DATA VALIDATION WORKSHEET

Explosives

Reviewer: Andrea Sansom
Date: 11/11/2004
DV Level: II III IV

Review Document:

_X_ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
_X_ Project QAPP/SAP

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-19
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	X		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids (for		X	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: *The chain of custody and the sample container label had a different collection time for sample 54SB64B. As directed from the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.*

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: *Three coolers at 0C, 1.6C and 0.7C.*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	X		

Notes: *EQB-1, EQB-2, and EQB-3 are non-detect*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		X	
6.4	Are there any RPD for MS/MSD recoveries outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 54SB63B MS MSD RPD

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB63A and DUP-4*

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	X		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.			X
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		X		
	Number of samples:	20			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB63A and DUP-4*

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-19
Test Name: PEST/PCB
Method No.: 8081A/8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do any soil samples contain more than 50% water?	X		
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: *The chain of custody and the sample container label had a different collection time for sample 54SB64B. As directed from the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.*

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		X	

Notes: *Three coolers at 0C, 1.6C and 0.7C .*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	X		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	X		

Notes: *EQB-1, EQB-2, EQB-3, & EQB-4 are non-detect*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	X		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	X		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		Pest	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows? If No, the associated sample result should be carefully evaluated.	X		

Notes:

5.0 GC/ECD Instrument Performance Check for Pesticides		Yes	No	NA
5.1	Is the 4,4'-DDT breakdown </= to 15%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	X		
5.2	Is the endrin breakdown </= to 15%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	X		

Notes:

6.0 Surrogate Recovery					Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				X		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				X		
6.3	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?				X		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?						X
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						X
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance			
	1 out	high/low	No action	No action			
	2 out	2 high same column	K	No action			
		2 low same column	L, UL	No action			
		mixed same column	J, UJ	No action			
		2 high diff columns	J	Not applicable			
		2 low diff columns	J, UJ	Not applicable			
		mixed diff columns	Professional judgement	Not applicable			
	3 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		2 high, 1 low	K (2 high)	J (1 low 2nd column)			
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)			
		other mixed	J, UJ	Not applicable			
	4 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		Mixed	J, UJ	Not applicable			
	If any recovery is >0% and <10% then L(+)/R(-).						
	If any recovery is 0% then R(+/-).						

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 30-150%?		X	
7.4	Are there any RPDs outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 54SB63B MS MSD RPD

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 30-150%?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			X
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB63A and DUP-4*

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).			X
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Pesticide Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes: *CLP requirement, not provided*

Case narrative indicates mercury was used to remove sulfur due to the possibility of degradation of some pesticide target analytes with use of the recommended cleanup with activated copper.

12.0 Data Completeness				Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	Pest	PCB	X		
	Number of samples:	20	20			
	Number of target compounds in each analysis:	21	7			
	Number of results rejected and not reported:	0	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)					
	% Completeness =	100%	100%			

Notes:

DATA VALIDATION WORKSHEET
INORGANIC - ICP/ICPMS/CVAA
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-19
Project No.: 21355035.20001

Project Name: Radford SWMU54
Reviewer: Andrea Sansom
Date: 11/11/2004

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	x			x			x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x			x			x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x			x			x		
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)		x			x			x	
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	x			x			x		

Note: *The chain of custody and the sample container label had a different collection time for sample 54SB64B. As directed from the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.*

*Three coolers at **0C, 1.6C** and **0.7C**.*

2.0 Holding Time		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		x			x			x	

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".	7+BLK			4+BLK			5+BLK		
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	x			x			x		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	x			x			x		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based	x			x			x		
3.5	Were ICV/CCV reported from mutiple exposures (3 for ICP or 2 for CVAA) with passing %RSD (ICP < 5% or CVAA < 10%)? If no, contact project chemist for laboratory resolution.	x			x			x		
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP: 90%-110% & Hg: 80-120%	x			x			x		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%									
3.7	For one point curves on ICP & ICPMS, did the CRDL standard recover between 80-120%? <50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K			x			x	105%		

Note: *TriMatrix incorporated a higher calibration standard to limit the number of required analytical dilutions for Al, Ba, Ca, Fe, Mn, and K.*

TriMatrix felt this would affect the low end of the curve creating more error at the non-detect detection limit of an acceptable CCB or MB.

TriMatrix elevated these reporting limits by a factor of five for this reason, while still meeting the project DQOs.

URS requested a new MDL study or processing through the new curve and/or to elevate the MDL as well.

Evaluation of the CCBs and MB was performed down to the MDL for both positive and negative detections.

4.0 Blanks

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	x			x			x		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	x			x			x		
4.3	Are there reported MB or ICB/CCBs values > MDL?	x			x				x	
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?		x		x				x	
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?	x			x				x	
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note:

EQB-2 Non-detect

EQB-3 Cr 0.3 J B,p

Fe 9.5 J

Zn 7.2 J L,o

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	x			x					
5.2	Are the ICS AB recoveries within 80% - 120%?	x			x					
5.3	Are the results for unspiked analytes (in ICS A) <± MDL?		x			x				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?		x			x				
	If not...									
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)									

Note:

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	X			X			X		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		X			X			X	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)									

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	X			X			X		
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	X			X			X		

Note: *54SB63B*

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	x			x			x		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?									
	%R > 125% 30%< %R < 74% < 30%									
	Positive K L L	x			x			x		
	Non-detect None UL R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	Se			x					x

Note: *54SB63B - MS/MSD/RPD - passed ; PDS displayed Se @ 69% (statement of qualifications) or 71% (anomaly report)*

selenium for this sample was reported using method of standard additions.

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	x			x			x		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	x			x					
10.2	Was a five-fold dilution performed?	x			x					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).	x				x				

Note: *54SB63B -Mg by 6010B @ 12.6%*

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	x			x			x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	x			x			x		

Note: *54SB63A and DUP-4*

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	x			x			x		
12.2	Were all dilutions reflected in the positive results and detection limits?	x					x			x
12.3	Were the Internal Standard recoveries within 30-120% (6020) or 80-120% (6010B)?	DF2			x					
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	x								
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	x								
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	x								

Note: *By 6020, samples DUP 4 (122%), 54SB63A (121%), 54SB67B (127%), and 54SB67C (129%) exceeded the upper control limit of the internal standard used to quantitate As, Ni, & Se. Samples were analyzed at dilution factor of two with passing internal standard recoveries. The elevated MDLs multiplied by three were still less than RL*

13.0 Completeness Calculation		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	x			x			x		
13.1.1	Number of samples: 20									
13.1.2	Number of target compounds in each analysis: 23									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

☑ Cooler ID on COC? ☐ VOC trip blank received?

If any shaded areas checked, complete Sample Receiving Non-Conformance Form

Paperwork Received

☐ No COC received

N/A	Yes	No	
	☑	☐	Chain of Custody Record(s)?
	☐		If No, COC initiated by ____
	☑		Rec'd for Lab signed/date/time?
☐	☑		Shipping Document?
☐	☐		Other ____

COC ID Nos.: 1270, 1271, 1268, 1269, 1267, 1274, 1272
☐ TriMatrix
☑ Other (name or ID#) Radford Army

Check COC for Accuracy

☐ No analysis requested

Yes	No	
☑	☐	Sample ID matches COC?
☐	☑	Sample date and time matches COC?
☑		Container type completed on COC?
☑	☐	All container types indicated are received?

Sample Condition Summary

☐ Non-TriMatrix containers, see Notes

N/A	Yes	No	
		☑	Broken containers/lids?
		☑	Missing or incomplete labels?
		☑	Illegible information on labels?
		☑	Low volume received?
		☑	Inappropriate containers received?
☑		☐	VOC vials have headspace?
☑		☐	Extra sample locations / containers not listed on COC?

Check Sample Preservation

N/A	Yes	No	
	☐	☑	All sample temperatures ≤4° C?
☐	☑		Completed Sample Preservation Verification Form?
☐	☐	☒	Samples preserved correctly?
☑	☐		If "No", added orange tag?
☑	☐		Received pre-preserved VOC soils?

