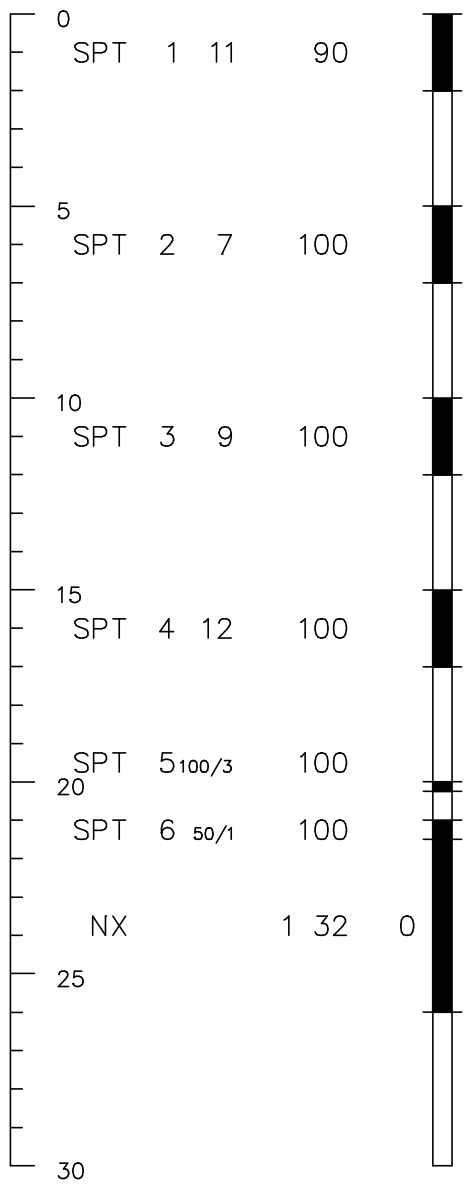
BORING 54MW2

Surface Elevation: 0
Location: Radford AAP, Virginia
Start: 10:20 on 9-17-91
Finish: 14:45 on 9-17-91



Symbols	Description
	DARK BROWN (7.5YR 3/3) SILTY FINE GRAINED SAND, SLIGHTLY MOIST, MICACEOUS, LOOSE
	BECOMING MORE MICACEOUS
	MOISTURE AND SILT INCREASING WITH DEPTH
SM	OCCASIONAL SILTY OR CLAYEY LINSES OR SEAMS
	15.5–16.0 FEET SILTY CLAY SEAMS
	MOIST
	THIN BROWN (10YR 5/3) SANDY GRAVELLY SEAM
	DARK GRAY (7.5YR N/4) INTERBEDDED, HIGHLY WEATHERED SHALE AND LIMESTONE WITH DARK BROWN (10YR 4/3) STAINING, HIGHLY FRACTURED
SH/LS	GREENISH GRAY (5G 6/1) HIGHLY WEATHERED, HIGHLY FRACTURED SHALE, WITH MANY THIN CALCITE VEINS, ROCK FRAGMENTS ARE HARD
	BOREHOLE TERMINATED AT A DEPTH OF 30.0 FEET

Project Number: 11656351

Log of Borehole 54SB84

Sheet 1 of 1

Date(s) Drilled	**1/11/2007**	Logged By	**John Spangler**	Reviewed By	**Brett Fisher**
Drilling Method	**Geoprobe-Direct Push Technology**	Drilling Contractor	**Richard Simmons Drilling**	Total Depth of Borehole	**17.6 feet**
Drill Rig Type	**Tractor Mounted Geoprobe Unit**	Drill Bit Size/Type	**4-foot x 2-inch macrocore**	Ground Surface Elevation	
Groundwater Level(s)	**16.2 ft bgs**	Sampling Method	**Macrocore disposable acetate liner**	Hammer Data	**NA**
Borehole Backfill	**3/8-inch bentonite pellets**	Coordinates	**N 3,602,097.6 E 10,895,586.8**		

Elevation, feet / Downhole Depth, feet	SAMPLES Type	Number	Feet Recovery	PID	Graphic Log	Lithologic Log (USCS Code)	MATERIAL DESCRIPTION	FIELD NOTES
0							7.5YR 4/4 brown, fine sandy SILT, moist, soft, grading less silt	Collected 54SB84A at 0.0-0.5 ft bgs.
2		1	3	ND		ML		
4							7.5YR 1/4 brown SILT with trace to little sand, very moist, micaceous, soft	
6		2	4	ND			7.5YR 5/6 strong brown, silty fine SAND, micaceous, medium dense	
8								Collected 54SB84B at 9.0-10.0 ft bgs.
10		3	4	ND		SM		
12								
14		4	4	ND			7.5YR 4/4 brown, very fine SAND and SILT, with trace to little clay, moist	Collected 54SB84C at 15.0-16.0 ft bgs.
16							7.5YR 4/2 brown very fine sany SILT with some clay, micaceous, soft ▽	
		5	2	ND		GW	Well graded GRAVEL, wet at 16.2 ft bgs	
18							Boring Refusal at 17.6 ft bgs

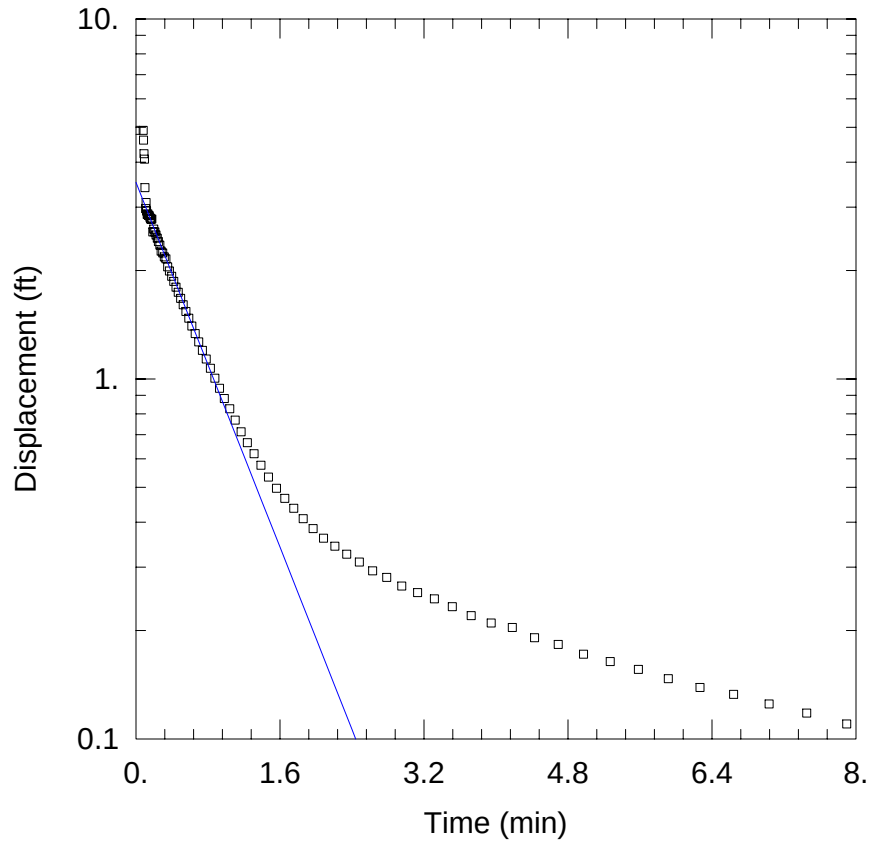
APPENDIX C.4

SLUG TEST DATA

THIS PAGE LEFT INTENTIONALLY BLANK



54MW4 FALLING HEAD

Data Set: P:\...\54MW4FALL.aqt
Date: 06/19/07 Time: 16:26:36

PROJECT INFORMATION

Company: URS Corporation
Client: USACE Balt. Dist.
Project: 09604-263-155
Test Location: RFAAP SWMU 54
Test Well: MW-4
Test Date: 03/06/03

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

K = 0.0005832 cm/sec
y0 = 3.514 ft

AQUIFER DATA

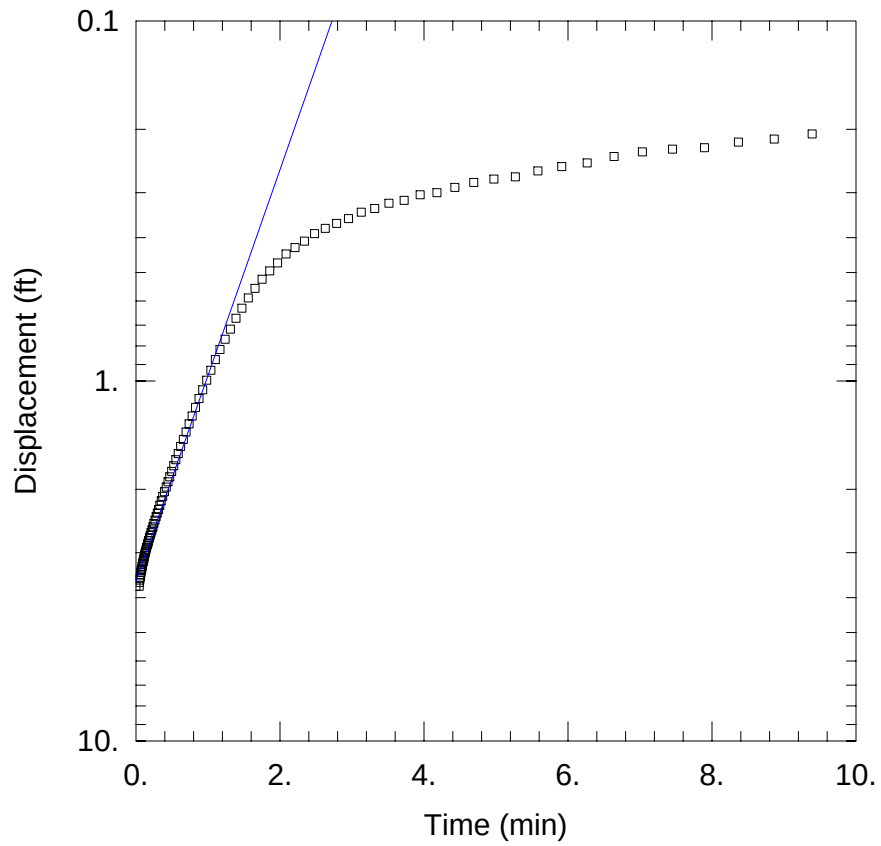
Saturated Thickness: 33.34 ft

Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (MW-4)

Initial Displacement: 4.905 ft
Wellbore Radius: 0.333 ft
Screen Length: 15. ft
Gravel Pack Porosity: 0.3

Casing Radius: 0.083 ft
Well Skin Radius: 0.333 ft
Total Well Penetration Depth: 34.7 ft



54MW4 RISING HEAD

Data Set: P:\...\54MW4RISE.aqt
Date: 06/19/07 Time: 16:31:57

PROJECT INFORMATION

Company: URS Corporation
Client: USACE Balt. Dist.
Project: 09604-263-155
Test Location: RFAAP SWMU 54
Test Well: MW-4
Test Date: 03/06/03

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

K = 0.0005269 cm/sec
y0 = 3.6 ft

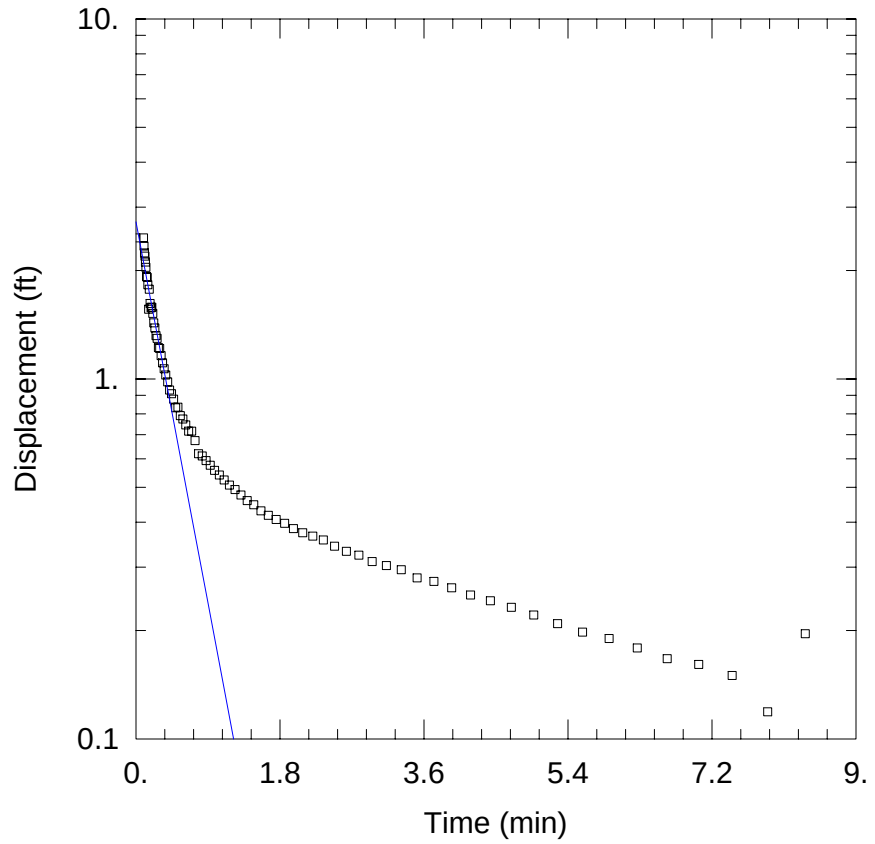
AQUIFER DATA

Saturated Thickness: 33.55 ft
Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (MW-4)

Initial Displacement: 3.718 ft
Wellbore Radius: 0.333 ft
Screen Length: 15. ft
Gravel Pack Porosity: 0.3

Casing Radius: 0.083 ft
Well Skin Radius: 0.333 ft
Total Well Penetration Depth: 34.91 ft



54MW-5 FALLING HEAD

Data Set: P:\...\54MW5FALL.aqt
Date: 06/19/07 Time: 16:45:28

PROJECT INFORMATION

Company: URS Corporation
Client: USACE Balt. Dist.
Project: 09604-263-155
Test Location: RFAAP
Test Well: 54MW5
Test Date: 3/6/03

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

K = 0.00373 cm/sec
y0 = 2.729 ft

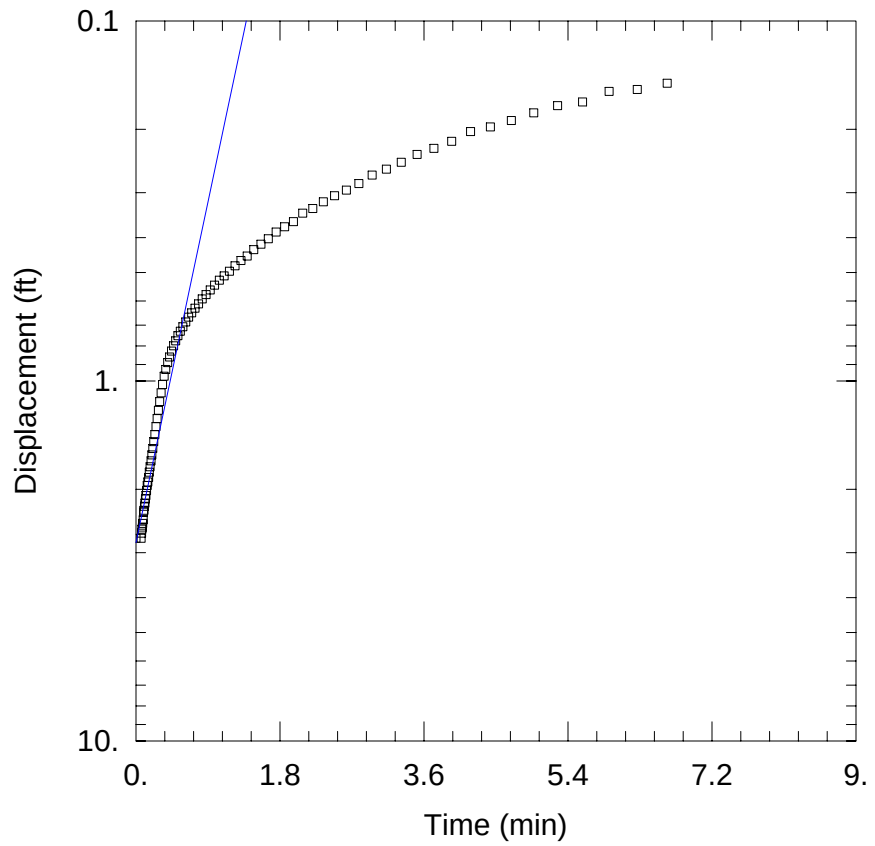
AQUIFER DATA

Saturated Thickness: 30.76 ft
Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (MW-5)

Initial Displacement: 2.465 ft
Wellbore Radius: 0.458 ft
Screen Length: 10. ft
Gravel Pack Porosity: 0.3

Casing Radius: 0.167 ft
Well Skin Radius: 0.458 ft
Total Well Penetration Depth: 10.37 ft



54MW-5 RISING HEAD

Data Set: P:\...\54MW5RISE.aqt
Date: 06/19/07 Time: 16:32:46

PROJECT INFORMATION

Company: URS Corporation
Client: USACE Balt. Dist.
Project: 09604-263-155
Test Location: RFAAP
Test Well: 54MW5
Test Date: 3/6/03

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

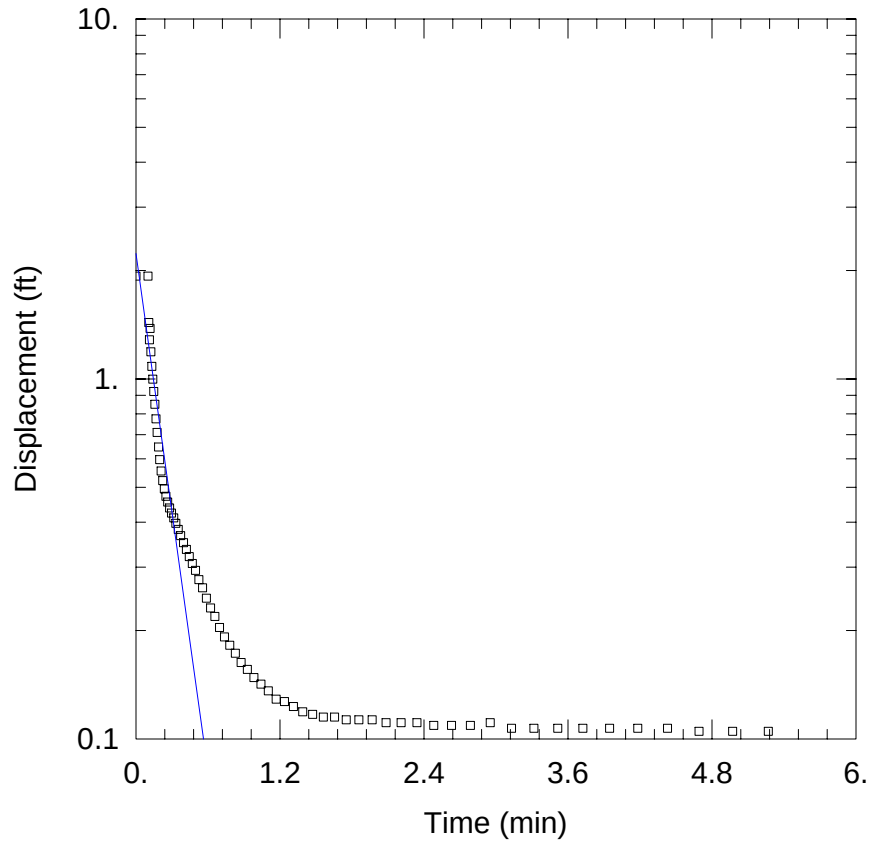
K = 0.003322 cm/sec
y0 = 2.813 ft

AQUIFER DATA

Saturated Thickness: 30.57 ft
Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (MW-5)

Initial Displacement: 2.737 ft
Wellbore Radius: 0.458 ft
Screen Length: 10. ft
Gravel Pack Porosity: 0.3
Casing Radius: 0.167 ft
Well Skin Radius: 0.458 ft
Total Well Penetration Depth: 10.18 ft



54MW-6 FALLING HEAD

Data Set: P:\...\54MW6FALL.aqt
Date: 06/19/07 Time: 16:28:36

PROJECT INFORMATION

Company: URS Corporation
Client: USACE Balt. Dist.
Project: 09604-263-155
Test Location: RFAAP
Test Well: 54MW6
Test Date: 3/6/03

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

K = 0.004998 cm/sec
y0 = 2.23 ft

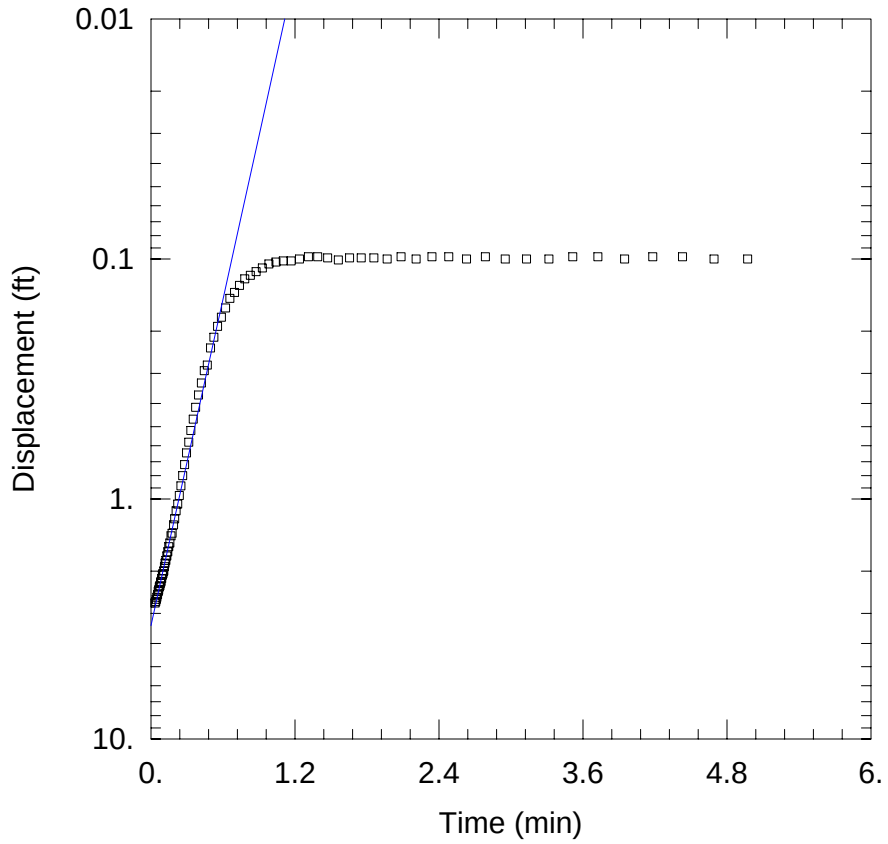
AQUIFER DATA

Saturated Thickness: 18.85 ft
Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (54MW-6)

Initial Displacement: 1.93 ft
Wellbore Radius: 0.333 ft
Screen Length: 15. ft
Gravel Pack Porosity: 0.3

Casing Radius: 0.167 ft
Well Skin Radius: 0.333 ft
Total Well Penetration Depth: 4.66 ft



54MW-6 RISING HEAD

Data Set: P:\...\54MW6RISE.aqt
Date: 06/19/07 Time: 16:33:40

PROJECT INFORMATION

Company: URS Corporation
Client: USACE Balt. Dist.
Project: 09604-263-155
Test Location: RFAAP
Test Well: 54MW6
Test Date: 3/6/03

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

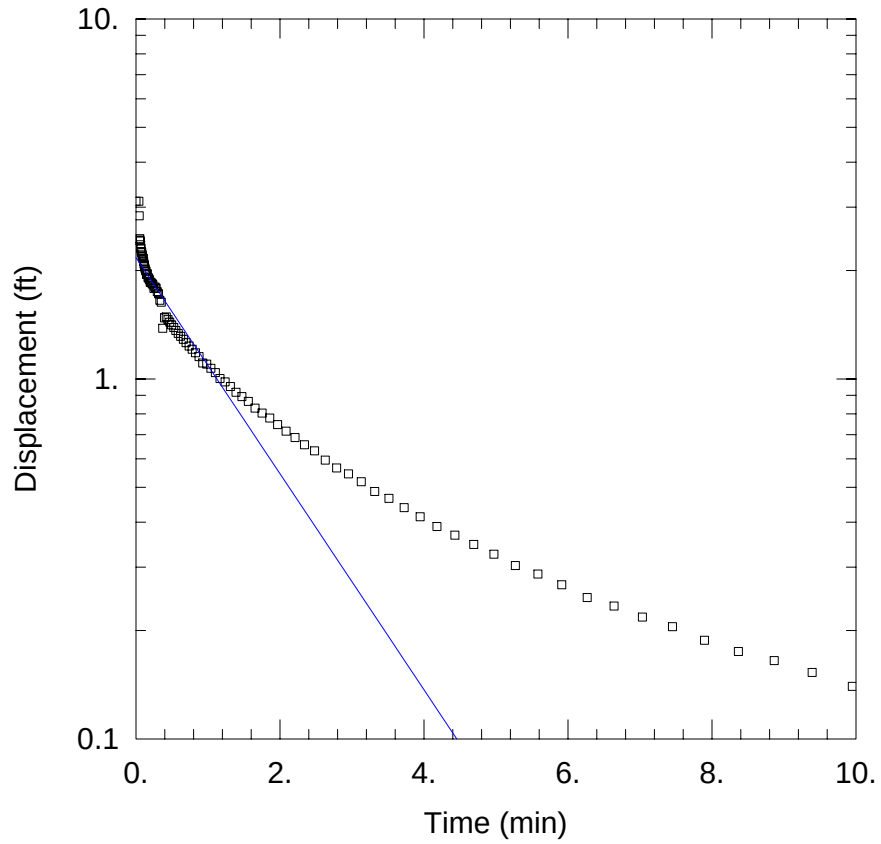
K = 0.00476 cm/sec
y0 = 3.369 ft

AQUIFER DATA

Saturated Thickness: 18.95 ft
Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (54MW-6)

Initial Displacement: 2.713 ft
Wellbore Radius: 0.333 ft
Screen Length: 15. ft
Gravel Pack Porosity: 0.3
Casing Radius: 0.167 ft
Well Skin Radius: 0.333 ft
Total Well Penetration Depth: 4.76 ft



54MW-7 FALLING HEAD

Data Set: P:\...\54MW7FALL.aqt
Date: 06/19/07 Time: 16:29:33

PROJECT INFORMATION

Company: URS Corporation
Client: USACE Balt. Dist.
Project: 09604-263-155
Test Location: RFAAP
Test Well: 54MW-7
Test Date: 3/6/03

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

K = 0.000984 cm/sec
y0 = 2.172 ft

AQUIFER DATA

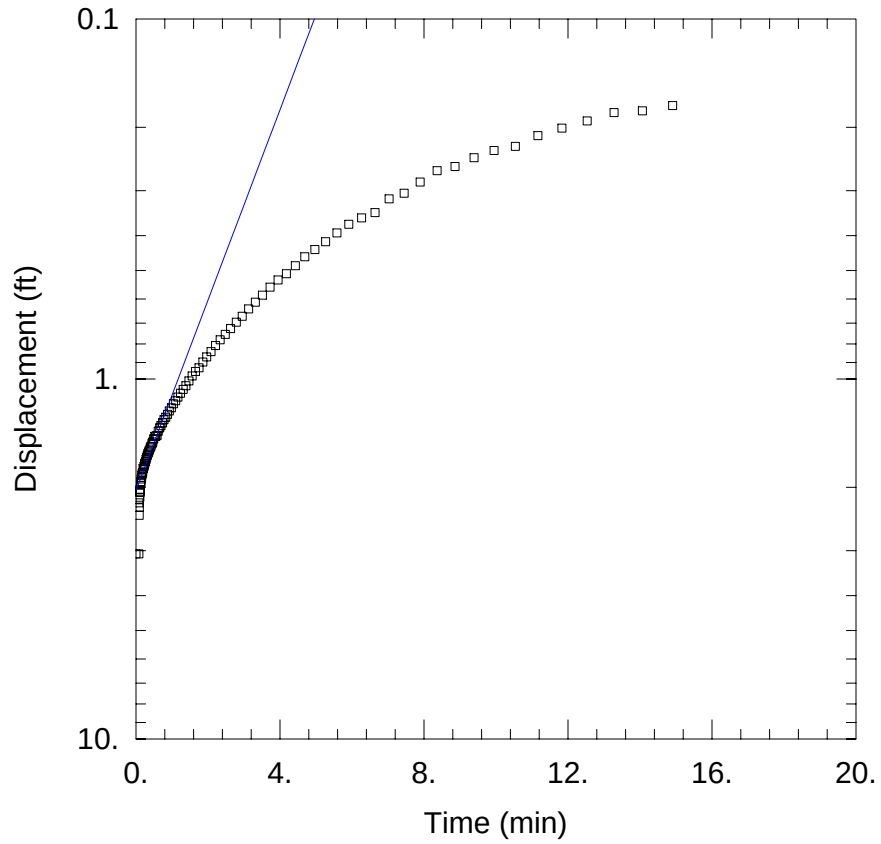
Saturated Thickness: 28.49 ft

Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (54MW-7)

