined using data for balances and glassware from measurement systems analysis methodology, raw material purity, and, when significant, equipment tolerances or calibration results.

5A Containers are overfilled to ensure the packaged amount, as a minimum.

5B Restek supplies deactivated vials along with most standards packed in 2 mL ampules, for the handling and storage of standards. Due to space constraints, Restek does not supply vials for larger volume ampules. Samples should be transferred into deactivated vials for handling and storage. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31840, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory, as a custom ordered item. Contact your Restek sales or customer service representative for details.

Tech Tip:

Decachlorobiphenyl has poor solubility in most organic solvents. The maximum concentration that can be prepared in acetone, hexane, or isooctane is 200µg/mL. Temperature will affect the solubility as well. Storing solutions at reduced temperatures will cause decachlorobiphenyl to precipitate.
Products containing decachlorobiphenyl must be sonicated for a minimum of 10 minutes prior to opening the ampul. Because each ultrasonic bath operates at a different energy level, 10 minutes is a guideline only. Longer sonication time will not affect product quality.
These precautions apply to working solutions prepared in your laboratory as well. The amount of compound that precipitates depends on concentration AND temperature. If you store your your standards at a temperature lower than 4°C (even dilute solutions), allow extra sonication time.

# I. SAMPLE DATA PACKAGE

## GC by SW-846

The Sample Data Summary Package shall contain data for all samples in one Work Order/Sample Delivery Group (SDG), as follows:

**A. SDG Narrative**

**B. Chain of Custody Records**

**C. Sample Preparation and Analysis Holding Time Data**
(HOLDING TIME SUMMARY)

**D. Surrogate Recovery Results**
(SURROGATE STANDARD RECOVERY AND RT SUMMARY)

**E. Laboratory Control Sample Results**
(LCS/LCS DUPLICATE RECOVERY)

**F. Matrix Spike Results**
(MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY)

**G. Batch Summary**
(PREPARATION BATCH SUMMARY)

**H. Analysis Sequence Summary**
(ANALYSIS SEQUENCE SUMMARY)

**I. Target Compound Results**
(ANALYSIS DATA SHEET)

**J. Initial Calibration Data**
(INITIAL CALIBRATION DATA)

**K. Continuing Calibration Data**
(CONTINUING CALIBRATION CHECK)

**L. Identification Summary Analytes**
(IDENTIFICATION SUMMARY FOR ANALYTES)

**M. Blank Data**

**N. Laboratory Control Sample Data**

**O. Matrix Spike Data**

**P. Run Logs / Prep Sheets / Standard Info / Manual Integration Summary**

# A. SDG Narrative

**CompuChem**
**A division of Liberty Analytical Corporation**

**Tel: 919/379-4100 Fax: 919/379-4050**

# SDG NARRATIVE
# SDG # 1212004
# PROTOCOL: SW-846

**SAMPLEIDENTIFICATIONS: 7W11B 7W12B 7WCA 7WDUP 7MW6 7W9C 7W10B 7W10C 7W13**

The 9 water samples listed above were received intact refrigerated between 0.1°C and 1.2°C, in sealed shipping containers, on December 1, 2012. The samples were scheduled for the requested analysis of the PCB fraction. The requested SW-846, 3rd Edition, Update IV, Method 8082A was used to prepare and analyze these samples, with the exceptions and/or additions requested by the client. All pertinent Quality Assurance notices are included in the narrative section and all pertinent Laboratory notices are included in the sample data sections. This portion of the narrative deals with the PCB fraction only.

PCBs:

Extraction and analysis holding time requirements were met for all samples in this SDG.

No target analytes confirmed above the reporting limits in any of these samples. All non-detects are reported to the reporting limit (RL) with a "U" flag qualifier.

Manual integrations were performed on one or more of the process files associated with this SDG. Please see the detailed Manual Integration Summary report that is located in section P. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

All QC criteria were met for all initial and continuing calibration standards associated to this SDG.

All of the surrogates met recovery and retention time criteria for the samples.

The method blank associated with the samples met quality control criteria.

The Laboratory Control Sample (LCS) prepared and analyzed with the samples met quality control criteria.

7W11B was used as the original to prepare the duplicate matrix spikes as requested. The associated duplicate matrix spikes met all of the advisory accuracy and precision criteria.

An uncertainty of these test results may be estimated from the recovery of the surrogates added to the sample prior to sample preparation or from the recovery of spiked compound(s) in the associated laboratory control sample. Further information is available upon request.

I certify that the tests used in this report meet all requirements of the NELAC standards unless otherwise stated in the SDG narrative or QA notice. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and/or in the computer-readable data submitted electronically has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Rev. 30

This table contains the GC columns (and volatile organic trap) used for the analysis of volatiles, semivolatiles, pesticides, and Aroclors by the requested analytical methods. Please see the SDG Narrative(s) for the specific fraction(s) relative to this SDG.
Note: This table also contains HPLC columns.

## CompuChem's Pagination Convention

As required by the EPA CLP Statement of Work (SOW) documents, data to be delivered must be paginated (by machine or hand). In the event that the initial numbering is incorrect (a page numbered twice or a page skipped, for example), it is CompuChem's policy to add an alphabetic suffix to a page number when necessary (e.g., 100A, 100B, etc.). This policy is also applicable to non-CLP data packages.

Revision 7 (01/12/2011)

# CompuChem

**A division of Liberty Analytical Corporation**

## Notification Regarding Manual Editing/Integration Flags

In some instances, manual adjustments to the software output are necessary to provide accurate data. These manual integrations are performed by the data reviewers, GC/MS operators, or GC/HPLC chemists. An Extracted Ion Current Profile (EICP) or a GC/HPLC chromatographic peak has been provided for the manual integration performed on each compound to demonstrate the accuracy of that process. The manual integrations are flagged on the quantitation report in the far right column beyond the FINAL concentration for GC/MS analysis, and in the "Flags" column for GC/HPLC analysis. The manual editing/integration flags are:

**M** - Denotes that a manual integration has been performed for this compound. The manual integration was performed in order to provide the most accurate area count possible for the peak. The most common reasons for performing manual integrations/editing are: the compound was not found by the automatic integration routine, the compound was incorrectly integrated by the automatic integration routine, and the co-eluting compounds were incorrectly integrated by the automatic integration routine.

**H** - Denotes that the data reviewer, GC/MS operator, or GC/HPLC Chemist has chosen an alternate peak within the retention time window from that chosen by the software for that compound. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

**MH** - Denotes that an alternate peak has been chosen within the retention time window from that chosen by the software for that compound and also a manual integration of the chosen peak has been performed. The manual integration was performed in order to provide the most accurate area count possible for the peak.

**L** - Denotes that a data reviewer or GC/MS operator has selected an alternate library search. This is typically done when an additional tentatively identified compound (TIC) has been added to the number of peaks searched. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

**ML** - Denotes that an alternate GC/MS library search has been selected and a manual integration has also been performed. This is typically done when an additional TIC has been added and the TIC peak also required a manual integration.

These codes will appear in the GC/MS and GC/HPLC raw data.

Revision 8 (01/29/2011)

## DATA REPORTING QUALIFIERS

On the appropriate reporting form, under the column labeled "Q" for qualifier, each result is flagged with the specific data reporting qualifiers listed below, as appropriate. Up to five qualifiers may be reported on the appropriate reporting form for each compound. The qualifiers used are:

U : This flag indicates the compound was analyzed for but not detected. The Contract Required Quantitation Limit (CRQL), or reporting limit, will be adjusted to reflect any dilution and, for soils, the percent moisture.

J : This flag indicates an estimated value. The flag is used as detailed below:

1. When estimating a concentration for tentatively identified compounds (TICs) where a response factor of 1:1 is assumed for the TIC analyte,

2. When the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the adjusted CRQL (or Reporting Limit) but greater than zero, and

3. When the retention time data indicate the presence of a compound that meets the pesticide and/or Aroclor or other GC or HPLC identification criteria, and the result is less than the adjusted CRQL (or Reporting Limit) but greater than zero. For example, if the CRQL (or Reporting Limit) is 10 µg/L, but a concentration of 3 µg/L is calculated, it is reported as 3J.

N : This flag indicates presumptive evidence of a compound. This flag is only used for TICs, where the identification is based on a mass spectral library search and must be used with the J flag. For generic characterization of a TIC such as "chlorinated hydrocarbon" (or for an "unknown," with no matches ≥85%), the N flag is not used.

P : In the EPA's Contract Laboratory Program (CLP), this flag is used for a pesticide/Aroclor target analyte, when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the Form I and flagged with a P.
For SW-846 GC and HPLC analyses, when the Relative Percent Difference (RPD) is greater than 40% and there is no evidence of chromatographic anomalies or interferences, then the lower of the two values is reported and flagged with a P on the reporting form. When the RPD is equal to or less than 40%, our policy is to also report the lower of the two values, although the choice could be a project specific issue. These SW-846 policies are consistent with Method 8000C. If Method 8000B is required, the higher of the two values is reported. For certain HPLC analyses, if one of the HPLC columns displays co-elution of target analytes, all results are reported from a primary column displaying no co-elution. Results are still flagged with a P if the RPD between columns is greater than 40%.

C : This flag applies to GC or HPLC results where the identification has been confirmed by GC/MS. If GC/MS confirmation was attempted but was unsuccessful, this flag is not applied; a laboratory-defined flag is used instead (see the X/Y/Z qualifier.)

# DATA REPORTING QUALIFIERS (continued)

B : This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates probable blank contamination and warns the data user to take appropriate action. This flag is used for a TIC as well as for a positively identified target compound. The combination of flags BU or UB is not an allowable policy. Blank contaminants are flagged B only when they are detected in the sample.

E : This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis. If one or more compounds have a concentration greater than the upper level of the calibration range, the sample or extract will be diluted and reanalyzed. All such compounds with a concentration greater than the upper level of the calibration range will have the result flagged with an E on the appropriate reporting form for the original analysis.

D : If a sample or extract is reanalyzed at a higher dilution factor, for example when the concentration of an analyte exceeds the upper calibration range, the DL suffix is appended to the sample number on the appropriate reporting form for the more diluted sample, and **all** reported concentrations on that form are flagged with the D flag. This flag alerts data users that any discrepancies between the reported concentrations may be due to dilution of the sample or extract.

NOTE 1: The D flag is not applied to compounds which are not detected in the sample analysis i.e. compounds reported with the CRQL (or Reporting Limit) and the U flag.

NOTE 2: Separate reporting forms are used for reporting the original analysis (Client Sample No. XXXXX) and the more diluted sample analysis (Client Sample No. XXXXXDL) i.e. the results from both analyses <u>are not combined</u> on a single reporting form.

A: This flag indicates that a TIC is a suspected aldol-condensation product.

S: In the SOM01.2 SOW document, this flag is used to indicate an estimated value for Aroclor target compounds where a valid 5-point initial calibration was not performed prior to the analytes detection in a sample. If an "S" flag is used for a specific Aroclor, then a reanalysis of the sample is required after a valid 5-point calibration is performed for the detected Aroclor. The "S" flag is not utilized for non CLP analyses.

X/Y/Z : Other specific flags may be required to properly define the results. If used, the flags will be fully described in the SDG Narrative. The laboratory-defined flags are limited to X, Y, and Z.

# B. Chain of Custody Records

The laboratory shall include a copy of the Chain-of-Custody (CoC) documentation for all of the samples in the Work Order/SDG. The CoC documents shall be arranged in increasing Client Sample ID number order, considering both letters and numbers.

## (ANALYSIS DATA SHEETS)

### Analysis Data Sheets (ADS) and Surrogate Recovery Results

Sample data shall be arranged in packets with the Analysis Data Sheet (ANALYSIS DATA SHEET), followed by the raw data for the sample. These sample packets shall be placed in increasing Client Sample ID number order, considering both letters and numbers.

a. Target Analyte Results (ANALYSIS DATA SHEET)
Tabulated results (identification and quantitation) shall be included.

b. Copies of Chromatograms
Positively identified compounds shall be labeled with the names of compounds, either directly out from the peak on the chromatogram, or on a printout of retention times on the data system printout if retention times are printed over the peak on the chromatogram. Included for each sample or sample extract, dilutions and reanalyses. The chromatogram shall contain the following header information: Client Sample ID Number, volume injected (uL), date and time of injection, GC column ID, GC instrument ID, Lab file ID and analyst ID.

c. Copies of Chromatograms from the Second Column
(where required)

d. Data System Printout
A printout of retention time and corresponding peak height or peak area shall accompany each chromatogram. Where edits have been made, initialing, dating and integration time range are required.

# J. Initial Calibration Data

## (INITIAL CALIBRATION DATA)

For all GC columns, all instruments, in chronological order by GC column and instrument. If more than one instrument is used, forms shall be arranged in order by instrument. Multiple initial calibrations from the same instrument shall be in chronological order. Within each initial calibration, the standards are in order by level, from lowest to highest.

1. Quantitation reports and chromatograms for the initial calibration.

2. Chromatogram peak displaying each manual integration, depicting integration time range.

# K. Continuing Calibration Data

## (CONTINUING CALIBRATION CHECK)

For all performance evaluation mixtures (if applicable) and continuing calibration verification standards, on all GC columns and instruments, in chronological order by GC column and instrument. If more than one instrument is used, forms shall be arranged in order by instrument. If multiple continuing calibrations from the same instrument are used, they shall be in chronological order.

(1) Quantitation reports and chromatogram for all continuing calibrations.

(2) Chromatogram peak displaying each manual integration, depicting integration time range.