☐ MeOH ☐ Na_2SO_4

Check for Short Hold-Time Prep/Analyses

☐ Bacteriological
☐ Air Bags
☐ EnCores
☐ Formaldehyde/Aldehyde
☐ Green-tagged Containers
☐ Yellow/White-tagged 1L Ambers (SV Prep-Lab)

AFTER HOURS ONLY:
COPIES OF COC TO LAB AREA(S)
☐ NONE RECEIVED
☐ RECEIVED, COCs TO LAB(S)

Notes This version of checklist applies to COC #s 1268, 1270, 1271, 1269, 1272

☐ Trip blank received ☐ Trip blank not listed on COC
☐ No COC received, Proj. Chemist reviewed (init./date) ____
☐ No analysis requested, Proj. Chemist completed (init./date) ____

Cooler Received (Date/Time)	Paperwork Delivered (Date/Time)	≤1 Hour Goal Met?
8/20/04 8:40	8/20/04 11:30	Yes (No)

Comments

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-20 **Fraction: Explosives, Nitroglycerin, Pesticides, Polychlorinated Biphenyls, & Metals**

Lab: TriMatrix **Project Name: Radford_SWMU_54**

Reviewer: Andrea_Sansom **Date: November_19,_2004**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: For the explosive analyses, the continuing calibrations analyzed on column CN displayed percent differences greater than the control limit (i.e., 15%) with a positive bias on 09/04/2004 at 1241 for 1,3-dinitrobenzene at 15.5% and at 1753 for 2,6-dinitrotoluene at 18.0%. The continuing calibrations analyzed on 09/05/2004 displayed percent differences greater than the control limit on column CN with a negative bias for tetryl at 15.2%, 15.3%, and 15.3%. All field sample extracts were non-detect for tetryl on the C18 column that displayed acceptable continuing calibrations. All field samples were non-detect for 1,3-dinitrobenzene and 2,6-dinitrotoluene on one of the two analytical columns despite the positive bias indicated on the CN column. Since only one column is required to pass to report valid non-detect results, no data qualifying action was taken.

For the pesticides analyses, the laboratory control spike for extraction batch 99417-125 displayed percent recoveries greater than the laboratory generated upper control limits for alpha-chlordane at 118% and gamma-chlordane at 119%. Since these recoveries were less than the QAPP upper control limit of 150%, no data qualifying action was taken. The initial calibration verifications displayed percent differences greater than the control limit of 15% for the following:

Date	Time	Instrument	Column	Analyte	Percent Difference	Bias
09/16/2004	1725	158	A	4,4'-DDD	25.0%	-
				4,4'-DDE	16.3%	-
				4,4'-DDT	15.8%	-
				delta-BHC	21.0%	-
				Methoxychlor	21.0%	-
09/22/2004	1209	158	A	delta-BHC	18.0%	+
			B	most analytes	>15%	-

Associated field samples that required both columns for analysis were non-detect and were flagged "UJ,c". The continuing calibrations displayed the following percent differences greater than the control limit of 15%:

Date	Time	Instrument	Column	Analyte	Percent Difference	Bias
09/15/2004	2136	158	B	4,4'-DDD	21.4%	-
				alpha-BHC	15.9%	+
				beta-BHC	16.8%	+
09/16/2004	0332	158	A	4,4'-DDD	18.4%	-
				Methoxychlor	15.9%	-
			B	alpha-BHC	20.3%	+
				beta-BHC	16.0%	+
				gamma-BHC	15.4%	+
09/16/2004	2226	158	A	4,4'-DDD	18.3%	-
				delta-BHC	16.3%	-
09/22/2004	2333	158	A	delta-BHC	15.3%	-
				Endosulfan I	16.6%	+

For the anomalous compounds that displayed a positive bias, the associated field sample results were non-detect, thus, no data qualifying action was taken. For the anomalous compounds that displayed a negative bias, the associated field sample results were reported non-detect from the alternate passing column, unless previously qualified for an initial calibration verification anomaly. Since only one column is required to pass to report a non-detect result, no data qualifying action was necessary. For anomalous compounds that displayed a negative bias on both analytical columns, the associated field sample results were non-detect and were flagged "UJ,c".

For the metals analyses, the instrument initial and/or continuing calibration blanks displayed negative estimate detections less than the reporting limit for barium, iron, manganese, sodium, and vanadium. The positive associated field sample result for sodium was less than five times the absolute value of the blank detection and was flagged "L,o". The associated non-detect results for sodium were flagged "UL,o". The other associated field sample results were positive and greater than five times the absolute value of the negative blank detections, thus, no data qualifying action was required. The initial and/or continuing calibration blanks displayed positive estimate detections less than the reporting limit for aluminum, magnesium, and zinc. The associated field sample results were positive and greater than five times the blank detections, thus, no data qualifying action was required. The method blanks displayed the following detections:

Batch	Analyte	Concentration (mg/Kg)
98711-126	Aluminum	24.4
	Barium	-0.385
	Calcium	18.8
	Iron	7.22
	Magnesium	40.1
	Manganese	-1.23
	Vanadium	-0.589
	Zinc	1.96
98745-127	Antimony	0.042

The positive associated field sample results were less than five times the blank concentration for antimony and were flagged "B,p". The associated calcium and iron field sample results were positive and greater than five times the blank detections, thus, no data qualifying action was required. The other blank detections were attributed to instrument drift; therefore, no data qualifying action was taken. The equipment blank EQB-3 displayed positive estimate detections for chromium at 0.314 ug/L, iron at 9.478 ug/L, and zinc at 7.216 ug/L. The positive equipment blank result for chromium was previously qualified due to a method blank detection and no further data qualifying action was taken. Positive field sample results for iron and zinc were greater than five times the equipment blank detections and no data qualifying action was required. The serial dilution performed on sample 54SB62C displayed percent differences greater than the control limit of 10% for cobalt at 12.3%, magnesium at 11.0%, vanadium at 12.5%, and zinc at 12.3%. The associated field sample results were positive and were flagged "J,s".

Correctable Anomalies: None.

Comments: Due to the abundance of target element lead, the field duplicate DUP-5 was analyzed at a dilution of 50 for this constituent only. The reporting limit for lead was elevated appropriately. If a given fraction was not discussed, no anomalies were encountered. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Explosives

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-20
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids (for		X	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: *Three coolers at 2.5C, 4.3C and 4.5C.*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	X		

Notes: *EQB-1, EQB-2, and EQB-3 are non-detect*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		X	
6.4	Are there any RPD for MS/MSD recoveries outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 54SB62C MS MSD RPD

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB69B and DUP-5*

54SB62B and DUP-6

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	X		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.			X
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		X		
	Number of samples:	13			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-20
Test Name: PEST/PCB
Method No.: 8081A/8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do any soil samples contain more than 50% water?	X		
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		X	

Notes: *Three coolers at 2.5C, 4.3C and 4.5C.*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	X		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	X		

Notes: *EQB-1, EQB-2, EQB-3, & EQB-4 are non-detect*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	X		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	X		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		Pest	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows? If No, the associated sample result should be carefully evaluated.	X		

Notes:

5.0 GC/ECD Instrument Performance Check for Pesticides		Yes	No	NA
5.1	Is the 4,4'-DDT breakdown </= to 15%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	X		
5.2	Is the endrin breakdown </= to 15%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	X		

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	X		
6.3	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	X		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			X
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			X

	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
	1 out	high/low	No action	No action
	2 out	2 high same column	K	No action
		2 low same column	L, UL	No action
		mixed same column	J, UJ	No action
		2 high diff columns	J	Not applicable
		2 low diff columns	J, UJ	Not applicable
		mixed diff columns	Professional judgement	Not applicable
	3 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		2 high, 1 low	K (2 high)	J (1 low 2nd column)
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
		other mixed	J, UJ	Not applicable
	4 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		Mixed	J, UJ	Not applicable
	If any recovery is >0% and <10% then L(+)/R(-).			
	If any recovery is 0% then R(+/-).			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 30-150%?		X	
7.4	Are there any RPDs outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 54SB62C MS MSD RPD

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 30-150%?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			X
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB69B and DUP-5*
54SB62B and DUP-6

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).			X
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Pesticide Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes: *CLP requirement, not provided*

Case narrative indicates mercury was used to remove sulfur due to the possibility of degradation of some pesticide target analytes with use of the recommended cleanup with activated copper.