Initial Displacement: 3.115 ft
Wellbore Radius: 0.458 ft
Screen Length: 10. ft
Gravel Pack Porosity: 0.3

Casing Radius: 0.167 ft
Well Skin Radius: 0.458 ft
Total Well Penetration Depth: 11.75 ft



54MW-7 RISING HEAD

Data Set: P:\...\54MW7RISE.aqt
Date: 06/19/07 Time: 16:34:04

PROJECT INFORMATION

Company: URS Corporation
Client: USACE Balt. Dist.
Project: 09604-263-155
Test Location: RFAAP
Test Well: 54MW-7
Test Date: 3/6/03

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

K = 0.0008645 cm/sec
y0 = 2.041 ft

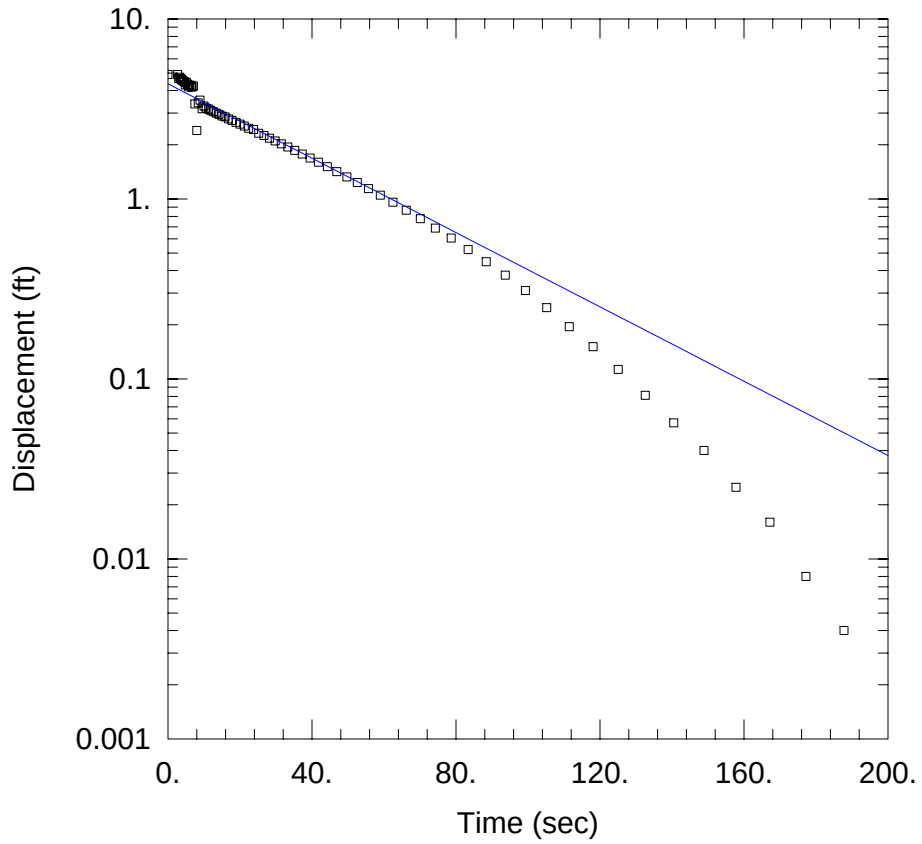
AQUIFER DATA

Saturated Thickness: 28.34 ft
Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (54MW-7)

Initial Displacement: 3.062 ft
Wellbore Radius: 0.458 ft
Screen Length: 10. ft
Gravel Pack Porosity: 0.3

Casing Radius: 0.167 ft
Well Skin Radius: 0.458 ft
Total Well Penetration Depth: 11.6 ft



54MW8 FALLING HEAD

Data Set: P:\...\54MW8FALL.aqt
Date: 06/19/07 Time: 16:30:20

PROJECT INFORMATION

Company: URS Group
Client: RFAAP
Project: 21355035
Test Location: Radford, VA
Test Well: 54MW8
Test Date: March 2, 2005

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

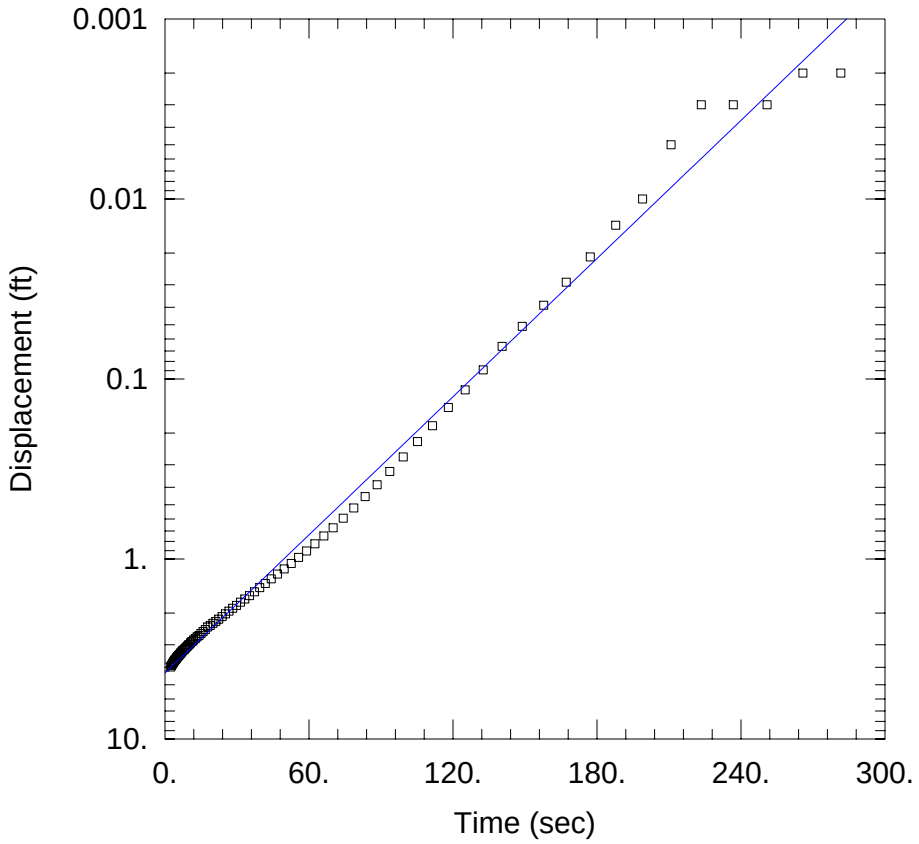
K = 0.001587 cm/sec
y0 = 4.358 ft

AQUIFER DATA

Saturated Thickness: 32.4 ft
Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (54MW10)

Initial Displacement: 4.912 ft
Wellbore Radius: 0.458 ft
Screen Length: 15. ft
Gravel Pack Porosity: 0.3
Casing Radius: 0.167 ft
Well Skin Radius: 0.458 ft
Total Well Penetration Depth: 17.25 ft



54MW8 RISING HEAD

Data Set: P:\...\54MW8RISE.aqt
Date: 06/19/07 Time: 16:34:30

PROJECT INFORMATION

Company: URS Group
Client: RFAAP
Project: 21355035
Test Location: Radford, VA
Test Well: 54MW8
Test Date: March 3, 2005

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

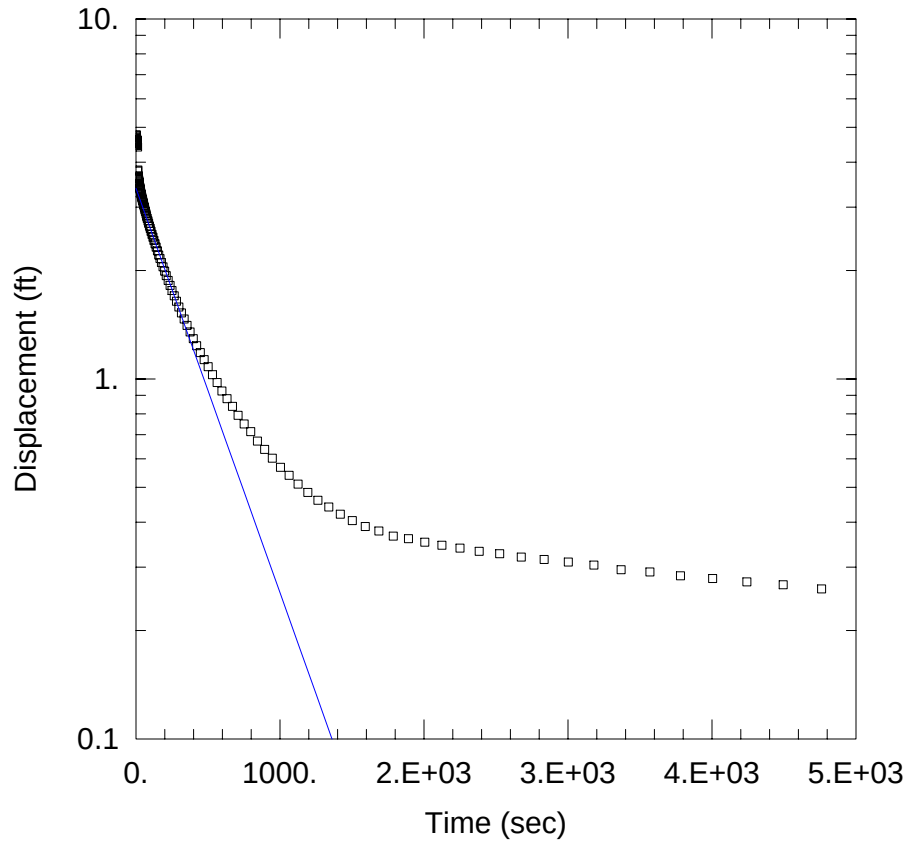
K = 0.001957 cm/sec
y0 = 4.308 ft

AQUIFER DATA

Saturated Thickness: 31.96 ft
Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (54MW8)

Initial Displacement: 3.986 ft
Wellbore Radius: 0.458 ft
Screen Length: 15. ft
Gravel Pack Porosity: 0.3
Casing Radius: 0.167 ft
Well Skin Radius: 0.458 ft
Total Well Penetration Depth: 16.81 ft



54MW9 FALLING HEAD

Data Set: P:\...\54MW9FALL.aqt
Date: 06/19/07 Time: 16:30:48

PROJECT INFORMATION

Company: URS Group
Client: RFAAP
Project: 21355035
Test Location: Radford, VA
Test Well: 54MW9
Test Date: March 3, 2005

SOLUTION

Aquifer Model: Unconfined
Solution Method: Bouwer-Rice

K = 0.0002182 cm/sec
y0 = 3.385 ft

AQUIFER DATA

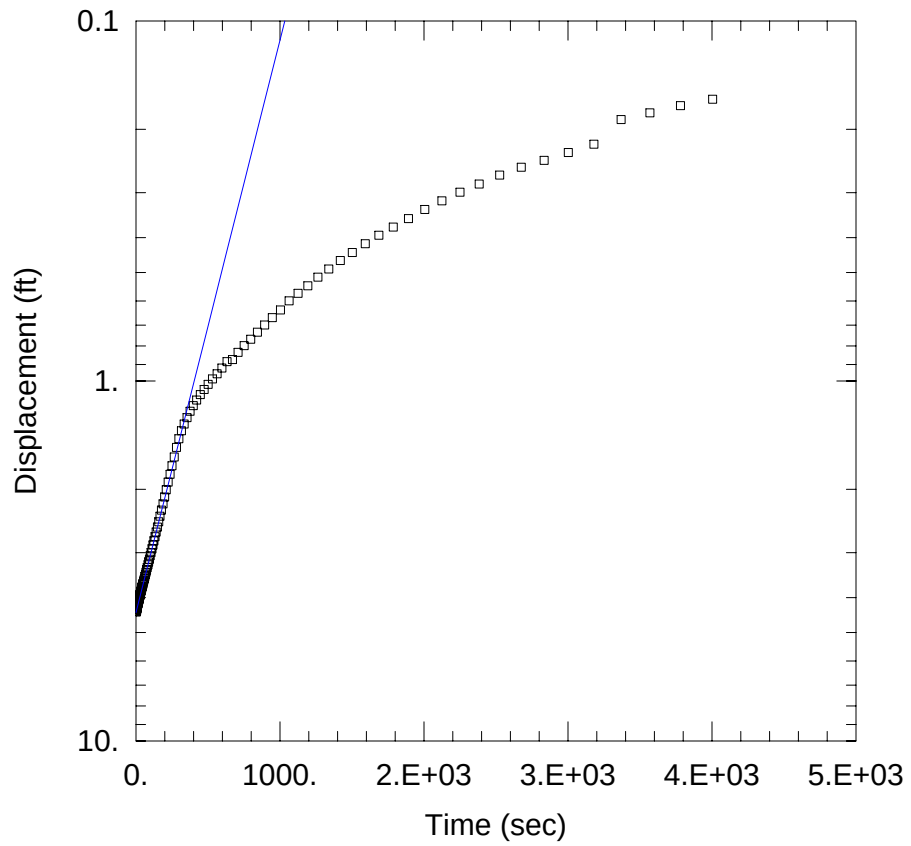
Saturated Thickness: 27.95 ft

Anisotropy Ratio (Kz/Kr): 1.

WELL DATA (54MW9)

Initial Displacement: 4.759 ft
Wellbore Radius: 0.458 ft
Screen Length: 10. ft
Gravel Pack Porosity: 0.3

Casing Radius: 0.167 ft
Well Skin Radius: 0.458 ft
Total Well Penetration Depth: 11.08 ft



54MW9 RISING HEAD

Data Set: P:\...\54MW9RISE.aqt
Date: 06/19/07 Time: 16:34:57

PROJECT INFORMATION

Company: URS Group
Client: RFAAP

MONITORING WELL INSPECTION LOG

PROJECT NAME: RFAAP-SWMU 34 - Qtr 4

URS PROJECT NO. 11656351

FACILITY NAME: RFAAP

MONITORING WELL: 54MW1

A. Inspected by (full name): Christina DeVine

B. Date/Time of Inspection: 14:15 9/19/07

C. Inspection Observations:

1. Locking protective casing:
   no lock
2. Concrete well Pad:
   intact
3. Lock:
   not present
4. Erosion:
   none observed
5. Exterior well identification number:
   placard on top of well

GROUNDWATER SAMPLING FIELD LOG

Project Information

Project Name:	RFAAP-SWMU 84 - Qtr 4	Date:	9/19/07
Facility Name:	RFAAP	Client:	RFAAP
URS Project No.:	11656351	Sampling Event:	GW qtrly Qtr
Weather Conditions:	sunny		
Sampling Team:	Jim Carter/Tina DeVine		

Monitoring Well ID and Measurement Information

Monitoring Well ID:	84MW1	Organic Vapor Headspace:	– ppm
Time Well Casing Unlocked:	12:07	Combustible Gas:	– %LEL
Well Stickup from Ground Surface (Inner Casing):	1.92 ft		
Well Stickup from Ground Surface (Outer Casing):	2.13 ft	Height of Water H_w [a-b]	37.63 ft
Depth to Water Top of Inner/Outer casing:[a]	19.68 ft		
Depth to Immiscible Layer	– ft	Measurement Technique:	
Thickness of Immiscible Layer	– ft	water level meter + tape measure	
Total Depth of Well From top of Inner/Outer Casing [b]:	57.31 ft		

Well Construction and Purge Volume Calculation

Screened Well [X]

Boring Radius (r_b)	ft
Nominal Radius of Casing (r_c)	ft
Height of Sand Pack (h_s)	ft
Length of Screen	ft

Purge/Sampling Technique:

High Flow-Volume Purge/Low Flow Sampling: [ ]
Low Flow Purge/Low Flow Sampling: [X]
Other:

Formulas for Determining Purge Volume

Water Level above Top of Sand Pack

$3 \times [\pi r_b^2 h_s - \pi r_c^2 h_s) \times 0.3 + (\pi r_c^2 h_w) \times 7.5] =$ _____ gals

Water Level below Top of Sand Pack

$3 \times [\pi r_b^2 h_w - \pi r_c^2 h_w) \times 0.3 + (\pi r_c^2 h_w) \times 7.5] =$ _____ gals

where:

r_b = radius of boring	ft
r_c = radius of casing	ft
h_s = height of sand	ft
h_w = height of water	ft
r_b = radius of boring	ft
r_c = radius of casing	ft
h_s = height of sand	ft
h_w = height of water	ft

Open Bedrock Well [ ]

Radius of Open Borehole (r_b)	ft
Depth to Bottom of Overburden Casing	ft
Depth to Bottom of Well	ft
Length of Well Open to Bedrock	ft

Formula for Determining Purge Volume:

$3 \times [(\pi r_b^2 h_w) \times 7.5] =$ _____ gals

where:

r_b = radius of boring	ft
h_w = height of water	ft
r_b = radius of boring	ft
h_w = height of water	ft

MONITORING WELL INSPECTION LOG

PROJECT NAME: RFAAP-SWMU54-Qtr 4

URS PROJECT NO. 11656351

FACILITY NAME: RFAAP

MONITORING WELL: 54MW8

A. Inspected by (full name): Christina DeVine

B. Date/Time of Inspection: 9/18/07 15:31

C. Inspection Observations:

1. Locking protective casing:
   lock present but rusted
2. Concrete well Pad:
   intact
3. Lock:
   rusted
4. Erosion:
   none
5. Exterior well identification number:
   not available

D. Inspection Comments:
   ~~well pad covered with growth~~

MONITORING WELL INSPECTION LOG

E. Repair/remediation comments:
replace lock and provide outside numbering

F. Repair/remediation Date: _____

Notification Regarding Manual Editing/Integration Flags

In some instances, manual adjustments to the software output are necessary to provide accurate data. These manual integrations are performed by the data reviewers, GC/MS operators, or GC chemists. An Extracted Ion Current Profile (EICP) or a GC chromatographic peak has been provided for the manual integration performed on each compound to demonstrate the accuracy of that process. The manual integrations are flagged on the quantitation report in the far right column beyond the FINAL concentration for GC/MS analysis, and in the "Flags" column for GC analysis. The manual editing/integration flags are:

M - Denotes that a manual integration has been performed for this compound. The manual integration was performed in order to provide the most accurate area count possible for the peak.

H - Denotes that a data reviewer, GC/MS operator, or GC Chemist has chosen an alternate peak within the retention time window from that chosen by the software for that compound. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

MH - Denotes that an alternate peak has been chosen within the retention time window from that chosen by the software for that compound and also a manual integration of the chosen peak has been performed. The manual integration was performed in order to provide the most accurate area count possible for the peak.

L - Denotes that a data reviewer or GC/MS operator has selected an alternate library search. This is typically done when an additional tentatively identified compound (TIC) has been added to the number of peaks searched. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

ML - Denotes that an alternate library search has been selected and a manual integration has also been performed. This is typically done when an additional TIC has been added and the TIC peak also required a manual integration.

The EPA CLP SOW documents require additional explanations for manual editing/integration. In the accompanying raw data packages, additional codes have been applied to the "M" flag and carry the following meanings;

M1 - The compound was initially not found by the automatic integration routine.

M2 - The compound was incorrectly integrated by the automatic integration routine.

M3 - The co-eluting compounds were incorrectly integrated by the automatic integration routine.

These codes will appear in the GC/MS and GC data packages.

Robert E. Meierer

Robert E. Meierer
Vice President

DATA REPORTING QUALIFIERS (continued)

C : This flag applies to GC or HPLC results where the identification has been confirmed by GC/MS. If GC/MS confirmation was attempted but was unsuccessful, this flag is not applied; a laboratory-defined flag is used instead (see the X/Y/Z qualifier.)

B : This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates probable blank contamination and warns the data user to take appropriate action. This flag is used for a TIC as well as for a positively identified target compound. The combination of flags BU or UB is not an allowable policy. Blank contaminants are flagged with a B only when they are detected in the sample.

E : This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis. If one or more compounds have a response greater than the upper level of the calibration range, the sample or extract will be diluted and reanalyzed. All such compounds with a response greater than the upper level of the calibration range will have the concentration flagged with an E on the Form I for the original analysis.

D : If a sample or extract is reanalyzed at a higher dilution factor, for example when the concentration of an analyte exceeds the upper calibration range, the DL suffix is appended to the sample number on the Form I for the more diluted sample, and **all** reported concentrations on that Form I are flagged with the D flag. This flag alerts data users that any discrepancies between the reported concentrations may be due to dilution of the sample or extract.

NOTE 1: The D flag is not applied to compounds that are not detected in the sample analysis i.e., compounds reported with the CRQL (or Reporting Limit) and the U flag.

NOTE 2: Separate Forms I are used for reporting the original analysis (Client Sample No. XXXXX) and the more diluted sample analysis (Client Sample No. XXXXXDL) i.e., the results from both analyses are not combined on a single Form I.

A : This flag indicates that a TIC is a suspected aldol-condensation product.

X/Y/Z : Other specific flags may be required to properly define the results. If used, the flags will be fully described in the SDG Narrative. The laboratory-defined flags are limited to X, Y and Z.

DATA REPORTING QUALIFIERS

On the Form I, under the column labeled "Q" for qualifier, each result is flagged with the specific data reporting qualifiers listed below, as appropriate. Up to five qualifiers may be reported on Form I for each compound. The qualifiers used are:

U : This flag indicates the compound was analyzed for but not detected. The Contract Required Quantitation Limit (CRQL), or reporting limit, will be adjusted to reflect any dilution and, for soils, the percent moisture.

J : This flag indicates an estimated value. The flag is used as detailed below:

1. When estimating a concentration for tentatively identified compounds (TICs) where a response factor of 1.0 is assumed for the TIC analyte,

2. When the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the CRQL (or Reporting Limit) but greater than zero, and

3. When the retention time data indicate the presence of a compound that meets the pesticide/Aroclor or other GC or HPLC identification criteria, and the result is less than the CRQL (or Reporting Limit) but greater than zero. For example, if the CRQL (or Reporting Limit) is 10 µg/L, but a concentration of 3 µg/L is calculated, it is reported as 3J.

N : This flag indicates presumptive evidence of a compound. This flag is only used for TICs, where the identification is based on a mass spectral library search. For generic characterization of a TIC such as 'chlorinated hydrocarbon', the N flag is not used.

P : In the EPA's Contract Laboratory Program (CLP), this flag is used for a pesticide/Aroclor target analyte, when there is greater than a 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on Form I and flagged with a P.
For SW-846 GC and HPLC analyses, when the Relative Percent Difference (RPD) is greater than 40% and there is no evidence of chromatographic anomalies or interferences, then the higher of the two values is reported and flagged with a P. When the RPD is equal to or less than 40%, our policy is to also report the higher of the two values, although the choice could be a project specific issue.

SDG NARRATIVE
SDG #S2797

SAMPLE IDENTIFICATIONS: 54IDMH20

The one water sample listed above was received intact, at 4.6 degrees C, with proper documentation, in sealed shipping containers, on December 13, 2002, and was scheduled for volatile TCLP, metals TCLP, semivolatile TCLP, herbicide TCLP, pesticide TCLP, reactive cyanide, reactive sulfide, and corrosivity analysis.
The volatile fraction sample was prepared by ZHE extraction, and analyzed following SW846 Method 8260B. All pertinent Quality Assurance Notices are included in the narrative section, and all pertinent Laboratory Notices SDG # S2797 are included in the sample data sections. Analysis holding time requirements were met this sample.

No target analytes were identified in the submitted sample above the reporting limits.

No searches were conducted for Tentatively Identified Compounds (TICs) per client request.

All Bromofluorobenzene (BFB) abundance criteria were met for tunes associated to this SDG. Overall QC criteria were met for all initial and continuing calibration standards associated to this SDG.

All of the system monitoring compounds(SMCs) met recovery criteria in the analysis of this sample, and all of the internal standards met response and retention time criteria in the analysis of this sample.

The associated method blank, and ZHE blank met all QC criteria, and did not contain any target analytes above the reporting limits.

The duplicate matrix spikes generated from this original met all QC precision and accuracy criteria without exception. The associated Laboratory Control Sample(LCS) met all accuracy criteria.

Manual quantitations were performed on the process files in the associated initial and continuing calibration(s). The reasons have been coded with explanations provided in the notice included in the narrative section of this SDG.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

SDG NARRATIVE

SDG # S2797
PROTOCOL: SW-846

SAMPLE IDENTIFICATIONS: 54IDMH20.

The one leachate sample listed above was received intact, properly refrigerated at 4.6°C, with proper documentation, in sealed shipping containers, on December 13, 2002. The samples were scheduled for the requested analyses of the semivolatile fraction. This portion of the SDG narrative deals with the semivolatile fractions only. SW-846, 3rd Edition, Update 3, the Toxicity Characteristic Leaching Procedure (TCLP) (Method 1311), Separatory Funnel extraction (Method 3510C), and Method 8270C were used to prepare and analyze this sample, with the exceptions and/or additions requested by the client. All pertinent Quality Assurance Notices are included in the narrative section, and all pertinent Laboratory Notices for SDG # S2797 are included in the sample data sections. Extraction and analysis holding time requirements were met for this sample.

There were no semivolatile project analytes identified above the Quantitation Limit (QL) in this sample. Manual quantitations were performed on one or more of the process files associated with this SDG. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

All decafluorotriphenylphosphine (DFTPP) abundance criteria were met for tunes associated to this SDG. Tailing factor criteria were met for pentachlorophenol and benzidine. The breakdown criterion was met for DDT. These three compounds have been added to the DFTPP solution and analyzed together. Overall QC criteria were met for all initial and continuing calibration standards associated to this SDG. All of the surrogates met recovery criteria in the analysis of this sample. All of the internal standards met response and retention time criteria in the analysis of this sample. The associated method blank met all quality control criteria. 54IDMH20 was used as the original to prepare the duplicate matrix spikes. The associated duplicate matrix spikes met all advisory accuracy criteria. Most of the advisory precision criteria were not met in the comparison of the duplicate matrix spikes. The associated Laboratory Control Sample (LCS) met all accuracy criteria.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

The one water sample listed above was received intact, properly refrigerated, with proper documentation, in sealed shipping containers, on December 13, 2002. The sample was scheduled for the requested analyses of the herbicide fraction. SW-846, 3rd Edition, Update 3, the Toxicity Characteristic Leaching Procedure (TCLP) (Method 1311), and Method 8081A were used to prepare and analyze these samples, with the exceptions and/or additions requested by the client. This portion of the SDG narrative deals with the pesticide fraction only. All pertinent Quality Assurance notices are included in the narrative section and all pertinent Laboratory notices for SDG # S2797 are included in the sample data sections.

Pesticide

Extraction and analysis holding time requirements were met for this sample. There is target analyte confirmed by dual column analysis above the Quantitation Limit in this sample. Manual quantitations were performed on one or more of the process files associated with this SDG, including 54IDH20. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

All QC criteria were met for all initial and continuing calibration standards associated to this SDG. The surrogates DCB and TCX were flagged as an outlier in the sample and in the matrix spike duplicate prepared from it. DCB was flagged as an outlier in the matrix spike.

The associated method blank met all quality control criteria.

54IDMH20 was used as the original to prepare the duplicate matrix spikes as requested. The recovery of the spike compound toxaphene was flagged as an outlier in the matrix spike and matrix spike duplicate. The Relative Percent Difference (RPD) of gamma-BHC, heptachlor, heptachlor epoxide, and toxaphene were flagged as an outlier in the comparison of the duplicate matrix spikes. The associated Laboratory Control Sample (LCS) met all accuracy criteria.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

SDG NARRATIVE
SDG # S2797
PROTOCOL: SW-846

SAMPLE IDENTIFICATIONS:
54IDMH20

The one water sample listed above was received intact, properly refrigerated, with proper documentation, in sealed shipping containers, on December 13, 2002. The sample was scheduled for the requested analyses of the herbicide fraction. SW-846, 3rd Edition, Update 3, the Toxicity Characteristic Leaching Procedure (TCLP) (Method 1311), and Method 8151A were used to prepare and analyze these samples, with the exceptions and/or additions requested by the client. This portion of the SDG narrative deals with the herbicide fraction only. All pertinent Quality Assurance notices are included in the narrative section and all pertinent Laboratory notices for SDG # S2797 are included in the sample data sections.

Herbicide

Extraction and analysis holding time requirements were met for this sample. 2,4-D and silvex were not confirmed by dual column analysis above the Quantitation Limit in this sample. Manual quantitations were performed on one or more of the process files associated with this SDG, including 54IDH20. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

All QC criteria were met for all initial and continuing calibration standards associated to this SDG. All of the surrogates met recovery and retention time criteria in the analyses of these samples.

The associated method blank met all quality control criteria. The method blank contained levels of 2,4-D and silvex within acceptance criteria limits.

54IDMH20 was used as the original to prepare the duplicate matrix spikes as requested. The associated duplicate matrix spikes met all advisory accuracy and precision criteria. The associated Laboratory Control Sample (LCS) met all accuracy criteria.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

INORGANIC CASE SUMMARY NARRATIVE
SDG # S2797
PROTOCOL #SW-846

The indicated Sample Delivery Group (SDG) consisting of one (1) one sample was received into the laboratory management system (LIMS) on December 13, 2002 intact and in good condition with Chain of Custody in order. Sample ID's reported in this data package are noted by the receiving department on the COC if they differ from those listed by the samplers on the COC.