# M. Blank Data

Arranged by type of blank (method, instrument or sulfur cleanup where applicable) in chronological order, by instrument.
Shall include:

1) Method blanks shall be in chronological order, by extraction date.
2) Instrument blanks shall be in chronological order, by GC column and instrument.
3) Sulfur cleanup blanks (if needed) shall be in chronological order, by date of analysis.

- Tabulated Results (ANALYSIS DATA SHEET)
- Chromatograms and date system printout(s) for each GC column and instrument used for analysis.

The presence of the Chemist's/Analyst's employee ID number, or signature, on this run log attests that strict compliance with the method's SOP has occurred. Any SOP deviations require documentation by the responsible chemist/analyst together with the chemist's/analyst's initials and the initials of the lab supervisor and a QA department representative, signifying approval of the deviation.

The presence of the Chemist's/Analyst's employee ID number, or signature, on this run log attests that strict compliance with the method's SOP has occurred. Any SOP deviations require documentation by the responsible chemist/analyst together with the chemist's/analyst's initials and the initials of the lab supervisor and a QA department representative, signifying approval of the deviation.

**Date Passed:** 20-Oct-2010 **Balance:** 1128342313

Manufactured under Restek's ISO 9001:2008
Registered Quality System
Certificate #FM 80397

1 Expiration date of the unopened ampule stored at the recommended storage condition.

2A Purity is determined by one or more of the following techniques: GC/FID, HPLC, GC/ECD, GC/MS. Value is rounded to the nearest whole number. Chemical identity is confirmed using GC/MS. See data pack or contact provider for further details.

2B Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities.

2C The following types of compounds will have a listed purity of less than 99%: Aldehyde/Ketone-DNPH compounds, Bromides, Chlorides, HCL salts, HBR salts, sulfates, hydrates, and other compounds as necessary. The listed purity is a correction factor that is equivalent to the percentage of parent compound in the molecule. This correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution. The concentration listed on the certificate is the concentration of the parent compound in the solution.

2D Purity of isomeric compounds is reported as the sum of the isomers. Value is rounded to the nearest whole number after summation.

3 Based upon gravimetric preparation with balance calibration verified using NIST traceable weights (seven mass levels) and/or class A glassware used for dilutions.

4 Uncertainties determined using data for balances and glassware from measurement systems analysis methodology, raw material purity, and, when significant, equipment tolerances or calibration results.

Registered Quality System
Certificate #FM 80397

1 Expiration date of the unopened ampule stored at the recommended storage condition is the last day of the month listed.

2A Purity and chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ECD, GC/MS. Purity value is rounded to the nearest whole number. See data pack or contact Restek for further details.

2B Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities.

2C The following types of compounds will have a listed purity of less than 99%: Aldehyde/Ketone-DNPH compounds, Bromides, Chlorides, HCL salts, HBR salts, sulfates, hydrates, and other compounds as necessary. The listed purity is a correction factor that is equivalent to the percentage of parent compound in the molecule. This correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution. The concentration listed on the certificate is the concentration of the parent compound in the solution.

2D Purity of isomeric compounds is reported as the sum of the isomers. Value is rounded to the nearest whole number after summation.

3 Based upon gravimetric preparation with balance calibration verified using NIST traceable weights (seven mass levels) and/or class A glassware used for dilutions.

4 Uncertainties determined using data for balances and glassware from measurement systems analysis methodology, raw material purity, and, when significant, equipment tolerances or calibration results.

5A Containers are overfilled to ensure the packaged amount, as a minimum.

5B Restek supplies deactivated vials along with most standards packed in 2 mL ampules, for the handling and storage of standards. Due to space constraints, Restek does not supply vials for larger volume ampules. Samples should be transferred into deactivated vials for handling and storage. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31840, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory, as a custom ordered item. Contact your Restek sales or customer service representative for details.

Tech Tip:

Decachlorobiphenyl has poor solubility in most organic solvents. The maximum concentration that can be prepared in acetone, hexane, or isooctane is 200µg/mL. Temperature will affect the solubility as well. Storing solutions at reduced temperatures will cause decachlorobiphenyl to precipitate.
Products containing decachlorobiphenyl must be sonicated for a minimum of 10 minutes prior to opening the ampul. Because each ultrasonic bath operates at a different energy level, 10 minutes is a guideline only. Longer sonication time will not affect product quality.
These precautions apply to working solutions prepared in your laboratory as well. The amount of compound that precipitates depends on concentration AND temperature. If you store your your standards at a temperature lower than 4°C (even dilute solutions), allow extra sonication time.

Christopher Zucco

Christopher Zucco - QA Analyst

**Date Passed:** 14-Oct-2011 **Balance:** 1128353505

**Manufactured under Restek's ISO 9001:2008 Registered Quality System Certificate #FM 80397**

1 Expiration date of the unopened ampule stored at the recommended storage condition is the last day of the month listed.

2A Purity and chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ECD, GC/MS. Purity value is rounded to the nearest whole number. See data pack or contact Restek for further details.

2B Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities.

2C The following types of compounds will have a listed purity of less than 99%: Aldehyde/Ketone-DNPH compounds, Bromides, Chlorides, HCL salts, HBR salts, sulfates, hydrates, and other compounds as necessary. The listed purity is a correction factor that is equivalent to the percentage of parent compound in the molecule. This correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution. The concentration listed on the certificate is the concentration of the parent compound in the solution.

2D Purity of isomeric compounds is reported as the sum of the isomers. Value is rounded to the nearest whole number after summation.

3 Based upon gravimetric preparation with balance calibration verified using NIST traceable weights (seven mass levels) and/or class A glassware used for dilutions.

4 Uncertainties determined using data for balances and glassware from measurement systems analysis methodology, raw material purity, and, when significant, equipment tolerances or calibration results.

5A Containers are overfilled to ensure the packaged amount, as a minimum.

5B Restek supplies deactivated vials along with most standards packed in 2 mL ampules, for the handling and storage of standards. Due to space constraints, Restek does not supply vials for larger volume ampules. Samples should be transferred into deactivated vials for handling and storage. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31840, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory, as a custom ordered item. Contact your Restek sales or customer service representative for details.

Pesticide Surrogate Mix 100-200ug/mL, Acetone, 1mL/ampul

**Container Size :** 2 mL **Pkg Amt:** > 1 mL

**Expiration Date :** March 2019 **Storage:** 0°C or colder

**Handling:** Contains PCBs - sonicate prior to use.

## CERTIFIED VALUES

| Elution Order | Compound | Grav. Conc. (weight/volume) | Expanded Uncertainty (95% C.L.; K=2) | | |
|---|---|---|---|---|---|
| 1 | 2,4,5,6-Tetrachloro-m-xylene | 100.0 ug/mL | +/- 0.7088 | ug/mL | Gravimetric |
| | CAS # 877-09-8 | | +/- 2.1243 | ug/mL | Unstressed |
| | Purity 98% | | +/- 3.4583 | ug/mL | Stressed |
| 2 | Decachlorobiphenyl | 200.0 ug/mL | +/- 1.4182 | ug/mL | Gravimetric |
| | CAS # 2051-24-3 | | +/- 4.2504 | ug/mL | Unstressed |
| | Purity 99% | | +/- 6.9193 | ug/mL | Stressed |

**Solvent:** Acetone
**CAS #** 67-64-1
**Purity** 99%

**Tech Tips:**

Decachlorobiphenyl has poor solubility in most organic solvents. The maximum concentration that can be prepared in acetone, hexane, or isooctane is 200µg/mL. Temperature will affect the solubility as well. Storing solutions at reduced temperatures will cause decachlorobiphenyl to precipitate.

Products containing decachlorobiphenyl must be sonicated for a minimum of 10 minutes prior to opening the ampul. Because each ultrasonic bath operates at a different energy level, 10 minutes is a guideline only. Longer sonication time will not affect product quality.

These precautions apply to working solutions prepared in your laboratory as well. The amount of compound that precipitates depends on concentration AND temperature. If you store your your standards at a temperature lower than 4°C (even dilute solutions), allow extra sonication time.

## General Certified Reference Material Notes

**Expiration Notes:**

- Expiration date of the unopened ampul stored at the recommended storage condition is the last day of the month listed in the expiration date field.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

**Purity Notes:**

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

**Certified Uncertainty Value Notes:**

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value ( includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  $k$ is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

| Label Conditions | Standard Conditions | Non-Standard Conditions |
|---|---|---|
| 25°C Nominal (Room Temperature) | < 60°C | ≥ 60°C up to 7 days |
| 10°C or colder (Refrigerate) | < 40°C | ≥ 40°C up to 7 days |
| 0°C or colder (Freezer) | < 25°C | ≥ 25°C up to 7 days |

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

**Manufacturing Notes:**

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

**Handling Notes:**

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31840, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

The 9 soil samples listed above were received intact at 0.1°C, with proper documentation, in sealed shipping containers, on October 24, 2012. The samples were scheduled for the requested analysis of the PCB fraction. The requested SW-846, 3rd Edition, Update 4, soxhlet extraction method 3540C was used to prepare the samples and method 8082A was used for analysis, with the exceptions and/or additions requested by the client. All pertinent Quality Assurance notices are included in the narrative section and all pertinent Laboratory notices are included in the sample data sections.

## PCBs

Extraction and analysis holding time requirements were met for the samples. After extraction an acid wash was performed on all of the samples and QC.

Aroclor 1254 was confirmed above the CRQL in the following sample IDs: 7GP-17-11, 7GP-18-14, 7GP19-14, 7GP20-14.5, and 7GP-23-12.5.

All QC criteria were met for all initial and continuing calibration standards associated to this SDG.

Manual integrations were performed on one or more of the process files associated with this SDG. Please see the detailed Manual Integration Summary report that is located in section P. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

All of the surrogates met recovery criteria.

The method blank associated with the samples met all quality control criteria.

7GP-20-14.5 was used as the original to prepare the duplicate matrix spikes as requested. The associated duplicate matrix spikes met all of the advisory accuracy and precision criteria with the exception of Aroclor 1254.

The Laboratory Control Samples (LCS) prepared and analyzed with the samples met recovery criteria.

An uncertainty of these test results may be estimated from the recovery of the surrogates added to the sample prior to sample preparation or from the recovery of spiked compound(s) in the associated laboratory control sample. Further information is available upon request.

I certify that the tests used in this report meet all requirements of the NELAC standards unless otherwise stated in the SDG narrative or QA notice.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on CD has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Rev. 30

This table contains the GC columns (and volatile organic trap) used for the analysis of volatiles, semivolatiles, pesticides, and Aroclors by the requested analytical methods. Please see the SDG Narrative(s) for the specific fraction(s) relative to this SDG.
Note: This table also contains HPLC columns.

## CompuChem's Pagination Convention

As required by the EPA CLP Statement of Work (SOW) documents, data to be delivered must be paginated (by machine or hand). In the event that the initial numbering is incorrect (a page numbered twice or a page skipped, for example), it is CompuChem's policy to add an alphabetic suffix to a page number when necessary (e.g., 100A, 100B, etc.). This policy is also applicable to non-CLP data packages.

Revision 7 (01/12/2011)

## Notification Regarding Manual Editing/Integration Flags

In some instances, manual adjustments to the software output are necessary to provide accurate data. These manual integrations are performed by the data reviewers, GC/MS operators, or GC/HPLC chemists. An Extracted Ion Current Profile (EICP) or a GC/HPLC chromatographic peak has been provided for the manual integration performed on each compound to demonstrate the accuracy of that process. The manual integrations are flagged on the quantitation report in the far right column beyond the FINAL concentration for GC/MS analysis, and in the "Flags" column for GC/HPLC analysis. The manual editing/integration flags are:

**M** - Denotes that a manual integration has been performed for this compound. The manual integration was performed in order to provide the most accurate area count possible for the peak. The most common reasons for performing manual integrations/editing are: the compound was not found by the automatic integration routine, the compound was incorrectly integrated by the automatic integration routine, and the co-eluting compounds were incorrectly integrated by the automatic integration routine.

**H** - Denotes that the data reviewer, GC/MS operator, or GC/HPLC Chemist has chosen an alternate peak within the retention time window from that chosen by the software for that compound. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

**MH** - Denotes that an alternate peak has been chosen within the retention time window from that chosen by the software for that compound and also a manual integration of the chosen peak has been performed. The manual integration was performed in order to provide the most accurate area count possible for the peak.

**L** - Denotes that a data reviewer or GC/MS operator has selected an alternate library search. This is typically done when an additional tentatively identified compound (TIC) has been added to the number of peaks searched. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

**ML** - Denotes that an alternate GC/MS library search has been selected and a manual integration has also been performed. This is typically done when an additional TIC has been added and the TIC peak also required a manual integration.

These codes will appear in the GC/MS and GC/HPLC raw data.

## DATA REPORTING QUALIFIERS

On the appropriate reporting form, under the column labeled "Q" for qualifier, each result is flagged with the specific data reporting qualifiers listed below, as appropriate. Up to five qualifiers may be reported on the appropriate reporting form for each compound. The qualifiers used are:

U : This flag indicates the compound was analyzed for but not detected. The Contract Required Quantitation Limit (CRQL), or reporting limit, will be adjusted to reflect any dilution and, for soils, the percent moisture.

J : This flag indicates an estimated value. The flag is used as detailed below:

1. When estimating a concentration for tentatively identified compounds (TICs) where a response factor of 1:1 is assumed for the TIC analyte,

2. When the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the adjusted CRQL (or Reporting Limit) but greater than zero, and

3. When the retention time data indicate the presence of a compound that meets the pesticide and/or Aroclor or other GC or HPLC identification criteria, and the result is less than the adjusted CRQL (or Reporting Limit) but greater than zero. For example, if the CRQL (or Reporting Limit) is 10 µg/L, but a concentration of 3 µg/L is calculated, it is reported as 3J.