12.0 Data Completeness				Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	Pest	PCB	X		
	Number of samples:	13	13			
	Number of target compounds in each analysis:	21	7			
	Number of results rejected and not reported:	0	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)					
	% Completeness =	100%	100%

Three coolers at 2.5C, 4.3C and 4.5C.

2.0 Holding Time		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		x			x			x	

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".	7+BLK			4+BLK			5+BLK		
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	x			x			x		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	x			x			x		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based	x			x			x		
3.5	Were ICV/CCV reported from mutiple exposures (3 for ICP or 2 for CVAA) with passing %RSD (ICP < 5% or CVAA < 10%)? If no, contact project chemist for laboratory resolution.	x			x			x		
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP: 90%-110% & Hg: 80-120%	x			x			x		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%									
3.7	For one point curves on ICP & ICPMS, did the CRDL standard recover between 80-120%?			x			x	90%		
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K									

Note: *TriMatrix incorporated a higher calibration standard to limit the number of required analytical dilutions for Al, Ba, Ca, Fe, Mn, and K.*

TriMatrix felt this would affect the low end of the curve creating more error at the non-detect detection limit of an acceptable CCB or MB.

TriMatrix elevated these reporting limits by a factor of five for this reason, while still meeting the project DQOs.

URS requested a new MDL study or processing through the new curve and/or to elevate the MDL as well.

Evaluation of the CCBs and MB was performed down to the MDL for both positive and negative detections.

4.0 Blanks

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	x			x			x		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	x			x			x		
4.3	Are there reported MB or ICB/CCBs values > MDL?	x			x				x	
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?		x		x				x	
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?	x			x				x	
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note:

EQB-3 Cr 0.3 J B,p
Fe 9.5 J
Zn 7.2 J L,o

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	x			x					
5.2	Are the ICS AB recoveries within 80% - 120%?	x			x					
5.3	Are the results for unspiked analytes (in ICS A) < ± MDL?		x			x				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?		x			x				
	If not...									
	Action: Not Spiked Analytes < -IDL L(+)/UL(-) > IDL K(+)									
	Spiked analytes (ICS AB analytes) < 50% L(+)/R(-) 50% - 79% L(+)/UL(-) >120% K(+)									

Note:

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	x			x			x		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		x			x			x	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)									

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	x			x			x		
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	x			x			x		

Note: *54SB62C*

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	x			x			x		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?	x			x			x		
	%R > 125% / 30%< %R < 74% / < 30%									
	Positive: K / L / L									
	Non-detect: None / UL / R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	x			x					x

Note: *54SB62C - MS/MSD/RPD/PDS - passed*

9.0 Instrument Detection Limits (IDL)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	x			x			x		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	x			x					
10.2	Was a five-fold dilution performed?	x			x					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).	x				x				

Note: *54SB62C - Co by 6010B @ 12.3%, Mg by 6010B @ 11.0% , V by 6010B @ 12.5% , and Zn by 6010B @ 12.3%*

11.0 Field Duplicate Samples

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	X			X			X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	X			X			X		

Note: *54SB69B and DUP-5*

54SB62B and DUP-6

12.0 Result Verification/ Internal Standards/ Tune

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	X			X			X		
12.2	Were all dilutions reflected in the positive results and detection limits?	X					X			X
12.3	Were the Internal Standard recoveries within 30-120% (6020) or 80-120% (6010B)?	X			X					
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	X								
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	X								
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	X								

Note:

13.0 Completeness Calculation

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	X			X			X		
13.1.1	Number of samples: 13									
13.1.2	Number of target compounds in each analysis: 23									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-21 **Fraction:** Pesticides_&_Polychlorinated_Biphenyls

Lab: TriMatrix **Project Name:** Radford_SWMU_54

Reviewer: Andrea_Sansom **Date:** November_22,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: For the pesticides analyses, the laboratory control spike for extraction batch 98680-128 displayed percent recoveries greater than the laboratory generated upper control limits for alpha-chlordane at 119% and gamma-chlordane at 121%. Since these recoveries were less than the QAPP upper control limit of 150%, no data qualifying action was taken. The initial calibration verification analyzed on instrument 158 on 09/22/2004 at 1209 displayed percent differences greater than the control limit of 15% for delta-BHC with a positive bias on column A and for several analytes with a negative bias on column B. Associated field sample results were non-detect on column A and non-detect for delta-BHC on column B. Since only one column is required to report valid non-detects, no data qualifying action was required. The continuing calibrations displayed the following percent differences greater than the control limit of 15%:

Date	Time	Instrument	Column	Analyte	Percent Difference	Bias
09/14/2004	2022	158	A	4,4'-DDD	19.6%	-
				4,4'-DDE / Endosulfan I	22.7%	+
				Methoxychlor	17.0%	-
			B	Aldrin	15.5%	+
				alpha-BHC	20.2%	+
				beta-BHC	19.3%	+
				gamma-BHC	17.5%	+
				Endosulfan I	20.6%	+
				Heptachlor	15.3%	+
09/15/2004	0150	158	A	4,4'-DDE / Endosulfan I	17.9%	+
			B	Aldrin	21.1%	+
				alpha-BHC	27.5%	+
				beta-BHC	25.3%	+
				delta-BHC	20.1%	+
				gamma-BHC	23.2%	+
				Endosulfan I	20.8%	+
				Heptachlor	20.2%	+
				Heptachlor epoxide	16.1%	+

Date	Time	Instrument	Column	Analyte	Percent Difference	Bias
09/15/2004	2136	158	B	4,4'-DDD	21.4%	-
				alpha-BHC	15.9%	+
				beta-BHC	16.8%	+
09/22/2004	2333	158	A	delta-BHC	15.3%	-
				Endosulfan I	16.6%	+

For the anomalous compounds that displayed a positive bias, the associated field sample results were non-detect, thus, no data qualifying action was taken. For the anomalous compounds that displayed a negative bias, the associated field sample results were reported non-detect from the alternate passing column. Since only one column is required to pass to report a non-detect result, no data qualifying action was necessary.

The field sample 54SB73A displayed a surrogate percent recovery greater than the laboratory generated upper control limit of 137% for tetrachloro-m-xylene at 139%. Since this percent recovery was less than the QAPP upper limit of 150%, no data qualifying action was taken.

The relative percent difference between the two analytical column concentrations was greater than the control limit of 40% for endrin aldehyde in sample 54SB73A at 48%. This result was flagged "J,g".

For the polychlorinated biphenyls analyses, the representative continuing calibration analyzed on 09/01/2004 at 2252 on column A displayed a percent difference greater than the control limit of 15% for PCB-1016 with a positive bias at 15.8%. Positive associated aroclor results were flagged "J,c". The continuing calibration analyzed on 09/03/2004 at 1334 on column B displayed a mean percent difference greater than the control limit for PCB-1254 with a positive bias at 17.7%. The associated positive PCB-1254 result for sample 54SB72A was flagged "J,c".

The matrix spike pair performed on field sample 54SB73C displayed percent recoveries (136%/136%) greater than the laboratory generated upper control limit of 134% for PCB-1260. Since these percent recoveries were less than the QAPP upper control limit of 150%, no data qualifying action was taken.

Correctable Anomalies: None.

Comments: All data are usable, as qualified, for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Pesticides/PCBs

Reviewer: Andrea Sansom
Date: November 22, 2004
DV Level: II III IV
Review Document:
X SW-846 - 8081/8082
X NFG - Region III Modifications
___ CLP

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-21
Test Name: PEST/PCB
Method No.: 8081A/8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do any soil samples contain more than 50% water?	X		
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		X	

Notes: *One cooler at 3.2C. (TM0640)*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	X		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	X		

Notes: *EQB-4 was non-detect*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	X		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	X		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		Pest	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows? If No, the associated sample result should be carefully evaluated.	X		

Notes:

5.0 GC/ECD Instrument Performance Check for Pesticides		Yes	No	NA
5.1	Is the 4,4'-DDT breakdown </= to 15%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	X		
5.2	Is the endrin breakdown </= to 15%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	X		

Notes:

6.0 Surrogate Recovery					Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				X		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				X		
6.3	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?				X		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?						X
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						X
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance			
	1 out	high/low	No action	No action			
	2 out	2 high same column	K	No action			
		2 low same column	L, UL	No action			
		mixed same column	J, UJ	No action			
		2 high diff columns	J	Not applicable			
		2 low diff columns	J, UJ	Not applicable			
		mixed diff columns	Professional judgement	Not applicable			
	3 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		2 high, 1 low	K (2 high)	J (1 low 2nd column)			
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)			
		other mixed	J, UJ	Not applicable			
	4 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		Mixed	J, UJ	Not applicable			
	If any recovery is >0% and <10% then L(+)/R(-).						
	If any recovery is 0% then R(+/-).						