The sample was analyzed for the TCLP list (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver) using analytical methods delineated in SW-846 (Update III).

SAMPLE IDs:

The cover page contained in this package lists the client ID's and the associated CompuChem numbers which are part of this SDG.

INSTRUMENTAL QUALITY CONTROL:

All calibration verification solutions (ICV, CCV), blanks (ICB, CCB) and interference check samples (ICSA & ICSAB) associated with this data were confirmed to be within SW-846 allowable limits.

SAMPLE PREPARATION QUALITY CONTROL:

The sample preparation procedure verifications (LCSW & PBW) were found to be within acceptable ranges. All field samples were prepared and analyzed within the contract specified holding times.

MATRIX RELATED QUALITY CONTROL:

The sample matrix spike WG21976-1 (54IDMH2OS) was inside control limits for all requested analytes. The sample matrix spike duplicate, WG21976-2 (54IDMH2OSD) was inside control limits for all requested analytes.

SW-846 control limits for matrix spike recoveries are set at 75% to 125% of the analyte quantity added unless original sample concentrations exceed the true values of these "spikes" by a factor of four or more; in this case effected analytes are not flagged even if recoveries fall outside percentage recovery control limits.

The sample matrix duplicate, WG21976-3 (54IDMH2OD) was inside control limits for all requested analytes..

SW-846 control limits for duplicate determinations are +/- 20% Relative Percent Difference (RPD) for concentrations greater than or equal to five times the CRDL in both the original and duplicate samples, and +/- the CRDL for concentrations less than five times the CRDL. The RPD is not calculated if both the original and duplicate values fall below the IDL.

A five-fold serial dilution of sample, S2797-1 (54IDWH2OL) was performed in accordance with SW-846 requirements for ICP analysis.

The adjusted sample concentrations were outside control limits for barium which is flagged with an "E" on all associated form 1, the cover page, and form 9.

An "E" indicates that a chemical or physical interference effect was encountered during the analysis of the flagged analyte. As a result of this interference, all values for the analyte in the same matrix must be considered to be estimated quantities.

SW-846 control limits for serial dilution are defined as a deviation less than or equal to 10% in the dilution-adjusted concentrations from the original values for all analyte concentrations with values greater than fifty (50) times their respective Instrument Detection Limit (IDL) in the original sample.

Release of the data contained in this hard copy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SDG NARRATIVE
SDG #T2797

SAMPLE IDENTIFICATIONS: 54IDMSOIL

The one soil sample listed above was received intact, at 4.6 degrees C, with proper documentation, in sealed shipping containers, on December 13, 2002, and was scheduled for volatile TCLP, metals TCLP, semivolatile TCLP, herbicide TCLP, pesticide TCLP, reactive cyanide, reactive sulfide, ignitability, and corrosivity analysis.
The volatile fraction sample was prepared by ZHE extraction, and analyzed following SW846 Method 8260B. All pertinent Quality Assurance Notices are included in the narrative section, and all pertinent Laboratory Notices SDG # T2797 are included in the sample data sections. Analysis holding time requirements were met this sample.

No target analytes were identified in the submitted sample above the reporting limits.

No searches were conducted for Tentatively Identified Compounds (TICs) per client request.

All Bromofluorobenzene (BFB) abundance criteria were met for tunes associated to this SDG. Overall QC criteria were met for all initial and continuing calibration standards associated to this SDG.

All of the system monitoring compounds(SMCs) met recovery criteria in the analysis of this sample, and all of the internal standards met response and retention time criteria in the analysis of this sample.

The associated method blank, and ZHE blank met all QC criteria, and did not contain any target analytes above the reporting limits.

The duplicate matrix spikes generated from this original met all QC precision and accuracy criteria without exception. The associated Laboratory Control Sample(LCS) met all accuracy criteria.

Manual quantitations were performed on the process files in the associated initial and continuing calibration(s). The reasons have been coded with explanations provided in the notice included in the narrative section of this SDG.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Notification Regarding Manual Editing/Integration Flags

In some instances, manual adjustments to the software output are necessary to provide accurate data. These manual integrations are performed by the data reviewers, GC/MS operators, or GC chemists. An Extracted Ion Current Profile (EICP) or a GC chromatographic peak has been provided for the manual integration performed on each compound to demonstrate the accuracy of that process. The manual integrations are flagged on the quantitation report in the far right column beyond the FINAL concentration for GC/MS analysis, and in the "Flags" column for GC analysis. The manual editing/integration flags are:

M - Denotes that a manual integration has been performed for this compound. The manual integration was performed in order to provide the most accurate area count possible for the peak.

H - Denotes that a data reviewer, GC/MS operator, or GC Chemist has chosen an alternate peak within the retention time window from that chosen by the software for that compound. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

MH - Denotes that an alternate peak has been chosen within the retention time window from that chosen by the software for that compound and also a manual integration of the chosen peak has been performed. The manual integration was performed in order to provide the most accurate area count possible for the peak.

L - Denotes that a data reviewer or GC/MS operator has selected an alternate library search. This is typically done when an additional tentatively identified compound (TIC) has been added to the number of peaks searched. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

ML - Denotes that an alternate library search has been selected and a manual integration has also been performed. This is typically done when an additional TIC has been added and the TIC peak also required a manual integration.

The EPA CLP SOW documents require additional explanations for manual editing/integration. In the accompanying raw data packages, additional codes have been applied to the "M" flag and carry the following meanings;

M1 - The compound was initially not found by the automatic integration routine.

M2 - The compound was incorrectly integrated by the automatic integration routine.

M3 - The co-eluting compounds were incorrectly integrated by the automatic integration routine.

These codes will appear in the GC/MS and GC data packages.

Robert E. Meierer
Vice President

DATA REPORTING QUALIFIERS (continued)

C : This flag applies to GC or HPLC results where the identification has been confirmed by GC/MS. If GC/MS confirmation was attempted but was unsuccessful, this flag is not applied; a laboratory-defined flag is used instead (see the X/Y/Z qualifier.)

B : This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates probable blank contamination and warns the data user to take appropriate action. This flag is used for a TIC as well as for a positively identified target compound. The combination of flags BU or UB is not an allowable policy. Blank contaminants are flagged with a B only when they are detected in the sample.

E : This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis. If one or more compounds have a response greater than the upper level of the calibration range, the sample or extract will be diluted and reanalyzed. All such compounds with a response greater than the upper level of the calibration range will have the concentration flagged with an E on the Form I for the original analysis.

D : If a sample or extract is reanalyzed at a higher dilution factor, for example when the concentration of an analyte exceeds the upper calibration range, the DL suffix is appended to the sample number on the Form I for the more diluted sample, and **all** reported concentrations on that Form I are flagged with the D flag. This flag alerts data users that any discrepancies between the reported concentrations may be due to dilution of the sample or extract.

NOTE 1: The D flag is not applied to compounds that are not detected in the sample analysis i.e., compounds reported with the CRQL (or Reporting Limit) and the U flag.

NOTE 2: Separate Forms I are used for reporting the original analysis (Client Sample No. XXXXX) and the more diluted sample analysis (Client Sample No. XXXXXDL) i.e., the results from both analyses are not combined on a single Form I.

A : This flag indicates that a TIC is a suspected aldol-condensation product.

X/Y/Z : Other specific flags may be required to properly define the results. If used, the flags will be fully described in the SDG Narrative. The laboratory-defined flags are limited to X, Y and Z.

DATA REPORTING QUALIFIERS

On the Form I, under the column labeled "Q" for qualifier, each result is flagged with the specific data reporting qualifiers listed below, as appropriate. Up to five qualifiers may be reported on Form I for each compound. The qualifiers used are:

U : This flag indicates the compound was analyzed for but not detected. The Contract Required Quantitation Limit (CRQL), or reporting limit, will be adjusted to reflect any dilution and, for soils, the percent moisture.

J : This flag indicates an estimated value. The flag is used as detailed below:

1. When estimating a concentration for tentatively identified compounds (TICs) where a response factor of 1.0 is assumed for the TIC analyte,

2. When the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the CRQL (or Reporting Limit) but greater than zero, and

3. When the retention time data indicate the presence of a compound that meets the pesticide/Aroclor or other GC or HPLC identification criteria, and the result is less than the CRQL (or Reporting Limit) but greater than zero. For example, if the CRQL (or Reporting Limit) is 10 µg/L, but a concentration of 3 µg/L is calculated, it is reported as 3J.

N : This flag indicates presumptive evidence of a compound. This flag is only used for TICs, where the identification is based on a mass spectral library search. For generic characterization of a TIC such as 'chlorinated hydrocarbon', the N flag is not used.

P : In the EPA's Contract Laboratory Program (CLP), this flag is used for a pesticide/Aroclor target analyte, when there is greater than a 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on Form I and flagged with a P.
For SW-846 GC and HPLC analyses, when the Relative Percent Difference (RPD) is greater than 40% and there is no evidence of chromatographic anomalies or interferences, then the higher of the two values is reported and flagged with a P. When the RPD is equal to or less than 40%, our policy is to also report the higher of the two values, although the choice could be a project specific issue.

SDG NARRATIVE

SDG # T2797
PROTOCOL: SW-846

SAMPLE IDENTIFICATIONS: 54IDMSOIL.

The one leachate sample listed above was received intact, properly refrigerated at 4.6°C, with proper documentation, in sealed shipping containers, on December 13, 2002. The samples were scheduled for the requested analyses of the semivolatile fraction. This portion of the SDG narrative deals with the semivolatile fractions only. SW-846, 3rd Edition, Update 3, the Toxicity Characteristic Leaching Procedure (TCLP) (Method 1311), Separatory Funnel extraction (Method 3510C), and Method 8270C were used to prepare and analyze this sample, with the exceptions and/or additions requested by the client. All pertinent Quality Assurance Notices are included in the narrative section, and all pertinent Laboratory Notices for SDG # T2797 are included in the sample data sections. Extraction and analysis holding time requirements were met for this sample.

There were no semivolatile project analytes identified above the Quantitation Limit (QL) in this sample. Manual quantitations were performed on one or more of the process files associated with this SDG. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

All decafluorotriphenylphosphine (DFTPP) abundance criteria were met for tunes associated to this SDG. Tailing factor criteria were met for pentachlorophenol and benzidine. The breakdown criterion was met for DDT. These three compounds have been added to the DFTPP solution and analyzed together. Overall QC criteria were met for all initial and continuing calibration standards associated to this SDG. All of the surrogates met recovery criteria in the analysis of this sample. All of the internal standards met response and retention time criteria in the analysis of this sample. The associated method blank met all quality control criteria. 54IDMSOIL was used as the original to prepare the duplicate matrix spikes. The associated duplicate matrix spikes met all advisory accuracy and precision criteria. The associated Laboratory Control Sample (LCS) met all accuracy criteria.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

SDG NARRATIVE

SDG T2797

SAMPLE IDENTIFICATION: 54IDMSOIL

The one solid sample listed above was scheduled for the requested analysis of the pesticide TCLP fraction. This portion of the SDG narrative deals with the pesticide fraction only. SW-846, 3rd Edition, Update 3, Toxicity Characteristic Leaching Procedure (TCLP) (Method 1311), Separatory Funnel Extraction (Method 3510C) and Method 8081A were used to prepare and analyze this sample, with the exceptions and/or additions requested by the client. All pertinent Quality Assurance Notices are included in the narrative section and all pertinent Laboratory Notices for SDG T2797 are included in the sample data sections.

Pesticide Section:

Extraction and analysis holding time requirements were met for this sample. There were no Target Compound List (TCL) analytes identified above the Contract Required Quantitation Limit (CRQL) in this sample. Manual quantitations were performed on one or more of the process files associated with this SDG. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

Overall QC criteria were met for all initial and continuing calibration standards associated to this SDG. All samples met QC recovery criteria for surrogates. The associated method blanks met all quality control criteria.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

SDG NARRATIVE

SDG T2797

SAMPLE IDENTIFICATION: 54IDMSOIL

The one solid sample listed above was scheduled for the requested analysis of the pesticide TCLP fraction. This portion of the SDG narrative deals with the pesticide fraction only. SW-846, 3rd Edition, Update 3, Toxicity Characteristic Leaching Procedure (TCLP) (Method 1311), Separatory Funnel Extraction (Method 3510C) and Method 8081A were used to prepare and analyze this sample, with the exceptions and/or additions requested by the client. All pertinent Quality Assurance Notices are included in the narrative section and all pertinent Laboratory Notices for SDG T2797 are included in the sample data sections.

Pesticide Section:

Extraction and analysis holding time requirements were met for this sample. There were no Target Compound List (TCL) analytes identified above the Contract Required Quantitation Limit (CRQL) in this sample. Manual quantitations were performed on one or more of the process files associated with this SDG. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

Overall QC criteria were met for all initial and continuing calibration standards associated to this SDG. All samples met QC recovery criteria for surrogates. The associated method blanks met all quality control criteria.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

INORGANIC CASE SUMMARY NARRATIVE
SDG # T2797
PROTOCOL #SW-846

The indicated Sample Delivery Group (SDG) consisting of one (1) one sample was received into the laboratory management system (LIMS) on December 13, 2002 intact and in good condition with Chain of Custody in order. Sample ID's reported in this data package are noted by the receiving department on the COC if they differ from those listed by the samplers on the COC.

The sample was analyzed for the TCLP list (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver) using analytical methods delineated in SW-846 (Update III).

SAMPLE IDs:

The cover page contained in this package lists the client ID's and the associated CompuChem numbers which are part of this SDG.

INSTRUMENTAL QUALITY CONTROL:

All calibration verification solutions (ICV, CCV), blanks (ICB, CCB) and interference check samples (ICSA & ICSAB) associated with this data were confirmed to be within SW-846 allowable limits.

SAMPLE PREPARATION QUALITY CONTROL:

The sample preparation procedure verifications (LCSW & PBW) were found to be within acceptable ranges. All field samples were prepared and analyzed within the contract specified holding times.

MATRIX RELATED QUALITY CONTROL:

The sample matrix spike WG22059-1 (54IDMSOILS) was inside control limits for all requested analytes. The sample matrix spike duplicate, WG22059-2 (54IDMSOILSD) was inside control limits for all requested analytes.

SW-846 control limits for matrix spike recoveries are set at 75% to 125% of the analyte quantity added unless original sample concentrations exceed the true values of these "spikes" by a factor of four or more; in this case effected analytes are not flagged even if recoveries fall outside percentage recovery control limits.

The sample matrix duplicate, WG22059-3 (54IDMSOILD) was inside control limits for all requested analytes..

SW-846 control limits for duplicate determinations are +/- 20% Relative Percent Difference (RPD) for concentrations greater than or equal to five times the CRDL in both the original and duplicate samples, and +/- the CRDL for concentrations less than five times the CRDL. The RPD is not calculated if both the original and duplicate values fall below the IDL.

A five-fold serial dilution of sample, T2797-1 (54IDMSOILL) was performed in accordance with SW-846 requirements for ICP analysis.

The adjusted sample concentrations were inside control limits for all requested analytes.

SW-846 control limits for serial dilution are defined as a deviation less than or equal to 10% in the dilution-adjusted concentrations from the original values for all analyte concentrations with values greater than fifty (50) times their respective Instrument Detection Limit (IDL) in the original sample.

Release of the data contained in this hard copy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SDG NARRATIVE
SDG # Q2901
PROTOCOL: SW-846

SAMPLE IDENTIFICATIONS:
54IDMSOIL2
54IDMSOIL3

The two soil samples listed above were received intact, properly refrigerated, with proper documentation, in sealed shipping containers, on March 6, 2003. The samples were scheduled for the requested analyses of the pesticide TCLP fractions. SW-846, 3rd Edition, Update 3, the Toxicity Characteristic Leaching Procedure (TCLP) (Method 1311), and Method 8081A were used to prepare and analyze these samples, with the exceptions and/or additions requested by the client. This portion of the SDG narrative deals with the pesticide TCLP fraction only. All pertinent Quality Assurance notices are included in the narrative section and all pertinent Laboratory notices for SDG # Q2901 are included in the sample data sections.

Pesticides TCLP

Extraction and analysis holding time requirements were met for all of these samples. There were no pesticide TCLP analytes confirmed by dual column above the Quantitation Limit (QL) in these samples. Manual quantitations were performed on one or more of the process files associated with this SDG, including sample 54IDMSOIL3. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

All QC criteria were met for all initial and continuing calibration standards associated to this SDG.

All of the surrogates met recovery and retention time criteria in the analyses of these samples.

The associated method blank met all quality control criteria.

Sample 54IDMSOIL3 was used as the original to prepare the duplicate matrix spikes. The associated duplicate matrix spikes met all accuracy and precision criteria. The associated Laboratory Control Sample (LCS) prepared and analyzed along with these samples met all accuracy criteria.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Notification Regarding Manual Editing/Integration Flags

In some instances, manual adjustments to the software output are necessary to provide accurate data. These manual integrations are performed by the data reviewers, GC/MS operators, or GC chemists. An Extracted Ion Current Profile (EICP) or a GC chromatographic peak has been provided for the manual integration performed on each compound to demonstrate the accuracy of that process. The manual integrations are flagged on the quantitation report in the far right column beyond the FINAL concentration for GC/MS analysis, and in the "Flags" column for GC analysis. The manual editing/integration flags are:

M - Denotes that a manual integration has been performed for this compound. The manual integration was performed in order to provide the most accurate area count possible for the peak.

H - Denotes that the data reviewer, GC/MS operator, or GC Chemist has chosen an alternate peak within the retention time window from that chosen by the software for that compound. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

MH - Denotes that an alternate peak has been chosen within the retention time window from that chosen by the software for that compound and also a manual integration of the chosen peak has been performed. The manual integration was performed in order to provide the most accurate area count possible for the peak.

L - Denotes that a data reviewer or GC/MS operator has selected an alternate library search. This is typically done when an additional tentatively identified compound (TIC) has been added to the number of peaks searched. No manual integration is performed in choosing an alternate peak. The software still performs the integration.

ML - Denotes that an alternate library search has been selected and a manual integration has also been performed. This is typically done when an additional TIC has been added and the TIC peak also required a manual integration.

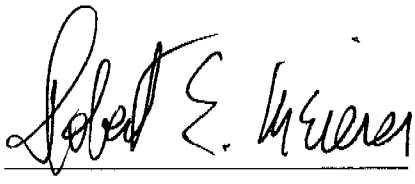
The EPA CLP SOW documents require additional explanations for manual editing/integration. In the accompanying raw data packages, additional codes have been applied to the "M" flag and carry the following meanings;

M1 - The compound was not found by the automatic integration routine.

M2 - The compound was incorrectly integrated by the automatic integration routine.

M3 - The co-eluting compounds were incorrectly integrated by the automatic integration routine.

These codes will appear in the GC/MS and GC data packages.



Robert E. Meierer
Vice President

DATA REPORTING QUALIFIERS

On the Form I, under the column labeled "Q" for qualifier, each result is flagged with the specific data reporting qualifiers listed below, as appropriate. Up to five qualifiers may be reported on Form I for each compound. The qualifiers used are:

U : This flag indicates the compound was analyzed for but not detected. The Contract Required Quantitation Limit (CRQL), or reporting limit, will be adjusted to reflect any dilution and, for soils, the percent moisture.

J : This flag indicates an estimated value. The flag is used as detailed below:

1. When estimating a concentration for tentatively identified compounds (TICs) where a response factor of 1.0 is assumed for the TIC analyte,

2. When the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the CRQL (or Reporting Limit) but greater than zero, and

3. When the retention time data indicate the presence of a compound that meets the pesticide/Aroclor or other GC or HPLC identification criteria, and the result is less than the CRQL (or Reporting Limit) but greater than zero. For example, if the CRQL (or Reporting Limit) is 10 µg/L, but a concentration of 3 µg/L is calculated, it is reported as 3J.

N : This flag indicates presumptive evidence of a compound. This flag is only used for TICs, where the identification is based on a mass spectral library search. For generic characterization of a TIC such as 'chlorinated hydrocarbon', the N flag is not used.

P : In the EPA's Contract Laboratory Program (CLP), this flag is used for a pesticide/Aroclor target analyte, when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on Form I and flagged with a P.
For SW-846 GC and HPLC analyses, when the Relative Percent Difference (RPD) is greater than 40% and there is no evidence of chromatographic anomalies or interferences, then the higher of the two values is reported and flagged with a P. When the RPD is equal to or less than 40%, our policy is to also report the higher of the two values, although the choice could be a project specific issue. For certain HPLC analyses, if one of the HPLC columns displays co-elution of target analytes, all results are reported from a primary column displaying no co-elution. Results are still flagged with a P if the RPD between columns is greater than 40%.

DATA REPORTING QUALIFIERS (continued)

C : This flag applies to GC or HPLC results where the identification has been confirmed by GC/MS. If GC/MS confirmation was attempted but was unsuccessful, this flag is not applied; a laboratory-defined flag is used instead (see the X/Y/Z qualifier.)

B : This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates probable blank contamination and warns the data user to take appropriate action. This flag is used for a TIC as well as for a positively identified target compound. The combination of flags BU or UB is not an allowable policy. Blank contaminants are flagged B only when they are detected in the sample.

E : This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis. If one or more compounds have a response greater than the upper level of the calibration range, the sample or extract will be diluted and reanalyzed. All such compounds with a response greater than the upper level of the calibration range will have the concentration flagged with an E on Form I for the original analysis.

D : If a sample or extract is reanalyzed at a higher dilution factor, for example when the concentration of an analyte exceeds the upper calibration range, the DL suffix is appended to the sample number on Form I for the more diluted sample, and **all** reported concentrations on that Form I are flagged with the D flag. This flag alerts data users that any discrepancies between the reported concentrations may be due to dilution of the sample or extract.

NOTE 1: The D flag is not applied to compounds which are not detected in the sample analysis i.e. compounds reported with the CRQL (or Reporting Limit) and the U flag.

NOTE 2: Separate Form Is are used for reporting the original analysis (Client Sample No. XXXXX) and the more diluted sample analysis (Client Sample No. XXXXXDL) i.e. the results from both analyses <u>are not combined</u> on a single Form I.

A : This flag indicates that a TIC is a suspected aldol-condensation product.

X/Y/Z : Other specific flags may be required to properly define the results. If used, the flags will be fully described in the SDG Narrative. The laboratory-defined flags are limited to X, Y and Z.

SDG CASE NARRATIVE

Radford Army Ammunition Plant
SWMU 54

SDG – 36440-26
FEBRUARY 3, 2005

This case narrative is applicable to the IDM sample collected from Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on January 10, 2005. The sample was assigned to TriMatrix project submittal 36440-26 for analytical services (the Project) to be performed according to:

a) Subcontract No. TMX-09112003 between the Client and TriMatrix

b) Radford Army Ammunition Plant Final Master Work Plan, August, 2003 and SWMU 54 Additional Characterization Work Instructions, July 2004, and

c) verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to assigned laboratory sample ID cross-reference table follows.

Field Sample ID	Date Sampled	Laboratory Sample ID
54IDM1	01/07/05	381082

Sample Receipt and Log-in

On January 10, 2005 at 08:35 hrs, one sample cooler containing multiple containers of one IDM sample for the analysis of project-specified parameters was received at TriMatrix via FedEx (the carrier). The cooler had been shipped from the Site on January 7, 2005 for delivery the next business day.

The external custody seal affixed to the cooler was intact. The sample was received in good condition but no ice or melt water was present. The receipt temperature of the interior of the cooler was measured via a 'temperature blank' shipped with the cooler; the measured temperature, in °C, was 14.9. Shipping documents included one field chain-of-custody form and associated carrier air bill.

Sample receipt activities and observations were recorded on a TriMatrix Sample Receiving and Log-in Checklist. Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

The Client was informed regarding the receipt temperature and advised TriMatrix to proceed with analysis.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.
5560 Corporate Exchange Court SE • Grand Rapids, MI 49512 • (616) 975-4500 • Fax (616) 942-7463

Provision of Sample Receipt Information to Client

A copy of the COC and receipt checklist was transmitted to the Client on the same day as sample receipt. The Client did not request any modification(s) to the analyses, as requested on the COC.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms applicable to the sample in this report are on file.

Analytical Methods

Sample preparation and analytical methods that were employed are per the Work Plan Addendum and/or subsequent discussion with the Client.

Target Analyte List and Reporting Limits

The target analyte list (by parameter) and reporting limit (goals) employed for the sample are summarized in the Work Plan Addendum and/or as agreed upon with the Client. Each reporting limit employed is at least three times the MDL per the USACE Shell for Analytical Chemistry Requirements (EM200-1-3 Feb 1, 2001) and project Data Quality Objectives (DQO).

Quality Control Limits

Per discussion with the Client, Work Plan-specified quality control limits were employed except for one parameter for which no Work Plan limits were available. For pH, internal accuracy and/or precision limits were employed.

Hold Times

The sample was leached (where applicable), extracted, and analyzed within EPA-specified hold times.

Technical Issues and Client Corrective Action Logs

General Analytical

The Client requested that, as the Project progressed, TriMatrix provide regular and timely updates regarding analytical status and any technical issues; see Attachment 1 of this narrative for e-mail correspondence. No Corrective Action Logs applicable to the samples in this submittal were generated.

Also see the individual parameter sections later in this narrative for any further discussion of parameter-specific issues.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Sample Result Reporting Convention

Sample Results

Sample results are reported as RL "U" (e.g., 0.001 U) if the target analyte was not detected above the MDL. For multiple-compound organic analysis where the analyte has been detected, the analyte, the result, and any needed qualifier are highlighted on the report page for ease of review.

Concentration Qualifiers

If applicable, sample results are qualified with:

- a "J" flag if the analyte was detected but the concentration is greater than the MDL but less than the RL,
- a "B" flag if the analyte was also detected in the method blank (exception: if the analyte concentration in the sample is greater than or equal to ten times that found in the associated method blank, the "B" flag is not applied),
- an asterisk (*) if a LIMS-generated statement of qualification applies. Note: no qualifying statements were generated for this submittal.

In addition, the Client requested that any sample result from volatile or semivolatile GC/MS analysis impacted by a non-compliant internal standard (IS) response be flagged as "J" if the sample IS response is less than 50% but greater than or equal to 30% and "R" if the response is less than 30%. Note: no results from this submittal required this qualification.

QC Batch and Analytical Batch Designations

A QC Batch associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.). The QC batch number is a five-digit number. Currently on some LIMS reports, it may be followed by a 3-digit number, preceded by a hyphen, representing the work shift (1, 2, or 3) and a two-digit date (mm). For most analyses, the 3-digit suffix can be ignored; an exception is Volatiles in which a Method Blank and Laboratory Fortified Blank are generated with each analytical batch.

An Analytical Batch associates all samples analyzed as a set under one analytical sequence. The analytical batch number is a six-digit number.

QC Type Designation

A glossary of the most common terms applicable to this deliverables package follows on the next several pages.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.
5560 Corporate Exchange Court SE • Grand Rapids, MI 49512 • (616) 975-4500 • Fax (616) 942-7463

QUALITY CONTROL SAMPLE TYPES

BLANKS

Type	Abbr.	Description	Frequency
Method Preparation Blank	MPB	The MPB is employed in any analytical process that includes sample pretreatment in order to monitor for any contaminants that may affect the sample result(s).	One per QC batch, not to exceed twenty (20) field investigative samples
Instrument Blank	BLK	The BLK is used to detect any contamination originating within the instrument system. For analyses in which there is no sample pretreatment, it is substituted for the MPB.	Depending upon the test, analysis is once per day, 12 hours, and/or at the beginning of an analytical run. If it is analyzed in lieu of an MPB, the frequency is one per QC Batch, not to exceed twenty (20) field investigative samples.
Initial Calibration Blank	ICB	The ICB is a reagent blank analyzed as a sample after the calibration curve has been generated. It is used to evaluate instrument calibration in a region of the curve below the reporting limit and near the limit of detection.	One per analytical batch immediately following the initial calibration or as specified in the analytical method.
Continuing Calibration Blank	CCB	The CCB is a reagent blank analyzed periodically throughout the analytical run in order to verify whether significant instrument drift has occurred near the reporting limit.	Every ten samples or as specified in the analytical method.

CONTROL SPIKES

Laboratory Fortified Blank	LFB	The LFB is an aliquot of reagent water or blank matrix spiked with a known amount of one or more target analytes; it is derived from a certified secondary source standard. This blank spike is required for each analytical method that includes a sample preparation step (digestion, distillation, extraction, etc.). The purpose of the blank spike is to verify the accuracy of the analyst's spiking technique, determine if the preparation batch is in control independent of field sample matrix, and to aid in the assessment of any matrix interference encountered during the analysis of the matrix spike and matrix spike duplicate, or laboratory duplicate.	One per QC batch, not to exceed twenty (20) field investigative samples
Laboratory Control Sample	LCS	The LCS is otherwise an LFB for analyses in which no sample pretreatment is employed.	One per QC batch, not to exceed twenty (20) field investigative samples.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.
5560 Corporate Exchange Court SE • Grand Rapids, MI 49512 • (616) 975-4500 • Fax (616) 942-7463

QUALITY CONTROL SAMPLE TYPES

CALIBRATION AND REPORTING LIMIT VERIFICATION

Type	Abbr.	Description	Frequency
Initial Calibration Verification	ICV	The ICV is a mid-range standard from a certified secondary source analyzed to assess the integrity of the primary standards used for calibration.	Once per initial calibration or as specified in the analytical method.
Continuing Calibration Verification	CCV	The CCV is a mid-range primary source standard analyzed as a sample and compared with the standard curve. Evaluation of the CCV will determine if instrument response since the last CCV has remained within acceptance limits.	Analyzed after the initial calibration and/or ICV, after every 10 samples, and at the conclusion of the analytical run - or as specified in the analytical method.
Contract Required Detection Limit	CRDL	A primary source standard containing target analytes, each at a concentration equal to or near the reporting limit, analyzed to demonstrate that the reporting limit can be met within a specified recovery criterion.	Once per initial calibration or as specified in the analytical method (applicable to inorganic analyses such a metals).