N : This flag indicates presumptive evidence of a compound. This flag is only used for TICs, where the identification is based on a mass spectral library search and must be used with the J flag. For generic characterization of a TIC such as "chlorinated hydrocarbon" (or for an "unknown," with no matches ≥85%), the N flag is not used.

P : In the EPA's Contract Laboratory Program (CLP), this flag is used for a pesticide/Aroclor target analyte, when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the Form I and flagged with a P.
For SW-846 GC and HPLC analyses, when the Relative Percent Difference (RPD) is greater than 40% and there is no evidence of chromatographic anomalies or interferences, then the lower of the two values is reported and flagged with a P on the reporting form. When the RPD is equal to or less than 40%, our policy is to also report the lower of the two values, although the choice could be a project specific issue. These SW-846 policies are consistent with Method 8000C. If Method 8000B is required, the higher of the two values is reported. For certain HPLC analyses, if one of the HPLC columns displays co-elution of target analytes, all results are reported from a primary column displaying no co-elution. Results are still flagged with a P if the RPD between columns is greater than 40%.

C : This flag applies to GC or HPLC results where the identification has been confirmed by GC/MS. If GC/MS confirmation was attempted but was unsuccessful, this flag is not applied; a laboratory-defined flag is used instead (see the X/Y/Z qualifier.)

# DATA REPORTING QUALIFIERS (continued)

B : This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates probable blank contamination and warns the data user to take appropriate action. This flag is used for a TIC as well as for a positively identified target compound. The combination of flags BU or UB is not an allowable policy. Blank contaminants are flagged B only when they are detected in the sample.

E : This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis. If one or more compounds have a concentration greater than the upper level of the calibration range, the sample or extract will be diluted and reanalyzed. All such compounds with a concentration greater than the upper level of the calibration range will have the result flagged with an E on the appropriate reporting form for the original analysis.

D : If a sample or extract is reanalyzed at a higher dilution factor, for example when the concentration of an analyte exceeds the upper calibration range, the DL suffix is appended to the sample number on the appropriate reporting form for the more diluted sample, and **all** reported concentrations on that form are flagged with the D flag. This flag alerts data users that any discrepancies between the reported concentrations may be due to dilution of the sample or extract.

NOTE 1: The D flag is not applied to compounds which are not detected in the sample analysis i.e. compounds reported with the CRQL (or Reporting Limit) and the U flag.

NOTE 2: Separate reporting forms are used for reporting the original analysis (Client Sample No. XXXXX) and the more diluted sample analysis (Client Sample No. XXXXXDL) i.e. the results from both analyses <u>are not combined</u> on a single reporting form.

A: This flag indicates that a TIC is a suspected aldol-condensation product.

S: In the SOM01.2 SOW document, this flag is used to indicate an estimated value for Aroclor target compounds where a valid 5-point initial calibration was not performed prior to the analytes detection in a sample. If an "S" flag is used for a specific Aroclor, then a reanalysis of the sample is required after a valid 5-point calibration is performed for the detected Aroclor. The "S" flag is not utilized for non CLP analyses.

X/Y/Z : Other specific flags may be required to properly define the results. If used, the flags will be fully described in the SDG Narrative. The laboratory-defined flags are limited to X, Y, and Z.

# B. Chain of Custody Records

The laboratory shall include a copy of the Chain-of-Custody (CoC) documentation for all of the samples in the Work Order/SDG. The CoC documents shall be arranged in increasing Client Sample ID number order, considering both letters and numbers.

# I. Target Compound Results

## (ANALYSIS DATA SHEETS)

### Analysis Data Sheets (ADS) and Surrogate Recovery Results

Sample data shall be arranged in packets with the Analysis Data Sheet (ANALYSIS DATA SHEET), followed by the raw data for the sample. These sample packets shall be placed in increasing Client Sample ID number order, considering both letters and numbers.

a. Target Analyte Results (ANALYSIS DATA SHEET)
Tabulated results (identification and quantitation) shall be included.

b. Copies of Chromatograms
Positively identified compounds shall be labeled with the names of compounds, either directly out from the peak on the chromatogram, or on a printout of retention times on the data system printout if retention times are printed over the peak on the chromatogram. Included for each sample or sample extract, dilutions and reanalyses. The chromatogram shall contain the following header information: Client Sample ID Number, volume injected (uL), date and time of injection, GC column ID, GC instrument ID, Lab file ID and analyst ID.

c. Copies of Chromatograms from the Second Column
(where required)

d. Data System Printout
A printout of retention time and corresponding peak height or peak area shall accompany each chromatogram. Where edits have been made, initialing, dating and integration time range are required.

# J. Initial Calibration Data

## (INITIAL CALIBRATION DATA)

For all GC columns, all instruments, in chronological order by GC column and instrument. If more than one instrument is used, forms shall be arranged in order by instrument. Multiple initial calibrations from the same instrument shall be in chronological order. Within each initial calibration, the standards are in order by level, from lowest to highest.

1. Quantitation reports and chromatograms for the initial calibration.

2. Chromatogram peak displaying each manual integration, depicting integration time range.

# K. Continuing Calibration Data

## (CONTINUING CALIBRATION CHECK)

For all performance evaluation mixtures (if applicable) and continuing calibration verification standards, on all GC columns and instruments, in chronological order by GC column and instrument. If more than one instrument is used, forms shall be arranged in order by instrument. If multiple continuing calibrations from the same instrument are used, they shall be in chronological order.

(1) Quantitation reports and chromatogram for all continuing calibrations.

(2) Chromatogram peak displaying each manual integration, depicting integration time range.

# M. Blank Data

Arranged by type of blank (method, instrument or sulfur cleanup where applicable) in chronological order, by instrument.
Shall include:

1) Method blanks shall be in chronological order, by extraction date.
2) Instrument blanks shall be in chronological order, by GC column and instrument.
3) Sulfur cleanup blanks (if needed) shall be in chronological order, by date of analysis.

- Tabulated Results (ANALYSIS DATA SHEET)
- Chromatograms and date system printout(s) for each GC column and instrument used for analysis.

The presence of the Chemist's/Analyst's employee ID number, or signature, on this run log attests that strict compliance with the method's SOP has occurred. Any SOP deviations require documentation by the responsible chemist/analyst together with the chemist's/analyst's initials and the initials of the lab supervisor and a QA department representative, signifying approval of the deviation.

Diane Shaffer
Diane Shaffer - QA Analyst

**Date Passed:** 20-Oct-2010 **Balance:** 1128342313

**Manufactured under Restek's ISO 9001:2008 Registered Quality System Certificate #FM 80397**

1 Expiration date of the unopened ampule stored at the recommended storage condition.
2A Purity is determined by one or more of the following techniques: GC/FID, HPLC, GC/ECD, GC/MS. Value is rounded to the nearest whole number. Chemical identity is confirmed using GC/MS. See data pack or contact provider for further details.
2B Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities.
2C The following types of compounds will have a listed purity of less than 99%: Aldehyde/Ketone-DNPH compounds, Bromides, Chlorides, HCL salts, HBR salts, sulfates, hydrates, and other compounds as necessary. The listed purity is a correction factor that is equivalent to the percentage of parent compound in the molecule. This correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution. The concentration listed on the certificate is the concentration of the parent compound in the solution.
2D Purity of isomeric compounds is reported as the sum of the isomers. Value is rounded to the nearest whole number after summation.
3 Based upon gravimetric preparation with balance calibration verified using NIST traceable weights (seven mass levels) and/or class A glassware used for dilutions.
4 Uncertainties determined using data for balances and glassware from measurement systems analysis methodology, raw material purity, and, when significant, equipment tolerances or calibration results.

2B Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities.

2C The following types of compounds will have a listed purity of less than 99%: Aldehyde/Ketone-DNPH compounds, Bromides, Chlorides, HCL salts, HBR salts, sulfates, hydrates, and other compounds as necessary. The listed purity is a correction factor that is equivalent to the percentage of parent compound in the molecule. This correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution. The concentration listed on the certificate is the concentration of the parent compound in the solution.

2D Purity of isomeric compounds is reported as the sum of the isomers. Value is rounded to the nearest whole number after summation.

3 Based upon gravimetric preparation with balance calibration verified using NIST traceable weights (seven mass levels) and/or class A glassware used for dilutions.

4 Uncertainties determined using data for balances and glassware from measurement systems analysis methodology, raw material purity, and, when significant, equipment tolerances or calibration results.

Manufactured under Restek's ISO 9001:2008
Registered Quality System
Certificate #FM 80397

1 Expiration date of the unopened ampule stored at the recommended storage condition is the last day of the month listed.

2A Purity and chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/ECD, GC/MS. Purity value is rounded to the nearest whole number. See data pack or contact Restek for further details.

2B Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities.

2C The following types of compounds will have a listed purity of less than 99%: Aldehyde/Ketone-DNPH compounds, Bromides, Chlorides, HCL salts, HBR salts, sulfates, hydrates, and other compounds as necessary. The listed purity is a correction factor that is equivalent to the percentage of parent compound in the molecule. This correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution. The concentration listed on the certificate is the concentration of the parent compound in the solution.

2D Purity of isomeric compounds is reported as the sum of the isomers. Value is rounded to the nearest whole number after summation.

3 Based upon gravimetric preparation with balance calibration verified using NIST traceable weights (seven mass levels) and/or class A glassware used for dilutions.

4 Uncertainties determined using data for balances and glassware from measurement systems analysis methodology, raw material purity, and, when significant, equipment tolerances or calibration results.

5A Containers are overfilled to ensure the packaged amount, as a minimum.

5B Restek supplies deactivated vials along with most standards packed in 2 mL ampules, for the handling and storage of standards. Due to space constraints, Restek does not supply vials for larger volume ampules. Samples should be transferred into deactivated vials for handling and storage. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31840, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory, as a custom ordered item. Contact your Restek sales or customer service representative for details.

Tech Tip:

Decachlorobiphenyl has poor solubility in most organic solvents. The maximum concentration that can be prepared in acetone, hexane, or isooctane is 200µg/mL. Temperature will affect the solubility as well. Storing solutions at reduced temperatures will cause decachlorobiphenyl to precipitate.
Products containing decachlorobiphenyl must be sonicated for a minimum of 10 minutes prior to opening the ampul. Because each ultrasonic bath operates at a different energy level, 10 minutes is a guideline only. Longer sonication time will not affect product quality.
These precautions apply to working solutions prepared in your laboratory as well. The amount of compound that precipitates depends on concentration AND temperature. If you store your your standards at a temperature lower than 4°C (even dilute solutions), allow extra sonication time.

# Memorandum

| | |
|---|---|
| **To:** | File |
| **From:** | Kathy Olsen, Environmental Scientist |
| **Date:** | 12/14/2012 |
| **Project Name:** | Closure Report Addendum for HWMU7 |
| **Project Number:** | JN: B03204-122E |
| **Subject:** | Data Validation Report – November 28-29, 2012 - Aroclor 1254 Groundwater Monitoring Event |
| **cc:** | |

Draper Aden Associates, of Blacksburg, Virginia, performed a comprehensive manual review of the Aroclor 1254 analytical results for the November 28-29, 2012 groundwater monitoring event at Hazardous Waste Management Unit 7 (HWMU 7) located at the located at the Radford Facility Army Ammunition Plant (RFAAP) in Radford, Virginia.

The event was performed as part of closure activities associated with the Closure Report Addendum, conducted in accordance with the Closure Plan Amendment for HWMU 7. The Closure Plan Amendment was approved by the Virginia Department of Environmental Quality (VDEQ) in correspondence dated September 27, 2011, as part of the Class 3 Permit Modification for the *Final Hazardous Waste Management Post-Closure Care Permit for Hazardous Waste Management Units (HWMUs) 5, 7, 10, and 16* (Permit).

On behalf of BAE Systems, Ordnance Systems Inc., Draper Aden Associates collected the following groundwater samples: 7MW12B, 7WCA, 7WDUP, 7W11B, 7MW6, 7W9C, 7W10B, 7W10C and 7W13 as noted on the attached chain of custody. Sample 7WDUP was submitted to the laboratory as blind field sample duplicate for 7WCA. Additional sample aliquot was collected for sample 7W11B, the sample selected for project specific matrix spike/matrix spike duplicate (MS/MSD) analysis.

The groundwater samples were sent via overnight courier to CompuChem (CompuChem), a Division of Liberty Analytical, of Cary, North Carolina. The samples were analyzed for Aroclor 1254 only by *USEPA SW-846 Test Methods for Evaluating Solid Wastes* (SW-846) Method 8082A. Compuchem reported the final analytical results in work order 1212004 which was received by Draper Aden Associates on December 12, 2012. Compuchem is a Virginia Environmental Laboratory Accreditation Program (VELAP) accredited laboratory for the above reported analyte, method and matrix.

Draper Aden Associates conducted data validation of the above noted data set using summary tables and instrument data provided by the analyzing laboratory. Data validation was conducted in general accordance with data validation guidelines in USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008, where applicable. Where quality assurance/quality control criteria differed, the analytical

method criteria were used or, laboratory specific criteria were used when no other acceptance criteria were available. Validation of this data set is limited to the items detailed in this report.

The following information and attached table summarize data validation results. Laboratory and validated results were reported to the method detection limit (DL). Results less than the quantitation limit (QL) should be considered as estimated values.