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 30-150%?		X	
7.4	Are there any RPDs outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 54SB73C MS MSD RPD

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 30-150%?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			X
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB76C and DUP-7*
54SB74A and DUP-8

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		X	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Pesticide Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes: *CLP requirement, not provided*

Case narrative indicates mercury was used to remove sulfur due to the possibility of degradation of some pesticide target analytes with use of the recommended cleanup with activated copper.

12.0 Data Completeness				Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	Pest	PCB	X		
	Number of samples:	18	18			
	Number of target compounds in each analysis:	21	7			
	Number of results rejected and not reported:	0	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)					
	% Completeness =	100%	100%

Comments

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-22 **Fraction:** Manganese

Lab: TriMatrix **Project Name:** Radford_SWMU_54

Reviewer: Andrea_Sansom **Date:** December_2,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: The instrument initial and/or continuing calibration blanks displayed negative estimate detections less than the reporting limit. The positive associated field sample result was greater than five times the absolute value of the blank detection and and no data qualifying action was required. The associated non-detect field sample results were flagged "UL,o".

Correctable Anomalies: None.

Comments: The cooler was received by the laboratory at a temperature less than the lower control limit of 2.0°C at 0.5°C. Since the containers were received intact and aliquots were not frozen, no impact to data quality was anticipated and no data qualifying action was taken. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Date: 12/2/2004

SDG No.: 36440-22
Project No.: 21355035.20001

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?				x					
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?				x					
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?					x				
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)				x					
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.				x					

Note:

Coolers at 0.5C

2.0 Holding Time		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).					x				

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".				4+BLK					
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).				x					
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".				x					
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based				x					
3.5	Were ICV/CCV reported from mutiple exposures (3 for ICP or 2 for CVAA) with passing %RSD (ICP < 5% or CVAA < 10%)? If no, contact project chemist for laboratory resolution.				x					
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP: 90%-110% & Hg: 80-120%				x					
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%									
3.7	For one point curves on ICP & ICPMS, did the CRDL standard recover between 80-120%? <50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K						x			

Note: _____

4.0 Blanks

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?				x					
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".				x					
4.3	Are there reported MB or ICB/CCBs values > MDL?					x				
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?				x					
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?					x				
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note: _____

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?				x					
5.2	Are the ICS AB recoveries within 80% - 120%?				x					
5.3	Are the results for unspiked analytes (in ICS A) < ± MDL?					x				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?					x				
	If not...									
	Action: Not Spiked Analytes Spiked analytes (ICS AB analytes)									
	< -IDL > IDL < 50% 50% - 79% >120%									
	L(+)/UL(-) K(+) L(+)/R(-) L(+)/UL(-) K(+)									

Note: _____

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.				X					
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)					X				

Action:	Solid		Aqueous		
	< LCL	> UCL	< 50%	50% - 79%	> 120%
	L(+)/UL(-)	K(+)	L(+)/R(-)	L(+)/UL(-)	K(+)

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.				X					
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.				X					

Note: *54MW-6*

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.				x					
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?									
					x					
	Positive: %R > 125% = K; 30%< %R < 74% = L; < 30% = L									
	Non-detect: None; UL; R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.				x					

Note: *54MW6 - MS/MSD/RPD/PDS - passed*

9.0 Instrument Detection Limits (IDL)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?				x					

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?				x					
10.2	Was a five-fold dilution performed?				x					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).					x				

Note:

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?				x					
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report				x					

Note: _____

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?				x					
12.2	Were all dilutions reflected in the positive results and detection limits?						x			
12.3	Were the Internal Standard recoveries within 30-120% (6020) or 80-120% (6010B)?				x					
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?									
12.5	Were the tune mass calibrations < 0.1 amu from the true value?									
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?									

Note: _____

13.0 Completeness Calculation		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)				x					
13.1.1	Number of samples: 2									
13.1.2	Number of target compounds in each analysis: 5									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-23 **Fraction:** Manganese

Lab: TriMatrix **Project Name:** Radford_SWMU_54

Reviewer: Andrea_Sansom **Date:** January_11,_2005

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: The cooler was received by the laboratory at a temperature less than the lower control limit of 2.0°C at 0.6°C. Since the containers were received intact and aliquots were not frozen, no impact to data quality was anticipated and no data qualifying action was taken. All data are usable for their intended purpose based on the data reviewed.

Signed: Andrea Sansom

DATA VALIDATION WORKSHEET
INORGANIC - ICP/ICPMS/CVAA
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-23
Project No.: 21355035.20001

Project Name: Radford SWMU54
Reviewer: Andrea Sansom
Date: 1/11/2005

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?				x					
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?				x					
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?					x				
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)				x					
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.				x					

Note:

Cooler at 0.6C

2.0 Holding Time		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).					x				

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".				4+BLK					
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).				x					
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".				x					
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based				x					
3.5	Were ICV/CCV reported from mutiple exposures (3 for ICP or 2 for CVAA) with passing %RSD (ICP < 5% or CVAA < 10%)? If no, contact project chemist for laboratory resolution.				x					
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP: 90%-110% & Hg: 80-120%				x					
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%									
3.7	For one point curves on ICP & ICPMS, did the CRDL standard recover between 80-120%? <50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K						x			

Note: _____

4.0 Blanks

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?				x					
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".				x					
4.3	Are there reported MB or ICB/CCBs values > MDL?					x				
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?					x				
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?					x				
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note: _____

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?				x					
5.2	Are the ICS AB recoveries within 80% - 120%?				x					
5.3	Are the results for unspiked analytes (in ICS A) < ± MDL?					x				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?					x				
	If not...									
	Action: Not Spiked Analytes Spiked analytes (ICS AB analytes)									
	< -IDL > IDL < 50% 50% - 79% >120%									
	L(+)/UL(-) K(+) L(+)/R(-) L(+)/UL(-) K(+)									

Note: _____

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.				x					
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)					x				

Action:	Solid		Aqueous		
	< LCL	> UCL	< 50%	50% - 79%	> 120%
	L(+)/UL(-)	K(+)	L(+)/R(-)	L(+)/UL(-)	K(+)

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.				x					
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.				x					

Note: *LCSD*

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.						x			
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?									
	%R > 125% / 30%< %R < 74% / < 30%									
	Positive: K / L / L						x			
	Non-detect: None / UL / R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.				x					

Note: _____

9.0 Instrument Detection Limits (IDL)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?				x					

Note: _____

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?				x					
10.2	Was a five-fold dilution performed?				x					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).				x					

Note: _____

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?						x			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report						x			

Note: _____

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?						x			
12.2	Were all dilutions reflected in the positive results and detection limits?						x			
12.3	Were the Internal Standard recoveries within 30-120% (6020) or 80-120% (6010B)?				x					
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?									
12.5	Were the tune mass calibrations < 0.1 amu from the true value?									
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?									

Note: _____

13.0 Completeness Calculation		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)				x					
13.1.1	Number of samples: 3									
13.1.2	Number of target compounds in each analysis: 5 total									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-24 **Fraction:** Manganese

Lab: TriMatrix **Project Name:** Radford_SWMU_54

Reviewer: Andrea_Sansom **Date:** February_7,_2005

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: The laboratory blanks displayed the following negative detections:

Blank Type (listed in order of analysis)	Concentration (µg/L)
Initial Calibration Blank	-1.9
Continuing Calibration Blank 1	-1.9
Method Prep Blank	-1.7
Continuing Calibration Blank 2	-1.8

The positive associated field sample result was flagged "L,o" while the non-detects were flagged "UL,o".

Correctable Anomalies: None.