MATRIX SPIKES, LABORATORY DUPLICATES, AND SURROGATES

Matrix Spike	SPK	The SPK is an aliquot of sample spiked with a known amount of a primary reference standard containing some or all of the analytes of interest. The purpose of the SPK is to monitor sample matrix effects on analytical accuracy; otherwise known as MS and MSD.	For organics and metals, one pair of matrix spikes for every 20 samples of each matrix type. For wet chemistry parameters, one matrix spike and one laboratory duplicate per 20 samples of each matrix type may be substituted.
Matrix Spike Duplicate	MSD	The MSD is the calculated relative percent difference (RPD) between the concentrations found from matrix spike pair or laboratory duplicate analyses.	One calculated RPD value per matrix spike or laboratory duplicate pair.
Sample Duplicate	DUP	The DUP is a replicate analysis of a particular sample that has been analyzed previously, usually within the sample analytical batch.	Every 10 samples of each matrix type or every 20 samples if combined with a matrix spike.
Surrogate Spike	SUR	Surrogates are brominated, fluorinated, isotopically labeled, or similar compounds not typically detected in environmental samples. They are used to assess analytical efficiency by measuring the percent recovery from a fortified sample or control matrix.	For almost all organic analyses, surrogate compounds are added to every blank, sample, matrix spike, matrix spike duplicate, and standard.

Statement of Data Qualifications

No statements were generated.

Data Review and Approval

All data was peer-reviewed by a second analyst and then by appropriate data management staff against laboratory quality control requirements and project specifications; it was then reviewed and approved by the group supervisor/manager prior to further review by the project chemist. All reviews were documented.

Data Deliverables

Preliminary Report

A preliminary report comprised of sample results and QC was provided to the Client via e-mail on January 21, 2005. In the preparation of the final deliverables, no revision to any data was found to be necessary.

Final Deliverables

The hardcopy data deliverables that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. Per Client request, raw data and additional instrument QC summaries have not been included. The same report on CD will be provided once the report has been reviewed by the Client.

The EDD, in GIS/Key format, is being issued separate from this hardcopy report.

TRIMATRIX LABORATORIES, INC.
SUMMARY DATA PACKAGE

PREPARED FOR:

URS Group, Inc.
5540 Falmouth Street, Suite 201
Richmond, VA 23229

FOR THE SITE:

Radford Army Ammunition Plant
SWMU54 IDM

SDG-36440-34

January 30, 2007

Submitted by:

TriMatrix Laboratories, Inc.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

SDG CASE NARRATIVE

URS Group, Inc.
Radford Army Ammunition Plant
SWMU54 IDM

SDG – 36440-34
JANUARY 30, 2007

This case narrative is applicable to the IDM sample collected from SWMU54 at Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on January 17, 2007. The sample was assigned to TriMatrix project sample delivery group (SDG) 36440-34 for analytical services (the Project) to be performed according to:

a) URS Project #11656351.30013, Subcontract # NCA-06-1783,

b) the Scope of Work (SOW) for the above,

c) Department of Defense Quality Systems Manual for Environmental Laboratories, Final Version 3, January 2006 (by reference)

d) any verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the sample received, a field sample to laboratory sample ID cross-reference table follows.

Field Sample Name	Sample Matrix	Laboratory Sample ID	Date Sampled	Date Received
IDM-1	Soil	0701258-01	01/17/07	01/18/07
IDM-1	Soil	0701258-02	01/17/07	01/18/07

Note: the 'IDM' sample was assigned two different laboratory sample IDs depending upon the matrix of the parameters to be reported (i.e., "TCLP" or "Waste").

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Sample Receipt and Log-in

On January 18, 2007 at 08:35 hrs, one sample cooler containing an IDM soil sample was received at TriMatrix via FedEx (the carrier). The cooler had been shipped from the Site on January 17.

The external custody seal affixed to the cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of the cooler was measured via a 'temperature blank' shipped in it; the measured temperature, in °C, was 5.2.

Shipping documents included one field chain-of-custody (COC) and associated carrier air bill.

The sample was not designated by the Client for MS/MSD analysis.

Samples were assigned to Work Order 0701258 and SDG 36440-34.

Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as listed on the COC.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Method 6010B

The acceptance criterion of < 2 x RL was substituted for < 2 x MDL for interference check solution ICS-A.

Analytical Methods

Sample preparation and analytical methods that were employed are per the SOW.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard. The target analyte list was specified by the Client in the SOW. Proposed RLs for non-TCLP parameters were submitted by TriMatrix to the Client prior to the receipt of any samples. TCLP parameters employ TriMatrix default RLs.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Project-specific Analytes of Concern

No project-specific analytes of concern were identified in the SOW.

Quality Control Limits

Where applicable, quality control limits specified in the DoD QSM were employed. TriMatrix does not consider DoD QSM water limits to be applicable to a TCLP (leachate) matrix and internal laboratory limits were employed for TCLP parameters.

Hold Times

All samples were extracted/digested (where applicable) and analyzed within hold time.

Technical Issues

There were no technical issues.

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample for an organic parameter is reanalyzed for confirmation purposes and also reported, the second analysis includes the suffix 'RE1'.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the preceding Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.).

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was reviewed and approved by the group supervisor/manager prior to further review by data management staff and the project chemist.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

Table C.9-5
Aluminum Site and Outside Fence Means Comparison - Area A - Surface Soil
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

t-Test Site vs Background Comparison for Full Data Sets without NDs

User Selected Options

From File	WorkSheet.wst
Full Precision	OFF
Confidence Coefficient	95%
Substantial Difference (S)	0
Selected Null Hypothesis	Site or AOC Mean Less Than or Equal to Background Mean (Form 1)
Alternative Hypothesis	Site or AOC Mean Greater Than the Background Mean

Area of Concern Data: Aluminum(site)

Background Data: Aluminum(outside fence)

Raw Statistics

	Site	Background
Number of Valid Samples	25	12
Number of Distinct Samples	23	12
Minimum	6620	5900
Maximum	19400	17100
Mean	11408	12381
Median	10700	13200
SD	3576	3435
SE of Mean	715.2	991.5

Site vs Background Two-Sample t-Test

H0: Mu of Site - Mu of Background <= 0

Method	DF	t-Test Value	Critical t (0.050)	P-Value
Pooled (Equal Variance)	35	-0.784	1.69	0.781
Satterthwaite (Unequal Variance)	22.6	-0.795	1.714	0.783

Pooled SD 3532.048

Conclusion with Alpha = 0.050

* Student t (Pooled) Test: Do Not Reject H0, Conclude Site <= Background
* Satterthwaite Test: Do Not Reject H0, Conclude Site <= Background

Test of Equality of Variances

Numerator DF	Denominator DF	F-Test Value	P-Value
24	11	1.084	0.929

Conclusion with Alpha = 0.05

* Two variances appear to be equal

Table C.9-6
Manganese Site and Outside Fence Means Comparison - Area A - Total Soil
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Wilcoxon-Mann-Whitney Site vs Background Comparison Test for Full Data Sets without NDs

User Selected Options

From File	WorkSheet.wst
Full Precision	OFF
Confidence Coefficient	95%
Substantial Difference	0
Selected Null Hypothesis	Site or AOC Mean/Median Less Than or Equal to Background Mean/Median (Form 1)
Alternative Hypothesis	Site or AOC Mean/Median Greater Than Background Mean/Median

Area of Concern Data: Manganese(site)

Background Data: Manganese(outside fence)

Raw Statistics

	Site	Background
Number of Valid Samples	50	36
Number of Distinct Samples	47	35
Minimum	220	224
Maximum	909	3710
Mean	517.6	981.2
Median	519	640
SD	135	843.1
SE of Mean	19.09	140.5

Wilcoxon-Mann-Whitney (WMW) Test

H0: Mean/Median of Site or AOC <= Mean/Median of Background

Site Rank Sum W-Stat	1994
WMW Test U-Stat	-1.593
WMW Critical Value (0.050)	1.645
P-Value	0.944

Conclusion with Alpha = 0.05

Do Not Reject H0, Conclude Site <= Background

P-Value >= alpha (0.05)

General Statistics

Number of Valid Samples	60	Number of Detected Data	3
Number of Unique Samples	3	Number of Non-Detect Data	57
		Percent Non-Detects	95.00%

Raw Statistics		**Log-transformed Statistics**	
Minimum Detected	0.495	Minimum Detected	-0.703
Maximum Detected	28	Maximum Detected	3.332
Mean of Detected	10.17	Mean of Detected	1.111
SD of Detected	15.46	SD of Detected	2.048
Minimum Non-Detect	0.099	Minimum Non-Detect	-2.313
Maximum Non-Detect	0.19	Maximum Non-Detect	-1.661

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	57
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	3
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	95.00%

UCL Statistics

Normal Distribution Test with Detected Values Only		**Lognormal Distribution Test with Detected Values Only**	
Lilliefors Test Statistic	0.791	Lilliefors Test Statistic	0.97

APPENDIX D

DATA QUALITY OBJECTIVES

THIS PAGE LEFT INTENTIONALLY BLANK

TABLE D-1
DATA USABILITY WORKSHEET
SITE: SWMU 54
MEDIUM: Soil

Activity	Comment
Field Sampling	
Discuss sampling problems and field conditions that affect data usability.	There were no problems identified during field sampling that affected data usability.
Are samples representative of receptor exposure for this medium (e.g., sample depth, grab vs. composite, filtered vs. unfiltered, low flow, etc.)?	Yes. Samples are representative of receptor exposure. Surface soil samples and subsurface soil samples were collected from discrete intervals.
Assess the effect of field QC results on data usability.	Field duplicate samples were collected at the rate of 1 per 10 soil samples. The average concentration of the soil sample and its duplicate sample were used in the risk assessments. Equipment rinsate blank samples were collected at the rate of 1 per 20 soil samples. Low-level detections at concentrations below the laboratory reporting limit were reported in one or more of the equipment blank samples for selected metals, dioxins, and common laboratory contaminant bis(2-ethylhexyl)phlalate. No significant impact on data usability resulted from these detections. Matrix spike (MS)/matrix spike duplicate (MSD) samples were at the rate of 1 per 20 soil samples. No significant impact on data usability was identified based on the matrix spike results.
Summarize the effect of field sampling issues on the risk assessment, if applicable.	No significant sampling issues were noted. See Sections 6.5.1 and 7.4.1 of the RFI/CMS Report discuss the uncertainty analysis for the human health and ecological risk assessments for sampling and analysis.
Analytical Techniques	
Were the analytical methods appropriate for quantitative risk assessment?	Yes. Low-level SW-846 analytical methods were used for soil analysis in accordance with the MWP and WPA No. 013. Soil samples were analyzed for SVOCs by SW-846 Method 8270C, PAHs by SW-846 Method 8310, explosives by SW-846 Methods 8330 and 8332, pesticides by SW-846 Method 8081A, PCBs by SW-846 Method 8082, PCB congeners by EPA Method 1668, dioxin/furans by SW-846 Method 8290, and metals by SW-846 6010B, 6020, and 7471A.
Were detection limits adequate?	Yes. Low-level SW-846 Methods were used. The detection limits were adequate for screening against adjusted RBCs.

TABLE D-1
DATA USABILITY WORKSHEET
SITE: SWMU 54
MEDIUM: Soil

Activity	Comment
Summarize the effect of analytical technique issues on risk assessment, if applicable.	There were no analytical technical issues, which significantly affected the risk assessments. Sections 6.5.1 and 7.4.1 of the RFI/CMS Report discuss the uncertainty analysis for the human health and ecological risk assessments for sampling and analysis.
Data Quality Objectives	
Precision – How were duplicates handled?	Field duplicate samples were collected at the rate of 1 per 10 soil samples. The average concentration of the soil sample and its duplicate sample were used in the risk assessments.
Accuracy – How were split samples handled?	Split samples were not collected.
Representativeness – Indicate any problems associated with data representativeness (e.g., trip blank or rinsate blank contamination, COC problems, etc.).	No significant issues regarding data representativeness were noted.
Completeness – Indicate any problems associated with data completeness (e.g., incorrect sample analysis, incomplete sample records, problems with field procedures, etc.).	No significant issues regarding completeness of the data were noted. The overall completeness goal of 90$\pm$2% for field activities was exceeded for analytical analysis and field data collection.
Comparability – Indicate any problems associated with data comparability.	No significant issues regarding comparability of the data were noted.
Were the DQOs specified in the QAPP satisfied?	Yes, the DQOs specified in the QAPP were satisfied.
Summarize the effect of DQO issues on the risk assessment, if applicable.	Not applicable
Data Validation and Interpretation	
What are the data validation requirements for this region?	EPA Region III modifications to the National Functional Guidelines for Data Validation.
What method or guidance was used to validate the data?	EPA Region III National Functional Guidelines for Data Validation.
Was the data validation method consistent with regional guidance? Discuss any discrepancies.	Yes, there were no discrepancies.
Were all data qualifiers defined? Discuss those which were not.	Yes, they were defined in the guidance document, data validation reports included in Appendix H of the RFI/CMS Report, and in the data tables included in Section 4.0 of the RFI/CMS Report.
Which qualifiers represent usable data?	B, E, J, K, L, UJ, UL
Which qualifiers represent unusable data?	R

TABLE D-1
DATA USABILITY WORKSHEET
SITE: SWMU 54
MEDIUM: Soil

Activity	Comment
How are tentatively identified compounds handled?	Detected tentatively identified compounds are qualified NJ. These compounds are not used in the risk assessments.
Summarize the effect of data validation and interpretation issues on the risk assessment, if applicable.	Section 6.5.1 of the RFI/CMS Report discusses uncertainties associated with qualified data.
Additional notes:	None.

TABLE D-2
DATA USABILITY WORKSHEET
SITE: SWMU 54
MEDIUM: Groundwater

Activity	Comment
Field Sampling	
Discuss sampling problems and field conditions that affect data usability.	There were no problems identified during field sampling that affected data usability.
Are samples representative of receptor exposure for this medium (e.g., sample depth, grab vs. composite, filtered vs. unfiltered, low flow, etc.)?	Yes. Groundwater samples collected from monitoring wells were used in the risk assessment. Direct push samples were not used in the risk assessment but were used in the nature and extent assessment and to assist in locating permanent monitoring well locations. The monitoring wells are screened within the uppermost portion of the alluvial and weathered bedrock aquifer. Both filtered and unfiltered samples were collected for metals. Filtered metals samples were used in the risk assessment and are considered representative of dissolved concentrations in groundwater. Low-flow groundwater sampling techniques were used to collect the samples representative of groundwater quality.
Assess the effect of field QC results on data usability.	Field duplicate samples were collected at the rate of 1 per 10 groundwater samples. The average concentration of the groundwater sample and its duplicate sample were used in the risk assessments. Equipment rinsate blank samples were collected at the rate of 1 per 20 groundwater samples. Low-level detections at concentrations below the laboratory reporting limit were reported in one or more of the equipment blank samples for selected metals and in one equipment blank sample for dioxins. No significant impact on data usability resulted from these detections. Matrix spike (MS)/matrix spike duplicate (MSD) samples were at the rate of 1 per 20 groundwater samples. No significant impact on data usability was identified based on the matrix spike results.
Summarize the effect of field sampling issues on the risk assessment, if applicable.	No significant sampling issues were noted. See Sections 6.5.1 of the RFI/CMS Report discuss the uncertainty analysis for the human health risk assessment for sampling and analysis.

MEDIUM: Groundwater

Activity	Comment
Analytical Techniques	
Were the analytical methods appropriate for quantitative risk assessment?	Yes. Low-level SW-846 and EPA analytical methods were used for groundwater analysis in accordance with the MWP and WPA No. 013. Groundwater samples were analyzed for SVOCs by SW-846 Method 8270C, PAHs by SW-846 Method 8310, explosives by SW-846 Methods 8330 and 8332, pesticides by SW-846 Method 8081A, PCBs by SW-846 Method 8082, dioxin/furans by SW-846 Method 8290, and metals by SW-846 6010B, 6020, and 7470A, and perchlorate by Method EPA 314 (prior to 2007) and SW-846 Method 6850 (2007).
Were detection limits adequate?	Yes. Low-level SW-846 Methods were used. The detection limits were adequate for screening against adjusted RBCs.
Summarize the effect of analytical technique issues on risk assessment, if applicable.	There were no analytical technical issues, which significantly affected the risk assessments. Section 6.5.1 of the RFI/CMS Report discusses the uncertainty analysis for the human health for sampling and analysis.
Data Quality Objectives	
Precision – How were duplicates handled?	Field duplicate samples were collected at the rate of 1 per 10 groundwater samples. The average concentration of the groundwater sample and its duplicate sample were used in the risk assessment.
Accuracy – How were split samples handled?	Split samples were not collected.
Representativeness – Indicate any problems associated with data representativeness (e.g., trip blank or rinsate blank contamination, COC problems, etc.).	No significant issues regarding data representativeness were noted.
Completeness – Indicate any problems associated with data completeness (e.g., incorrect sample analysis, incomplete sample records, problems with field procedures, etc.).	No significant issues regarding completeness of the data were noted. The overall completeness goal of 90$\pm$2% for field activities was exceeded for analytical analysis and field data collection.
Comparability – Indicate any problems associated with data comparability.	No significant issues regarding comparability of the data were noted.
Were the DQOs specified in the QAPP satisfied?	Yes, the DQOs specified in the QAPP were satisfied.
Summarize the effect of DQO issues on the risk assessment, if applicable.	Not applicable

Activity	Comment
Data Validation and Interpretation	
What are the data validation requirements for this region?	EPA Region III modifications to the National Functional Guidelines for Data Validation.
What method or guidance was used to validate the data?	EPA Region III National Functional Guidelines for Data Validation.
Was the data validation method consistent with regional guidance? Discuss any discrepancies.	Yes, there were no discrepancies.
Were all data qualifiers defined? Discuss those which were not.	Yes, they were defined in the guidance document, data validation reports included in Appendix H of the RFI/CMS Report, and in the data tables included in Section 4 of the RFI/CMS Report.
Which qualifiers represent usable data?	B, E, J, K, L, UJ, UL
Which qualifiers represent unusable data?	R
How are tentatively identified compounds handled?	Detected tentatively identified compounds are qualified NJ. These compounds are not used in the risk assessment.
Summarize the effect of data validation and interpretation issues on the risk assessment, if applicable.	Section 6.5.1 of the RFI/CMS Report discusses uncertainties associated with qualified data.
Additional notes:	None.

Notes:

CAS = Chemical Abstracts Service
µg/L = Microgram Per Liter
ng/L = Nanogram Per Liter
TCL = Target Compound List
MDL = Method Detection Limit
RL = Reporting Limit
LQ = Laboratory Qualifier
VQ = Validation Qualifier
r = Reason Code
NT = Not Tested

Data Qualifiers:
A = Amount detected is less than the Lower Detection Limit.
B = Not detected substantially above the level reported in laboratory or field blanks.
J = Analyte present. Reported value may not be accurate or precise.
L = Analyte present. Reported value may be biased low. Actual value is expected to be higher.
N = Presumptive evidence of a compound.
U = Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
m = MS/MSD recovery failure.
o = Calibration blank contamination
p = Preparation blank contamination
w = Identification criteria failure.
x = Field blank contamination.
z = Method blank contamination.

MEDIUM: Surface Water and Sediment Pore Water – New River

Activity	Comment
Field Sampling	
Discuss sampling problems and field conditions that affect data usability.	There were no problems identified during field sampling that affected data usability.
Are samples representative of receptor exposure for this medium (e.g., sample depth, grab vs. composite, filtered vs. unfiltered, low flow, etc.)?	Yes. Unfiltered grab samples were collected for analysis and used in the risk assessment. Low-flow sampling was used to collect the sediment pore-water samples.
Assess the effect of field QC results on data usability.	Field duplicate samples were collected at the rate of 1 per 10 for surface water and for sediment pore-water samples. The average concentration of the surface water sample and sediment pore-water sample and their associated duplicate samples were used in the risk assessments. Equipment rinsate blank samples were not collected given that new disposable tubing, sampling equipment, and a peristaltic pump were used to collect the samples. Matrix spike (MS)/matrix spike duplicate (MSD) samples were at the rate of 1 per 20 surface water and sediment-pore water samples. No significant impact on data usability was identified based on the matrix spike results.
Summarize the effect of field sampling issues on the risk assessment, if applicable.	No significant sampling issues were noted. See Sections 6.5.1 of the RFI/CMS Report discuss the uncertainty analysis for the human health risk assessment for sampling and analysis.
Analytical Techniques	
Were the analytical methods appropriate for quantitative risk assessment?	Yes. Low-level SW-846 and EPA analytical methods were used for surface water and sediment pore-water analysis in accordance with the MWP and WPA No. 013. Surface water and sediment-pore water samples were analyzed for explosives by SW-846 Methods 8330 and 8332 and perchlorate by Method EPA 314.
Were detection limits adequate?	Yes. Low-level SW-846 and EPA Methods were used. The detection limits were adequate for screening against adjusted RBCs.
Summarize the effect of analytical technique issues on risk assessment, if applicable.	There were no analytical technical issues, which significantly affected the risk assessments. Section 6.5.1 of the RFI/CMS Report discusses the uncertainty analysis for the human health for sampling and analysis.

Selection of Exposure Pathways - SWMU 54 - Area A
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future	Surface Soil	Surface Soil	Surface Soil	Maintenance Worker	Adult	Ingestion	Quant	Receptor could ingest surface soil from the site while conducting routine maintenance activities (i.e., mowing lawns).
						Dermal Absorption	Quant	Receptor could come into contact with surface soil from the site while conducting routine maintenance activities (i.e., mowing lawns).
		Air	Ambient Air Above Surface Soil (Particulates)[2]	Maintenance Worker	Adult	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil.
	Subsurface Soil	Subsurface Soil	Subsurface Soil	Maintenance Worker	Adult	Ingestion	None	Receptor is not likely to ingest subsurface soil from the site since maintenance does not include excavation.
						Dermal Absorption	None	Receptor is not likely to come in contact with subsurface soil from the site since maintenance does not include excavation.
		Air	Ambient Air Above Subsurface Soil (Particulates)[2]	Maintenance Worker	Adult	Inhalation	None	Receptor is not likely to inhale particulates from ambient air above the subsurface soil since maintenance activities do not include excavation.
	Groundwater [1]	Groundwater	Groundwater	Maintenance Worker	Adult	Ingestion	None	Receptor is not likely to ingest groundwater from the site during maintenance activities.
						Dermal Absorption	None	Receptor is not likely to contact groundwater from the site during maintenance activities.
		Air	Upward Migration of Vapors from Groundwater (Outdoors)[2]	Maintenance Worker	Adult	Inhalation	None	Receptor is not likely to inhale vapors that migrated upward from groundwater to ambient air.
			Upward Migration of Vapors from Groundwater (Indoors)[2]	Maintenance Worker	Adult	Inhalation	None	Receptor is assumed to be outdoors.
			Vapors while Showering[2]	Maintenance Worker	Adult	Inhalation	None	Receptor is assumed not to shower on-site.
Future	Surface Soil	Surface Soil	Surface Soil	Commerical/Industrial Worker	Adult	Ingestion	Quant	Receptor could ingest surface soil while working on site.
						Dermal Absorption	Quant	Receptor could contact surface soil while working on site.
				Construction Worker	Adult	Ingestion	Quant	Receptor could ingest surface soil from the site during construction activities.
						Dermal Absorption	Quant	Receptor could come into contact with surface soil from the site during construction activities.
				Resident	Child	Ingestion	Quant	Receptor could ingest surface soil while living on site.
						Dermal Absorption	Quant	Receptor could come into contact with surface soil while living on site.
					Adult	Ingestion	Quant	Receptor could ingest surface soil while living on site.
						Dermal Absorption	Quant	Receptor could come into contact with surface soil while living on site.
					Child/Adult	Ingestion	Quant	The cancer risk estimates for the adult resident (24 years) and child resident (6 years) are added together (30 years) to address lifetime exposure to surface soil. The non-cancer hazard evaluations are treated separately for child and adult resident.
						Dermal Absorption	Quant	
		Air	Ambient Air Above Surface Soil (Particulates)[2]	Commerical/Industrial Worker	Adult	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil while working on site.
				Construction Worker	Adult	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil.
				Resident	Child	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil while living on site.
					Adult	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil while living on site.
					Child/Adult	Inhalation	Quant	The cancer risk estimates for the adult resident (24 years) and child resident (6 years) are added together (30 years) to address lifetime exposure to surface soil. The non-cancer hazard evaluations are treated separately for child and adult resident.
			Upward Migration of Vapors from Soil (Indoors)[2]	Commercial/Industrial Worker	Adult	Inhalation	None	Receptor is not likely to inhale VOCs from soil via vapor intrusion into building.[2]
				Resident	Adult	Inhalation	None	Receptor is not likely to inhale VOCs from soil via vapor intrusion into residence.[2]
					Child	Inhalation	None	Receptor is not likely to inhale VOCs from soil via vapor intrusion into residence.[2]

Table E.1-1
Selection of Exposure Pathways - SWMU 54 - Area A
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Future Cont.	Subsurface Soil	Subsurface Soil	Subsurface Soil	Commerical/Industrial Worker	Adult	Ingestion	Quant	Receptor could ingest subsurface soil when mixed with surface soil from construction of a commercial/industrial facility.
						Dermal Absorption	Quant	Receptor could contact subsurface soil when mixed with surface soil from construction of a commercial/industrial facility.
				Construction Worker	Adult	Ingestion	Quant	Receptor could ingest subsurface soil from the site while during construction activities.
						Dermal Absorption	Quant	Receptor could come into contact with subsurface soil from the site during construction activities.
				Resident	Child	Ingestion	Quant	Receptor could ingest subsurface soil when mixed with surface soil from construction of a residence.
						Dermal Absorption	Quant	Receptor could come in contact with subsurface soil when mixed with surface soil from construction of a residence.
					Adult	Ingestion	Quant	Receptor could ingest subsurface soil when mixed with surface soil from construction of a residence.
						Dermal Absorption	Quant	Receptor could come in contact with subsurface soil when mixed with surface soil from construction of a residence.
					Child/Adult	Ingestion	Quant	The cancer risk estimates for the adult resident (24 years) and child resident (6 years) are added together (30 years) to address lifetime exposure to subsurface soil. The non-cancer hazard evaluations are treated separately for child and adult resident.
						Dermal Absorption	Quant

SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Future Cont.	Groundwater[1]	Groundwater	Groundwater	Commercial/Industrial Worker	Adult	Ingestion	Quant	Receptor could ingest groundwater used as a water supply.
						Dermal Absorption	Quant	Receptor could come into contact with groundwater used as a water supply for industrial process.
				Construction Worker	Adult	Ingestion	Quant	Due to the depth to groundwater (approximately 16-20 ft bgs), the receptor is not likely to ingest groundwater during excavation activities.
						Dermal Absorption	Quant	Due to the depth to groundwater (approximately 16-20 ft bgs), the receptor is not likely to contact groundwater during excavation activities.
				Resident	Adult	Ingestion	Quant	Receptor could ingest groundwater used as a water supply.
						Dermal Absorption	Quant	Receptor could come into contact with groundwater used as a water supply.
					Child	Ingestion	Quant	Receptor could ingest groundwater used as a water supply.
						Dermal Absorption	Quant	Receptor could come into contact with groundwater used as a water supply.
					Child/Adult	Ingestion	Quant	The cancer risk estimates for the adult resident (24 years) and child resident (6 years) are added together (30 years) to address lifetime exposure to groundwater. The non-cancer hazard evaluations are treated separately for child and adult resident.
						Dermal Absorption	Quant	
		Air	Upward Migration of Vapors from Groundwater (Outdoors)[2]	Commercial/Industrial Worker	Adult	Inhalation	None	Receptor is not likely to inhale vapors that migrated upward from groundwater to ambient air.[2]
				Construction Worker	Adult	Inhalation	None	Receptor is not likely to inhale vapors that migrated upward from groundwater to ambient air.
				Resident	Adult	Inhalation	None	Receptor is not likely to inhale vapors that migrated upward from groundwater to ambient air in any significant quantities.[2]
					Child	Inhalation	None	Receptor is not likely to inhale vapors that migrated upward from groundwater to ambient air in any significant quantities.[2]
			Upward Migration of Vapors from Groundwater (Indoors)[2]	Commercial/Industrial Worker	Adult	Inhalation	None	Receptor not likely inhale VOCs from groundwater via vapor intrusion into building.[2]
				Construction Worker	Adult	Inhalation	None	Receptor is assumed to be outdoors.
				Resident	Adult	Inhalation	None	Receptor not likely inhale VOCs from groundwater via vapor intrusion into residence.[2]
					Child	Inhalation	None	Receptor not likely to inhale VOCs from groundwater via vapor intrusion into residence.[2]
			Vapors while Showering[2]	Commercial/Industrial Worker	Adult	Inhalation	None	Receptor is assumed not to shower on-site.
				Construction Worker	Adult	Inhalation	None	Receptor is assumed not to shower on-site.
				Resident	Adult	Inhalation	None	Receptor is not likely inhale vapors from groundwater while showering.[2]
					Child	Inhalation	None	Receptor is assumed not to shower.