The chain of custody (COC) documentation was complete, unless noted below. The laboratory received the samples on ice and in good condition with custody seals intact. The COC was appropriately signed and dated by field and laboratory personnel. Technical holding time criteria were met.

The final certificate of analysis for Method 8082A was complete in its presentation and the data were of acceptable quality. The data set exhibited the laboratory's ability to achieve the reported QL. The QL was at or below the USEPA MCL (for total PCBs).

Quality control (QC) history documentation and QC check sample criteria were met. Instrument calibration, blank, surrogate, retention time, MS/MSD, and laboratory control sample criteria were met. A review of transcriptions from instrument data to sample summary sheets was performed. Representative calculations were performed on ten percent of the data set. No significant deviations from specific QA/QC criteria were identified during the review process. The method DL study and IDOC study for analyst B. Lake were provided as a revision. No other corrective action was needed.

For this event, Aroclor 1254 was not detected at or above the method detection limit or QL and all results were validated and reported as "U" to note the target analyte was analyzed for, but not detected above the DL.

## SW-846 METHOD 8082A (PCBS AS AROCLORS) GC DATA VALIDATION

***Comment:*** *Method 8082A involves extraction (SW-846 Method 3510C) for water samples. Target analytes are separated and quantified by GC using electron capture detection (ECD).*

### A. QC DELIVERABLES PACKAGE:

1. Was the case narrative present/signed by a lab representative? ☑ YES ☐ NO
2. Was the Chain of Custody present/signed by a lab representative? ☑ YES ☐ NO
3. Were the sample results included for the sample locations? ☑ YES ☐ NO
4. Did the laboratory report results for required target analytes? ☑ YES ☐ NO
5. Did the QLs reported on sample summary sheets agree with the instrument specific MDL study? ☑ YES ☐ NO

**Comments:** QC deliverables requirements were met. Laboratory reported Aroclor 1254 only.

### B. INSTRUMENT QC HISTORY DOCUMENTATION CRITERIA:

1. Was the extraction method specified? ☑ YES ☐ NO
2. Were instrument specific DLs and QLs provided? ☑ YES ☐ NO
3. Was the instrument calibration range specified? ☑ YES ☐ NO

**Comments:** Instrument QC history criteria were met.

### C. CHECK SAMPLE CRITERIA: *(Initial Demonstration of Capability)*

1. Did the check sample contain the required target analytes? ☑ YES ☐ NO
2. Were the check samples analyzed in quadruplicate? ☑ YES ☐ NO
3. Were target analyte average recoveries reported? ☑ YES ☐ NO
4. Were the target analyte standard deviations reported? ☑ YES ☐ NO

**Comments:** Check sample criteria were met.

### D. TECHNICAL HOLDING TIME AND PRESERVATION CRITERIA:

1. Was the 7-day sample collection to extraction holding time met? ☑ YES ☐ NO
2. Was the 40-day extraction to analysis holding time met? ☑ YES ☐ NO
3. Were the samples received at <6°C? ☑ YES ☐ NO

**Comments:** Sample preservation, extraction and holding time criteria were met. It should be noted that the SW-846 holding time requirement was revised to a year.

### E. INITIAL GC CALIBRATION CRITERIA:

1. Was a minimum five point calibration analyzed prior to analysis present (Aroclor 1254)? ☑ YES ☐ NO
2. Calibration type used by laboratory: *External.*
3. Was the %Relative Standard Deviation for the analytes <20%? ☑ YES ☐ NO
4. State the Quantitation Method used by the laboratory: Avg CF
5. List target analytes with a % RSD >20%: *None.*
6. Was the lowest concentration calibration standard at or below the QL, MCL, regulatory compliance or action limit? ☑ YES ☐ NO
7. Were calibration standards dropped to meet calibration criteria? ☐ YES ☑ NO

**Comments:** Initial calibration criteria were met. Low calibration standard concentration for Aroclor 1254 was 0.5 µg/l.

## F. CALIBRATION VERIFICATION (CV) CRITERIA:

1. Was a CV standard performed every 12-hours? ☑ YES ☐ NO
2. Was a mid-concentration standard analyzed after each group of 10 samples (recommended) and after 20 samples (required)? ☑ YES ☐ NO
3. Was a CV standard analyzed at the end of the analytical sequence? ☑ YES ☐ NO
   *Note: Samples containing detected target analytes must be bracketed by an acceptable calibration verification standard.*
4. Did analytes/surrogate have a % Difference (%D) within ± 20%? ☑ YES ☐ NO
   If no, was a new calibration curve prepared? *N/A*
5. Did the CV RT fall within the daily RT window? ☑ YES ☐ NO
6. Were the target analytes and surrogates present in the CV? ☑ YES ☐ NO

**Comments:** Calibration verification criteria were met.

## G. BLANK CRITERIA:

1. Was a blank analyzed prior to the batch samples? ☑ YES ☐ NO
2. Was a blank analyzed after 20 batch samples? ☑ NA ☐ YES ☐ NO
3. Was an extraction blank analyzed with the batch samples? ☑ YES ☐ NO
4 Was a trip blank analyzed per analytical batch? ☐ YES ☑ NO
5. List target analytes identified in the blanks: *None.*

**Comments:** Blank criteria were met.

## H. SURROGATE CRITERIA:

1. Were the samples, standards, blanks, and checks spiked with at least 1 surrogate analyte for dual column analysis? ☑ YES ☐ NO
2. List surrogate used and laboratory's surrogate % recovery range criteria:
   tetrachloro-m-xylene (TCX): 30-130%
   decachlorobiphenyl (DCB): 30-130% (required)
3. List samples whose surrogate % recoveries were not within the range: *None*

**Comments:** Surrogate criteria were met.

## I. RETENTION TIME CRITERIA:

1. Were the daily Retention Time (RT) windows reported? ☑ YES ☐ NO
2. Were the surrogate/MS/MSD/LCS/CV RTs within RT window? ☑ YES ☐ NO

**Comments:** Retention time criteria were met.

## J. MATRIX SPIKE/ MATRIX SPIKE DUPLICATE (MS/MSD) CRITERIA:

1. Was a MS/MSD analyzed per sample batch or every 20 samples, whichever may occur first? ☑ YES ☐ NO
2. Did the MS/MSD contain Aroclor 1254? ☑ YES ☐ NO
3. Was the MS/MSD analyzed on the specific project matrix? ☑ YES ☐ NO

4. List the MS % recovery range: *30-135%; RPD: 0-40*
5. Were any analytes qualified as estimated? ☐ YES ☑ NO
   - If yes, and the LCS for the analyte(s) recovered within control limits, matrix interference is suspected.

**Comments:** MS/MSD criteria were met. MS/MSD was spiked with Aroclor 1254.

## K. LABORATORY CONTROL SAMPLE (LCS) CRITERIA:

1. Was a LCS included in the sample analysis? ☑ YES ☐ NO
2. Did the LCS contain Aroclor 1254? ☑ YES ☐ NO
3. List the LCS analytes and the recovery range criteria: *50-150%*
4. List the LCS analytes not within the recovery range criteria: *None.*

**Comments:** LCS criteria were met. LCS was spiked with Aroclor 1254.

## L. TARGET ANALYTE IDENTIFICATION:

1. Were the reported analytes within the RT windows? ☑ NA ☐ YES ☐ NO
2. Were the reported analytes confirmed? ☑ NA ☐ YES ☐ NO
   When using a second GC column for confirmation, the second column must meet the same calibration acceptance criteria.
3. Did any result exceed the calibration range? ☐ YES ☑ NO
4. Were sample dilutions required? ☐ YES ☑ NO
5. Were analyte concentrations that were recorded on the sample quantitation reports accurately transferred to the sample summary sheets? ☑ NA ☐ YES ☐ NO

**Comments:** Target analyte identification criteria were met. Aroclor 1254 was not detected at or above the detection limit.

## M. CORRECTIVE ACTION TAKEN AND GENERAL COMMENTS:

**Comments:** The MDL study and IDOC study for analyst B. Lake were provided as a revision. No other corrective action was needed. Calculation verification was performed on 10% of the data set.

## REFERENCES:

Draper Aden Associates conducted data validation of the above noted data set using summary tables and raw data provided by the analyzing laboratory. Data validation was conducted in general accordance with SW-846 Method requirements (Test Methods for Evaluating Solid Wastes - Physical and Chemical Methods, USEPA SW-846, 3rd edition - Final Update I, II/IIA, III and subsequent updates) and CLP data validation guidelines (USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, October 1999 and USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008, where applicable). Validation of this data set is limited to the items detailed in this report.

**LIMITATIONS:**

Draper Aden Associates prepared this document (which may include drawings, specifications, reports, studies and attachments) in accordance with the agreement between Draper Aden Associates and the client.

The standard of care for all professional engineering, environmental and surveying and related services performed or furnished by Draper Aden Associates under this Agreement are the care and skill ordinarily used by members of these professions practicing under similar circumstances at the same time and in the same locality. Draper Aden Associates makes no warranties, express or implied, under this Agreement in connection with Draper Aden Associates' services.

Conclusions presented are based upon a review of available information, the results of our field studies, and/or professional judgment. To the best of our knowledge, information provided by others is true and accurate, unless otherwise noted. Draper Aden Associates' liability, hereunder, shall be limited to amounts due Draper Aden Associates for services actually rendered, or reimbursable expenses actually incurred.

Any reuse or modification of any of the aforementioned documents (whether hard copies or electronic transmittals) prepared by Draper Aden Associates without written verification or adaptation by Draper Aden Associates will be at the sole risk of the individual or entity utilizing said documents and such use is without the authorization of Draper Aden Associates. Draper Aden Associates shall have no legal liability resulting from any and all claims, damages, losses, and expenses, including attorney's fees arising out of the unauthorized reuse or modification of these documents. Client shall indemnify Draper Aden Associates from any claims arising out of unauthorized use or modification of the documents whether hard copy or electronic.

# Comprehensive Data Validation Report - Summary of Validated Results

Draper Aden Associates
Engineering • Surveying • Environmental Services

## Facility: HWMU-7 Monitoring Event: November 28, 2012

| Analyte | Sample ID | Laboratory Result (ug/L) | Q | Validated Result (ug/L) | Q | QL (ug/L) | DL (ug/L) | Validation Notes |
|---|---|---|---|---|---|---|---|---|
| **Method: 8082A** | | | | | | | | |
| *Laboratory: CompuChem, a Division of Liberty Analytical, Cary, NC* | | | | | | | | |
| **Aroclor 1254** | 7W12B | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |
| | 7MW6 | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |
| | 7WCA | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |
| | 7W11B | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |
| | 7W9C | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |
| | 7W10B | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |
| | 7W10C | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |
| | 7W13 | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |
| | 7WDUP | 0.5 | U | U | | 0.5 | 0.072 | Analyte not detected. |

**Definitions:**

**QL** Denotes quantitation limit.
**DL** Denotes method detection limit.
**Q** Denotes data qualifier.
**U** Denotes analyte not detected at or above laboratory detection limit (DL) or QL.
**J** Denotes analyte reported at or above laboratory detection limit and associated result is estimated. When used with "U" (i.e., "UJ"), denotes analyte not detected at or above laboratory detection limit and project required quantitation limit/detection limit is estimated.
**R** Denotes result rejected.
**Laboratory Data Qualifiers**,
"U" denotes not detected at or above the DL or QL.

CompuChem
a division of Liberty Analytical Corporation

**Demonstration of Capability**
**Certification Statement**

Study Date: 1/27/03
Laboratory Name: CompuChem, a division of Liberty Analytical Corporation
Laboratory Address: 501 Madison Avenue, Cary, NC 27513
Analyst Name/Employee ID#: **Lake, Brad/2512**

Matrix: Water & Soil
Method Number: 8081/8082
SOP No./Rev#: IP 192/ 2.2.4.10/3 & IP 194/2.2.5.3/2
Analyte/Class of Analytes/Measured Parameters: Pesticides & PCBs

We, the undersigned, CERTIFY that:

1. The analyst identified above, using the cited test method, which is in use at this facility for the analyses of samples under the National Environmental Laboratory Accreditation Program, have met the Demonstration of Capability.

2. The test method was performed by the analyst identified on this certification.

3. A copy of the test method and the laboratory-specific SOPs are available for all personnel on-site.

4. The data associated with the demonstration capability are true, accurate, complete and self-explanatory.

5. All raw data (including a copy of this certification form) necessary to reconstruct and validate these analyses have been retained at the facility, and that the associated information is well organized and available for review by authorized assessors.

| | | |
|---|---|---|
| Rich Henson, Lab Technical Director<br>Technical Director's Name and Title | Signature | 020503<br>Date |
| Linda Carter, QA Manager<br>Quality Assurance Officer's Name | Linda Carter<br>Signature | 2/5/03<br>Date |

This certification form must be completed each time a demonstration of capability study is completed.

| | | |
|---|---|---|
| (1) | True: | Consistent with supporting data. |
| | Accurate: | Based on good laboratory practices consistent with sound scientific principles/practices. |
| | Complete: | Includes the results of all supporting performance testing. |
| | Self-Explanatory: | Data properly labeled and stored so that the results are clear and require no additional explanation. |

# Memorandum

| | |
|---|---|
| **To:** | File |
| **From:** | Kathy Olsen, Environmental Scientist |
| **Date:** | 1/16/2013 |
| **Project Name:** | Closure Report Addendum for HWMU7 |
| **Project Number:** | JN: B03204-122E |
| **Subject:** | Data Validation Report – October 23, 2012 - PCB Aroclor Soil Event |
| **cc:** | |

Draper Aden Associates, of Blacksburg, Virginia, performed a comprehensive manual review of the analytical results for the October 23, 2012 soil monitoring event at Hazardous Waste Management Unit 7 (HWMU 7) located at the located at the Radford Facility Army Ammunition Plant (RFAAP) in Radford, Virginia.