Comments: The cooler was received by the laboratory at a temperature less than the lower control limit of 2.0°C at 0.7°C. Since the containers were received intact and aliquots were not frozen, no impact to data quality was anticipated and no data qualifying action was taken. All data are usable as qualified for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET
INORGANIC - ICP/ICPMS/CVAA
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-24
Project No.: 21355035.20001

Project Name: Radford SWMU54
Reviewer: Andrea Sansom
Date: 2/7/2005

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?				X					
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?				X					
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?					X				
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)				X					
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.				X					

Note:

Cooler at 0.7C

2.0 Holding Time		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).					X				

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".				4+BLK					
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).				X					
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".				X					
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based				X					
3.5	Were ICV/CCV reported from mutiple exposures (3 for ICP or 2 for CVAA) with passing %RSD (ICP < 5% or CVAA < 10%)? If no, contact project chemist for laboratory resolution.				X					
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP: 90%-110% & Hg: 80-120%				X					
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%									
3.7	For one point curves on ICP & ICPMS, did the CRDL standard recover between 80-120%?						X			
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K									

Note: _____

4.0 Blanks

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?				X					
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".				X					
4.3	Are there reported MB or ICB/CCBs values > MDL?					X				
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?					X				
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?					X				
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note: _____

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?				X					
5.2	Are the ICS AB recoveries within 80% - 120%?				X					
5.3	Are the results for unspiked analytes (in ICS A) < ± MDL?				X					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?						X			
	If not...									
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)									

Note: _____

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.				X					
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)					X				

Action:	Solid		Aqueous		
	< LCL	> UCL	< 50%	50% - 79%	> 120%
	L(+)/UL(-)	K(+)	L(+)/R(-)	L(+)/UL(-)	K(+)

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.				X					
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.				X					

Note: ***LCSD***

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.						X			
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?									
	%R > 125% / 30%< %R < 74% / < 30%						X			
	Positive: K / L / L									
	Non-detect: None / UL / R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.									

Note: _____

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?				X					

Note: _____

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?						X			
10.2	Was a five-fold dilution performed?									
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).									

Note: _____

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?						X			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report						X			

Note: _____

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?						X			
12.2	Were all dilutions reflected in the positive results and detection limits?						X			
12.3	Were the Internal Standard recoveries within 30-120% (6020) or 80-120% (6010B)?				X					
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?									
12.5	Were the tune mass calibrations < 0.1 amu from the true value?									
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?									

Note: _____

13.0 Completeness Calculation		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)				X					
13.1.1	Number of samples: 3									
13.1.2	Number of target compounds in each analysis: 5 total									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%									

Note: _____

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-25 **Fraction:** Explosives, Nitroglycerin, & Manganese

Lab: TriMatrix **Project Name:** Radford_SWMU_54

Reviewer: Andrea_Sansom **Date:** February_7,_2005

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: For the explosives analyses, the relative percent difference between the dual column concentrations exceeded the method recommended control limit of 40% for hexahydro-1,2,3-trinitro-1,3,5-triazine results for samples 54MW – 8 at 481.1% and 54MW – 9 at 841.8%. Due to the possibility of carryover or positive interference, the lower of the two concentrations were reported. These results were flagged "J,g". The concentration exceeded the linear range of the initial calibration for 2,4,6-trinitrotoluene in the straight analyses for samples 54MW – 10 and DUP – 1. These results were flagged "J,q". Both samples were reanalyzed at a dilution factor of two with acceptable results for 2,4,6-trinitrotoluene that should be used for data interpretation.

Correctable Anomalies: None.

Comments: For the nitroglycerin analyses, all field samples were non-detect on the analytical columns CN and C18. The positive interference present on the C8 column from 2,4,6-trinitrotoluene was of no consequence. The chain of custody #COC 010 indicated 54MW-9 whereas the sample containers within this cooler indicated 54MW-8 on the labels. As directed by the field sampler, the laboratory used the identification from the sample container label for log-in purposes. If a given fraction was not discussed, all quality control criteria was met for that fraction. All data are usable as qualified for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Explosives

Reviewer: Andrea Sansom
Date: 2/7/2005
DV Level: II III IV

Review Document:

_X_ Region III Modified for National Functional Guidelines
___ NFG for organic Data review (February 1994)
_X_ Project QAPP/SAP

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-25
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids (for		X	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: *The chain of custody (54MW-9 COC010) and the sample container labels (54MW-8) had a different identification. As directed by the field sampler, the laboratory used the identification from the sample container label for log-in purposes.*

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: *Three coolers at 2.8C, 2.7C and 3.9C.*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			X

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		X	
6.4	Are there any RPD for MS/MSD recoveries outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: *54MW-8*

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54MW- 10 and DUP-1*

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	X		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.	X		
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		X		
	Number of samples:	4			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: *54MW - 8*

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: ***54MW - XX and DUP-5***

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 4			
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			

Notes:

DATA VALIDATION WORKSHEET
INORGANIC - ICP/ICPMS/CVAA
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-25
Project No.: 21355035.20001

Project Name: Radford SWMU54
Reviewer: Andrea Sansom
Date: 2/7/2005

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?				X					
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?				X					
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?					X				
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)				X					
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.				X					

Note:

Three coolers at 2.8C, 2.7C and 3.9C.

2.0 Holding Time		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).					X				

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".				4+BLK					
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).				X					
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".				X					
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based				X					
3.5	Were ICV/CCV reported from mutiple exposures (3 for ICP or 2 for CVAA) with passing %RSD (ICP < 5% or CVAA < 10%)? If no, contact project chemist for laboratory resolution.				X					
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP: 90%-110% & Hg: 80-120%				X					
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%									
3.7	For one point curves on ICP & ICPMS, did the CRDL standard recover between 80-120%?						X			
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K									

Note: ***Evaluation of the CCBs and MB was performed down to the MDL for both positive and negative detections.***

4.0 Blanks

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?				X					
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".				X					
4.3	Are there reported MB or ICB/CCBs values > MDL?					X				
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?					X				
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?						X			
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note:

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?				X					
5.2	Are the ICS AB recoveries within 80% - 120%?				X					
5.3	Are the results for unspiked analytes (in ICS A) < ± MDL?					X				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?						X			
	If not...									
	Action: Not Spiked Analytes Spiked analytes (ICS AB analytes)									
	< -IDL > IDL < 50% 50% - 79% >120%									
	L(+)/UL(-) K(+) L(+)/R(-) L(+)/UL(-) K(+)									

Note:

6.0 Laboratory Control Sample (LCS)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.				X					
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)					X				
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)									

Note:

7.0 Laboratory Duplicates (MSD)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.				X					
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.				X					

Note: ***54MW - 8***

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.				X					
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?				X					
	%R > 125% 30%< %R < 74% < 30%									
	Positive K L L									
	Non-detect None UL R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.				X					

Note: _____

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?				X					

Note: _____

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?				X					
10.2	Was a five-fold dilution performed?				X					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).					X				

Note: _____

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?				X					
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report				X					

Note: ***54MW - 10 and DUP-1***

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?				X					
12.2	Were all dilutions reflected in the positive results and detection limits?						X			
12.3	Were the Internal Standard recoveries within 30-120% (6020) or 80-120% (6010B)?				X					
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?									
12.5	Were the tune mass calibrations < 0.1 amu from the true value?									
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?									

Note:

13.0 Completeness Calculation		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)				X					
13.1.1	Number of samples: 4									
13.1.2	Number of target compounds in each analysis: 2									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

Cooler Received (Date/Time)	Paperwork Delivered (Date/Time)	≤1 Hour Goal Met?
12-22-04 10:25	12-22-04 12:32	Yes (No)

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision

DATA VALIDATION REPORT - Level III Review

SDG No.: H4J140182 **Fraction:** Perchlorate

Lab: STL-Knoxville **Project Name:** Radford_SWMU_54

Reviewer: Andrea_Sansom **Date:** October_28,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The matrix spike duplicate performed on field sample 54GP79 displayed a percent recovery greater than the upper control limit of 120% at 136%. This matrix spike pair displayed a relative percent difference greater than the control limit of 15% at 28%. Since the associated field sample result was non-detect and the matrix spike displayed an acceptable recovery at 102%, no data qualifying action was taken.

Correctable Anomalies: None.

Comments: None.