Notes:
[1] Groundwater from the surface aquifer is not currently used at the sites for potable or non-potable water supply.
[2] VOCs are not chemicals of interest for the site; therefore, the vapors pathway is not assessed quantitatively.

Notes:

COPC = Chemical of Potential Concern
CAS = Chemical Abstracts Service
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
VOC = Volatile Organic Compound
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
TIC = Tentatively Identified Compound
mg/kg = Milligram Per Kilogram
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
N/C = Noncarcinogenic/Carcinogenic per EPA RBC Table (October 2007)
[1] = Chromium VI RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endosulfan RBC value was used
[7] = Endrin RBC value was used
[8] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[9] = Pyrene RBC value was used
[10] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

(A) = Facility-Wide Background Point Estimate as Reported in the Facility-Wide Background Study Report (IT 2001a)
(B) = Re-sampled; Pesticides and PCBs analyzed January 2007.
(C) = Re-sampled; Pesticides, PCBs, and Dioxin/Furans analyzed January 2007.
(D) = Re-sampled; Dioxin/Furans analyzed January 2007.
(E) = Re-sampled; PCBs and PCB Congeners analyzed January 2007.

ARAR = Applicable, Relevant, and Appropriate Requirement
USEPA = U.S. Environmental Protection Agency
TBC = To-Be-Considered
RDA = Recommended Daily Allowance
IND = Adjusted Industrial RBC
AL = USEPA Action Level

ARES = Above Residential RBC
ARES/IND = Above Residential RBC/Industrial RBC
BSL = Below Residential/Industrial RBC Screening Levels
NSV = No Screening Value Available

CAS = Chemical Abstracts Service
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
VOC = Volatile Organic Compound
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
TIC = Tentatively Identified Compound
mg/kg = Milligram Per Kilogram
RBC = USEPA Region III Risk-Based Concentration
(RBC) values from the October 11, 2007,
RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
N/C = Noncarcinogenic/Carcinogenic per EPA RBC Table (October 2007)
[1] = Chromium VI RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endosulfan RBC value was used
[7] = Endrin RBC value was used
[8] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[9] = Pyrene RBC value was used
[10] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

(A) = Facility-Wide Background Point Estimate as Reported in the Facility-Wide Background Study Report (IT 2001a)
(B) = Re-sampled; Pesticides and PCBs analyzed January 2007.
(C) = Re-sampled; Pesticides, PCBs, and Dioxin/Furans analyzed January 2007.
(D) = Re-sampled; Dioxin/Furans analyzed January 2007.
(E) = Re-sampled; PCBs and PCB Congeners analyzed January 2007.

USEPA = U.S. Environmental Protection Agency
ARAR = Applicable, Relevant, and Appropriate Requirement
TBC = To-Be-Considered
RDA = Recommended Daily Allowance
IND = Adjusted Industrial RBC
AL = USEPA Action Level

ARES = Above Residential RBC
ARES/IND = Above Residential RBC/Industrial RBC
BSL = Below Residential/Industrial RBC Screening Levels
NSV = No Screening Value Available

Notes:

CAS = Chemical Abstracts Service
mg/kg = Milligram Per Kilogram
ug/kg = Microgram Per Kilogram
pg/g = Picogram Per Gram
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
MDL = Method Detection Limit
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
R-RBC = Residential RBC

Y = MDL exceeds screening level
N = MDL does not exceed screening level
NS = No screening level available
SL = Screening Level
[1] = Mercuric chloride soil RBC value used
[2] = Chlordane RBC value was used
[3] = Alpha-BHC RBC value was used
[4] = Endosulfan RBC value was used
[5] = Endrin RBC value was used
[6] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[7] = Pyrene RBC value was used
[8] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

Total 2,3,7,8-TCDD Equivalents [3]	--	6.51E-07	3.00E-04	ng/L	54MW2	2/3	--	3.0E-04	--	4.47E-04	--	N	BSL

Notes:

CAS = Chemical Abstracts Service
µg/L = Microgram Per Liter
ng/L = Nanogram Per Liter
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
C = Carcinogenic per EPA RBC Table (October 2007)
N = Noncarcinogenic per EPA RBC Table (October 2007)
MCL = Maximum Contaminant Level
BSL = Below Tap Water RBC/MCL
NSV = No Screening Value
DUP AVG = results for duplicate samples averaged
ARBC = Above Tap Water RBC

[1]=Chromium VI RBC used for screening
[2] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening
[3]=See Table 6.3B for Calculation of Total 2,3,7,8-TCDD Equivalents

[A] = Data from September 2007 used in screening
[B] = Data from 2003 - 2004 used in screening
[C] = Data from December 2006 used in screening

Notes:

CAS = Chemical Abstracts Service
µg/L = Microgram Per Liter
ng/L = Nanogram Per Liter
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
MDL = Method Detection Limit
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
T-RBC = Tap Water RBC

Y = MDL exceeds screening level
N = MDL does not exceed screening level
NS = No screening level available
[1] = Chromium IV RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endosulfan RBC value was used
[7] = Endrin RBC value was used
[8] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[9] = Pyrene RBC value was used
[10] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

				IR	Inhalation Rate	0.5	m^3/hr	(3)	
				PEF	Particulate Emission Factor	6.80E+08	m^3/kg	(1)	

Notes:

(1) PEFs provided on Table E.1-4.4

(2) The inhalation rate is calculated using a daily long term rate of 15 m^3/day (USEPA, 1991) divided by 24 hours to derive hourly inhalation rate of 0.63 m^3/hour.

(3) The inhalation rate is calculated using a daily long term rate of 12 m^3/day (USEPA, 2003) divided by 24 hours to derive hourly inhalation rate of 0.5 m^3/hour.

Note that VOCs were not analytes of interest for the site; therefore, the outdoor and indoor vapor inhalation pathways are not quantitatively assessed for the site.

Notes:
VOCs were not identified as COPC in
CAS = Chemical Abstract Service
ABS_d = Dermal Absorption Fraction
VF = Volatilization Factor
D_a = Apparent Diffusivity
m^3/kg = cubic meters per kilogram
cm2/s = centimeter squared per second

*ABS_d values are taken from Exhibit 3-4, Risk Assessment Guidance for Superfund (RAGS), Volume I, Human Health Evaluation and Manual, Part E; Supplemental Guidance for Dermal Risk Assessment, July 2004, and Region III Technical Guidance, Assessing Dermal Exposure in Soil, December 1995.
[1] = ABSd value for 2,4,6-Trinitrotoluene and nitroglycerin from RAIS
[2]= ABSd value for 2,4-Dintrotoluene used for Dinitrotoluene Mix

D_a values calculated using the following equation and values from the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.
Equation 4-8 from USEPA, 2002:

$D_a = [((\Theta_a^{10/3} \times Di \times H) + (\Theta_w^{10/3} \times D_w))/n^2]/[((\rho_b \times K_d) + \Theta_w + (\Theta_a \times H)]$

Θ_a (L_{air}/L_{soil}) =	0.28
Θ_w (L_{water}/L_{soil}) =	0.15
D_i(cm2/sec) =	varies
D_w(cm2/sec) =	varies
H(unitless) =	varies
n (L_{Pore}/L_{soil}) =	0.43
ρ_b (g/cm^3) =	1.50
K_d (cm^3/g) =	varies
K_{oc} (cm^3/g) =	varies
foc (g/g) =	0.006

VF (soil only) values for construction worker were calculated using the following equations and values from the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.
Equation 5-14 from USEPA 2002:

$VF = Q/C_{sa} * 1/F_D * (3.14 * D_A * T)^{1/2} * CF/(2 * \rho_b * D_A)$

Q/C_{sa} (g/m^2-s)/kg/m^3) =	11.40	calculated value
F_D (unitless) =	0.185	default
D_A (cm^2/sec) =	varies	chemical specific (see above)
T (sec) =	3.15E+07	receptor specific exposure interval (T= ED(yrs)*365 days/year*24 hours/day*60 min/hour*60sec/min)
CF (m^2/cm^2) =	1.00E-04	default
ρ_b (kg/L) =	1.5	default

Equation 5-15 from USEPA, 2002:

$Q/C_{sa} = A * e^{\wedge}((\ln A_c$	11.40	
A=	2.4538	default
B =	17.566	default
C =	189.0426	default
A_c (acres)=	1.69	contaminated site area

Notes (continued):

VF (soil only) values for commercial/industrial worker, adult resident, and child resident, and adolescent tresspasser calculated using the following equations and values from the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.

Equation 4-8 from USEPA, 2002:

$VF = Q/C_{vol}*(3.14*D_A*T)^{1/2}*CF/(2*\rho_b*D_a)$

Q/C_{vol} (g/m2-s)/kg/m3) =	46.89	calculated value
D_A (cm^2/sec) =	varies	chemical specific (see above)
T (sec) =	varies	receptor specific exposure interval (T= ED(yrs)*365 days/year*24 hours/day*60 min/hour*60sec/min)
		(Maintenance Worker=7.88E+08 sec, Commercial/Industrial Worker=7.88E+08 sec, Adult Resident=7.56E+08, and Child Resident=1.89E+08)
CF (m^2/cm^2) =	1.00E-04	default
ρ_b (g/cm^3)	1.5	default

Exhibit D-3 from USEPA, 2002:

$Q/C_{vol} = A*e^{((\ln A_{site} - B)^2/C)}$ =	46.89	
A =	9.9253	Huntington value
B =	18.6636	Huntington value
C =	211.8862	Huntington value
A_{site} (acres)=	1.69	contaminated site area

Table E.1-4.4.RME
PEF Calculations - Area A
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Commercial/Industrial Worker

Equation 4-5 from Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.

$$PEF = Q / C_{wind} \cdot \frac{3{,}600 s/h}{0.036 \cdot (1-V) \cdot (U_m / U_t)\text{^}3 \cdot F(x)}$$

Parameter	Value	
PEF	6.80E+08	
Q/C_{wind}	46.89	calculated below
V	0.5	default
U_m	4.69	default
U_t	11.32	default
F(x)	0.194	default

PEF = particulate emission factor (m^3/kg)
s/h = seconds per hour
Q/Cwind = Inverse of the ratio of the geometric mean air concentration to the emission flux at the center of a square source (g/m^3-s per kg/m^3)
V = fraction of vegatative cover (unitless)
U_m = mean annual windspeed (m/s)
U_t = equivalent threshold value of windspeed at 7m (m/s)
F(x) = function dependent on Um/Ut derived using Cowherd et al. (1985)
Site Area = 1.69

Q/C_{wind} calculated in accordance with Exhibit D-2 from USEPA, 2002 using A, B, and C values for Huntington, WV:
$Q/C_{wind} = A*e\text{^}((\ln A_{site} - B)^2/C))$

Q/C_{wind}=	46.89	
A =	9.9253	unitless
B =	18.6636	unitless
C =	211.8862	unitless
A_{site}=	1.69	acres

Table E.1-4.4.RME
PEF Calculations - Area A
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Construction Worker

Equation 5-5 from Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.

$$PEF_{sc} = Q / C_{sr} \cdot \frac{1}{F_D} \cdot \left[\frac{T \cdot A_R}{556 \cdot (W/3)^{\wedge} 0.4 \cdot \frac{(365\ d/yr - p)}{365\ d/yr} \cdot \sum VKT} \right]$$

Parameter	Value	
PEF_{sc}	1.20E+06	
Q/C_{sr}	18.89	calculated
F_D	0.185	default
T (sec)	7,488,000	assumed-see below
A_R (m^2)	504	calculated
W (tons)	8	assumed-see below
p (days/yr)	140	determined-see below
sumVKT (km)	632	assumed-see below

PEF_{sr} = subchronic road particulate emission factor (m^3/kg)

Q/C_{sr} = Inverse of the ratio of the 1-h geometric mean air concentration to the emission flux along a straight road segment bisecting a square site (g/m2-s per kg/m3)

F_D = dispersion correction factor (unitless)

T = total time over which construction occurs-total time period assumed to be 6 months (52wks x 5days per week x 8 hours per day x 3,600 s per hour)

A_R = surface area of contaminated road segment (m^2)

L_R = length of road segment (assumed to equal to (1.69 acres*43,560 ft^2/acre)$^{1/2}$)

W_R = width of road segment (assumed to be 20 ft)

$A_R = L_R \times W_R \times 0.092903 m^2/ft^2$

A_R= 504 m^2

W = mean vehicle weight assumed to be 8 tons ([(20 cars * 2 tons/car)+(10 trucks*20 tons/truck)]/30 vehicles)

p = number of days with at least 0.01 inches of precipitation (from Exhibit 5-2 140 days/year)

sumVKT = sum of fleet vehicle kilometers traveled during the exposure duration (km) (30 of vehicles x 0.081 of km/day x 52wks x 5 days/wk)

Q/C_{sr} calculated in accordance with Equation 5-6:

using A, B, and C default values:

$Q/C_{sr} = A*e^{\wedge}((\ln A_s - B)^2/C))$

Q/C_{sr}=	18.89	g/m^2-s per kg/m^3
A =	12.9351	unitless
B =	5.7383	unitless
C =	71.7711	unitless
A_s =	1.69	acres

Iron "Margin of Exposure" Evaluation
SMWU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Total Soil - Child Resident - SWMU 54 Area A				
Iron EPC (mg/kg)	Child Daily Intake Estimate* (mg/day)	RDA for Child 6 mths to 4 years Old	Child Daily Intake ** (mg/kg-day)	Provisional RfD (mg/kg-day)
19,503	3.7	10 mg/day	0.25	0.7
Total Soil - Child Resident - SWMU 54 Area B				
Iron EPC (mg/kg)	Child Daily Intake Estimate* (mg/day)	RDA for Child 6 mths to 4 years Old	Child Daily Intake ** (mg/kg-day)	Provisional RfD (mg/kg-day)
20,993	4.0	10 mg/day	0.27	0.7

* See Table H-2 for equations used to calculated daily intake estimates.
** Default weight of 15 kg used for child

Table 2
Iron "Margin of Exposure" Evaluation
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Exposure Route	Receptor Population	Receptor Age	Exposure Point	Parameter Code	Parameter Definition	Value	Units	Rationale/ Reference	Intake Equation
Ingestion-Total Soil	Resident	Child	SWMU 40/71	AT-NC	Averaging Time (Non-Cancer)	2,190	days	USEPA, 1991a	
				CF1	Conversion Factor 1	1.00E-06	kg/mg	unit conversion	Chronic
				CS	Chemical Concentration in Soil	Chemical Specific	mg/kg	MDC or EPC	Daily = $\frac{CS*IRS*EF*ED*FI*CF1}{BW*AT}$
				ED	Exposure Duration	6	years	USEPA, 1991a	Intake
				EF	Exposure Frequency	350	days/year	USEPA, 1991a	(mg/day)
				FI	Fraction Ingested	1	(unitless)		
				IRS	Ingestion Rate of Soil	200	mg/day	USEPA, 1991a	

LEAD IEUBK MODEL RESULTS

THIS PAGE LEFT INTENTIONALLY BLANK

LEAD MODEL FOR WINDOWS Version 1.0

==========
Model Version: 1.0 Build 264
User Name: Tina DeVine
Date: 6/26/2008
Site Name: RFAAP
Operable Unit: SWMU 54
Run Mode: Site Risk Assessment

Water Data
MDL for Lead
Soil/Dust Data
Mean Concentations for Lead
==========
The time step used in this model run: 1 - Every 4 Hours (6 times a day).

****** Air ******

Indoor Air Pb Concentration: 30.000 percent of outdoor.
Other Air Parameters:

Age	Time Outdoors (hours)	Ventilation Rate (m^3/day)	Lung Absorption (%)	Outdoor Air Pb Conc (ug Pb/m^3)
.5-1	1.000	2.000	32.000	0.100
1-2	2.000	3.000	32.000	0.100
2-3	3.000	5.000	32.000	0.100
3-4	4.000	5.000	32.000	0.100
4-5	4.000	5.000	32.000	0.100
5-6	4.000	7.000	32.000	0.100
6-7	4.000	7.000	32.000	0.100

****** Diet ******

Age	Diet Intake(ug/day)
.5-1	5.530
1-2	5.780
2-3	6.490
3-4	6.240
4-5	6.010
5-6	6.340
6-7	7.000

****** Drinking Water ******

Water Consumption:

Age	Water (L/day)
.5-1	0.200
1-2	0.500
2-3	0.520
3-4	0.530
4-5	0.550
5-6	0.580
6-7	0.590

Drinking Water Concentration: 1.300 ug Pb/L

****** Soil & Dust ******

Multiple Source Analysis Used

Average multiple source concentration: 42.550 ug/g

Mass fraction of outdoor soil to indoor dust conversion factor: 0.700
Outdoor airborne lead to indoor household dust lead concentration: 100.000
Use alternate indoor dust Pb sources? No

Age	Soil (ug Pb/g)	House Dust (ug Pb/g)
.5-1	46.500	42.550
1-2	46.500	42.550
2-3	46.500	42.550
3-4	46.500	42.550
4-5	46.500	42.550
5-6	46.500	42.550
6-7	46.500	42.550

****** Alternate Intake ******

Age	Alternate (ug Pb/day)
.5-1	0.000
1-2	0.000
2-3	0.000
3-4	0.000
4-5	0.000
5-6	0.000
6-7	0.000

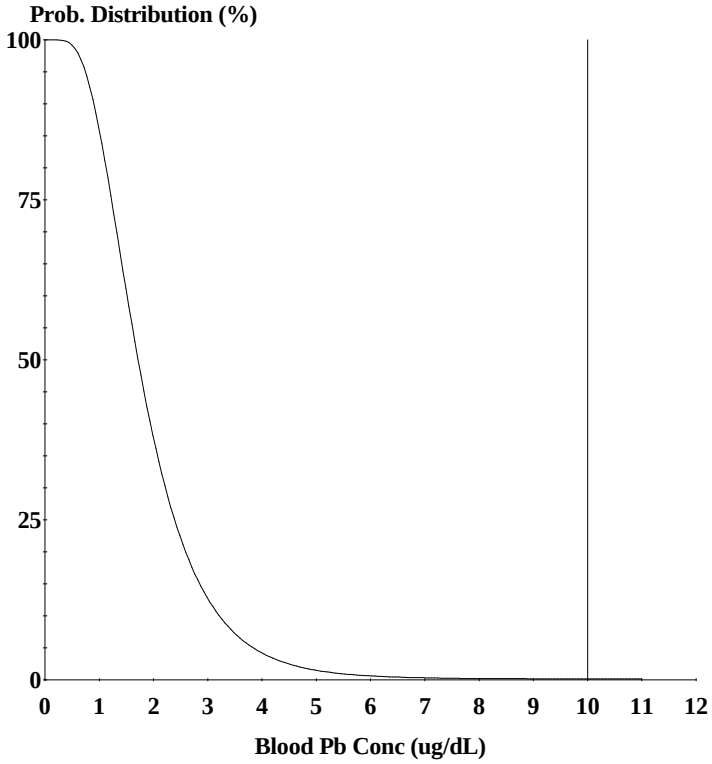
****** Maternal Contribution: Infant Model ******

Maternal Blood Concentration: 2.500 ug Pb/dL

****
CALCULATED BLOOD LEAD AND LEAD UPTAKES:
****

Year	Air (ug/day)	Diet (ug/day)	Alternate (ug/day)	Water (ug/day)
.5-1	0.021	2.647	0.000	0.124
1-2	0.034	2.771	0.000	0.312
2-3	0.062	3.123	0.000	0.325
3-4	0.067	3.021	0.000	0.334
4-5	0.067	2.931	0.000	0.349
5-6	0.093	3.100	0.000	0.369
6-7	0.093	3.425	0.000	0.375

Year	Soil+Dust (ug/day)	Total (ug/day)	Blood (ug/dL)
.5-1	1.082	3.874	2.1
1-2	1.722	4.839	2.1
2-3	1.728	5.238	1.9
3-4	1.738	5.160	1.8
4-5	1.297	4.643	1.6
5-6	1.170	4.732	1.5
6-7	1.106	4.999	1.4



Cutoff = 10.000 ug/dl
Geo Mean = 1.799
GSD = 1.600
% Above = 0.013

Age Range = 0 to 84 months
Time Step = Every 4 Hours
Run Mode = Site Risk Assessment

TABLE E.2-1
Selection of Exposure Pathways - SWMU 54 - Area B
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future	Surface Soil	Surface Soil	Surface Soil	Maintenance Worker	Adult	Ingestion	Quant	Receptor could ingest surface soil from the site while conducting routine maintenance activities (i.e., mowing lawns).
						Dermal Absorption	Quant	Receptor could come into contact with surface soil from the site while conducting routine maintenance activities (i.e., mowing lawns).
		Air	Ambient Air Above Surface Soil (Particulates)[2]	Maintenance Worker	Adult	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil.
	Subsurface Soil	Subsurface Soil	Subsurface Soil	Maintenance Worker	Adult	Ingestion	None	Receptor is not likely to ingest subsurface soil from the site since maintenance does not include excavation.
						Dermal Absorption	None	Receptor is not likely to come in contact with subsurface soil from the site since maintenance does not include excavation.
		Air	Ambient Air Above Subsurface Soil (Particulates)[2]	Maintenance Worker	Adult	Inhalation	None	Receptor is not likely to inhale particulates from ambient air above the subsurface soil since maintenance activities do not include excavation.
	Groundwater [1]	Groundwater	Groundwater	Maintenance Worker	Adult	Ingestion	None	Receptor is not likely to ingest groundwater from the site during maintenance activities.
						Dermal Absorption	None	Receptor is not likely to contact groundwater from the site during maintenance activities.
		Air	Upward Migration of Vapors from Groundwater (Outdoors)[2]	Maintenance Worker	Adult	Inhalation	None	Receptor is not likely to inhale vapors that migrated upward from groundwater to ambient air.
			Upward Migration of Vapors from Groundwater (Indoors)[2]	Maintenance Worker	Adult	Inhalation	None	Receptor is assumed to be outdoors.
			Vapors while Showering[2]	Maintenance Worker	Adult	Inhalation	None	Receptor is assumed not to shower on-site.
Future	Surface Soil	Surface Soil	Surface Soil	Commerical/Industrial Worker	Adult	Ingestion	Quant	Receptor could ingest surface soil while working on site.
						Dermal Absorption	Quant	Receptor could contact surface soil while working on site.
				Construction Worker	Adult	Ingestion	Quant	Receptor could ingest surface soil from the site during construction activities.
						Dermal Absorption	Quant	Receptor could come into contact with surface soil from the site during construction activities.
				Resident	Child	Ingestion	Quant	Receptor could ingest surface soil while living on site.
						Dermal Absorption	Quant	Receptor could come into contact with surface soil while living on site.
					Adult	Ingestion	Quant	Receptor could ingest surface soil while living on site.
						Dermal Absorption	Quant	Receptor could come into contact with surface soil while living on site.
					Child/Adult	Ingestion	Quant	The cancer risk estimates for the adult resident (24 years) and child resident (6 years) are added together (30 years) to address lifetime exposure to surface soil. The non-cancer hazard evaluations are treated separately for child and adult resident.
						Dermal Absorption	Quant	
		Air	Ambient Air Above Surface Soil (Particulates)[2]	Commerical/Industrial Worker	Adult	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil while working on site.
				Construction Worker	Adult	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil.
				Resident	Child	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil while living on site.
					Adult	Inhalation	Quant	Receptor could inhale particulates from ambient air above the surface soil while living on site.
					Child/Adult	Inhalation	Quant	The cancer risk estimates for the adult resident (24 years) and child resident (6 years) are added together (30 years) to address lifetime exposure to surface soil. The non-cancer hazard evaluations are treated separately for child and adult resident.
			Upward Migration of Vapors from Soil (Indoors)[2]	Commercial/Industrial Worker	Adult	Inhalation	None	Receptor is not likely to inhale VOCs from soil via vapor intrusion into building.[2]
				Resident	Adult	Inhalation	None	Receptor is not likely to inhale VOCs from soil via vapor intrusion into residence.[2]
					Child	Inhalation	None	Receptor is not likely to inhale VOCs from soil via vapor intrusion into residence.[2]

Notes:

COPC = Chemical of Potential Concern
CAS = Chemical Abstracts Service
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
TIC = Tentatively Identified Compound
mg/kg = Milligram Per Kilogram
RBC = USEPA Region III Risk-Based Concentration
(RBC) values from the October 11, 2007,
RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
N/C = Noncarcinogenic/Carcinogenic per EPA RBC Table (October 2007)
[1] = Chromium VI RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endrin RBC value was used
[7] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[8] = Pyrene RBC value was used
[9] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

(C) = Re-sampled; Pesticides, PCBs, and Dioxin/Furans analyzed January 2007.
(D) = Re-sampled; Dioxin/Furans analyzed January 2007.
(E) = Re-sampled; PCBs and PCB Congeners analyzed January 2007.
(F) = Re-sampled; PCBs, PCB Congeners, and Dioxin/Furans analyzed January 2007.

ARAR = Applicable, Relevant, and Appropriate Requirement
USEPA = U.S. Environmental Protection Agency
TBC = To-Be-Considered
RDA = Recommended Daily Allowance
IND = Adjusted Industrial RBC
AL = USEPA Action Level

ARES = Above Residential RBC
ARES/IND = Above Residential RBC/Industrial RBC
BSL = Below Residential/Industrial RBC Screening Levels
NSV = No Screening Value Available

Notes:

COPC = Chemical of Potential Concern
CAS = Chemical Abstracts Service
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
TIC = Tentatively Identified Compound
mg/kg = Milligram Per Kilogram
RBC = USEPA Region III Risk-Based Concentration
(RBC) values from the October 11, 2007,
RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
N/C = Noncarcinogenic/Carcinogenic per EPA RBC Table (October 2007)
[1] = Chromium VI RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endrin RBC value was used
[7] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[8] = Pyrene RBC value was used
[9] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

[C] = Re-sampled; Pesticides, PCBs, and Dioxin/Furans analyzed January 2007.
[D] = Re-sampled; Dioxin/Furans analyzed January 2007.
[E] = Re-sampled; PCBs and PCB Congeners analyzed January 2007.
[F] = Re-sampled; PCBs, PCB Congeners, and Dioxin/Furans analyzed January 2007.

USEPA = U.S. Environmental Protection Agency
ARAR = Applicable, Relevant, and Appropriate Requirement
TBC = To-Be-Considered
RDA = Recommended Daily Allowance
IND = Adjusted Industrial RBC
AL = USEPA Action Level

ARES = Above Residential RBC
ARES/IND = Above Residential RBC/Industrial RBC
BSL = Below Residential/Industrial RBC Screening Levels
NSV = No Screening Value Available

NITROGLYCERIN	55-63-0	mg/kg	37	0.1	1	7.8E-01	**Y**

Notes:

CAS = Chemical Abstracts Service
mg/kg = Milligram Per Kilogram
ug/kg = Microgram Per Kilogram
pg/g = Picogram Per Gram
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
MDL = Method Detection Limit
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the Ocotber 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
R-RBC = Residential RBC

Y = MDL exceeds screening level
N = MDL does not exceed screening level
NS = No screening level available
SL = Screening Level
[1] = Mercuric chloride soil RBC value used
[2] = Chlordane RBC value was used
[3] = Alpha-BHC RBC value was used
[4] = Endosulfan RBC value was used
[5] = Endrin RBC value was used
[6] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[7] = Pyrene RBC value was used
[8] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

Table E.2-2.4
Area B Groundwater COPC Selection

Notes:

CAS = Chemical Abstracts Service
µg/L = Microgram Per Liter
TAL = Target Analyte List
TCL = Target Compound List
VOC = Volatile Organic Compound
SVOC = Semivolatile Organic Compound
TIC = Tentatively Identified Compound
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
C = Carcinogenic per EPA RBC Table (October 2007)
N = Noncarcinogenic per EPA RBC Table (October 2007)
MCL = Maximum Contaminant Level
BSL = Below Tap Water RBC/MCL
DUP AVG = results for duplicate samples averaged

ARBC = Above Tap Water RBC

[1] = Chromium VI RBC used for screening
[2] = USEPA Action Level used for screening
[3] = Methylmercury RBC used for screening

[A] = Data from 2003-2004 used in screening
[B] = Data from September 2007 used in screening

Notes:

CAS = Chemical Abstracts Service
µg/L = Microgram Per Liter
ng/L = Nanogram Per Liter
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
SVOC = Semi-volatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
MDL = Method Detection Limit
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
T-RBC = Tap Water RBC

Y = MDL exceeds screening level
N = MDL does not exceed screening level
NS = No screening level available
[1] = Chromium IV RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endosulfan RBC value was used
[7] = Endrin RBC value was used
[8] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[9] = Pyrene RBC value was used
[10] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

Table E.2-3.1
EXPOSURE POINT CONCENTRATION SUMMARY
REASONABLE MAXIMUM EXPOSURE
Exposure to Contaminants in Area B Surface Soil
SWMU 54 RFI/CMS Report

Notes:

CAS = Chemical Abstract Service

ABS_d = Dermal Absorption Fraction

VF = Volatilization Factor

D_a = Apparent Diffusivity

m^3/kg = cubic meters per kilogram

cm2/s = centimeter squared per second

*ABS_d values are taken from Exhibit 3-4, Risk Assessment Guidance for Superfund (RAGS), Volume I, Human Health Evaluation and Manual, Part E; Supplemental Guidance for Dermal Risk Assessment, July 2004, and Region III Technical Guidance, Assessing Dermal Exposure in Soil, December 1995.