The event was performed as part of closure activities associated with the Closure Report Addendum, conducted in accordance with the Closure Plan Amendment for Hazardous Waste Management Unit 7. The Closure Plan Amendment was approved by the Virginia Department of Environmental Quality (VDEQ) in correspondence dated September 27, 2011, as part of the Class 3 Permit Modification for the *Final Hazardous Waste Management Post-Closure Care Permit for Hazardous Waste Management Units (HWMUs) 5, 7, 10, and 16* (Permit).

On behalf of BAE Systems, Ordnance Systems Inc., Draper Aden Associates collected the following soil samples:

| | | | |
|---|---|---|---|
| 7GP-17 (11') | 7GP-18 (14') | 7GP-19 (14') | 7GP-20 (14.5') |
| 7GP-21 (13.5') | 7GP-22 (13') | 7GP-23 (12.5') | 7GP-24 (14') |

Also collected were an equipment rinseate blank, EQ-1, (water) and a blind field sample duplicate for 7GP-22 (13'), sample 7GP-22-22 (13'). Additional sample aliquot was also collected for sample 7GP-20 (14.5'), the sample selected for project specific matrix spike/matrix spike duplicate (MS/MSD) analysis.

The samples were sent via overnight courier to CompuChem (CompuChem), a Division of Liberty Analytical, of Cary, North Carolina. The samples were analyzed for polychlorinated biphenyls (PCBs) as aroclors by *USEPA SW-846 Test Methods for Evaluating Solid Wastes* (SW-846) Method 8082A; and total residue as percent solids by MCAWW 160.3 MOD. Compuchem reported the final analytical results in two work orders (1210139 and 1210140) which were received by Draper Aden Associates on November 5, 2012. Compuchem is a Virginia Environmental Laboratory Accreditation Program (VELAP) accredited laboratory for the above reported analytes, method and matrices.

Draper Aden Associates conducted data validation of the above noted data set using summary tables and instrument data provided by the analyzing laboratory. Data validation was conducted in general accordance with data validation guidelines presented in *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008, where applicable. Where quality assurance/quality control criteria differed, the analytical method criteria were used or, laboratory specific criteria were used when no other acceptance criteria were available. Validation of this data set is limited to the items detailed in this report.

The following information and attached table summarize data validation results. Laboratory and validated results were reported to the method detection limit (DL). Results less than the quantitation limit (QL) should be considered as estimated values.

The chain of custody (COC) documentation was complete, unless noted below. The laboratory received the samples on ice and in good condition with custody seals intact. The chain of custody was appropriately signed and dated by field and laboratory personnel. Technical holding time criteria were met. The COC listed the equipment rinseate blank sample ID as EQ-1; however, the bottle was labeled EB-1. EB-1 was used as the sample ID for the equipment rinseate blank and no data qualifications were required.

The final certificate of analysis for Method 8082A was complete in its presentation and the data were of acceptable quality. The data set exhibited the laboratory's ability to achieve the reported QL.

Quality control (QC) history documentation and QC check sample criteria were met. Instrument calibration, blank, surrogate, retention time, MS/MSD, and laboratory control sample criteria were met, except where noted below. No PCBs were reported in the sample/blind field duplicate. A review of transcriptions from instrument data to sample summary sheets was performed. Representative calculations were performed on ten percent of the data set. No significant deviations from specific QA/QC criteria were identified during the review process except where noted below. The method DL study and IDOC study for analyst B. Lake were provided as a revision. No other corrective action was needed.

The MSD recovered high for Aroclor 1254. Detected results for Aroclor 1254 were qualified as estimated to note this QC deficiency (see Table 1 below).

Aroclor 1254 was detected at or above the detection limit in and/or QL in six samples (see Table 1 below for list of detections). A split sampling event was performed in conjunction with this sampling event. Collected split samples were sent to TestAmerica Burlington, in Burlington, Vermont. The TestAmerica Burlington results confirmed the original results and the original results from CompuChem were reported as final results.

Sample results were confirmed using two dissimilar columns. For a result greater than the QL, the agreement between the dual column concentrations was less than 20 (relative percent difference). Aroclor 1254 was reported below the QL in 7GP-21 (13.5') and qualified as estimated, "J." Except where noted above, sample results remain as reported by the laboratory and were validated and reported as "U" to note the target analyte was analyzed for, but not detected above the DL or QL.

## *Table 1: Summary of Detections:*

| *ANALYTE* | *METHOD* | *LAB RESULT* | *VALIDATED RESULT* | *QL* | *UNITS** | *DATA VALIDATION NOTES* |
|---|---|---|---|---|---|---|
| ***Sample ID:* 7GP-17 (11')** | | | | | | |
| Aroclor 1254 | 8082A | 150 | 150 J | 20 | µg/kg | MSD recovered high. |
| ***Sample ID:* 7GP-18 (14')** | | | | | | |
| Aroclor 1254 | 8082A | 93 | 93 J | 20 | µg/kg | MSD recovered high. |
| ***Sample ID:* 7GP-19 (14')** | | | | | | |
| Aroclor 1254 | 8082A | 390 | 390 J | 20 | µg/kg | MSD recovered high. |
| ***Sample ID:* 7GP-20 (14.5')** | | | | | | |
| Aroclor 1254 | 8082A | 400 | 400 J | 20 | µg/kg | MSD recovered high. |
| ***Sample ID:* 7GP-21 (13.5')** | | | | | | |
| Aroclor 1254 | 8082A | 6.7 J | 6.7 J | 20 | µg/kg | Result < QL. MSD recovered high. |
| ***Sample ID:* 7GP-23 (12.5')** | | | | | | |
| Aroclor 1254 | 8082A | 240 | 240 J | 20 | µg/kg | MSD recovered high. |

**Notes:**
Target analytes detected at or above the detection limit or QL and/or analytical data that required a data validation qualifier due to quality control deviations noted above are summarized above. *Results were reported on a dry weight basis.

**Data Validation Qualifiers:**
**QL** Denotes quantitation limit/reporting limit.
**DL** Denotes laboratory detection limit.
**U** Validation qualifier denotes analyte not detected at or above DL.
**J** Denotes analyte reported above DL and associated result is estimated.
**UJ** Denotes analyte not detected at or above the DL and associated DL and QL are estimated.

**Laboratory Data Qualifiers:**
**J** Lab qualifier denotes target analyte detected less than the QL, result estimated.
**U** Lab qualifier denotes analyte not detected at or above detection limit.
**B** Lab qualifier denotes analyte detected at or above the detection limit or QL in the associated laboratory preparation blank

## SW-846 METHOD 8082A (PCBS AS AROCLORS) GC DATA VALIDATION

***Comment:*** *Method 8082A involves soxhlet extraction (SW-846 Method 3540C) for soil samples(Method 3510 water). Target analytes are separated and quantified by GC using electron capture detection (ECD). Samples were acid washed prior to analysis for cleanup.*

### A. QC DELIVERABLES PACKAGE:

1. Was the case narrative present/signed by a lab representative? ☑ YES ☐ NO
2. Was the Chain of Custody present/signed by a lab representative? ☑ YES ☐ NO
3. Were the sample results included for the sample locations? ☑ YES ☐ NO
4. Did the laboratory report results for required target analytes? ☑ YES ☐ NO
5. Did the QLs reported on sample summary sheets agree with the instrument specific MDL study? ☑ YES ☐ NO

**Comments:** QC deliverables requirements were met. Laboratory reported total PCBs as aroclors which included Aroclors 1016, 1221, 1232, 1242, 1248, 1254 and 1260.

### B. INSTRUMENT QC HISTORY DOCUMENTATION CRITERIA:

1. Was the extraction method specified? ☑ YES ☐ NO
2. Were instrument specific DLs and QLs provided? ☑ YES ☐ NO
3. Was the instrument calibration range specified? ☑ YES ☐ NO

**Comments:** Instrument QC history criteria were met.

### C. CHECK SAMPLE CRITERIA: *(Initial Demonstration of Capability)*

1. Did the check sample contain the required target analytes? ☑ YES ☐ NO
2. Were the check samples analyzed in quadruplicate? ☑ YES ☐ NO
3. Were target analyte average recoveries reported? ☑ YES ☐ NO
4. Were the target analyte standard deviations reported? ☑ YES ☐ NO

**Comments:** Check sample criteria were met.

### D. TECHNICAL HOLDING TIME AND PRESERVATION CRITERIA:

1. Was the 14-day sample collection to extraction holding time met (soil)? ☑ YES ☐ NO
   Was the 7-day sample collection to extraction holding time met (water)? ☑ YES ☐ NO
2. Was the 40-day extraction to analysis holding time met? ☑ YES ☐ NO
3. Were the samples received at <6°C? ☑ YES ☐ NO

**Comments:** Sample preservation, extraction and holding time criteria were met. It should be noted that the SW-846 holding time requirement was revised to a year.

### E. INITIAL GC CALIBRATION CRITERIA:

1. Was a minimum five point calibration analyzed prior to analysis present (Aroclors 1016, 1248, 1254 and 1260)? ☑ YES ☐ NO
2. Calibration type used by laboratory: *External.*
3. Was the %Relative Standard Deviation for the analytes <20%? ☑ YES ☐ NO
4. State the Quantitation Method used by the laboratory: Avg CF

5. List target analytes with a % RSD >20%: *None.*
6. Was the lowest concentration calibration standard at or below the QL, regulatory compliance or action limit? ☑ YES ☐ NO
7. Were calibration standards dropped to meet calibration criteria? ☐ YES ☑ NO

**Comments:** Initial calibration criteria were met. Low calibration standard concentration for Aroclors 1016, 1248, 1254 and 1260 was at or below the QL. A single calibration standard was analyzed prior to sample analysis for the remaining Aroclors.

## F. CALIBRATION VERIFICATION (CV) CRITERIA:

1. Was a CV standard performed every 12-hours? ☑ YES ☐ NO
2. Was a mid-concentration standard analyzed after each group of 10 samples (recommended) and after 20 samples (required)? ☑ YES ☐ NO
3. Was a CV standard analyzed at the end of the analytical sequence? ☑ YES ☐ NO
   *Note: Samples containing detected target analytes must be bracketed by an acceptable calibration verification standard.*
4. Did analytes/surrogate have a % Difference (%D) within ± 20%? ☑ YES ☐ NO
   If no, was a new calibration curve prepared? *N/A*
5. Did the CV RT fall within the daily RT window? ☑ YES ☐ NO
6. Were the target analytes and surrogates present in the CV? ☑ YES ☐ NO

**Comments:** Calibration verification criteria were met.

## G. BLANK CRITERIA:

1. Was a blank analyzed prior to the batch samples? ☑ YES ☐ NO
2. Was a blank analyzed after 20 batch samples? ☑ NA ☐ YES ☐ NO
3. Was an extraction blank analyzed with the batch samples? ☑ YES ☐ NO
4. Was a trip blank analyzed per analytical batch? ☑ NA ☐ YES ☐ NO
5. List target analytes identified in the blanks: *None.*

**Comments:** Blank criteria were met. Reported that contained EQ-1 was not validated and results were not detected at or above the DL or QL.

## H. SURROGATE CRITERIA:

1. Were the samples, standards, blanks, and checks spiked with at least 1 surrogate analyte for dual column analysis? ☑ YES ☐ NO
2. List surrogate used and laboratory's surrogate % recovery range criteria:
   tetrachloro-m-xylene (TCX): 30-130%
   decachlorobiphenyl (DCB): 30-130% (required)
3. List samples whose surrogate % recoveries were not within the range: *None*

**Comments:** Surrogate criteria were met.

## I. RETENTION TIME CRITERIA:

1. Were the daily Retention Time (RT) windows reported? ☑ YES ☐ NO
2. Were the surrogate/MS/MSD/LCS/CV RTs within RT window? ☑ YES ☐ NO

**Comments:** Retention time criteria were met.

## J. MATRIX SPIKE/ MATRIX SPIKE DUPLICATE (MS/MSD) CRITERIA:

1. Was a MS/MSD analyzed per sample batch or every 20 samples, whichever may occur first? ☑ YES ☐ NO
2. Did the MS/MSD contain Aroclor1254? ☑ YES ☐ NO
3. Was the MS/MSD analyzed on the specific project matrix? ☑ YES ☐ NO
4. List the MS % recovery range: *30-135%; RPD: 0-40*
5. Were any analytes qualified as estimated? ☑ YES ☐ NO
   - If yes, and the LCS for the analyte(s) recovered within control limits, matrix interference is suspected.

**Comments:** MS/MSD criteria were met except as noted above. MS/MSD was spiked with Aroclors 1016/1260/1254.

## K. LABORATORY CONTROL SAMPLE (LCS) CRITERIA:

1. Was a LCS included in the sample analysis? ☑ YES ☐ NO
2. Did the LCS contain Aroclor 1254? ☑ YES ☐ NO
3. List the LCS analytes and the recovery range criteria: *50-150%*
4. List the LCS analytes not within the recovery range criteria: *None.*

**Comments:** LCS criteria were met. LCS was spiked with Aroclors 1016/1260/1254.

## L. TARGET ANALYTE IDENTIFICATION/QUANTITATION:

1. Were the reported analytes within the RT windows, both columns? ☑ YES ☐ NO
2. Were the reported analytes confirmed? ☑ YES ☐ NO
   When using a second GC column for confirmation, the second column must meet the same calibration acceptance criteria.
3. Did any result exceed the calibration range? ☐ YES ☑ NO
4. Were sample dilutions required? ☐ YES ☑ NO
5. Were analyte concentrations that were recorded on the sample quantitation reports accurately transferred to the sample summary sheets? ☑ YES ☐ NO
6. Primary/secondary column concentration agreement < 20%D? ☑ YES ☐ NO
7. The laboratory used dual column GC system? ☑ YES ☐ NO
8. Was a second dissimilar GC column used? ☑ YES ☐ NO
8. Data evaluated from both columns? ☑ YES ☐ NO
9. Was quantitation based on comparison to similar Aroclor standard? ☑ YES ☐ NO

**Comments:** Target analyte identification and quantitation criteria were met. PCBs as Aroclor 1254 were reported above the detection limit in six samples (see Table 1). Results were reported from column "CLPPEST."