GTKN8	010	54GP80	10/13/04	16:40

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

EPA method - Modified for USEPA Region III Modifications to NFGs (Inorganic)

Project Name: Radford SWMU 54
Project Number: 21355035.20001
Laboratory: STL-Knoxville
SDG No.: H4J140182
Test Name: Perchlorate
Method No.: E314.0

1.0 Laboratory Deliverables

		Yes	No	NA
1.1a	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.1b	Do sample ID Numbers on COC match those in report?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. %	x		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		
	Action: Resolve any discrepancies before proceding further.			

Notes:

2.0 Holding Times and Preservation

		Yes	No	NA
2.1	Do sample collection, preservation, shipping, and storage condition meet the requirement of the relevant Project Controlling Documents (PCDs)?	x		
	Action: No chemical preservation required.			
2.2	Have technical holding times (28 days), determined from date of sampling to date of analysis (including dilution or reanalysis) been exceeded? If yes, apply J(+)/UJ(-) to all associated analytes.		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, apply J(+)/R(-) to all associated analytes.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were required blanks (MB) prepared/submitted at the appropriate frequency? If not, note in DV report.	x		
3.2	Do any method blanks have positive results above the MDL? Action: If Yes, positive associated sample results less than 5X the concentration in the blank should be qualified "B" indicating the result is qualitatively suspect.		x	
3.3	After correcting for method blank contamination, do any field/equipment/trip blanks have positive results? If so, apply the same rules given above based on the highest blank value of those associated with the sample.		x	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.2	Are all initial calibration correlation coefficients within the control limits (i.e., $r > 0.99$)? If No, apply "R" to all non-detects; "J" to positive results for all samples associated with the calibration.	x		
4.3	Was a instrument performance check (IPC) analyzed at the matrix conductivity threshold (MCT)? If no, verify that the sample chromatagrams do not display this interference.	x		
4.4	Is the $Pd_{A/H} < 25\%$, % recovery between 80-120%, and the retention time shift < 5%. If No, apply R to all results for sample that display this type of interference.	x		
4.5	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Control limit: $\leq \pm 15\%$. If No, apply "R" to all non-detects; "J*" to positive results for all samples associated with the calibration. Positive results are to be used only qualitatively.	x		

Notes:

5.0 Matrix Spikes		Yes	No	NA
5.1	Was a matrix spike analyzed at required frequency per the PCDs?	x		
5.2	Is the %R for the matrix spike and matrix spike duplicate outside the QC limits?	x		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

PDS of 54GP81 @81%

MS of 54GP79 @ 102%

MSD of 54GP79 @ 136% with RPD @ 28% 54GP79 was ND, no action taken.

6.0 Laboratory Control Samples (LCS/LCSDs)		Yes	No	NA
6.1	Were LCS analyzed at required frequency per the PCDs?	x		
6.2	Are there any LCS and/or LCSD recoveries outside the QC limits (i.e., 85-115%)?		x	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
6.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits (i.e., 15%)?		x	
	Action: If Yes, J(+) only.			

Notes:

7.0 Field Duplicates		Yes	No	NA
7.1	Was a field duplicate submitted/analyzed at an appropriate frequency of one per ten?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes: 54GW78 / DUP-1

ND ND

8.0 Laboratory Duplicates (sample duplicate or matrix spike duplicate)		Yes	No	NA
8.1	Was a duplicate analyzed at the correct frequency?	x		
8.2	Are all analyte duplicate results within control limits? If No, J(+) only. Note in DV report any instance where one or another of the pair was positive while the other was negative.	x		

Notes: MSD RPD high, see MS/MSD notes

9.0 Analyte Identification and Detection Limit Verification		Yes	No	NA
9.1	Do retention times in calibrations and samples fall within appropriately developed and applied windows? If not, look for uniform shifts. Failing that, flag all results "R" as qualitatively suspect.	x		
9.2	Verify quantitative results. Do manual calculations agree with reported values to within rounding error? If not, increase audit. If additional errors are found, require resubmission. Notify PM immediately.	x		
9.3	Do detection/reporting limits meet those required by the QAPP and were they properly adjusted for dilution factors and dry weight equivalent of wet weight aliquot)? If not, note affected sample Ids in DV report.	x		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit: 90%)	x		
10.1.1	Number of samples: 10			
10.1.2	Number of target compounds in each analysis: 1			
10.1.3	Number of results rejected and not reported: 0			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			

Notes:

PROJECT NARRATIVE
H4J140182

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation is included with this report.

Sample Receipt

There were no problems with the condition of the samples received.

Quality Control

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

The matrix spike duplicate recovery for sample 54GP79 was outside control limits for perchlorate. The laboratory control sample showed acceptable results indicating that the analysis was in control. The matrix spike duplicate result are, therefore, attributed to matrix effects.

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. #04-041-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906 (SDWA, expires 6/24/05), Hawaii DOH, Illinois EPA Cert. #000687, Indiana DOH Cert. #C-TN-02, Iowa DNR Cert. #375, Kansas DHE Cert. #E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. # QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center, US EPA Perchlorate Approval and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure

DATA VALIDATION REPORT - Level III Review

SDG No.: H4J150165 **Fraction:** Perchlorate

Lab: STL-Knoxville **Project Name:** Radford_SWMU_54

Reviewer: Andrea_Sansom **Date:** October_28,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: None.

SAMPLE SUMMARY

H4J150165

WO #	SAMPLE#	CLIENT SAMPLE ID	SAMPLED DATE	SAMP TIME
GTN8V	002	54GP85	10/14/04	09:45
GTN8X	003	54GP87	10/14/04	12:05

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Laboratory: STL-Knoxville
SDG No.: H4J150165
Test Name: Perchlorate
Method No.: E314.0

EPA method - Modified for USEPA Region III Modifications to NFGs (Inorganic)

1.0 Laboratory Deliverables		**Yes**	**No**	**NA**
1.1a	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.1b	Do sample ID Numbers on COC match those in report?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. %	x		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		
	Action: Resolve any discrepancies before proceding further.			

Notes:

2.0 Holding Times and Preservation		**Yes**	**No**	**NA**
2.1	Do sample collection, preservation, shipping, and storage condition meet the requirement of the relevant Project Controlling Documents (PCDs)?	x		
	Action: No chemical preservation required.			
2.2	Have technical holding times (28 days), determined from date of sampling to date of analysis (including dilution or reanalysis) been exceeded? If yes, apply J(+)/UJ(-) to all associated analytes.		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, apply J(+)/R(-) to all associated analytes.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were required blanks (MB) prepared/submitted at the appropriate frequency? If not, note in DV report.	x		
3.2	Do any method blanks have positive results above the MDL? Action: If Yes, positive associated sample results less than 5X the concentration in the blank should be qualified "B" indicating the result is qualitatively suspect.		x	
3.3	After correcting for method blank contamination, do any field/equipment/trip blanks have positive results? If so, apply the same rules given above based on the highest blank value of those associated with the sample.		x	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.2	Are all initial calibration correlation coefficients within the control limits (i.e., r > 0.99)? If No, apply "R" to all non-detects; "J" to positive results for all samples associated with the calibration.	x		
4.3	Was a instrument performance check (IPC) analyzed at the matrix conductivity threshold (MCT)? If no, verify that the sample chromatagrams do not display this interference.	x		
4.4	Is the $Pd_{A/H}$ < 25%, % recovery between 80-120%, and the retention time shift < 5%. If No, apply R to all results for sample that display this type of interference.	x		
4.5	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Control limit: $\leq \pm$ 15%. If No, apply "R" to all non-detects; "J*" to positive results for all samples associated with the calibration. Positive results are to be used only qualitatively.	x		

Notes:

5.0 Matrix Spikes		Yes	No	NA
5.1	Was a matrix spike analyzed at required frequency per the PCDs?			x
5.2	Is the %R for the matrix spike and matrix spike duplicate outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: Found in SDG H4J140182:

PDS of 54GP81 @81%

MS of 54GP79 @ 102%

MSD of 54GP79 @ 136% with RPD @ 28% 54GP79 was ND, no action taken.

6.0 Laboratory Control Samples (LCS/LCSDs)		Yes	No	NA
6.1	Were LCS analyzed at required frequency per the PCDs?	x		
6.2	Are there any LCS and/or LCSD recoveries outside the QC limits (i.e., 85-115%)?		x	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
6.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits (i.e., 15%)?		x	
	Action: If Yes, J(+) only.			