[1] = ABS_d value for 2,4,6-Trinitrotoluene, RDX, Nitroglycerin, and Aminodinitrotoluenes from RAIS

[2]= ABS_d value for 2,4-Dintrotoluene used for Dinitrotoluene Mix

[3]= ABS_d value for 2-Amino-4,6-Dintrotoluene used for Aminodinitrotoluenes

D_a values calculated using the following equation and values from the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002. Equation 4-8 from USEPA, 2002:

$$D_a = [(\Theta_a^{10/3} \times Di \times H) + (\Theta_w^{10/3} \times D_w))/n^2]/[((\rho_b \times K_d) + \Theta_w + (\Theta_a \times H)]$$

Θ_a (L_{air}/L_{soil}) =	0.28
Θ_w (L_{water}/L_{soil}) =	0.15
D_i(cm2/sec) =	varies
D_w(cm2/sec) =	varies
H(unitless) =	varies
n (L_{Pore}/L_{soil}) =	0.43
ρ_b (g/cm^3) =	1.50
K_d (cm^3/g) =	varies
K_{oc} (cm^3/g) =	varies
foc (g/g) =	0.006

Radford Army Ammunition Plant, Radford, Virginia

Notes continued:

VF (soil only) values for commercial/industrial worker, adult resident, and child resident, and adolescent tresspasser calculated using the following equations and values from the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.

Equation 4-8 from USEPA, 2002:

$VF = Q/C_{vol} * (3.14 * D_A * T)^{1/2} * CF/(2 * \rho_b * D_a)$

Q/C_{vol} (g/m2-s)/kg/m3) =	46.22	calculated value
D_A (cm^2/sec) =	varies	chemical specific (see above)
T (sec) =	varies	receptor specific exposure interval (T= ED(yrs)*365 days/year*24 hours/day*60 min/hour*60sec/min)
		(Maintenance Worker=7.88E+08 sec, Commercial/Industrial Worker=7.88E+08 sec, Adult Resident=7.56E+08, Child Resident=1.89E+08, and Adolescent Trespasser=3.15E+08 sec)
CF (m^2/cm^2) =	1.00E-04	default
ρ_b (g/cm^3)	1.5	default

Exhibit D-3 from USEPA, 2002:

$Q/C_{vol} = A * e^{((\ln A_{site} - B)^2/C)}$ = 46.22

A =	9.9253	Huntington value
B =	18.6636	Huntington value
C =	211.8862	Huntington value
A_{site} (acres)=	1.84	contaminated site area

VF (soil only) values for construction worker were calculated using the following equations and values from the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.

Equation 5-14 from USEPA 2002:

$VF = Q/C_{sa} * 1/F_D * (3.14 * D_A * T)^{1/2} * CF/(2 * \rho_b * D_A)$

Q/C_{sa} (g/m^2-s)/kg/m^3) =	11.23	calculated value
F_D (unitless) =	0.185	default
D_A (cm^2/sec) =	varies	chemical specific (see above)
T (sec) =	3.15E+07	receptor specific exposure interval (T= ED(yrs)*365 days/year*24 hours/day*60 min/hour*60sec/min)
CF (m^2/cm^2) =	1.00E-04	default
ρ_b (kg/L) =	1.5	default

Equation 5-15 from USEPA, 2002:

$Q/C_{sa} = A * e^{((\ln A_c - B)^2/C)}$ = 11.23

A=	2.4538	default
B =	17.566	default
C =	189.0426	default
A_c (acres)=	1.84	contaminated site area

Table E.2-4.4.RME
PEF Calculations - Area B
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Commercial Worker/Resident

Equation 4-5 from Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.

$$PEF = Q / C_{wind} \cdot \frac{3{,}600 s/h}{0.036 \cdot (1-V) \cdot (U_m / U_t)^3 \cdot F(x)}$$

Parameter	Value	
PEF	6.70E+08	
Q/C_{wind}	46.22	calculated below
V	0.5	default
U_m	4.69	default
U_t	11.32	default
F(x)	0.194	default

PEF = particulate emission factor (m^3/kg)
s/h = seconds per hour
Q/Cwind = Inverse of the ratio of the geometric mean air concentration to the emission flux at the center of a square source (g/m^3-s per kg/m^3)
V = fraction of vegatative cover (unitless)
U_m = mean annual windspeed (m/s)
U_t = equivalent threshold value of windspeed at 7m (m/s)
F(x) = function dependent on Um/Ut derived using Cowherd et al. (1985)
Site Area = 1.84

Q/C_{wind} calculated in accordance with Exhibit D-2 from USEPA, 2002
using A, B, and C values for Huntington, WV:
$Q/C_{wind} = A*e^{((\ln A_{site} - B)^2/C)}$

Q/C_{wind}=	46.22	
A =	9.9253	unitless
B =	18.6636	unitless
C =	211.8862	unitless
A_{site}=	1.84	acres

Table E.2-4.4.RME
PEF Calculations - Area B
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Construction Worker

Equation 5-5 from Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9355.4-24. USEPA, 2002.

$$PEF_{sc} = Q / C_{sr} \cdot \frac{1}{F_D} \cdot \left[\frac{T \cdot A_R}{556 \cdot (W/3)^{\wedge} 0.4 \cdot \frac{(365\ d/yr - p)}{365\ d/yr} \cdot \sum VKT} \right]$$

Parameter	Value	
PEF_{sc}	1.18E+06	
Q/C_{sr}	18.66	calculated
F_D	0.185	default
T (sec)	7,488,000	assumed-see below
A_R (m^2)	526	calculated
W (tons)	8	assumed-see below
p (days/yr)	140	determined-see below
sumVKT (km)	663	assumed-see below

PEF_{sr} = subchronic road particulate emission factor (m^3/kg)
Q/C_{sr} = Inverse of the ratio of the 1-h geometric mean air concentration to the emission flux along a straight road segment bisecting a square site (g/m2-s per kg/m3)
F_D = dispersion correction factor (unitless)
T = total time over which construction occurs-total time period assumed to be 6 months (52wks x 5days per week x 8 hours per day x 3,600 s per hour)
A_R = surface area of contaminated road segment (m^2)
L_R = length of road segment (assumed to equal to (1.84 acres*43,560 ft^2/acre)$^{1/2}$)
W_R = width of road segment (assumed to be 20 ft)
$A_R = L_R \times W_R \times 0.092903 m^2/ft^2$
A_R= 526 m^2
W = mean vehicle weight assumed to be 8 tons ([(20 cars * 2 tons/car)+(10 trucks*20 tons/truck)]/30 vehicles)
p = number of days with at least 0.01 inches of precipitation (from Exhibit 5-2 140 days/year)
sumVKT = sum of fleet vehicle kilometers traveled during the exposure duration (km)
(30 of vehicles x 0.085 of km/day x 52wks x 5 days/wk)

Q/C_{sr} calculated in accordance with Equation 5-6:
using A, B, and C default values:
$Q/C_{sr} = A*e^{\wedge}((\ln A_s - B)^2/C))$

Q/C_{sr}=	18.66	g/m^2-s per kg/m^3
A =	12.9351	unitless
B =	5.7383	unitless
C =	71.7711	unitless
A_s =	1.84	acres

USEPA..... U.S. Environmental Protection Agency

1.0 INTRODUCTION

The purpose of this appendix is to present and describe development of exposure assessment models for the receptors presented in Section 7.0, the Screening Level Ecological Risk Assessment (SLERA) at SWMU 54. The following sections provide a summary of parameters used in the models and a detailed description of the direct contact and dose rate modeling approachs used in the SLERA. The complete SLERAs for Area A and Area B are presented in Appendices F.2 and F.3, respectively.

2.0 MODEL PARAMETERS

The direct contact and dose rate models include parameters relating to receptor-specific exposure, chemical of potential concern (COPC) toxicity, and bioaccumulation rates. The following sections describe the estimation of these parameters and major assumptions of parameterization.

2.1 TOXICITY REFERENCE VALUES

MDCs for detected chemicals in soil are used as the preliminary exposure estimate to evaluate a conservative risk scenario for the direct contact pathway to soil invertebrates. Other potentially complete exposure pathways to soil invertebrate and microbial communities include direct ingestion of soil and biota. Due to insufficient information to quantify these pathways, likely secondary to the direct contact/absorption pathway, their omission should not substantially alter the risk characterization.

To evaluate the preliminary exposure estimates, the Toxicity Reference Values (TRVs) that were protective of terrestrial plants and soil invertebrate/microbial communities, were selected from a review of toxicological benchmarks for soil. TRVs for direct contact of soil to invertebrates/microbes and soil to plants were determined from the following guidance:

- USEPA Ecological Soil Screening Level (ECO-SSL): soil invertebrate and plant;
- Oak Ridge National Laboratory (ORNL): plant, microbial community, earthworm values (Efroymson *et al*. 1997a, Efroymson *et al*. 1997b, Efroymson *et al*. 1997c); and
- USEPA Region III Biological Technical Assistance Group (BTAG) soil screening values (USEPA 1995), BTAG freshwater screening benchmarks (USEPA 2006a), and BTAG freshwater sediment screening levels (USEPA 2006b)

Selected screening levels and sources are reported on Tables F.2-5 (Area A) and F.3-5 (Area B) for terrestrial plants and Tables F.2-7 (Area A) and F.3-7 (Area B) for soil invertebrates and microbial communities.

2.2 RECEPTOR-SPECIFIC EXPOSURE PARAMETERS

Wildlife receptors selected to characterize exposure at SWMU 54 include:

- Herbivorous mammals: Meadow Vole (*Microtus pennsylvanicus*);
- Invertivorous mammals: Short-tailed Shrew (*Blarina brevicauda*);
- Invertivorous birds: American Robin (*Turdus migratorius*);
- Carnivorous birds: Red-tailed Hawk (*Buteo jamaicensis*); and
- Carnivorous mammals: Red Fox (*Vulpes vulpes*).

Exposure parameters used to derive TRV-based substrate concentrations for each receptor include body weight (kg), food ingestion rate (kg dry weight/day), dietary fraction, incidental substrate ingestion rate (kg dry weight/day), and area use factor. Both preliminary and refinement level exposure parameters are presented in Table F.2-9 (Area A) and Table F.3-9 (Area B).

2.3 LITERATURE-BASED NOAEL AND LOAEL VALUES

The dose-response relationships for chemicals of potential concern are expressed as NOAELs and LOAELs for wildlife receptors, which are defined as a daily ingested amount (mg/kg body weight-day) that is associated with a specified effect. This process involves the determination of a "test species dose" for a critical endpoint from a particular experimental combination of exposure concentration, exposure duration, test species, and chemical. Endpoints may be based on growth, reproductive, developmental, and survival effects. Such effects are important because they may affect the abundance or reproductive success of receptor populations. The test-species dose from the selected study is then modified using extrapolation and uncertainty factors (EFs and UFs).

For this evaluation, EFs and UFs are used to modify laboratory study results, based on the methodology of Sample et al. (1996). This process involves the determination of a "test species dose" for a critical endpoint from a particular experimental combination of exposure concentration, exposure duration, test species, and chemical. The test-species dose from the selected study is then modified to account for the various extrapolations and uncertainties inherent in applying results from a controlled setting to an ecologically relevant setting, as in:

$$\text{NOAEL or LOAEL} = \frac{\text{Test-Species Dose}}{\text{Duration UF} \times \text{Endpoint UF}} \times \text{Body-Weight EF}$$

EFs and UFs are based on: (1) the duration of exposure, (2) the endpoint measured, and (3) differences in body weights among test and receptor species (Calabrese and Baldwin 1993, Ford et al. 1992, Opresko et al. 1994, Sample et al. 1996, USEPA 1996, Wentsel et al. 1994). EFs and UFs derivation and use is described in the following subsections. The use of surrogate chemical data is also discussed. NOAEL and LOAELs for COPCs are summarized in Table F.2-10 (Area A) and Table F.3-10 (Area B).

2.3.1 The Test-Species Dose

Critical toxicological values are identified from carefully qualified primary and secondary literature references. The selection of particular studies and endpoints used for the derivation of NOAELs and LOAELs is based on the evaluation of the applicable studies and the dose-response data contained therein. In cases where preferred toxicological endpoints are not available, other toxicity values are used, but additional uncertainty factors may be incorporated. All toxicological values chosen for NOAEL and LOAEL derivation are presented on a mg chemical per kg body weight per day (mg/kg BW-day) basis. These units allow comparisons among organisms of different body sizes (Sample et al. 1996).

2.3.2 Duration Uncertainty Factors

Exposure durations of interest include (1) chronic, (2) subchronic, and (3) acute. Chronic studies occur over the lifetime or a majority of the lifespan of the test organism, generally longer than one year for mammals and 10 weeks for birds. Additionally, studies in which the test organism is dosed during a critical life stage (e.g., gestation) are included with chronic duration studies. Subchronic studies include exposures of two weeks to one year in duration that do not occur during a critical life stage. Acute studies typically have exposures of less than two weeks. NOAELs and LOAELs are usually reported from chronic and subchronic studies, with acute studies often reporting LD_{50} levels (LD_{50}; doses corresponding to the overt expression of a serious adverse effect such as mortality in 50% of test animals). Test-species doses from chronic studies are used preferentially over data from acute and subchronic studies. In cases where chronic data are not available as test-species doses, studies involving less-than-chronic exposures are used to in NOAEL and LOAEL derivation with the addition of a duration uncertainty factor.

For this study, duration uncertainty factors are applied according to USACHPPM 2000:

- Subchronic NOAEL to Chronic NOAEL: 10
- Subchronic LOAEL to Chronic NOAEL: 20

- Subchronic LOAEL to Chronic LOAEL: 4
- Acute NOAEL to Chronic NOAEL: 30
- Acute LOAEL to Chronic NOAEL: 50
- Acute LOAEL to Chronic LOAEL: 10

2.3.3 Endpoint Uncertainty Factors

Additional UFs are used to account for uncertainties in extrapolation between effect- and no-effect levels. Specifically, a NOAEL test-species dose may be estimated from a LOAEL (or LD_{50}) value, or a LOAEL may be estimated from a LD_{50}.

Extrapolation from a LOAEL or LD_{50t} to a NOAEL: Consistent with USACHPPM 2000, a UF of 10 is used with chronic LOAEL values to estimate the chronic NOAEL, which is considered conservative (Sample et al. 1996, USEPA 1996). When a LOAEL value is not available, a LD_{50} is used, although chronic NOAELs may range from 1/10 to 1/10,000 of the corresponding acute LD_{50} value (Opresko et al. 1994). For this report, an uncertainty factor of 100 is used to estimate a NOAEL value from a LD_{50} value (USACHPPM 2000).

Extrapolation from an LD_{50} to a LOAEL: Consistent with USACHPPM 2000, an UF of 20 is used conservatively to estimate a LOAEL value from a LD_{50} value (USACHPPM 2000).

2.3.4 Body-Weight Extrapolation Factor

This extrapolation is accomplished using a body weight-scaling factor to account for differences in body size (Sample et al. 1996). Numerous studies have shown that many physiological functions such as metabolic rates and responses to chemicals are a function of body size for mammals. Smaller mammals have higher metabolic rates and are usually more resistant to chemicals because of more rapid rates of detoxification. It has been shown that the best measure of body size is one based on body surface-area, which can be expressed in terms of body weight raised to a fractional power (Opresko et al. 1994, Sample et al. 1996, USEPA 1980). Dosimetric differences between the mammalian test species and wildlife receptors are accounted for using:

$$\mathrm{NOAEL}_w = \mathrm{NOAEL}_t \times \left(\frac{\mathrm{BW}_t}{\mathrm{BW}_w} \right)^{0.25}$$

where:

$NOAEL_w$	= NOAEL for the mammalian wildlife receptor (mg/kg BW-day)
$NOAEL_t$	= NOAEL for the mammalian test species (mg/kg BW-day)
BW_t	= Test species body weight (kg)
BW_w	= Wildlife receptor body weight (kg)

Scaling factors may not be appropriate for avian interspecies extrapolations. Information has shown that adjustment factors based on body size for interspecies extrapolation among avian species range from 0.63 to 1.55 (Sample et al. 1996). Therefore, a body-weight extrapolation factor is not used to derive avian NOAELs and LOAELs.

Mammalian wildlife receptor body weights are presented on Tables F.2-9 (Area A) and F.3-9 (Area B) and laboratory test species body weights are presented on Tables F.2-10 (Area A) and F.3-10 (Area B).

2.4 BIOACCUMULATION FACTORS

Bioaccumulation factors (BAFs) provide quantitative indicators of the tendency for a chemical to partition into terrestrial organisms, relative to the concentrations present in terrestrial exposure media. Exposure-point concentrations of chemicals in terrestrial prey (soil invertebrates and small mammals) and terrestrial plants are estimated using BAFs derived from the literature. The derivation of BAFs is described for organic and inorganic chemicals in the following subsections.

2.4.1 Terrestrial Plants

Exposure-point concentrations of chemicals in terrestrial plants are estimated using soil-to-plant bioaccumulation factors (uptake factors for plants, UF_{plant}) derived from the literature. UF_{plant} values are used to estimate wet-weight chemical concentrations in terrestrial plants using the same equation for invertebrates and a dry weight to wet weight conversion factor assuming plants are 80% water (Salisbury and Ross 1992). Tables F.2-11 (Area A) and F.3-11 (Area B) presents the uptake factors for plants.

Organic Chemicals: Organic chemicals may enter the plant by partitioning from contaminated soil to the roots and then translocating throughout the plant via the xylem tissue. Most bioaccumulative, lipophilic organic chemicals partition to the epidermis of the root or adhere to soil particles and are not drawn into the inner root or xylem (Paterson et al. 1990). Uptake factors for estimating concentrations of organic chemicals in plant tissues are derived from the following equation:

$$UF_{plant} = 10^{[1.588-(0.578\times \log K_{ow})]}$$

where:

UF_{plant} = Plant uptake factor (kg soil, dry weight / kg plant, dry weight)

$\log K_{ow}$ = Logarithm of the octanol:water partition coefficient

This relationship is based on a linear regression of bioaccumulation factors for 29 organic chemicals (Travis and Arms 1988). The correlation coefficient for the regression is 0.73, indicating that a majority of the variability in bioaccumulation is explained by the log K_{ow}. UF_{plant} values are derived for organic chemicals using this equation.

Inorganic Chemicals: Concentrations of inorganic chemicals in plant tissues are estimated based on generalized soil-to-plant transfer coefficients reported in a literature review. The soil-to-plant transfer factors for inorganic chemicals are equivalent to UF_{plant} values for organic chemicals and represent the ratio of the dry weight concentrations in plant tissue to the dry weight concentration of the element in root-zone soils. Bechtel-Jacobs 1998 C_p regression equation: $C_p = e^{(slope*\ln(Cs) - intercept)}$

2.4.2 Terrestrial Prey

Organic Chemicals: BAFs for estimating concentrations of organic chemicals in prey tissues are derived from linear regression equations presented in Travis and Arms (1998) and Beyer and Stafford (1993). The dry weight to wet weight (DW:WW) conversion factor is 0.2 for soil invertebrates (kg soil invertebrate dry weight per soil invertebrate wet weight; assumes invertebrates are 80% water), based on data reported in USEPA (1993). No DW:WW conversion factor was applied for small mammals. The BAF values used in to estimate concentrations of organic chemicals in soil invertebrates and small mammals are shown in Tables F.2-12 and F.2-13 (Area A) and F.3-12 and F.3-13 (Area B).

Inorganic Chemicals: Inorganic bioaccumulation factors for terrestrial prey (Tables F.2-13 and F.3-13) are wet-weight-based and are used to predict concentrations in invertebrates and small mammals according to:

$$BAF_{si} = C_{si} / C_{soil}$$

where:

BAF_{si} = Soil invertebrate uptake factor for inorganic chemicals

C_{si} = Chemical concentration predicted in soil invertebrates (mg chemical / kg soil invertebrate, dry weight)

C_{soil} = Concentration of inorganic chemical in soil (mg chemical / kg soil, dry weight)

2.5 TOXICITY EQUIVALENCY FACTORS

Dioxin/Furan COPCs represent a group of 17 polychlorinated dioxin/furan congeners of 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD). These congeners induce toxicity by binding to the aryl hydrocarbon (Ah) receptor, a cellular protein. All congeners are not equally toxic relative to TCDD (USEPA 1999). Therefore, the toxicity of each congener relative to TCDD is expressed in terms of a Toxicity Equivalency Factor (TEFs) established for mammals, birds, and fish (Van den Berg et. all 1998). The aggregate toxicity of a mixture of dioxins/furans in an exposure medium is expressed as TCDD-equivalents ($TEQ_{2,3,7,8\ TCCD}$), which are calculated as the TEF-weighted sum of the average daily dose (ADD_i) of the 17 congeners. $TEQ_{2,3,7,8\ TCCD}$ is calculated as follows:

$$TEQ_{2,3,7,8TCDD} = \sum_{i=1}^{17} ADD_i \times TEF_i$$

Determining the aggregate toxicity of the 17 dioxin/furan congeners in terms of $TEQ_{2,3,7,8\ TCCD}$ enables direct comparison to toxicological benchmarks developed for 2,3,7,8 TCDD (USEPA 1999). Therefore, NOAELs and LOAELs derived in the literature are used for direct evaluation of ecological effects resulting from $TEQ_{2,3,7,8\ TCCD}$ exposure.

Tables F.2-2 and F.3-2 present the total 2,3,7,8 TCDD TEQs calculated for Area A and B, respectively.

3.0 DIRECT CONTACT APPROACH

3.1 PRELIMINARY DIRECT CONTACT TOXICITY EVALUATION

Risk is assessed by comparing the preliminary exposure estimate (maximum detected concetrations - MDC) of each detected chemical to the established TRV (detailed in Section 2.1). The preliminary risk is characterized in terms of a hazard quotient (HQ), which is expressed as:

HQ = MDC/TRV

where:

HQ = Hazard Quotient for the contaminant (unitless)
MDC = Maximum Detected Concentration for contaminant (mg/kg)
TRV = Screening Level for contaminant (mg/kg)

3.2 REFINED DIRECT CONTACT TOXICITY EVALUATION

For the refined evaluation, risk is assessed by comparing the exposure point concentration (EPC) of each detected chemical to the TRV (Section 7.1.6 details EPC development). The refined risk HQ is expressed as:

HQ = EPC/TRV

where:

HQ = Hazard Quotient for the contaminant (unitless)
EPC = Calculated Exposure Point Concentration for contaminant (mg/kg)
TRV = Screening Level for contaminant (mg/kg)

An HQ of less than 1 indicates no or negligible risk. The potential for risk increases as the HQ increases above unity. However, this result should be considered in the context of other characteristics of the exposure area.

Results of the direct contact toxicity evaluation for Area A are presented in Tables F.2-6 (terrestrial plants) and F.2-8 (soil and microbial communities) and Area B results are presented in Tables F.3-6 (terrestrial plants) and F.3-8 (soil and microbial communities).

4.0 DOSE RATE MODELING APPROACH

A simplified food web model is utilized to calculate TRVs for each chemical and wildlife receptor. TRVs quantify COPC concentrations in exposure media that may result in no observable adverse effects or low observable adverse effects. The NOAEL corresponds to the greatest exposure associated with no observed adverse effects on growth, reproduction, or survival. The LOAEL corresponds to the smallest exposure associated with observed adverse effects on growth, reproduction or survival. TRVs developed by dose rate models are used to evaluate ecological effects associated with COPEC concentrations in exposure media.

4.1 PRELIMINARY DOSE RATE MODEL

Preliminary risk characterization for wildlife receptors uses the conservative preliminary exposure estimate and ecological effects evaluation to characterize risk to potential terrestrial receptors.

The simplified food web model considers the ingestion of prey, the incidental ingestion of media, and the primary routes of exposure to wildlife receptors. Chemical concentrations in prey are expressed as a function of chemical concentrations in exposure media using BAFs for terrestrial prey items. Other important parameters in the model include receptor body weight and an estimate of receptor use. As shown in the equation below, literature-derived NOAEL and LOAEL values are input into the model as the ADD variable to calculate the concentration in exposure media (C_{TRV}) that would result in a dose equivalent to a NOAEL or LOAEL.

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food} \ (BAF_{food} \cdot DF) + IR_s)AF}$$

where:

C_{TRV} = NOAEL or LOAEL-based screening level (mg chemical/kg soil)

ADD = NOAEL or LOAEL (mg COPC/kg body weight-day)

BW = Minimum Body Weight of the receptor (kg)

IR_{food} = Maximum Ingestion Rate of food (kg food ingested per day, dry weight)

BAF_{food} = BAF of most contaminated dietary component used, specific to prey type and COPC (ratio of mg of COPC/kg fauna, wet weight to mg COPC/ kg substrate, dry weight)

DF = Dietary Fraction (most contaminated dietary component assumed to be 100% of diet)

IR_s = Maximum Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)

AF = 100% Area Use Factor

Preliminary receptor parameters for Area A and Area B are presented on Tables F.2-9 and F.3-9, respectively. The resulting risk is characterized in terms of an HQ and is presented for wildlife receptors in Appendix F.2 and summarized in Table F.2-24 for Area A and Appendix F.3 and summarized in Table F.3-24 for Area B.

4.2 REFINED EXPOSURE ESTIMATE AND RISK CHARACTERIZATION

The refined exposure and risk characterization, Step 3a of the ecological risk assessment guidance (ERAGS), reviews and refines the conservative assumptions used in the risk calculation (USEPA 1997). In Step 3a, conservative assumptions used in the preliminary exposure and risk characterization are replaced with more environmentally realistic assumptions to evaluate risk posed by COPECs identified in the preliminary risk characterization. The addition of Step 3a focuses the outcome of the ecological screening, streamlines the review process and functions as the initial basis for ecological risk management decision-making at each site.

4.3 REFINED DOSE RATE MODEL

This step replaces the conservative assumptions used in the preliminary exposure estimate and ecological effects evaluation with more environmentally realistic assumptions including the use of average body weight, average food and substrate ingestion rates, and the use of realistic area use factor, resulting in a more realistic estimate of potential risk.

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food} \sum (BAF_{food} \cdot DF) + IR_s)AF}$$

where:

C_{TRV} = NOAEL or LOAEL-based screening level (mg chemical/kg soil)

ADD = NOAEL or LOAEL (mg COPC/kg body weight-day)

BW = Average Body Weight of the receptor (kg)

IR_{food} = Average Ingestion Rate of food (kg food ingested per day, dry weight)

BAF_{food} = BAF of dietary component used, specific to prey type and COPC (ratio of mg of COPC/kg fauna, wet weight to mg COPC/ kg substrate, dry weight)

DF = Dietary Fraction

IR_s = Average Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)

$AF_{refined}$ = Refined Area Use Factor (detailed below)

In the refined model, a realistic area use factor ($AF_{refined}$) was used to calculate the ratio of the site area to the average home range of the receptor:

$$AF_{refined} = \text{Site Area/Home Range Area}$$

Other receptor parameters in the refined model remain conservative. The conservative assumptions are summarized as follows:

- Receptors assimilate 100% of COPECs detected in the food and soil; and
- Receptors forage in the site area 100% of the time.

Refined receptor parameters for Area A and Area B are presented on Tables F.2-9 and F.3-9, respectively. The resulting risk is characterized in terms of an HQ and is presented for wildlife receptors in Appendix F.2 and summarized in Table F.2-24 for Area A and Appendix F.3 and summarized in Table F.3-24 for Area B.

4.4 EXAMPLE C_{TRV} EQUATION CALCULATION – PRELIMINARY AND REFINED

The following example C_{TRV} equation details the arsenic NOAEL-based screening level (SL) calculated for the short-tailed shrew at Area A (Table F.2-16 and F.2-17) and resulting HQs:

Preliminary

- ADD = 0.15 mg/kg bw-day (NOAEL)
- BW = 0.0125 kg (minimum body weight)
- IR_{food} = 0.003 kg dw/day (maximum ingestion rate)
- BAF_{food} = 1.1 (for the most contaminated dietary component in this case plant)
- DF = 1 (100% most contaminated dietary component in this case 100% plants)
- IR_{soil} = 0.00039 kg dw/day (maximum soil ingestion rate)
- AF = 1 (default used)

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}\ (BAF_{food} \cdot DF) + IR_s)AF} = \frac{0.15 \cdot 0.0125}{(0.003\,(1.1 \cdot 1) + 0.00039) \cdot 1} = \textbf{5.1E-01 mg/kg}$$

NOAEL HQ = MDC (mg/kg)/NOAEL-based SL (mg/kg) = $\frac{2.5}{5.1E-01}$ = **4.9E+00**

EPC NOAEL HQ = NOAEL HQ * (EPC (mg/kg) / MDC (mg/kg)) = 4.9E+00*($\frac{1.49}{2.5}$) = **2.9E+00**

Refined

- ADD = 0.15 mg/kg bw-day
- BW = 0.015 kg
- IR_{food} = 0.002 kg dw/day
- BAF_{plant} = 0.038
- BAF_{inv} = 0.215
- DF_{plant} = 0.14
- DF_{inv} = 0.86
- IR_{soil} = 0.00026 kg dw/day
- $AF_{refined}$ = 1

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food} \sum (BAF_{food} \cdot DF_{food}) + IR_s)AF}$$

$$= \frac{0.15 \cdot 0.015}{(0.002\,(0.038 \cdot 0.14 + 0.215 \cdot 0.86) + 0.00026) \cdot 1} = \textbf{3.5+00 mg/kg}$$

NOAEL HQ = EPC (mg/kg)/NOAEL-based SL (mg/kg) = $\frac{1.49}{3.5E+00}$ = **4.2E-01**

Tables F.2-24 and F.3-24 provides a summary of preliminary and refined HQs developed for terrestrial receptors at Area A and B, respectively.