## M. CORRECTIVE ACTION TAKEN AND GENERAL COMMENTS:

**Comments:** Validation was performed on both columns. Reported that contained EQ-1 was not validated and results were not detected at or above the DL or QL. The IDOC study for analyst B. Lake was provided as a revision. The samples aud QC were acid washed after extraction and prior to analysis for cleanup purposes. No other corrective action was needed.

**LIMITATIONS:**

Draper Aden Associates prepared this document (which may include drawings, specifications, reports, studies and attachments) in accordance with the agreement between Draper Aden Associates and the client.

The standard of care for all professional engineering, environmental and surveying and related services performed or furnished by Draper Aden Associates under this Agreement are the care and skill ordinarily used by members of these professions practicing under similar circumstances at the same time and in the same locality. Draper Aden Associates makes no warranties, express or implied, under this Agreement in connection with Draper Aden Associates' services.

Conclusions presented are based upon a review of available information, the results of our field studies, and/or professional judgment. To the best of our knowledge, information provided by others is true and accurate, unless otherwise noted. Draper Aden Associates' liability, hereunder, shall be limited to amounts due Draper Aden Associates for services actually rendered, or reimbursable expenses actually incurred.

Any reuse or modification of any of the aforementioned documents (whether hard copies or electronic transmittals) prepared by Draper Aden Associates without written verification or adaptation by Draper Aden Associates will be at the sole risk of the individual or entity utilizing said documents and such use is without the authorization of Draper Aden Associates. Draper Aden Associates shall have no legal liability resulting from any and all claims, damages, losses, and expenses, including attorney's fees arising out of the unauthorized reuse or modification of these documents. Client shall indemnify Draper Aden Associates from any claims arising out of unauthorized use or modification of the documents whether hard copy or electronic.

CompuChem
a division of Liberty Analytical Corporation

**Demonstration of Capability**
**Certification Statement**

Study Date: 1/27/03
Laboratory Name: CompuChem, a division of Liberty Analytical Corporation
Laboratory Address: 501 Madison Avenue, Cary, NC 27513
Analyst Name/Employee ID#: **Lake, Brad/2512**

Matrix: Water & Soil
Method Number: 8081/8082
SOP No./Rev#: IP 192/ 2.2.4.10/3 & IP 194/2.2.5.3/2
Analyte/Class of Analytes/Measured Parameters: Pesticides & PCBs

We, the undersigned, CERTIFY that:

1. The analyst identified above, using the cited test method, which is in use at this facility for the analyses of samples under the National Environmental Laboratory Accreditation Program, have met the Demonstration of Capability.

2. The test method was performed by the analyst identified on this certification.

3. A copy of the test method and the laboratory-specific SOPs are available for all personnel on-site.

4. The data associated with the demonstration capability are true, accurate, complete and self-explanatory.

5. All raw data (including a copy of this certification form) necessary to reconstruct and validate these analyses have been retained at the facility, and that the associated information is well organized and available for review by authorized assessors.

| | | |
|---|---|---|
| Rich Henson, Lab Technical Director<br>Technical Director's Name and Title | Signature | 020503<br>Date |
| Linda Carter, QA Manager<br>Quality Assurance Officer's Name | Linda Carter<br>Signature | 2/5/03<br>Date |

This certification form must be completed each time a demonstration of capability study is completed.

| | | |
|---|---|---|
| (1) | True: | Consistent with supporting data. |
| | Accurate: | Based on good laboratory practices consistent with sound scientific principles/practices. |
| | Complete: | Includes the results of all supporting performance testing. |
| | Self-Explanatory: | Data properly labeled and stored so that the results are clear and require no additional explanation. |

10-23-12

BAE - RAAP

HWMU-7 Closure

PCB Confirmation Soil Sampling

DAA: Ross Miller, Tiffany Jebson

Davidson Drilling: Chase Davidson

Rob Lavelle

Weather: Clear, Cool (50's-60's °F)

0900 DAA & Davidson Drill arrive on-site

Badging / Vehicle Check in

0950 Arrive at HWMU-7, Set up

10:10 Collect Equipment Blank EB-1 (2-1L Ambers per sample / split) from Geoprobe SS sleeve - decomed prior to sample collection

10:30 Setup & begin drilling at 7GP-22

10:45 Collect 7GP-22 (13') plus ~~MS/MSD~~ 7GP-22-22 (13') - Duplicate

CompuChem (CC): 1-8 oz glass - 8082A PCBs

Test Am (TA): 2-4 oz glass - 8082A PCBs

- Probe to 12' w/ solid point, then push 4' x 2" sample tube from 12' to 16'

+ Sample collected from top of native soil -

- Dark gray to brown fine sand & silt w/ trace round gravel.

Note: Decon sampler tubes & cutter w/ Alconox/DI H2O/Methanol/DI H2O after each boring

10-23-12

BAE-RAAP

HWMU-7 Closure

PCB Confirmation Soil Sampling

11:00 Set up & begin drilling at 7GP-17

11:10 Collect 7GP-17 (11')

CC: 1-8 oz. glass - 8082A PCBs

TA: 1-4 oz glass - 8082A PCBs

- Probe to 10' w/ solid point, then push 4' x 2" sample tube from 10'-14'

- Sample collected from interface of clay liner (red-brown micaceous f. sandy clay) and native soil (dark grey fine sand and silt w/ trace round gravel)

11:20 Setup & begin drilling at 7GP-21

11:35 Collect 7GP-21 (13.5')

CC: 1-8 oz glass - 8082A PCBs

TA: 1-4 oz. glass - 8082A PCBs

Probe to 12' w/ solid point, then push 4' x 2" sample tube from 12-16'

- Sample collected from bottom of clay liner (red-brown micaceous f. sandy clay)

11:45 Set up & begin drilling at 7GP-23

11:55 Collect 7GP-23 (12.5')

CC: 1-8 oz glass 8082A PCBs

TA: 1-4 oz. glass 8082A PCBs

10-23-12

BAE-RAAP

HWMU-7 Closure

PCB Confirmation Soil Samples

7GP-23: Probe to 11' w/ solid point, then push 4' x 2" sample tube from 11' to 15'

- Sample collected from top of native soil

12:05 Set up & begin drilling at 7GP-18

12:20 Collect 7GP-18 (14')

CC: 1-8oz glass. 8082A PCBs

TA: 1-4oz glass. 8082A PCBs

- Probe to 13' w/ solid point, then push 4' x 2" sample tube from 13' to 17'.

- Sample collected from base of clay liner (red-brown micaceous f. sandy clay

- Decon sample tube & cutting tool w/ Alconox/DI H2O/ Methanol/DI H2O after each boring

12:50 Set up & begin drilling at 7GP-20

13:00 Collect 7GP-20 (14.5') / MS / MSD

CC: 1-8oz glass 8082A PCBs

TA: 2-4oz glass 8082A PCBs

- Probe to 13' w/ solid point, then push 4' x 2" sample tube from 13'-17'

- Sample collected from interface of clay liner (red-brown micaceous f. sandy clay) ~~dead~~ top of native soil (dark gray fine sand & silt, trace mud gravel)

10-23-12

BAE-RAAP

HWMU-7 Closure

PCB Confirmation Soil Sampling

13:20 Set up & begin drilling at 7GP-24

13:30 Collect 7GP-24 (14')

CC: 1-8oz glass 8082A PCBs

TA: 1-4oz glass 8082A PCBs

- Probe to 12' w/ solid point, then push 4' x 2" sample tube from 12' to 16'

- Sample collected from clay liner (red-brown micaceous f. sandy clay)

13:40 Set up & begin drilling at 7GP-19

13:55 Collect 7GP-19 (14')

CC: 1-8oz glass 8082A PCBs

TA: 1-4oz glass 8082A PCBs

- Probe to 13' w/ solid point, then push 4' x 2" sample tube from 13' to 17'

- Sample collected from top of native soil (dark gray f. sand and silt w/ trace mud gravel)

Final decon of geoprobe equip.

Break down site.

14:20 Depart Site

11/28/12 RAAP B03204-122E DAS/TQE FB# 11

General Notes

Weather - Mostly Sunny, 40's - 50's
PPE - Eye Protection, Nitrile gloves
Calibrations - YSI 650 MDS
- pH: 4.00 = 4.00, 7.00 = 7.00, 10.00 = 9.98
- Conductivity reads 1413 us in 1413 us std
- DO% = 100

TABLE A
VALUES USED FOR DAILY INTAKE CALCULATIONS - DERMAL ABSORPTION - RESIDENTIAL ADULT
HAZARDOUS WASTE MANAGEMENT UNIT 7 - CLOSURE REPORT ADDENDUM
RADFORD ARMY AMMUNITION PLANT, RADFORD, VIRGINIA

| | |
|---|---|
| Medium: | Soil |
| Exposure Medium: | Soil |
| Receptor Population: | **R** |
| | R = Current or Future Resident |
| | C = Construction/Utility Worker |
| | I = Commercial/Industrial Worker |
| Exposure Route: | Dermal |
| Receptor Age: | **A** |
| | A = Adult |
| | C = Child |

Intake Equation:
DAD=CS x ABS x IF
Intake Factor Equation:
IF=SA x CF x AF x EF x ED x 1/BW x 1/AT

| | |
|---|---|
| DAD [n-Nitrosodiphenylamine (carcinogen)] = | 1.01E-06 |
| DAD [bis(2-Ethylhexyl)phthalate (carcinogen)] = | 2.34E-07 |
| DAD [4,4-DDD (carcinogen)] = | 8.20E-10 |
| DAD [4,4-DDE (carcinogen)] = | 5.86E-10 |
| DAD [Aroclor-1254 (carcinogen)] = | 1.31E-07 |
| DAD [Aroclor-1254 (non-carcinogen)] = | 3.06E-07 |
| DAD [Toluene (non-carcinogen)] = | 9.84E-10 |
| DAD [Barium (non-carcinogen)] = | 1.52E-05 |
| DAD [Beryllium (non-carcinogen)] = | 8.20E-08 |
| DAD [Cyanide (non-carcinogen)] = | 3.77E-08 |
| DAD [Selenium (non-carcinogen)] = | 2.24E-07 |
| DAD [bis(2-Ethylhexyl)phthalate (non-carcinogen)] = | 5.47E-07 |

| Parameter Code | Parameter Definition | Units | Default Value | Rationale/ Reference | User Defined Value | Rationale/ Reference |
|---|---|---|---|---|---|---|
| DAD | Dermally Absorbed Dose | mg/kg-day | | | | |
| CS (n-Nitrosodiphenylamine) | Chemical Concentration in Soil | mg/kg | | | 4.3 | Sample Result |
| CS (bis(2-Ethylhexyl)phthalate) | Chemical Concentration in Soil | mg/kg | | | 1 | Sample Result |
| CS (4,4-DDD) | Chemical Concentration in Soil | mg/kg | | | 0.0035 | Sample Result |
| CS (4,4-DDE) | Chemical Concentration in Soil | mg/kg | | | 0.0025 | Sample Result |
| CS (Aroclor 1254) | Chemical Concentration in Soil | mg/kg | | | 0.4 | Sample Result |
| CS (Toluene) | Chemical Concentration in Soil | mg/kg | | | 0.006 | Sample Result |
| CS (Barium) | Chemical Concentration in Soil | mg/kg | | | 279 | Sample Result |
| CS (Beryllium) | Chemical Concentration in Soil | mg/kg | | | 1.5 | Sample Result |
| CS (Cyanide) | Chemical Concentration in Soil | mg/kg | | | 0.69 | Sample Result |
| CS (Selenium) | Chemical Concentration in Soil | mg/kg | | | 4.1 | Sample Result |
| CF | Conversion Factor | kg/mg | 1E-06 | | | |
| AF | Soil to Skin Adherence Factor | mg/cm^2 | 0.07 | EPA, 2001 | | |
| ABS | Absorption Factor | unitless | Chemical Specific | EPA, 1995 and EPA, 2001 | | |
| ABS (n-Nitrosodiphenyl.) | Absorption Factor | unitless | | | 1.00E-01 | EPA, 2001 |
| ABS (bis(2-Ethylhexyl)phthalate) | Absorption Factor | unitless | | | 1.00E-01 | EPA, 2001 |
| ABS (4,4-DDD) | Absorption Factor | unitless | | | 1.00E-01 | EPA, 1995 |
| ABS (4,4-DDE) | Absorption Factor | unitless | | | 1.00E-01 | EPA, 1995 |
| ABS (Aroclor 1254) | Absorption Factor | unitless | | | 1.40E-01 | EPA, 2001 |
| ABS (Toluene) | Absorption Factor | unitless | | | 3.00E-02 | EPA, 1995 |
| ABS (Barium) | Absorption Factor | unitless | | | 1.00E-02 | EPA, 1995 |
| ABS (Beryllium) | Absorption Factor | unitless | | | 1.00E-02 | EPA, 1995 |
| ABS (Cyanide) | Absorption Factor | unitless | | | 1.00E-02 | EPA, 1995 |
| ABS (Selenium) | Absorption Factor | unitless | | | 1.00E-02 | EPA, 1995 |
| SA | Skin Surface Area Available for Contact | cm2/day | 5,700 (3) | EPA, 2001 | | |
| EF | Exposure Frequency | days/years | 350 | EPA, 1991 | | |
| ED | Exposure Duration | years | 30 | EPA, 1991 | | |
| BW | Body Weight | kg | 70 | EPA, 1991 | | |
| AT-C | Averaging Time (Cancer) | days | 25,550 | EPA, 1989 | | |
| AT-N | Averaging Time (Non-Cancer) | days | 10,950 | EPA, 1989 | | |
| IF-C | Intake Factor (Cancer) | days^-1 | 2.34E-06 | calculated | | |
| IF-N | Intake Factor (Non-cancer) | days^-1 | 5.47E-06 | calculated | | |

EPA, 1989= Risk Assessment Guidance for Superfund: Volume I -- Human Health Evaluation Manual (Part A). Office of Emergency and Remedial Response. EPA/540/1-89/002.
EPA, 1991= Human Health Evaluation Manual, Supplemental Guidance: Standard Default Exposure Factors. Office of Solid Waste and Emergency Response. OSWER Directive 9285.6-03
EPA, 1995= Assessing Dermal Exposure from Soil. Region III. Office of Superfund Programs. EPA/903-K-95-003.
EPA, 2001= RAGS E, Chapter 3

(1) Based on soil-to-skin adherence data presented in U. S. EPA (2001) for a "utility worker".
(2) Represents face, hands, forearms, lower legs and feet
(3) Represents the face, hands, and forearms for workers; face hands, forearms and lower legs for resident adults.