Notes:

7.0 Field Duplicates		Yes	No	NA
7.1	Was a field duplicate submitted/analyzed at an appropriate frequency of one per ten?			x
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes: 54GW78 / DUP-1 Found in SDG H4J140182

ND ND

8.0 Laboratory Duplicates (sample duplicate or matrix spike duplicate)		Yes	No	NA
8.1	Was a duplicate analyzed at the correct frequency?			x
8.2	Are all analyte duplicate results within control limits? If No, J(+) only. Note in DV report any instance where one or another of the pair was positive while the other was negative.			

Notes: MSD RPD high, see MS/MSD notes

9.0 Analyte Identification and Detection Limit Verification		Yes	No	NA
9.1	Do retention times in calibrations and samples fall within appropriately developed and applied windows? If not, look for uniform shifts. Failing that, flag all results "R" as qualitatively suspect.	x		
9.2	Verify quantitative results. Do manual calculations agree with reported values to within rounding error? If not, increase audit. If additional errors are found, require resubmission. Notify PM immediately.	x		
9.3	Do detection/reporting limits meet those required by the QAPP and were they properly adjusted for dilution factors and dry weight equivalent of wet weight aliquot)? If not, note affected sample Ids in DV report.	x		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit: 90%)	x		
10.1.1	Number of samples: 2			
10.1.2	Number of target compounds in each analysis: 1			
10.1.3	Number of results rejected and not reported: 0			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			

Notes:

PROJECT NARRATIVE
H4J150165

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation is included with this report.

Sample Receipt

There were no problems with the condition of the samples received.

Quality Control

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.2	Are all initial calibration correlation coefficients within the control limits (i.e., r > 0.99)? If No, apply "R" to all non-detects; "J" to positive results for all samples associated with the calibration.	X		
4.3	Was a instrument performance check (IPC) analyzed at the matrix conductivity threshold (MCT)? If no, verify that the sample chromatagrams do not display this interference.	X		
4.4	Is the $Pd_{A/H}$ < 25%, % recovery between 80-120%, and the retention time shift < 5%. If No, apply R to all results for sample that display this type of interference.	X		
4.5	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Control limit: $\leq \pm$ 15%. If No, apply "R" to all non-detects; "J*" to positive results for all samples associated with the calibration. Positive results are to be used only qualitatively.	X		

Notes:

5.0 Matrix Spikes

		Yes	No	NA
5.1	Was a matrix spike analyzed at required frequency per the PCDs?	X		
5.2	Is the %R for the matrix spike and matrix spike duplicate outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

6.0 Laboratory Control Samples (LCS/LCSDs)

		Yes	No	NA
6.1	Were LCS analyzed at required frequency per the PCDs?	X		
6.2	Are there any LCS and/or LCSD recoveries outside the QC limits (i.e., 85-115%)?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
6.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits (i.e., 15%)?			X
	Action: If Yes, J(+) only.			

Notes:

7.0 Field Duplicates

		Yes	No	NA
7.1	Was a field duplicate submitted/analyzed at an appropriate frequency of one per ten?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: 54GW78 / DUP-1 RPD

9.8 9.1 7.4%

8.0 Laboratory Duplicates (sample duplicate or matrix spike duplicate)		Yes	No	NA
8.1	Was a duplicate analyzed at the correct frequency?	X		
8.2	Are all analyte duplicate results within control limits? If No, J(+) only. Note in DV report any instance where one or another of the pair was positive while the other was negative.	X		

Notes:

9.0 Analyte Identification and Detection Limit Verification		Yes	No	NA
9.1	Do retention times in calibrations and samples fall within appropriately developed and applied windows? If not, look for uniform shifts. Failing that, flag all results "R" as qualitatively suspect.	X		
9.2	Verify quantitative results. Do manual calculations agree with reported values to within rounding error? If not, increase audit. If additional errors are found, require resubmission. Notify PM immediately.	X		
9.3	Do detection/reporting limits meet those required by the QAPP and were they properly adjusted for dilution factors and dry weight equivalent of wet weight aliquot)? If not, note affected sample Ids in DV report.	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit: 90%)	X		
10.1.1	Number of samples: 4			
10.1.2	Number of target compounds in each analysis: 1			
10.1.3	Number of results rejected and not reported: 0			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			

Notes:

PROJECT NARRATIVE
H4L220192

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation is included with this report.

Sample Receipt

There were no problems with the condition of the samples received.

Quality Control

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. #04-041-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906 (SDWA, expires 6/24/05), Hawaii DOH, Illinois EPA Cert. #000687, Indiana DOH Cert. #C-TN-02, Iowa DNR Cert. #375, Kansas DHE Cert. #E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. # QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center, US EPA Perchlorate Approval and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: RAAP002 **Fraction:** Perchlorate

Lab: STL-Knoxville **Project Name:** Radford_SWMU54

Reviewer: Andrea_Sansom **Date:** September_22,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: Matrix spikes displayed percent recoveries less than the lower control limit of 80% for sample 54GW66 at 70%, 54GW67 at 76%, and 54GW69 at 74%. The parent sample results were estimate detections that were flagged "J,m".

Correctable Anomalies: The laboratory revised the result forms to include the method detection limit and to report five estimate detections that were not originally reported.

Comments: The collection date and time on the chain of custody and custody seals were inadvertently omitted for samples received by STL-Knoxville on 08/21/2004. The laboratory logged in per the container labels. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: Andrea Sansom

Review Document:

Perchlorate

Project Name: Radford SWMU 54
Project Number: 21355035.20001
Laboratory: STL-Knoxville
SDG No.: RAAP002
Test Name: Perchlorate
Method No.: E314.0

EPA method - Modified for USEPA Region III Modifications to NFGs (Inorganic)

1.0 Laboratory Deliverables		**Yes**	**No**	**NA**
1.1a	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.1b	Do sample ID Numbers on COC match those in report?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. %	x		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		
	Action: Resolve any discrepancies before proceding further.			

Notes:

some times/dates/seals were missing on one day, lab used labels

2.0 Holding Times and Preservation		**Yes**	**No**	**NA**
2.1	Do sample collection, preservation, shipping, and storage condition meet the requirement of the relevant Project Controlling Documents (PCDs)?	x		
	Action: No chemical preservation required.			
2.2	Have technical holding times (28 days), determined from date of sampling to date of analysis (including dilution or reanalysis) been exceeded? If yes, apply J(+)/UJ(-) to all associated analytes.		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, apply J(+)/R(-) to all associated analytes.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were required blanks (MB) prepared/submitted at the appropriate frequency? If not, note in DV report.	x		
3.2	Do any method blanks have positive results above the MDL? Action: If Yes, positive associated sample results less than 5X the concentration in the blank should be qualified "B" indicating the result is qualitatively suspect.		x	
3.3	After correcting for method blank contamination, do any field/equipment/trip blanks have positive results? If so, apply the same rules given above based on the highest blank value of those associated with the sample.		x	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.2	Are all initial calibration correlation coefficients within the control limits (i.e., $r > 0.99$)? If No, apply "R" to all non-detects; "J" to positive results for all samples associated with the calibration.	x		
4.3	Was a instrument performance check (IPC) analyzed at the matrix conductivity threshold (MCT)? If no, verify that the sample chromatagrams do not display this interference.	x		
4.4	Is the $Pd_{A/H} < 25\%$, % recovery between 80-120%, and the retention time shift < 5%. If No, apply R to all results for sample that display this type of interference.	x		
4.5	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Control limit: $\leq \pm 15\%$. If No, apply "R" to all non-detects; "J*" to positive results for all samples associated with the calibration. Positive results are to be used only qualitatively.	x		

Notes:

5.0 Matrix Spikes		Yes	No	NA
5.1	Was a matrix spike analyzed at required frequency per the PCDs?	x		
5.2	Is the %R for the matrix spike and matrix spike duplicate outside the QC limits?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

three PDSs were less than 80% and greater than 70%

6.0 Laboratory Control Samples (LCS/LCSDs)		Yes	No	NA
6.1	Were LCS analyzed at required frequency per the PCDs?	x		
6.2	Are there any LCS and/or LCSD recoveries outside the QC limits (i.e., 85-115%)?		x	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
6.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits (i.e., 15%)?		x	
	Action: If Yes, J(+) only.			