5.0 SUMMARY

Receptor-specific exposure parameters are obtained from life history studies found in the literature. Important receptor-specific exposure parameters input into the model include: body weight, food ingestion rate, diet composition, incidental substrate ingestion rate, and area use factor.

The dose-response relationships for chemicals of potential interest are expressed as NOAELs and LOAELs for wildlife receptors, which are defined as a daily ingested amount (mg COPC/kg body weight-day) that is associated with a specified growth, reproductive, developmental, or survival effect.

Extrapolation and uncertainty factors are applied to literature-based toxicological endpoints to account for differences in a controlled laboratory setting and an ecologically relevant setting. Extrapolation and uncertainty factors are based on: (1) the duration of exposure, (2) the endpoint measured, and (3) differences in body weights among test and receptor species.

Bioaccumulation accumulation factors provide quantitative indicators of the tendency for a chemical to partition into organisms, relative to the concentrations present in exposure media. Exposure-point concentrations of chemicals in terrestrial prey (soil invertebrates and small mammals) are estimated using several BAFs derived from the literature.

COPC concentrations in prey and media, receptor-specific exposure parameters, literature-based NOAEL and LOAEL values, and bioaccumulation factors are used in the model to calculate the concentration in exposure media (C_{TRV}) that would result in a dose equivalent to a NOAEL or LOAEL. The dose rate modeling approach is used to evaluate the potential mobility of COPCs through varying trophic associations.

Notes:

pg/g = Picogram Per Gram
ft/bgs = Feet Below Ground Surface
TEF = Toxicity Equivalency Factor
LQ = Laboratory Qualifier
VQ = Validation Qualifier
r = Reason Code

Total 2,3,7,8-TCDD Equivalents are calculated by summing the detected concentration times the TEF for each chemical. Non-detects, R-flagged data, and B-flagged data are excluded from summed total.

Qualifiers:

- A Amount detected is less than the Lower Calibration Limit.
- B Not detected substantially above the level reported in laboratory or field blanks.
- E Concentration exceeded the upper level of the calibration range of the instrument for that specific analysis.
- J Analyte present. Reported value may not be accurate or precise.
- U The compound was analyzed for but not detected. The reporting limit will be adjusted to reflect any dilution, and for soil, the percent moisture.
- c Calibration failure; poor (RRF) or unstable (%D) response
- q Concentration exceeded the linear range

Notes:
kg = Kilogram
kg dw/day = Kilogram Dry-weight per Day
L/day = Liter per Day

[1]Wildlife Exposure Factors Handbook. U.S. Environmental Protection Agency (EPA). 1993. Office of Research and Development. 2 Volumes. EPA/600/R93/187a&b. December.
[2] Estimated food intake rate (kg [dw]/day) calculated as follows:
FI ((kg/day) = 0.0687 $Wt.^{0.882}$ for mammals (red fox and short-tailed shrew)
FI ((g/day) = 0.577 $Wt.^{0.727}$ for herbivores (meadow vole)
FI ((g/day) = 0.301 $Wt.^{0.751}$ for non-passerine birds (red-tailed hawk)
FI ((g/day) = 0.398 $Wt.^{0.850}$ for passerine birds (american robin)
[3]Estimating Exposure to Terrestrial Wildlife to Contaminants. Sample and Sutter. 1994. ES/ER/TM-125.
The soil ingestion rate for the american robin set equal to 38% of the american woodcock value (0.34*10.4%=4%), based on a robin diet of 38% invertbrates.

Table F.2-10
Wildlife TRVs
Screening Level Ecological Risk Assessment - Area A
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Notes:

CAS = Chemical Abstract Service
TRV = Toxic Reference Value
NOAEL = No observable adverse effects level
LOAEL = Lowest observable adverse effects level
mg/kg = Milligram Per Kilogram
bw/d = Body Weight Per Day
kg = kilogram
PAH = Polynuclear Aromatic Hydrocarbon
PCB = Polychlorinated Biphenyl
USACE = U.S. Army Corps of Engineers
ORNL = Oak Ridge National Laboratory
LD_{50} = Lethal Dose for 50% of test organisms
NOAEL and LOAEL values were derived from acute values by applying an uncertainty factor of 150.

Jager Model: As presented in USEPA 2005, Guidance for Developing Ecological Screening Levels, Appendix 4-1, Table 5.

BAF = K_{ww}(L/kg worl dw)/K_d (L/kg soil dw)

K_{ww} (dry weight) = 10^(0.87*logK_{ow} - 2.0) / 0.16

Wet weight to dry weight assuming 16% solids

K_d = f_{oc} * K_{oc}

foc = 0.017 from site specific physical soil data

Note: The maximum Kow utilized for the Tier I calculation and the Selected Kow utilized for the Tier II calculation.

Table F.2-13
Soil Bioaccumulation/Bioconcentration Factors - Soil to Mammal Pathway
Screening Level Ecological Risk Assessment - Area A
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Notes:

CAS = Chemical Abstract Services

C_s = Chemical Concentration in Soil

C_d = Chemical Concentration in Prey (assumed to be 100% earthworms (dry weight))

C_m = Chemical Concentration in Mammal (dry weight)

K_{ow} = Chemical octanol to water partitioning coefficient

[1] = BAFs for chemical using Ce regression equation calculated by as follows: BAF = C_m/C_s

Notes:

CAS = Chemical Abstract Services
C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)
ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.2-10
BW = Minimum Body Weigth of Receptor (kg)
IR_{food} = Maximum Ingestion Rate for Food
BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)
DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)
IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)
AF = 100% Area Use Factor
NOAEL = No observable adverse effects level
LOAEL = Lowest observable adverse effects level
mg/kg = Milligram Per Kilogram
bw - day = Body Weight - Day
HQ = Hazard Quotient
TRV = Toxicity Reference Value
EPC = Exposure Point Concentration

Meadow Vole Specific Data from Table F.2-9

BW=	0.017	kg
IR_{food} =	0.010	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00024	kg dw/day
AF =	1	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Concentration
LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Concentration
EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Notes:

CAS = Chemical Abstract Services

C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)

ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.2-10

BW = Minimum Body Weigth of Receptor (kg)

IR_{food} = Maximum Ingestion Rate for Food

BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)

DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)

IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)

AF = 100% Area Use Factor

NOAEL = No observable adverse effects level

LOAEL = Lowest observable adverse effects level

mg/kg = Milligram Per Kilogram

bw - day = Body Weight - Day

HQ = Hazard Quotient

TRV = Toxicity Reference Value

EPC = Exposure Point Concentration

Short-tailed Shrew Specific Data from Table F.2-9

BW=	0.0125	kg
IR_{food} =	0.003	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00039	kg dw/day
AF =	1	unitless

[a] = The following equation was used to calculate soil screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Screening Level

LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Screening Level

EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Notes:

CAS = Chemical Abstract Services

C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)

ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.2-10

BW = Minimum Body Weigth of Receptor (kg)

IR_{food} = Maximum Ingestion Rate for Food

BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)

DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)

IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)

AF = 100% Area Use Factor

NOAEL = No observable adverse effects level

LOAEL = Lowest observable adverse effects level

mg/kg = Milligram Per Kilogram

bw - day = Body Weight - Day

HQ = Hazard Quotient

TRV = Toxicity Reference Value

EPC = Exposure Point Concentration

Red FoxSpecific Data from Table F.2-9

BW=	2.9500	kg
IR_{food} =	0.342	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00960	kg dw/day
AF =	1	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Screening Level

LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Screening Level

EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Table F.2-19
Refined Wildlife Risk Characterization - Red Fox
Screening Level Ecological Risk Assessment - Area A
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

AF =	0.0070	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food} \sum (BAF_{food} \cdot DF) + (IR_s)) \cdot AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = EPC/Calculated NOAEL-Based Screening Level
LOAEL HQ = EPC/Calculated LOAEL-Based Screening Level

Notes:

CAS = Chemical Abstract Services

C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)

ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.2-10

BW = Minimum Body Weigth of Receptor (kg)

IR_{food} = Maximum Ingestion Rate for Food

BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)

DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)

IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)

AF = 100% Area Use Factor

NOAEL = No observable adverse effects level

LOAEL = Lowest observable adverse effects level

mg/kg = Milligram Per Kilogram

bw - day = Body Weight - Day

HQ = Hazard Quotient

TRV = Toxicity Reference Value

EPC = Exposure Point Concentration

American Robin Specific Data from Table F.2-9

BW=	0.0635	kg
IR_{food} =	0.020	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00100	kg dw/day
AF =	1	unitless

[a] = The following equation was used to calculate soil screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Concentration

LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Concentration

EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Notes:

CAS = Chemical Abstract Services

C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)

ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.2-10

BW_i = Minimum Body Weigth of Receptor (kg)

IR_{food} = Maximum Ingestion Rate for Food

BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)

DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)

IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)

AF = 100% Area Use Factor

NOAEL = No observable adverse effects level

LOAEL = Lowest observable adverse effects level

mg/kg = Milligram Per Kilogram

bw - day = Body Weight - Day

HQ = Hazard Quotient

TRV = Toxicity Reference Value

EPC = Exposure Point Concentration

Red-tailed Hawk Specific Data from Table F.2-9

BW=	0.957	kg
IR_{food} =	0.063	kg dw/day
BAF_{food}=	Chem Specific	unitless
DF_{mam} =	1.00	unitless
IR_{soil} =	0.00	kg dw/day
AF =	1	unitless

[a] = The following equation was used to calculate screenning levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Concentration

LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Concentration

EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Table F.2-23
Refined Wildlife Risk Characterization - Red-tailed Hawk
Screening Level Ecological Risk Assessment - Area A

Notes:

pg/g = Picogram Per Gram
ft/bgs = Feet Below Ground Surface
TEF = Toxicity Equivalency Factor
LQ = Laboratory Qualifier
VQ = Validation Qualifier
r = Reason Code

Total 2,3,7,8-TCDD Equivalents are calculated by summing the detected concentration times the TEF for each chemical. Non-detects, R-flagged data, and B-flagged data are excluded from summed total.

Qualifiers:

- A Amount detected is less than the Lower Calibration Limit.
- B Not detected substantially above the level reported in laboratory or field blanks.
- E Concentration exceeded the upper level of the calibration range of the instrument for that specific analysis.
- J Analyte present. Reported value may not be accurate or precise.
- U The compound was analyzed for but not detected. The reporting limit will be adjusted to reflect any dilution, and for soil, the percent moisture.
- c Calibration failure; poor (RRF) or unstable (%D) response
- q Concentration exceeded the linear range
- w Identification criteria failure
- z Method blank and/or storage blank contamination

Notes:
kg = Kilogram
kg dw/day = Kilogram Dry-weight per Day
L/day = Liter per Day

[1]Wildlife Exposure Factors Handbook. U.S. Environmental Protection Agency (EPA). 1993. Office of Research and Development. 2 Volumes. EPA/600/R93/187a&b. December.
[2] Estimated food intake rate (kg [dw]/day) calculated as follows:
FI ((kg/day) = 0.0687 $Wt.^{0.882}$ for mammals (red fox and short-tailed shrew)
FI ((g/day) = 0.577 $Wt.^{0.727}$ for herbivores (meadow vole)
FI ((g/day) = 0.301 $Wt.^{0.751}$ for non-passerine birds (red-tailed hawk)
FI ((g/day) = 0.398 $Wt.^{0.850}$ for passerine birds (american robin)
[3]Estimating Exposure to Terrestrial Wildlife to Contaminants. Sample and Sutter. 1994. ES/ER/TM-125.
The soil ingestion rate for the american robin set equal to 38% of the american woodcock value (0.34*10.4%=4%), based on a robin diet of 38% invertbrates.

Table F.3-10
Wildlife TRVs and Sources
Screening Level Ecological Risk Assessment - Area B
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Notes:

CAS = Chemical Abstract Service
TRV = Toxic Reference Value
NOAEL = No observable adverse effects level
LOAEL = Lowest observable adverse effects level
mg/kg = Milligram Per Kilogram
bw/d = Body Weight Per Day
kg = kilogram
PAH = Polynuclear Aromatic Hydrocarbon
PCB = Polychlorinated Biphenyl
USACE = U.S. Army Corps of Engineers
ORNL = Oak Ridge National Laboratory
LD_{50} = Lethal Dose for 50% of test organisms
NOAEL and LOAEL values were derived from acute values by applying an uncertainty factor of 150.

Table F.3-11
Soil Bioaccumulation Factors - Soil to Plant Pathway
Screening Level Ecological Risk Assessment - Area B
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Notes:

CAS = Chemical Abstract Services
BAF = Bioaccumulation Factor
K_{ow} = Chemical octanol-water coefficient
NC = Not Calculated
C_s = Chemical Concentration in Soil
C_p = Chemical Concentration in Plant Matter (dry weight)
[1] = BAFs for chemical using Cp regression equation calculated by as follows: BAF = C_p/C_s

Notes:

CAS = Chemical Abstract Services

C_s = Chemical Concentration in Soil

C_e = Chemical Concentration in Earthworm (dry weight)

K_{ow} = Chemical octanol-water coefficient

K_{oc} = Chemical water to soil partitioning coefficient

K_{ww} = Chemical worm to soil partitioning coefficient

foc = mean fraction organic content in soil

[1] = BAFs for chemical using Ce regression equation calculated by as follows: BAF = C_e/C_s

Table F.3-12

Jager Model: As presented in USEPA 2005, Guidance for Developing Ecological Screening Levels, Appendix 4-1, Table 5.

BAF = K_{ww}(L/kg worl dw)/K_d (L/kg soil dw)

K_{ww} (dry weight) = 10^(0.87*logK_{ow} - 2.0) / 0.16

Wet weight to dry weight assuming 16% solids

$K_d = f_{oc} * K_{oc}$

foc = 0.021 from site specific physical soil data

Note: The maximum Kow utilized for the Tier I calculation and the Selected Kow utilized for the Tier II calculation.

Notes:

CAS = Chemical Abstract Services

C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)

ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.3-10

BW = Minimum Body Weigth of Receptor (kg)

IR_{food} = Maximum Ingestion Rate for Food

BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)

DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)

IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)

AF = 100% Area Use Factor

NOAEL = No observable adverse effects level

LOAEL = Lowest observable adverse effects level

mg/kg = Milligram Per Kilogram

bw - day = Body Weight - Day

HQ = Hazard Quotient

TRV = Toxicity Reference Value

EPC = Exposure Point Concentration

Meadow Vole Specific Data from Table F.3-9

BW=	0.017	kg
IR_{food} =	0.010	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00024	kg dw/day
AF =	1	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Concentration

LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Concentration

EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Notes:

CAS = Chemical Abstract Services
C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)
ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.3-10
BW = Minimum Body Weigth of Receptor (kg)
IR_{food} = Maximum Ingestion Rate for Food
BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)
DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)
IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)
AF = 100% Area Use Factor
NOAEL = No observable adverse effects level
LOAEL = Lowest observable adverse effects level
mg/kg = Milligram Per Kilogram
bw - day = Body Weight - Day
HQ = Hazard Quotient
TRV = Toxicity Reference Value
EPC = Exposure Point Concentration

Short-tailed Shrew Specific Data from Table F.3-9

BW=	0.0125	kg
IR_{food} =	0.003	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00039	kg dw/day
IR_{water} =	0.003	L/day
AF =	1	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Screening Level
LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Screening Level
EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Notes:

CAS = Chemical Abstract Services

C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)

ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.3-10

BW = Average Body Weigth of Receptor (kg)

IR_{food} = Average Ingestion Rate for Food

BAF_{food} = Bioaccumulation factor, specific to prey type and chemical

DF = Dietary fraction

IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)

AF = Area Use Factor

NOAEL = No observable adverse effects level

LOAEL = Lowest observable adverse effects level

mg/kg = Milligram Per Kilogram

bw - day = Body Weight - Day

TRV = Toxicity Reference Value

EPC = Exposure Point Concentration

Short-tailed Shrew Specific Data from Table F.3-9

BW=	0.015	kg
IR_{food} =	0.002	kg dw/day
BAF_{food}=	Chem Specific	unitless
DF_{plants} =	0.14	unitless
DF_{inv} =	0.86	unitless
IR_{soil} =	0.00026	kg dw/day
IR_{water} =	0.002	L/day
AF =	1.000	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food} \sum (BAF_{food} \cdot DF) + (IR_s)) \cdot AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

HQ = Hazard Quotient

NOAEL HQ = EPC/Calculated NOAEL-Based Screening Level

LOAEL HQ = EPC/Calculated LOAEL-Based Screening Level

Notes:

CAS = Chemical Abstract Services
C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)
ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.3-10
BW = Minimum Body Weigth of Receptor (kg)
IR_{food} = Maximum Ingestion Rate for Food
BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)
DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)
IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)
AF = 100% Area Use Factor
NOAEL = No observable adverse effects level
LOAEL = Lowest observable adverse effects level
mg/kg = Milligram Per Kilogram
bw - day = Body Weight - Day
HQ = Hazard Quotient
TRV = Toxicity Reference Value
EPC = Exposure Point Concentration

Red Fox Specific Data from Table F.3-9

BW=	2.9500	kg
IR_{food} =	0.342	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00960	kg dw/day
IR_{water} =	0.573	L/day
AF =	1	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Screening Level
LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Screening Level
EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Notes:

CAS = Chemical Abstract Services
C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)
ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.3-10
BW = Minimum Body Weigth of Receptor (kg)
IR_{food} = Maximum Ingestion Rate for Food
BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)
DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)
IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)
AF = 100% Area Use Factor
NOAEL = No observable adverse effects level
LOAEL = Lowest observable adverse effects level
mg/kg = Milligram Per Kilogram
bw - day = Body Weight - Day
HQ = Hazard Quotient
TRV = Toxicity Reference Value
EPC = Exposure Point Concentration

American Robin Specific Data from Table F.3-9

BW=	0.0635	kg
IR_{food} =	0.020	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00100	kg dw/day
IR_{water} =	0.013	L/day
AF =	1	unitless

[a] = The following equation was used to calculate screening level:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Concentration
LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Concentration
EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

Notes:

CAS = Chemical Abstract Services

C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)

ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.3-10

BW = Average Body Weigth of Receptor (kg)

IR_{food} = Average Ingestion Rate for Food

BAF_{food} = Bioaccumulation factor, specific to prey type and chemical

DF = Dietary fraction

IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)

AF = Area Use Factor

NOAEL = No observable adverse effects level

LOAEL = Lowest observable adverse effects level

mg/kg = Milligram Per Kilogram

bw - day = Body Weight - Day

HQ = Hazard Quotient

TRV = Toxicity Reference Value

EPC = Exposure Point Concentration

American Robin Specific Data from Table F.3-9

BW=	0.0773	kg
IR_{food} =	0.016	kg dw/day
BAF_{food}=	Chem Specific	unitless
DF_{plants} =	0.62	unitless
DF_{inv} =	0.38	unitless
IR_{soil} =	0.0008	kg dw/day
IR_{water} =	0.011	L/day
AF =	1.000	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food} \sum (BAF_{food} \cdot DF) + (IR_s)) \cdot AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = EPC/Calculated NOAEL-Based Screening Level

LOAEL HQ = EPC/Calculated LOAEL-Based Screening Level

Notes:

CAS = Chemical Abstract Services
C_{TRV}= NOAEL-based screening level (mg chemical/kg soi)
ADD = NOAEL or LOAEL (mg chemical/kg body weight-day) from Table F.3-10
BW_r = Minimum Body Weigth of Receptor (kg)
IR_{food} = Maximum Ingestion Rate for Food
BAF_{food} = Bioaccumulation factor (Most contaminated dietary component BSAF used)
DF = Dietary fraction (Most contaminated dietary component assumed to be 100% of diet)
IRs = Incidental Ingestion Rate of soil (kg soil ingested per day, dry weight)
AF = 100% Area Use Factor
NOAEL = No observable adverse effects level
LOAEL = Lowest observable adverse effects level
mg/kg = Milligram Per Kilogram
bw - day = Body Weight - Day
HQ = Hazard Quotient
TRV = Toxicity Reference Value
ECP = Exposure Point Concentration

Red-tailed Hawk Specific Data from Table F.3-9
Red-tailed Hawk

BW=	0.957	kg
IR_{food} =	0.063	kg dw/day
BAF_{food}=	Chem Specific	unitless
IR_{soil} =	0.00	kg dw/day
IR_{water} =	0.068	L/day
AF =	1	unitless

[a] = The following equation was used to calculate screening levels:

$$C_{TRV} = \frac{ADD \cdot BW}{(IR_{food}(BAF_{food} \cdot DF) + IR_s)AF}$$

See Appendix F.1 for an example C_{TRV} calculation.

NOAEL HQ = Maximum Detected Concentration/Calculated NOAEL-Based Concentration
LOAEL HQ = Maximum Detected Concentration/Calculated LOAEL-Based Concentration
EPC NOAEL HQ = NOAEL HQ * (EPC/Maximum Detected Concentration)

URS

April 13, 2004

Ms. René Hypes, Project Review Coordinator
Division of Natural Heritage
Virginia Department of Conservation and Recreation
217 Governor Street
Richmond, VA 23219

Subject: Natural Heritage Project Review

Dear Ms. Hypes:

I am writing to request information concerning threatened and endangered species potentially inhabiting the area in the vicinity of an industrial site located near the town of Radford, VA. URS is performing an ecological risk assessment of the site. This information is needed to update information we received from a prior request (Invoice Number: H-3243, 4/10/03).

The site is located in the Valley and Ridge Province in western Montgomery County and eastern Pulaski County, VA. Land use surrounding the site is largely undeveloped due to steep terrain, although less rugged areas are primarily used for agriculture.

A portion of a topographic map (Radford North,VA quad) is attached which specifies the location of the site. Please perform a search of the area within a one-mile radius of this location and notify us of any threatened or endangered species and/or critical or protected habitats known to occur in this vicinity.

If you should have any questions concerning this request, please contact me at 215-542-3800. I thank you for your assistance in this matter.

Sincerely,

Doreen LaPorta

Re: Industrial Site, Valley and Ridge in western Montgomery County

Dear Ms. LaPorta:

The Department of Conservation and Recreation's Division of Natural Heritage (DCR) has searched its Biotics Data System for occurrences of natural heritage resources from the area outlined on the submitted map. Natural heritage resources are defined as the habitat of rare, threatened, or endangered plant and animal species, unique or exemplary natural communities, and significant geologic formations.

According to the topographic map, this project either overlies or is adjacent to a karst landscape characterized by sinkholes, caves, disappearing streams, and large springs. The project has been sent to the Virginia Karst Program and to the Virginia Speleological Survey for review for documented sensitive karst features and caves. A significant cave has been documented in the project vicinity. Please coordinate with the Virginia Karst Program at 540-831-4056 (worndorff@dcr.state.va.us) to avoid, minimize, or mitigate impacts.

Our files also do not indicate the presence of any State Natural Area Preserves under DCR's jurisdiction in the project vicinity.

Under a Memorandum of Agreement established between the Virginia Department of Agriculture and Consumer Services (VDACS) and the Virginia Department of Conservation and Recreation (DCR), DCR represents VDACS in comments regarding potential impacts on state-listed threatened and endangered plant and insect species. The current activity will not affect any documented state-listed plants or insects.

New and updated information is continually added to Biotics. Please contact DCR for an update on this natural heritage information if a significant amount of time passes before it is utilized.

A fee of $ 95.00 has been assessed for the service of providing this information. Please find enclosed an invoice for that amount. Please return one copy of the invoice along with your remittance made payable to the Treasurer of Virginia, Department of Conservation and Recreation, 203 Governor Street, Suite 414, Richmond, VA 23219, ATTN: Cashier. Payment is due within thirty days of the invoice date.

Should you have any questions or concerns, feel free to contact me at 804-371-2708. Thank you for the opportunity to comment on this project.

Sincerely,

S. René Hypes
Project Review Coordinator

Re: Project #3348

Greetings:

The U.S. Fish and Wildlife Service (Service) has received your request to review the attached project for potential impacts to federally listed or proposed endangered and threatened species and designated critical habitat in Virginia pursuant to the Endangered Species Act (ESA) of 1973 (87 Stat. 884, as amended; 16 U.S.C. 1531 *et seq.*). Attached is a list of species with Federal status and species of concern that have been documented or may occur in the county where your project is located. This list was prepared by this office and is based on information obtained from previous surveys for rare and endangered species.

In order to ensure coordination with the State agencies, we consistently recommend that individuals contact the Virginia Department of Conservation and Recreation, Division of Natural Heritage **and** the Virginia Department of Game and Inland Fisheries, since each agency maintains a different database and has differing expertise and/or regulatory responsibility. You can contact these agencies at the following addresses:

Virginia Department of Game and Inland Fisheries
Environmental Services Section
P.O. Box 11104
Richmond, VA 23230
(804) 367-1000

Virginia Department of Conservation and Recreation
Division of Natural Heritage
217 Governor Street, 2nd Floor
Richmond, VA 23219
(804) 786-7951

If either of these agencies determines that your project may impact a federally listed, proposed, or candidate species OR federally designated critical habitat, please contact this office and provide a copy of the response letter from each agency and the above referenced project number; otherwise, further contact with this office is not necessary.

If you have any questions or need further assistance, please contact Ms. Jolie Harrison at (804) 693-6694, extension 208.

Sincerely,

Karen L. Mayne

Notes:

COPC = Chemical of Potential Concern
CAS = Chemical Abstracts Service
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
VOC = Volatile Organic Compound
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
TIC = Tentatively Identified Compound
mg/kg = Milligram Per Kilogram
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
N/C = Noncarcinogenic/Carcinogenic per EPA RBC Table (October 2007)
[1] = Chromium VI RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endosulfan RBC value was used
[7] = Endrin RBC value was used
[8] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[9] = Pyrene RBC value was used
[10] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

(A) = Facility-Wide Background Point Estimate as Reported in the Facility-Wide Background Study Report (IT 2001a)
(B) = Re-sampled; Pesticides and PCBs analyzed January 2007.
(D) = Re-sampled; Dioxin/Furans analyzed January 2007.

ARAR = Applicable, Relevant, and Appropriate Requirement
USEPA = U.S. Environmental Protection Agency
TBC = To-Be-Considered
RDA = Recommended Daily Allowance
IND = Adjusted Industrial RBC
AL = USEPA Action Level

ARES = Above Residential RBC
ARES/IND = Above Residential RBC/Industrial RBC
BSL = Below Residential/Industrial RBC Screening Levels
NSV = No Screening Value Available

ND = Not Detected
NA = Not Applicable

Notes:

COPC = Chemical of Potential Concern
CAS = Chemical Abstracts Service
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
VOC = Volatile Organic Compound
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
TIC = Tentatively Identified Compound
mg/kg = Milligram Per Kilogram
RBC = USEPA Region III Risk-Based Concentration
(RBC) values from the October 11, 2007,
RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
N/C = Noncarcinogenic/Carcinogenic per EPA RBC Table (October 2007)
[1] = Chromium VI RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endosulfan RBC value was used
[7] = Endrin RBC value was used
[8] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[9] = Pyrene RBC value was used
[10] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

(A) = Facility-Wide Background Point Estimate as Reported in the Facility-Wide Background Study Report (IT 2001a)
(B) = Re-sampled; Pesticides and PCBs analyzed January 2007.
(D) = Re-sampled; Dioxin/Furans analyzed January 2007.