**Note the following AFs from RAGS E for site specific scenarios:**

| | |
|---|---|
| groundskeeper | AF=0.1 |
| construction worker | AF=0.3 |
| utility worker | AF=0.9 |

EPA, 1991= Human Health Evaluation Manual, Supplemental Guidance: Standard Default Exposure Factors. Office of Solid Waste and Emergency Response. OSWER Directive 9285.6-03
EPA, 1999= EPA Region III Risk-Based Concentration Table: Technical Background Information

(1) Air concentrations may be estimated by applying the particulate emission factor (PEF) or volatilization factor (VF) to soil concentrations as described in Soil Screening Guidance: Technical Background Document. U. S. EPA, Office of Solid Waste and Emergency Response. May 1996. (EPA/540/R-95/128) and Soil Screening Guidance: User's Guide. U.S.EPA, Office of Solid Waste and Emergency Response. April 1996. (EPA/540/R-96/018).
(2) Indoor air concentrations for volatiles may be estimated with the Johnson and Etinger Model.

TABLE F
VALUES USED FOR DAILY INTAKE CALCULATIONS - INHALATION - RESIDENTIAL CHILD
HAZARDOUS WASTE MANAGEMENT UNIT 7 - CLOSURE REPORT ADDENDUM
RADFORD ARMY AMMUNITION PLANT, RADFORD, VIRGINIA

| | |
|---|---|
| Medium: | Soil |
| Exposure Medium: | Air |
| Receptor Population: | **R** |
| | R = Current or Future Resident |
| | C = Construction/Utility Worker |
| | I = Commercial/Industrial Worker |
| Exposure Route: | Inhalation |
| Receptor Age: | **C** |
| | A = Adult |
| | C = Child |

Intake Equation:
CDI = CA x IF
Intake Factor Equation:
IF = IR-A x EF x ED x ET x 1/BW x 1/AT
CA Estimation:
CA = CS / PEF

| | |
|---|---|
| CDI [n-Nitrosodiphenylamine (carcinogen)] = | 2.08E-10 |
| CDI [bis(2-Ethylhexyl)phthalate (carcinogen)] = | 4.83E-11 |
| CDI [4,4-DDD (carcinogen)] = | 1.69E-13 |
| CDI [4,4-DDE (carcinogen)] = | 1.21E-13 |
| CDI [Aroclor-1254 (carcinogen)] = | 1.93E-11 |
| CDI [Aroclor-1254 (non-carcinogen)] = | 2.26E-10 |
| CDI [Toluene (non-carcinogen)] = | 8.77E-07 |
| CDI [Barium (non-carcinogen)] = | 1.11E-05 |
| CDI [Beryllium (carcinogen)] = | 7.25E-11 |
| CDI [Beryllium (non-carcinogen)] = | 8.46E-10 |
| CDI [Cyanide (non-carcinogen)] = | 3.89E-10 |
| CDI [Selenium (non-carcinogen)] = | 2.31E-09 |
| CDI [bis(2-Ethylhexyl)phthalate (non-carcinogen)] = | 5.64E-10 |

| Parameter Code | Parameter Definition | Units | Default Value | Rationale/ Reference | User Defined Value | Rationale/ Reference |
|---|---|---|---|---|---|---|
| CDI | Chronic Daily Intake | mg/kg-day | | | | |
| CA | Chemical Concentration in Air | mg/m^3 | (1, 2) | | | |
| CS (n-Nitrosodiphenylamine) | Chemical Concentration in Soil | mg/kg | | | 4.3 | Sample Result |
| CS (bis(2-Ethylhexyl)phthalate) | Chemical Concentration in Soil | mg/kg | | | 1 | Sample Result |
| CS (4,4-DDD) | Chemical Concentration in Soil | mg/kg | | | 0.0035 | Sample Result |
| CS (4,4-DDE) | Chemical Concentration in Soil | mg/kg | | | 0.0025 | Sample Result |
| CS (Aroclor 1254) | Chemical Concentration in Soil | mg/kg | | | 0.4 | Sample Result |
| CS (Toluene) | Chemical Concentration in Soil | mg/kg | | | 0.006 | Sample Result |
| CS (Barium) | Chemical Concentration in Soil | mg/kg | | | 279 | Sample Result |
| CS (Beryllium) | Chemical Concentration in Soil | mg/kg | | | 1.5 | Sample Result |
| CS (Cyanide) | Chemical Concentration in Soil | mg/kg | | | 0.69 | Sample Result |
| CS (Selenium) | Chemical Concentration in Soil | mg/kg | | | 4.1 | Sample Result |
| CS (Aroclor 1254 - average) | Chemical Concentration in Soil | mg/kg | | | 0.38 | Avg. Samp. Result |
| PEF | Particulate Emission Factor | m^3/kg | 1.36E+09 | EPA (1) | | |
| VF | Volatilization Factor, Soil to Air | m^3/kg | | | 5.25E+03 | calculated |
| IR-A | Inhalation Rate | m^3/hour | 0.5 | EPA, 1999 | | |
| EF | Exposure Frequency | days/year | 350 | EPA, 1991 | | |
| ED | Exposure Duration | years | 6 | EPA, 1991 | | |
| ET | Exposure Time | hours/day | 24 | EPA, 1991 | | |
| BW | Body Weight | kg | 15 | EPA, 1991 | | |
| AT-C | Averaging Time (Cancer) | days | 25,550 | EPA, 1989 | | |
| AT-N | Averaging Time (Non-Cancer) | days | 2,190 | EPA, 1989 | | |
| IF-C | Intake Factor (Cancer) | m3/kg-day | 6.58E-02 | calculated | | |
| IF-N | Intake Factor (Non-cancer) | m3/kg-day | 7.67E-01 | calculated | | |

EPA, 1989= Risk Assessment Guidance for Superfund: Volume I -- Human Health Evaluation Manual (Part A). Office of Emergency and Remedial Response. EPA/540/1-89/002.
EPA, 1991= Human Health Evaluation Manual, Supplemental Guidance: Standard Default Exposure Factors. Office of Solid Waste and Emergency Response. OSWER Directive 9285.6-03
EPA, 1999= EPA Region III Risk-Based Concentration Table: Technical Background Information

(1) Air concentrations may be estimated by applying the particulate emission factor (PEF) or volatilization factor (VF) to soil concentrations as described in Soil Screening Guidance: Technical Background Document. U. S. EPA, Office of Solid Waste and Emergency Response. May 1996. (EPA/540/R-95/128) and Soil Screening Guidance: User's Guide. U.S.EPA, Office of Solid Waste and Emergency Response. April 1996. (EPA/540/R-96/018).
(2) Indoor air concentrations for volatiles may be estimated with the Johnson and Etinger Model.

**Definitions:**

***The following definitions apply to results reported for Appendix IX monitoring events.***
***All Appendix IX monitoring results for compliance wells are reported to the detection limit.***

**QL** Denotes permit required quantitation limit.
**U** denotes not detected at or above the detection limit.
**UA** denotes not detected at or above the adjusted detection limit.
**J** Denotes result is estimated. When used with "U" (i.e., "UJ"), denotes analyte not detected at or above the detection limit and detection limit and QL are estimated. When used with "UA" (i.e., "UAJ"), denotes analyte not detected at or above adjusted detection limit and adjusted detection limit and QL are estimated.
**UN** Denotes analyte concentration is less than the quantitation limit and/or five times the blank concentration. Not reliably detected due to blank contamination. This qualifier used only for Appendix IX monitoring event when compliance well results are reported to at or above the project detection limit.
**R** Denotes result rejected.
**Q** Denotes data validation qualifier.
**Background** Denotes background concentrations listed in the VDEQ-approved Class 3 Permit Modification for the Post-Closure Care Permit for HWMUs 5, 7, 10 and 16; dated September 27, 2011.
**CAS#** Denotes Chemical Abstract Services registration number.
**GPS** Denotes groundwater protection standard.

***The following definitions apply to results reported for non-Appendix IX monitoring events.***
***All non-Appendix IX monitoring results for compliance wells are reported to at or above the quantitation limit.***

**QL** Denotes permit required quantitation limit.
**U** Denotes analyte not detected at or above QL.
**UA** Denotes analyte not detected at or above adjusted sample QL.
**J** Denotes result is estimated. When used with "U" (i.e., "**UJ**"), denotes analyte not detected at or above QL and QL is estimated. When used with "UA" (i.e., "**UAJ**"), denotes analyte not detected at or above adjusted QL and adjusted QL is estimated.
**R** Denotes result rejected.
**Q** Denotes data validation qualifier.
**Background** Denotes background concentrations listed in the VDEQ-approved Class 3 Permit Modification for the Post-Closure Care Permit for HWMUs 5, 7, 10 and 16; dated September 27, 2011
**CAS#** Denotes Chemical Abstract Services registration number.
**GPS** Denotes groundwater protection standard.

Notes:

-**Appendix IX Groundwater Monitoring Events**:
***Third Quarter 2003, Second Quarter 2004, Second Quarter 2005, Third Quarter 2006, Second Quarter 2007, Second Quarter 2008, Second Quarter 2009, Second Quarter 2010, Second Quarter 2011, Second Quarter 2012***
All Appendix IX results evaluated and reported to detection limit.
-9/29/2003: Verification sampling event for 7MW6, 7W11B, 7W12B, 7WCA (copper and zinc).
Verification results reported in this table for copper and zinc.
-6/21-22/2004: Verification sampling event for 7MW6, 7W11B, 7W12B, 7WCA.
Verification results reported in this table for chloroform (7W12B).
-3/23/2005: Verification sampling event for 7MW6. Verification results reported in this table for bis(2-ethylhexyl)phthalate).
-7/26/2005: Verification sampling event for 7MW6, 7W11B, 7W12B, 7WCA (ethyl acetate), 7W11B (beta-BHC), and 7MW6 (alpha-BHC). All verification results reported as not detected. Verification results reported.
-Sept 2006: Verification sampling event for 7W12B & 7W11B for chloroform; initial results reported in table for chloroform (7W11B, 7W12B).
-July 17, 2008: Verification sampling event for 7W13 arsenic and cobalt. 7W9C cobalt
-June 11, 2009, Verification sampling event for 7MW6 Diethyl ether. Analyte not detected. Verification results reported.
-June 2012 – Verification event for 7MW6 diethyl ether and 7W11B delta-BHC and beta-BHC - Verification results reported.

## *Target Analyte Monitoring Results At or Above Permit Quantitation Limit*
## *HWMU 7 Plume Monitoring Wells*
## *Radford Army Ammunition Plant, Radford, Virginia*

***All Results in ug/L.*** ***Upgradient well = 7W12B***

| *Analyte/Quarter* | *7W12B Q* | *7W9C Q* | *7W10B Q* | *7W10C Q* | *7W13 Q* | *QL* | *Background* | *GPS* | *Method* | *CAS #* |
|---|---|---|---|---|---|---|---|---|---|---|

**Definitions:**

***All plume monitoring well results reported to at or above the permit quantitation limit except for the upgradient well during the Appendix IX monitoring Event. During the Appendix IX monitoring event, results for the upgradient well are reported to the detection limit.***

**Q** Denotes data validation qualifier.
**QL** Denotes permit required quantitation limit.
**U** Denotes analyte not detected at or above QL.
**UA** Denotes analyte not detected at or above adjusted sample QL.
**J** Denotes result is estimated. When used with "U" (i.e., "**UJ**"), denotes analyte not detected at or above QL and QL is estimated. When used with "UA" (i.e., "**UAJ**"), denotes analyte not detected at or above adjusted QL and adjusted QL is estimated.
**UN** Denotes analyte concentration is less than the quantiation limit and five times the blank concentration. Not reliably detected due to blank contamination. This qualifier used only for Appendix IX monitoring event when compliance well results are reported to at or above the project detection limit.
**R** Denotes result rejected.
**Background** Denotes background concentrations listed in the VDEQ-approved Class 3 Permit Modification for the Post-Closure Care Permit for HWMUs 5, 7, 10 and 16, dated September 27, 2011.
**CAS#** Denotes Chemical Abstract Services registration number. **GPS** Denotes groundwater protection standard.

Notes:
-January 2005: Verification sampling event for 7MW13 4Q2004 arsenic. Verification results reported in this table for arsenic (7W13).
-March 2006: Verification sampling event for 7MW13 1Q2006 arsenic. Verification results reported in this table for arsenic (7W13).
-July 2006: Verification sampling event for 7MW13 2Q2006 arsenic. Verification results reported in this table for arsenic (7W13).
-Sept 2006: Verification sampling event for 7W12B 3Q2006 chloroform. Initial results reported in this table for chloroform (7W12B).
-July 17, 2007: Verification sampling event for 7W13 arsenic-verification event result reported, highest of four quadruplicate results, 7W13 cobalt-original result reported.. 7W9C cobalt- Verification result reported.
-Dec 17, 2008: Verification sampling event for 7W13-. cobalt- Original result reported.
-June 28, 2010 - Verification sampling event for 7W13 - cobalt- Original result reported.
Also, verification sampling event for 7W13 - cobalt- verification result reported.
-Dec 16, 2010 - Verification sampling event for 7W13 . arsenic- Verification result reported.
- June 27, 2011 - Verification sampling event for 7MW6 benzene and diethyl ether and 7W11B - Benzene - Verification result reported.
-June 2012 – Verification event for 7MW6 diethyl ether and 7W11B delta-BHC and beta-BHC - Verification results reported.

**RE:** Request to Establish Background and Groundwater Protection Standard for Diethyl Ether
Post Closure Care Permit HWMU 5, 7, 10 & 16
Radford Army Ammunition Plant, Radford, VA
EPA ID# VA1210020730

Dear Mr. Stewart:

The Department of Environmental Quality (Department) has received your request, dated October 22, 2012, to establish the background value and Groundwater Protection Standard (GPS) for diethyl ether in groundwater. This document was submitted on behalf of Radford Army Ammunition Plant, by BAE Systems, Ordinance Systems Inc. The Department has reviewed this request and concurs as follows:

- The facility detected diethyl ether in HWMU-7 at point of compliance well 7MW6 at an estimated concentration of 1.2µg/l during the 2nd quarter of 2012. The post closure care permit requires the facility to conduct four quarters of monitoring and establish background for the detected constituent. However, the facility previously has collected ten independent samples from the upgradient well at HWMU-7 and none of these samples have detected diethyl ether. The Department concurs with the facility's recommendation for forgo additional quarterly sampling and establish the background value for diethyl ether at the quanitation limit (QL) of 13µg/l.

- The facility recommends that the GPS for diethyl ether be established at the April 2012 EPA Mid-Atlantic Risk Assessment Regional Screening Level (RSL) for

tap water of 3,100µg/l. This recommendation is based on the absence a USEPA maximum contaminant level (MCL) and VDEQ alternate concentration limit (ACL) for diethyl ether. The Department concurs with this recommendation.

- The Department agrees with the facility's plan to add diethyl ether to the Groundwater Monitoring Constituent List for HWMU-7 beginning with the Fourth Quarter 2012 semi-annual monitoring event and to evaluate this constituent of concern further in the forthcoming Closure Report Addendum for HWMU-7.

If you have any questions or concerns, you may contact me at 276-676-4867 or by email at Vincent.Maiden@deq.virginia.gov.

Sincerely,

Vincent Maiden

DRAPER ADEN ASSOCIATES (DAA) PREPARED THIS DOCUMENT (WHICH MAY INCLUDE DRAWINGS, SPECIFICATIONS, REPORTS, STUDIES AND ATTACHMENTS) IN ACCORDANCE WITH THE AGREEMENT BETWEEN DAA AND ALLIANT TECHSYSTEMS INC.

THE STANDARD OF CARE FOR ALL PROFESSIONAL ENGINEERING, ENVIRONMENTAL AND SURVEYING AND RELATED SERVICES PERFORMED OR FURNISHED BY DAA UNDER THIS AGREEMENT ARE THE CARE AND SKILL ORDINARILY USED BY MEMBERS OF THESE PROFESSIONS PRACTICING UNDER SIMILAR CIRCUMSTANCES AT THE SAME TIME AND IN THE SAME LOCALITY. DAA MAKES NO WARRANTIES, EXPRESS OR IMPLIED, UNDER THIS AGREEMENT IN CONNECTION WITH DAA'S SERVICES.

CONCLUSIONS PRESENTED ARE BASED UPON A REVIEW OF AVAILABLE INFORMATION, THE RESULTS OF OUR FIELD STUDIES, AND/OR PROFESSIONAL JUDGMENT. TO THE BEST OF OUR KNOWLEDGE, INFORMATION PROVIDED BY OTHERS IS TRUE AND ACCURATE, UNLESS OTHERWISE NOTED.

DAA'S LIABILITY, HEREUNDER, SHALL BE LIMITED TO AMOUNTS DUE DAA FOR SERVICES ACTUALLY RENDERED, OR REIMBURSABLE EXPENSES ACTUALLY INCURRED.

ANY REUSE OR MODIFICATION OF ANY OF THE AFOREMENTIONED DOCUMENTS (WHETHER HARD COPIES OR ELECTRONIC TRANSMITTALS) PREPARED BY DAA WITHOUT WRITTEN VERIFICATION OR ADAPTATION BY DAA WILL BE AT THE SOLE RISK OF THE INDIVIDUAL OR ENTITY UTILIZING SAID DOCUMENTS AND SUCH USE IS WITHOUT THE AUTHORIZATION OF DAA. DAA SHALL HAVE NO LEGAL LIABILITY RESULTING FROM ANY AND ALL CLAIMS, DAMAGES, LOSSES, AND EXPENSES, INCLUDING ATTORNEY'S FEES ARISING OUT OF THE UNAUTHORIZED REUSE OR MODIFICATION OF THESE DOCUMENTS. CLIENT SHALL INDEMNIFY DAA FROM ANY CLAIMS ARISING OUT OF UNAUTHORIZED USE OR MODIFICATION OF THE DOCUMENTS WHETHER HARD COPY OR ELECTRONIC.

CONCLUSIONS PRESENTED BY DAA DO NOT REFLECT VARIATIONS IN SUBSURFACE GROUNDWATER QUALITY THAT MIGHT EXIST BETWEEN OR BEYOND SAMPLING POINTS OR BETWEEN SPECIFIC SAMPLE COLLECTIONS EVENTS. DAA SHALL INCUR NO LIABILITY RESULTING FROM INFORMATION SUPPLIED BY OTHERS.

## RADFORD ARMY AMMUNITION PLANT – HWMU-7
### CALCULATION OF CONSTITUENT BACKGROUND VALUES

Draper Aden Associates recalculated background values for the plume monitoring well constituents of the groundwater monitoring program for Hazardous Waste Management Unit No. 7 (HWMU-7) located at the Radford Army Ammunition Plant (Radford AAP) in Radford, Virginia. Background values were calculated for all plume monitoring well constituents.

The background values for HWMU-7 plume monitoring well constituents were calculated using the analytical data for upgradient well 7W12B using data from Second Quarter 2003 through Second Quarter 2007 (available most recent data with one exception-cyanide includes 4th Quarter 2007 data). Inter-well upper prediction limits (UPL) were calculated on the background data for the target parameters in accordance with the facility permit and VHWMR (40 CFR 264.97(h)). Where applicable, the background value calculations were based on site-wide 95% confidence, 95% coverage upper prediction intervals. The calculated background values for all target constituents are listed on **Table 1**.

### Background Data and Background Value Calculations

The constituents listed below were 100% non-detected (<LOQ) in the background well. The background values for these constituents were established as equal to their quantitation limits (QL).

| Background Value = Quantitation Limit (QL) | | | | |
|---|---|---|---|---|
| **Constituent** | **Sample Size** | **% Non-Detects** | **QL (µg/l)** | **Background Value (µg/l)** |
| Antimony | 17 | 100 | 1 | 1 |
| Arsenic | 17 | 100 | 10 | 10 |
| Cadmium | 17 | 100 | 1 | 1 |
| Cobalt | 17 | 100 | 5 | 5 |
| Copper | 16 | 100 | 5 | 5 |
| Lead | 17 | 100 | 1 | 1 |
| Mercury | 17 | 100 | 2 | 2 |
| Nickel | 17 | 100 | 10 | 10 |
| Selenium | 17 | 100 | 10 | 10 |
| Silver | 17 | 100 | 2 | 2 |
| Thallium | 17 | 100 | 1 | 1 |
| Cyanide | 18 | 100 | 20 | 20 |
| Bis(2-ethylhexyl)phthalate | 17 | 100 | 6 | 6 |
| Butyl benzyl phthalate | 17 | 100 | 10 | 10 |
| 2,4-Dinitrophenol | 17 | 100 | 10 | 10 |
| 2,4-Dinitrotoluene | 17 | 100 | 10 | 10 |
| 2,6-Dinitrotoluene | 17 | 100 | 10 | 10 |
| p-Nitrophenol | 17 | 100 | 10 | 10 |

Non-parametric prediction intervals were computed for the constituents for which the data from upgradient well 7W-12B satisfied one of the following two criteria, per VDEQ regulations and guidance as well as USEPA guidance:

- Percentage of non-detects was greater than or equal to 50 and less than 100; or
- Percentage of non-detects was less than 50, but data was not normally distributed in original or log-transformed mode.

Only one result for zinc was reported above its LOQ. The reported result (10.9 µg/l) is the NUPL for zinc. The non-parametric prediction limit computation for chromium is presented in **Appendix A**.

| **Background Value = UPL of Non-parametric Prediction Interval (NUPL)** | | | | | |
|---|---|---|---|---|---|
| **Parameter** | **Sample Size** | **% Non-Detects** | **QL (µg/l)** | **NUPL (µg/l)** | **Background Value (µg/l)** |
| Chromium | 17 | 12 | 5 | 9.9 | 9.9 |
| Zinc | 14 | 93 | 10 | 10.9 | 10.9 |

The following constituent (barium) exhibited normally distributed background data with less than 0% non-detects. One sided parametric prediction interval was computed on the background data for barium. The background value for barium was set as equal to its UPL. The background concentration calculations were based on a site wide 95% confidence, 95% coverage upper prediction intervals. The background and relevant statistical data for barium is summarized below. The prediction interval computation is presented in **Appendix A**.

| **Background Value = UPL of one-sided Prediction Interval** | | | | | |
|---|---|---|---|---|---|
| **Parameter** | **Sample Size** | **% Non-Detects** | **QL (µg/l)** | **UPL (µg/l)** | **Background Value (µg/l)** |
| Barium | 17 | 0 | 10 | 41.0 | 41.0 |

# TABLE 1

## HWMU-7
## CALCULATED BACKGROUND VALUES

| Constituent | Background Value (µg/l unless otherwise noted) |
|---|---|
| Antimony | 1 |
| Arsenic | 10 |
| Barium | 41.0 |
| Cadmium | 1 |
| Chromium | 9.9 |
| Cobalt | 5 |
| Copper | 5 |
| Lead | 1 |
| Mercury | 2 |
| Nickel | 10 |
| Selenium | 10 |
| Silver | 2 |
| Thallium | 1 |
| Zinc | 10.9 |
| Cyanide | 20 |
| Bis(2-ethylhexyl)phthalate | 6 |
| Butyl benzyl phthalate | 10 |
| 2,4-Dinitrophenol | 10 |
| 2,4-Dinitrotoluene | 10 |
| 2,6-Dinitrotoluene | 10 |
| p-Nitrophenol | 10 |

# APPENDIX A

## HWMU-7
## BACKGROUND VALUE CALCULATIONS
## STATISTICAL COMPUTATIONS FOR BARIUM AND CHROMIUM

**RAAP-HWMU-7 - Background Calculation - December 2007**
17-Dec-07

Y2K Correction dates are as shown in table below.

| Actual Event | | | Date Used in Stat Software |
|---|---|---|---|
| 2003-Qtr2 | | | 8/1/1999 |
| 2003-Qtr3 | | | 8/2/1999 |
| 2003-Qtr4 | | | 8/3/1999 |
| 2004-Qtr1 | | | 8/4/1999 |
| 2004-Qtr2 | | | 8/5/1999 |
| 2004-Qtr3 | | | 8/6/1999 |
| 2004-Qtr4 | | | 8/7/1999 |
| 2005-Qtr1 | | | 8/8/1999 |
| 2005-Qtr2 | | | 8/9/1999 |
| 2005-Qtr3 | | | 8/10/1999 |
| 2005-Qtr4 | | | 8/11/1999 |
| 2006-Qtr1 | | | 8/12/1999 |
| 2006-Qtr2 | | | 8/13/1999 |
| 2006-Qtr3 | | | 8/14/1999 |
| 2006-Qtr4 | | | 8/15/1999 |
| 2007-Qtr1 | | | 8/16/1999 |
| 2007-Qtr2 | | | 8/17/1999 |

**Notes:**
1) Background data was computed for all target constituents using the 2Q 2003 - 2Q 2007 data for background well 7W12B. Background data was 100% <LOQ for all target parameters except barium, chromium and zinc. Zinc had only one reported result > LOQ.
Statistical computations using GRITS/STAT V5.0 performed only for barium and chromium, as applicable.