USEPA = U.S. Environmental Protection Agency
ARAR = Applicable, Relevant, and Appropriate Requirement
TBC = To-Be-Considered
RDA = Recommended Daily Allowance
IND = Adjusted Industrial RBC
AL = USEPA Action Level

ARES = Above Residential RBC
ARES/IND = Above Residential RBC/Industrial RBC
BSL = Below Residential/Industrial RBC Screening Levels
NSV = No Screening Value Available

ND = Not Detected
NA = Not Applicable

General UCL Statistics for Data Sets with Non-Detects

User Selected Options

From File	WorkSheet.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

DI-N-OCTYL PHTHALATE (ug/kg)

General Statistics

Number of Valid Data	11	Number of Detected Data	5
Number of Distinct Detected Data	5	Number of Non-Detect Data	6
		Percent Non-Detects	54.55%

Raw Statistics		**Log-transformed Statistics**	
Minimum Detected	57	Minimum Detected	4.043
Maximum Detected	320	Maximum Detected	5.768
Mean of Detected	177.4	Mean of Detected	5.031
SD of Detected	98.48	SD of Detected	0.644
Minimum Non-Detect	380	Minimum Non-Detect	5.94
Maximum Non-Detect	400	Maximum Non-Detect	5.991

Note: Data have multiple DLs - Use of KM Method is recommended	Number treated as Non-Detect	11
For all methods (except KM, DL/2, and ROS Methods),	Number treated as Detected	0
Observations < Largest ND are treated as NDs	Single DL Non-Detect Percentage	100.00%

Warning: There are only 5 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

DIBENZO(A,H)ANTHRACENE (ug/kg)

General Statistics

Number of Valid Data	11	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	9
		Percent Non-Detects	81.82%

Raw Statistics		**Log-transformed Statistics**	
Minimum Detected	16	Minimum Detected	2.773
Maximum Detected	36	Maximum Detected	3.584
Mean of Detected	26	Mean of Detected	3.178
SD of Detected	14.14	SD of Detected	0.573
Minimum Non-Detect	4.2	Minimum Non-Detect	1.435
Maximum Non-Detect	10	Maximum Non-Detect	2.303

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	9
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	2
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	81.82%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

APPENDIX G.2

AREA B REMEDIAL GOALS

THIS PAGE LEFT INTENTIONALLY BLANK

Table G.2-1a
Remedial Goal Calculation Equations - Area B
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Remedial Goal Equations used for Soil

Ingestion
Noncarcinogens

$$RG_o = \frac{THQ*BW*AT\text{-}N*RfD_o}{EF*ED*IR\text{-}S*FI*CF_1}$$

Dermal
Noncarcinogens

$$RG_d = \frac{THQ*BW*AT\text{-}N*RfD_d}{SA*AF*ABS_d*EF*ED*CF_1}$$

Inhalation
Noncarcinogens

$$RG_i = \frac{THQ*BW*AT\text{-}N*RfD_i}{EF*ED*IR\text{-}A*ET*(1/VF+1/PEF)}$$

Overall Remedial Goal Equation

$$RG = \frac{1}{(1/RG_o + 1/RG_d + 1/RG_i)}$$

NOTES:

RG =	remedial goal soil	mg/kg
THQ =	target hazard quotient	unitless

Receptor specific parameters provided in Appendix E.2, Table E.2-4.1c (oral and dermal) and Table E.2-4.1d (inhalation)

BW =	body weight (receptor specific - kg)	kg
AT-N =	averaging time (receptor specific)	days
EF =	exposure frequency (receptor specific)	days/year
ED =	exposure duration (receptor specific)	years
ET =	exposure time (receptor specific)	hours/day
EV =	event frequency (receptor specific)	events/day
IR-S =	ingestion rate -soil (receptor specific)	mg/day
IR-A =	inhalation rate (receptor specific)	m^3/hour
SA =	skin surface contact area (receptor specific)	cm^2
AF =	adherence factor (receptor specific)	mg/cm^2

Table G.2-1a
Remedial Goal Calculation Equations - Area B
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

NOTES CONTINUED:

Toxicity Data provided in Appendix E.2, Tables E.2-5.1 and E.2-5.2

RfD_o =	oral reference dose (see Table E.2-5.1)	mg/kg-day
RfD_d =	dermal reference dose (see Table E.2-5.1)	mg/kg-day
RfD_i =	inhalation reference dose (see Table E.2-5.2)	mg/kg-day

Additional parameters used for soil calculations provided in Appendix E.2

FI =	fraction ingested (1.0)	unitless
ABS_d =	absorption factor (see Table E.2-4.3)	unitless
VF =	volatilization factor (see Table E.2-4.3)	m^3/kg
PEF =	particulate emission factor (see Table E.2-4.4)	m^3/kg
CF_1 =	conversion factor (1E-06)	kg/mg
CF_2 =	conversion factor (1E-03)	cm^3/L
CF_3 =	conversion factor (1E-03)	mg/ug

Table G.2-1b

Notes:

COPC = Chemical of Potential Concern
CAS = Chemical Abstracts Service
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
TIC = Tentatively Identified Compound
mg/kg = Milligram Per Kilogram
RBC = USEPA Region III Risk-Based Concentration
(RBC) values from the October 11, 2007,
RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
N/C = Noncarcinogenic/Carcinogenic per EPA RBC Table (October 2007)
[1] = Chromium VI RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endrin RBC value was used
[7] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[8] = Pyrene RBC value was used
[9] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

[D] = Re-sampled; Dioxin/Furans analyzed January 2007.

ARAR = Applicable, Relevant, and Appropriate Requirement
USEPA = U.S. Environmental Protection Agency
TBC = To-Be-Considered
RDA = Recommended Daily Allowance
IND = Adjusted Industrial RBC
AL = USEPA Action Level

ARES = Above Residential RBC
ARES/IND = Above Residential RBC/Industrial RBC
BSL = Below Residential/Industrial RBC Screening Levels
NSV = No Screening Value Available

ND = Not Detected
NA = Not Applicable

Notes:

COPC = Chemical of Potential Concern
CAS = Chemical Abstracts Service
TAL = Target Analyte List
TCL = Target Compound List
PCB = Polychlorinated Biphenyl
SVOC = Semivolatile Organic Compound
PAH = Polynuclear Aromatic Hydrocarbon
TIC = Tentatively Identified Compound
mg/kg = Milligram Per Kilogram
RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table
Adjusted RBCs = a Hazard Quotient (HQ) of 0.1 applied to non-carcinogens
N/C = Noncarcinogenic/Carcinogenic per EPA RBC Table (October 2007)
[1] = Chromium VI RBC value was used
[2] = Lead criteria are Action Levels; see USEPA Region III guidance
[3] = Mercuric chloride soil RBC value used
[4] = Chlordane RBC value was used
[5] = Alpha-BHC RBC value was used
[6] = Endrin RBC value was used
[7] = Noncarcinogenic Residential RBC value for Aroclor 1254 was used for screening
[8] = Pyrene RBC value was used
[9] = Noncarcinogenic Residential and Industrial RBC values for 2,4,6-Trinitrotoluene were used for screening

[D] = Re-sampled; Dioxin/Furans analyzed January 2007.

USEPA = U.S. Environmental Protection Agency
ARAR = Applicable, Relevant, and Appropriate Requirement
TBC = To-Be-Considered
RDA = Recommended Daily Allowance
IND = Adjusted Industrial RBC
AL = USEPA Action Level

ARES = Above Residential RBC
ARES/IND = Above Residential RBC/Industrial RBC
BSL = Below Residential/Industrial RBC Screening Levels
NSV = No Screening Value Available

ND = Not Detected
NA = Not Applicable

General UCL Statistics for Data Sets with Non-Detects

User Selected Options

From File	WorkSheet.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

BENZO(A)PYRENE (ug/kg)

General Statistics

Number of Valid Data	27	Number of Detected Data	5
Number of Distinct Detected Data	5	Number of Non-Detect Data	22
		Percent Non-Detects	81.48%

Raw Statistics		**Log-transformed Statistics**	
Minimum Detected	5.8	Minimum Detected	1.758
Maximum Detected	74	Maximum Detected	4.304
Mean of Detected	26.34	Mean of Detected	2.784
SD of Detected	29.01	SD of Detected	1.094
Minimum Non-Detect	1.6	Minimum Non-Detect	0.47
Maximum Non-Detect	1.6	Maximum Non-Detect	0.47

Warning: There are only 5 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

EOS® BARRIER DESIGN WORKSHEET
FOR ENHANCED *IN SITU* BIOREMEDIATION OF GROUNDWATER

THIS PAGE LEFT INTENTIONALLY BLANK

EOS Remediation, Inc.

EOS® BARRIER DESIGN WORKSHEET

Version 2.1 Rev. Date: March 7, 2007
www.EOSRemediation.com

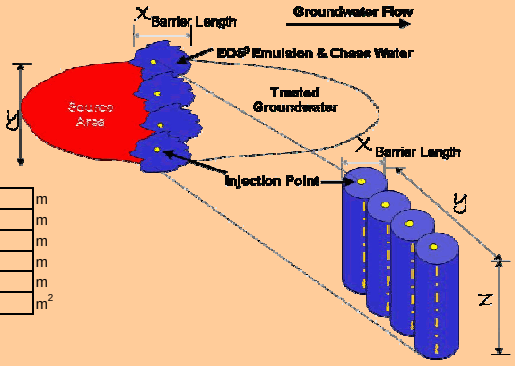
Help

Site Name:	RAAP
Location:	SWMU 54 AREA A
Project No.:	

Step 1: Select a Substrate from the EOS® Family of Bioremediation Products

Substrate Selected (pick from drop down list): EOS 450

For Product Literature Click Here



Step 2: EOS® Consumption During Contaminant Biodegradation / Biotransformation

Section A: Treatment Area Dimensions

Length of treatment area parallel to groundwater flow, " x"	40	ft	12.2	m
Width of treatment area perpendicular to groundwater flow, " y"	390	ft	118.9	m
Minimum depth to contamination	10	ft	3.0	m
Maximum depth of contamination	30	ft	9.1	m
Treatment thickness, "z"	20	ft	6.1	m
Treatment zone cross-sectional area, A = y * z	7,800	ft^2	724.6	m^2

Section B: Groundwater Flow Rate / Site Data

Soil Characteristics

Nominal Soil Type (pick from drop down list)	Sand			
Total Porosity (accept default or enter n)	0.38	(decimal)		
Effective Porosity (accept default or enter n_e)	0.33	(decimal)		
Soil bulk density; (1-n)*2.65 g/cc (accept calculated or enter dry bulk density)	1.64	g/cc	103	lbs / ft^3

Hydraulic Characteristics

Hydraulic Conductivity (accept default or enter K)	4.86	ft/day	1.7E-03	cm/sec
Hydraulic Gradient (accept default or enter i)	0.017	ft/ft		

Note: Since the hydraulic gradient ($i = dh/dx$) is negative, we ask you to enter $-i$ in the EOS® Design Tool so that you can enter a positive number for convenience.

Non-reactive Transport Velocity, $V_x = -(K \times i) / n_e$	0.25	ft/day	0.076	m/day
Groundwater flow rate through treatment zone, $Q = -KiA$	4820.38	gallons/day	18,248.40	L/day

Section C: Calculated Contact Length

Contact time (τ) between oil and contaminants (accept default or enter τ)	120	typical values 60 to 180 days, see comment
Calculated Contact Length (x) = $\tau * V_x$	30.0	ft

Treatment zone volume	312,000	ft^3	8,835	m^2
Treatment zone groundwater volume (volume * effective porosity)	770,141	gallons	2,915,503	L

Section D: Design Lifespan For One Application

	5	year(s)	typical values 5 to 10 years	
Estimated total groundwater volume treated over design life	9,567,337	gallons	36,218,824	L

Section E: Electron Acceptors

10

Inputs	Typical Value	GW Conc. (mg/L)	MW (g/mole)	e^- equiv./ mole	Stoichmetry *Contaminant/ H_2 (wt/wt H_2)*	Hydrogen Demand *(g H_2)*
Dissolved Oxygen (DO)	0 to 8	10	32.0	4	7.94	45632.90217
Nitrate Nitrogen (NO_3^- - N)	1 to 10	10	62.0	5	12.30	29437.15154
Sulfate (SO_4^{2-})	10 to 500	50	96.1	8	11.91	152012.7621
Tetrachloroethene (PCE), C_2Cl_4			165.8	8	20.57	
Trichloroethene (TCE), C_2HCl_3			131.4	6	21.73	
cis-1,2-dichloroethene (c-DCE), $C_2H_2Cl_2$			96.9	4	24.05	
Vinyl Chloride (VC), C_2H_3Cl			62.5	2	31.00	
Carbon tetrachloride, CCl_4			153.8	8	19.08	
Chloroform, $CHCl_3$			119.4	6	19.74	
sym-tetrachloroethane, $C_2H_2Cl_4$			167.8	8	20.82	
1,1,1-Trichloroethane (TCA), CH_3CCl_3			133.4	6	22.06	
1,1-Dichloroethane (DCA), CH_2CHCl_2			99.0	4	24.55	
Chloroethane, C_2H_5Cl			64.9	2	32.18	
Perchlorate, ClO_4^-		0.004	99.4	8	12.33	11.74866978
Hexavalent Chromium, Cr[VI]			52.0	3	17.20	
User added						
User added						
User added						

Section F: Additional Hydrogen Demand and Carbon Losses

Generation (Potential Amount Formed)	Typical Value	GW Conc. (mg/L)	MW (g/mole)	e^- equiv./ mole	Stoichmetry *Contaminant / H_2 (wt/wt H_2)*	Hydrogen Demand *(g H_2)*	DOC Released *(moles)*
Estimated Amount of $Fe2^+$ Formed	10 to 100	3	55.8	1	55.41	1961.050376	
Estimated Amount of Manganese (Mn^{2+}) Formed		3	54.9	2	27.25	3986.852752	

Estimated Amount of CH_4 Formed	5 to 20	10	16.0	8	1.99	182040.082	
Target Amount of DOC to Release	60 to 100	60	12.0				180928.27

Calculations assume:

1.) all reactions go to completion during passage through emulsified edible oil treated zone; and,

2.) perfect reaction stoichiometry.

EOS® Requirement Calculations Based on Hydrogen Demand and Carbon Losses

Stoichiometric Hydrogen Demand	914	pounds
DOC Released	13,727	pounds

EOS® Requirement Based on Hydrogen Demand and Carbon Loss

57 drums

Step 3: EOS® Requirement Based on Attachment by Aquifer Material

Soil Characteristics

Effective treatment thickness, "z_e" (typically less than 40%): 0.25

For Additional Information on Effective Thickness, Click Here

Weight of sediment to be treated: 8,000,393 lbs

Adsorptive Capacity of Soil (accept default or enter site specific value): 0.0013 lbs EOS® / lbs sediment

EOS® Attachment by Aquifer Material[1]

- Fine sand with some clay 0.001 to 0.002 lbs EOS® / lbs soil
- Sand with higher silt/clay content 0.002 to 0.004 lbs EOS® / lbs soil

[1]Default values provided based on laboratory studies completed by NCSU

For Additional Data, Click Here

EOS® Requirement Based on Oil Entrapment by Aquifer Material

25

Summary – How much EOS® do you need?

Suggested Quantity of EOS® for Your Project: 57 drums

APPENDIX G.5

GROUNDWATER MODELING

THIS PAGE LEFT INTENTIONALLY BLANK

G.5 AT123D MODEL

G.5.1 OVERVIEW

The AT123D, Analytical, Transient One-, Two-, and Three-Dimensional analytical groundwater transport model has been used to evaluate RDX and 2,4,6-TNT attenuation rates in groundwater at SWMU 54 after removal of the remaining soil source at Area A. This model is part of the SEVIEW integrated contaminant transport and fate modeling system developed by Environmental Software Consultants, Inc. (ESC 2007). AT123D computes the spatial-temporal concentration distribution of dissolved phase chemicals in the aquifer system and predicts the transient spread of a contaminant plume through a groundwater aquifer. The fate and transport processes accounted for in AT123D are advection, dispersion, adsorption, and decay. AT123D estimates these components on a monthly basis for up to 99 years of simulation time.

G.5.2 MODEL INPUT PARAMETERS

Various input parameters for aquifer characteristics, source area characteristics, chemical specific properties, and chemical loading were used for model development and implementation as described in the following sections. Table G.5-1 summarizes various site-specific input parameters that were used for the SWMU 54 site.

G.2.1 Aquifer Parameters

ATD123 has input aquifer parameters for aquifer characteristics and geometry including: hydraulic conductivity, hydraulic gradient, effective porosity, soil bulk density, longitudinal, transverse, and vertical dispersivities, aquifer width and depth, number of calculation term values, and model error tolerance. Site specific parameters were used for model input as summarized in Table G.5-1. Model default values were used for vertical dispersivity, number of calculation terms, and error tolerance.

G.2.2 Input Parameters

Model input parameters describe the geometry of the source release and contaminant properties. Site specific parameters were used for the source area size and organic carbon content of the aquifer matrix as summarized in Table G.5-1. Model database parameters were used for chemical properties of RDX and 2,4,6-TNT including organic carbon adsorption coefficient (K_{oc}), distribution coefficient (K_d – calculated using organic carbon content and K_{oc}), and water diffusion coefficient multiplied by tortuosity.

G.2.3 Load Parameters

AT123D load parameters were used to establish an initial concentration within the volume of contaminated groundwater. An instantaneous release load was used to establish initial concentrations in groundwater for RDX and 2,4,6-TNT, which were approximately equal to the maximum concentrations observed during the latest groundwater sampling event conducted in September 2007. The release load was limited to the first 36 months of the model with progressively lower loads over each 12 month period to account for source removal and potential residual loading effects after source removal.

G.5.3 MODEL RESULTS

Model results for RDX and 2,4,6-TNT are summarized in Table G.5-2 and show attenuation of chemical concentrations to levels below their established remedial goals within five years of source removal. A number of factors likely account for the observed attenuation including source removal, the lower initial chemical concentrations present in the aquifer, chemical specific characteristics, and site-specific dispersion factors related to groundwater/surface water interaction occurring at the site.

Table G.5-1
Input Parameters for SWMU 54 AT123D Groundwater Model
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

Parameter	Model Input Value	Units	Comment
Aquifer Hydraulic Gradient (Average)	0.0213	ft/ft	Average Value for Area A Section 2.1.4 of RFI/CMS Report
Aquifer Hydraulic Conductivity	4.86	ft/day	Average Value for Area A Section 2.1.7 of RFI/CMS Report (6.172 m/hr)
Effective Porosity	0.20	Unitless	Average Value for Limestone/Sand and Gravel Section 2.72 of RFI/CMS Report
Total Organic Carbon	1%	%	Average Value for Unconsolidated Sediments from RFI/CMS physical test results
Carbon Absorption Coefficient (Koc)	Varies by Chemical	ug/g	From SEVIEW/ATD123 Model Chemical Database
Aquifer Material Bulk Density	1.69	kg/m^3	Average Value for Unconsolidated Sediments from RFI/CMS physical test results
Model Length and Width from Source Area	50	m	Approximate distance from source area to farthest downgradient well adjacent to New River
Dispersivity (Longitudinal)	5	m	1/10 of plume distance
Dispersivity (Lateral)	5	m	1/10 length of observed lateral plume disperson distance (north)
Vertical Dispersivity	0.2	m	ATD123D default value
Source Area Size	2500	ft^2	Estimated area of explosives in soil based on RFI/CMS Data
Source Area Loading	36	months	An instantaneous release load was used to establish initial concentrations in groundwater for RDX and 2,4,6-TNT, which were approximately equal to the maximum concentrations observed during the latest groundwater sampling event conducted in September 2007. The release load was limited to the first 36 months of the model with progressively lower loads over each 12 month period to account for source removal and potential residual loading effects after source removal.

Notes:
ft = feet
ft^2 = square feet
m = meters
TNT = Trinitrotoluene
RDX = Hexahydro-1,3,5-trinitro-1,3,5-triazacyclohexane
ug/kg = microgram per gram
mg/L = Milligrams per liter

Table G.5-2
Summary of Groundwater Modeling Results for RDX and 2,4,6-TNT After Removal of Source Area
SWMU 54 RFI/CMS Report
Radford Army Ammunition Plant, Radford, Virginia

RDX - RG = 6.1 µg/L	**RDX Concentrations in µg/L**							
Source Removal at Year 0	MNA Period					Verification of Endpoint		
Year	1	2	3	4	5	6	7	8
Model Predicted with Source Removal	8.1*	3.69	2.23	1.50	1.11	0.86	0.69	0.57

TNT - RG = 7.82 µg/L	**2,4,6-TNT Concentrations in µg/L**							
Source Removal at Year 0	MNA Period					Verification of Endpoint		
Year	1	2	3	4	5	6	7	8
Model Predicted with Source Removal	17.4*	12.2	9.54	7.76	6.45	5.44	4.69	4.18

Notes:
* Approximately Equivalent to the Maximum Groundwater Concentration Detected in September 2007
RG = Established remedial goal in groundwater.
µg/L = Micrograms per liter.
Years 1-5: Monitored Natural Attenuation Period (MNA) estimated in RFI/CMS Report.
Years 6-8: Three Year period to demonstrate achievement and maintenance of endpoints.
red = Concentration Above Remedial Goal

DATA VALIDATION REPORT - Level III Review

SDG No.: _____A2810_____ **Fraction:**_SVOCs, PAH, Explosives, Nitroglycerin & Metals__

Lab: _CompuChem_____ **Project Name:** __Radford SWMU 54_____

Reviewer: _____RA_____ **Date:** _____April 18, 2003_____

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the SVOC analyses, the initial calibration analyzed on 3/5/03 displayed %RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 21.59%, phenol at 19.70%, bis(2-chloroethyl)ether at 18.25%, 2,2-oxybis(1-chloropropane) at 16.51%, n-nitroso-di-n-propylamine at 17.81%, nitrobenzene at 15.11%, 2,4-dimethylphenol at 15.92%, bis (2-chloroethoxy)methane at 18.54%, naphthalene at 19.02%, 4-chloroaniline at 16.07%, 4-chloro-3-methylphenol at 15.91%, 2-methylnaphthalene at 16.16%, hexachlorocyclopentadiene at 21.09%, 2,4,5-trichlorophenol at 15.75%, 1,1-biphenyl at 15.79%, 2-nitroaniline at 21.22%, acenaphthylene at 18.09%, 3-nitroaniline at 19.84%, acenaphthene at 20.76%, dibenzofuran at 16.84%, fluorene at 18.10%, 4-nitroaniline at 18.18%, n-nitrosodiphenylamine at 17.80%, and atrazine at 15.40%. No positive results were reported and no data qualifying action was required since the failures were not serious enough (i.e., > 50%) to affect the non-detects.

The CCV analyzed on 3/6/03 at 2320 displayed a %D greater than the control limit (i.e., 20%) with a negative bias for 4,6-dinitro-2-methylphenol at 20.59%. Non-detects were flagged "UJ,c" in the associated samples.

For the PAH analyses, the RPD for the MS/MSD analyses of sample 54MW5 was greater than the QC limit (i.e., 20%) for fluoranthene at 22%. No positive results were reported in the parent sample and no data qualifying action was required.

For the explosives analyses, the continuing calibration analyzed on 3/6/03 at 1345 displayed %Ds greater than the QC limit (i.e., 15%) with a positive bias for RDX at 23.67%, 2-nitrotoluene at 20.85%, 3-nitrotoluene at 21.15%, and 4-nitrotoluene at 22.48% on the initial column. The continuing calibration analyzed on 3/12/03 at 1221 displayed a %D greater than the QC limit with a positive bias for 2,6-dinitrotoluene at 17.26% on the second column. The continuing calibration

analyzed on 3/12/03 at 2329 displayed %Ds greater than the QC limit with a positive bias for 2,6-dinitrotoluene at 17.38%, 2-nitrotoluene at 16.31% and 4-nitrotoluene at 16.31% on the second column. No positive results were reported in the associated samples. No data qualifying action was taken for the non-detects since the %Ds were acceptable on the alternate column.

The MSD recovery for HMX (45%) was less than the lower QC limit. The associated sample result was positive in the parent sample 54MW5 and was flagged "J,m."

The RPDs between the two analytical columns were greater than the QC limit (i.e., 40%) for 4-amino-2,6-dinitrotoluene in sample 54MW2 (54%) and 54MW3 (73.7%) and HMX in sample 54MW7 (69.7%). These results were flagged "J,g." The higher results were reported by the laboratory.

For the metal analyses, the initial CRDL percent recoveries for cadmium (113.2%), lead (82.3%), potassium (65.4%), selenium (118%), thallium (71.1%), and zinc (72.1%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "L,w" and non-detects were flagged "UL,w" for lead, potassium, thallium, and zinc in the associated samples. All associated sample results were either non-detect or were previously flagged for cadmium and selenium, and no further data qualifying action was required.

The method blank displayed negative results for calcium and zinc and a positive result for selenium. Positive selenium results less than 5 times the blank concentration were flagged "B,p" in the associated samples. Positive zinc results were previously flagged due to CRDL anomalies and no further data qualifying action was taken. Positive calcium results were greater than 5 times the absolute value of the blank concentration and no data qualifying action was required.

The initial and continuing calibration blanks also displayed positive results for iron, manganese and magnesium; and negative results for calcium, lead, sodium, and zinc. Positive iron and manganese results less than 5 times the blank concentration were flagged "B,o" in the associated samples. Positive sodium results less than 5 times the absolute value of the blank concentration were flagged "L,o" in the associated samples. All associated sample results were either greater than 5 times the blank concentration or were previously flagged due to other anomalies for the other analytes and no further data qualifying action was required.

Equipment blank GW-EB-1 contained aluminum at 37.6 ug/L, barium at 0.33 ug/L, chromium at 3.5 ug/L, cobalt at 3 ug/L and sodium at 529 ug/L. Equipment blank GW-EB-2 contained sodium at 386 ug/L. Positive results less than 5 times the blank concentration were flagged "B,x" in the associated samples.

The MS/MSD recoveries analyzed on sample 54MW5 were outside the QC limit for selenium (125.7%/125.9%) and thallium (59.9%/63.1%). All associated sample results were previously flagged due to other anomalies and no further data qualifying action was required.

The RPD for manganese (32%) was greater than the QC limit (i.e., 25%) for the field duplicate pair 54MW7/GW-DUP-1. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

Correctable Anomalies: None.

Comments: Positive TIC results were flagged "NJ,t" in the associated samples. All unknown hits were removed from TIC summary forms by the reviewer. It should be noted that if a given fraction (analysis) is not discussed in this report, it indicates that no anomalies were observed for that fraction. All data, as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Ranjan

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 4/15/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: A2810
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?			✓
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

collected	extract	analyzed
3/4/03	3/6/03	3/7/03
3/3/03	7	7

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes:

see attached

UJ,C

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / L / K Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 54MW7 ND GW-DUP-1 ND

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			✓

Notes:

Pos TIC → NJ, t

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: A2810
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 ^{O}C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

collected	extract	analyzed
3/4/02	3/6/02	3/7/03
3/3/02	4	4

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	✓		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			✓
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			✓
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: fluoranthrene 22 %. 720%.

Parent 54MW5 UDJ no flag

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes:

54MW7 ND GW-DUP-1 ND

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness =			
	% Completeness = 100 %

Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: A2810
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

collected	extract	analyzed
3/4/03	3/11/03	3/12/03
3/3/03	3/5/03	3/6/03

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		

3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			✓
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			✓
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: See attached
no pos
no flag

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			(
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		

6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: HMX MSD 45% C lower QC
in parent 54MW5 →J,m

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 54MW7 GW-DUP-1
HMX 4.7 6.4 U OK✓

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes: several 740's → J/g

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:			
10.1.3	Number of results rejected and not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			
	% Completeness =

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination

DATA VALIDATION REPORT - Level III Review

SDG No.: B2810 **Fraction:** Metals

Lab: CompuChem **Project Name:** Radford SWMU 54

Reviewer: AS **Date:** April 2, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the metal analyses, the initial and continuing calibration blanks contained positive detections for antimony, barium, beryllium, cadmium, calcium, cobalt, magnesium, manganese, potassium, selenium, silver, and vanadium. All associated sample results less than five times the blank concentration were flagged "B,o". The initial calibration blank also displayed a negative detection for cobalt. Associated non-detect sample results were flagged "UL,o". All associated positive detections were less than five times the absolute value of the initial calibration blank concentration and were flagged "L,o", unless otherwise qualified due to field blank contamination.

The batch blank displayed a positive detection for zinc at 1.488 ug/L and a negative detection for iron at -8.852 ug/L. Associated positive results less than five times the batch blank concentration for zinc were flagged "B,p". All associated results for iron were non-detect and were flagged "UL,p". The batch blank also contained positive results for barium, magnesium, potassium, and selenium and negative results for cobalt and iron. These results were previously flagged due to calibration blank contamination and no further data qualifying action was required.

Equipment blank GW-EB-1 collected on 3/3/03 displayed a detection for nickel at 1.9 ug/L. Equipment blank GW-EB-2 collected on 3/4/03 displayed a detection for cobalt at 0.62 ug/L. Positive results less than 5 times the blank concentration were flagged "B,x" in the associated samples.

The initial CRDL percent recoveries for aluminum (160.7%), antimony, (116.1%), arsenic (79.5%), cadmium (111.2%), cobalt (86.6%), copper (58.2%), lead (119.7%), nickel (117.4%), potassium (114.5%), selenium (148.0%), sodium

(78.0%), and thallium (62.6%) were outside the control limit (i.e., 90-110%). Positive associated field sample results less than 2xCRDL were flagged "K,w" for aluminum, lead, nickel, potassium, and selenium, unless previously flagged due to blank contamination. The associated sample results were non-detect for antimony and cadmium while the CRDL displayed a positive bias, thus, no data qualifying action was taken. The associated non-detect sample results for arsenic, cobalt, copper, sodium, and thallium were flagged "UL,w" and positive detections less than 2xCRDL were flagged "L,w", unless previously flagged as blank contamination or biased low due to negative detections in the initial calibration blank.

The MS/MSD pair for sample 54MW5 displayed recoveries for arsenic (73.1%/73.2%) that were less than the lower QC limit. All associated sample results were non-detect and were previously flagged "UL,w" due to low recovery in the CRDL standard. No further data qualifying action was taken.

The percent difference for the serial dilution analysis on sample 54MW5 was greater than the QC limit (i.e., 10%) for sodium at 14.2%. Positive results were flagged "J,s", unless previously flagged due to low recovery in the CRDL standard.

Correctable Anomalies: None.

Comments: All data as qualified, are usable for their intended purpose based on the data reviewed.