Notes:

7.0 Field Duplicates		Yes	No	NA
7.1	Was a field duplicate submitted/analyzed at an appropriate frequency of one per ten?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

54GW69 / DUP-9			54GW64 / DUP-9		
4.0	3.6	10%	1.1	0.97	4.00%

8.0 Laboratory Duplicates (sample duplicate or matrix spike duplicate)		Yes	No	NA
8.1	Was a duplicate analyzed at the correct frequency?	x		
8.2	Are all analyte duplicate results within control limits? If No, J(+) only. Note in DV report any instance where one or another of the pair was positive while the other was negative.	x		

Notes:

9.0 Analyte Identification and Detection Limit Verification		Yes	No	NA
9.1	Do retention times in calibrations and samples fall within appropriately developed and applied windows? If not, look for uniform shifts. Failing that, flag all results "R" as qualitatively suspect.	x		
9.2	Verify quantitative results. Do manual calculations agree with reported values to within rounding error? If not, increase audit. If additional errors are found, require resubmission. Notify PM immediately.	x		
9.3	Do detection/reporting limits meet those required by the QAPP and were they properly adjusted for dilution factors and dry weight equivalent of wet weight aliquot)? If not, note affected sample Ids in DV report.	x		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit: 90%)	x		
10.1.1	Number of samples: 13			
10.1.2	Number of target compounds in each analysis: 1			
10.1.3	Number of results rejected and not reported: 0			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			

Notes:

PROJECT NARRATIVE
RAAP002

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation is included with this report.

Sample Receipt

The collection data was not listed on the Chain-of-Custody documentation for samples received 08/21/04.

Custody seals were not present upon sample receipt on 08/21/04 at STL Knoxville.

Quality Control

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

The matrix spike recovery for sample 54GW66 was outside control limits for perchlorate. The laboratory control samples showed acceptable results indicating that the analysis was in control. The matrix spike result is, therefore, attributed to matrix effects.

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. # 03-049-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906, Hawaii DOH, Illinois EPA Cert. # 000687, Indiana DOH Cert. #C-TN-02, Kansas DHE Cert. # E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. # 68-576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. #QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center, US EPA Perchlorate Approval and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

APPENDIX H.3
Additional Investigations and Quarterly Groundwater Monitoring
2006-2007

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-29 **Fraction:** Explosives_& Metals

Lab: TriMatrix **Project Name** Radford SWMU 54

Reviewer: RA **Date:** January 16, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the explosives analyses, the matrix spike duplicate analyzed for sample NR-SED-5 displayed a percent recovery (%R) less than the lower control limit of 75% for 2-amino-4,6-dinitrotoluene at 73%. The associated parent sample result was non-detect and was flagged "UJ,m". The matrix spike pair analyzed for sample NR-SED-14 displayed %Rs greater than the upper control limit of 125% for 2-amino-4,6-dinitrotoluene at 182% and 185%, respectively. The associated parent sample result was non-detect and no data qualifying action was necessary.

For the metals analyses by method 6010B, the method blanks displayed positive detections for iron, chromium, manganese, and zinc. Positive associated field sample results less than five times the method blank contaminations were flagged "B,p". The continuing calibration blanks displayed positive detections for iron and chromium; and negative detections for barium and sodium. The associated field sample results were greater than five times the absolute value of the blank concentrations, and no data qualifying action was necessary.

The matrix spike pair analyzed for sample NR-SED-14 displayed %Rs and relative percent differences greater than the upper control limits for calcium (251%/48%) and magnesium (196%/27%). The associated parent sample results were positive and were flagged "K,m".

The serial dilution analyzed for sample NR-SED-14 displayed a percent difference greater than the control limit of 10% for iron at 106.5%. The associated field sample results were positive and were flagged "J,s", unless previously flagged for method blank contamination.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to laboratory sample ID cross-reference table follows.

Field Sample Name	Sample Matrix	Laboratory Sample ID	Date Sampled	Date Received
NR-SED-22	Soil	0611283-01	11/08/06	11/09/06
NR-SED-23	Soil	0611283-02	11/08/06	11/09/06

DATA VALIDATION WORKSHEET

Explosives

Reviewer: RA
Date: 110107
DV Level: II (III) IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
_X__ SW-846
_X__ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 11656351.30007
Laboratory: TriMatrix
SDG No.: 30440-29
Test Name: Explosives
Method No.: 8330

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 ^{O}C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	✓		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	✓		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within			
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

5.0 Laboratory Control Sample (LCS)		Yes	No	NA
5.1	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.2	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
5.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.			✓

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.2	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.3	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	<10% low high			
	Positives L L K			
	Non-detects R UL No action			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes: MSD for NR-SED-5 <75% at 73% for 2-Amino-4,6-dinitrotoluene
Parent ND → UJ/M

MS/MSD for NR-SED-14 / 125% for 2-Amino-4,6-dinitrotoluene at 182% / 185%.) Parent ND, No action

8.0 Field Duplicate		Yes	No	NA
8.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: NR-SED-17 and DUP-1 Both NDs ✓ NR-SED-9 and DUP-2 Both NDs ✓ NR-SED-3 and DUP-3 Both NDs ✓

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
10.1.1	Number of samples:			
10.1.2	Number of target compounds in each analysis: 14			
10.1.3	Number of results rejected or not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

STATEMENT OF DATA QUALIFICATIONS

Nitroaromatics & Nitramines by EPA Method 8330

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is not qualified.

Analysis: USEPA-8330

Sample/Analyte: 0611283-20 NR-SED-5 2-Amino-4,6-dinitrotoluene

Quality Control Results – Nitroaromatic Explosives

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications for both the primary and confirmation columns were method-compliant.

Method Blanks

No target analytes were detected above one-half the RL. In addition, there were no J-flagged detections.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Samples

Each Laboratory Control Sample (LCS) was fortified with all target analytes. All recoveries were in control for both the primary column and confirmation column runs.

Matrix Spikes

Samples 'NR-SED-14' and 'NR-SED-5' were fortified with all target analytes. All recoveries and RPDs were in control with the exception of one recovery (73%) for 2-Amino-4,6-DNT in'NR-SED-5'.

Sample Results

See Section B. Second-column analysis was needed for six samples due to tentative detections of one or more target analytes on the primary column. Those confirmation analyses are identified by the laboratory sample ID plus an 'RE1' suffix. The confirmation analyses were performed at a different date and time and, for the two samples for which a tentative detection was confirmed, summary forms and raw data have been included following that for the primary column. Where an analyte was confirmed, the primary column result has been reported (both RPDs were less than 40%). For the remaining four samples that did not confirm, raw data (only) has been included at the end of the 'Preparation Logs/Miscellaneous Confirmation Column' subsection.

Note: for all soil samples for explosives analysis, a representative subsample is air-dried and a smaller measured amount of that dried subsample is then extracted. Unlike most other parameters for a soil sample that are processed on a wet-weight basis, a Percent Solids value (if determined) for the sample is not applied to the MDL, RL, or to the result.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-29
Project No.: 11605635 1.30007

Reviewer: RA
Date: 1/11/07

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓			✓					
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓			✓					
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓			✓				
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{O}C \pm 2\ ^{O}C$)	✓			✓			✓					
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓			✓					

Note: _____

2.0 Holding Time		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓			✓				

Note: _____

3.0 Instrument Calibration		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".	✓			✓			✓					
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	✓			✓			✓					
3.3	Once per calibration, did a high and low distilled standard recovery within 85-115%? If no, follow 3.6.												
3.4	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓			✓					
3.5	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓			✓					
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP 90%-110%, FOR Hg 80-120%, FOR CN 85-115%.	✓			✓			✓					
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%												
3.7	For ICP & ICPMS, did the CRDL standard recover between 80-120%?	✓			✓								
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K												

Note: [redacted]

4.0 Blanks

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓			✓					
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓			✓					
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓			✓			✓					
	Sample Results > MDL												
	< 5X Blank Contamination B												
4.4	Are there negative blank results with the absolute value > MDL?	✓			✓				✓				
	Sample Results Non-detects > MDL												
	< 5X absolute Blank Contamination UL L												
4.5	Are there reported field blank > ± MDL?			✓			✓		✓				
	Sample Results > MDL												
	< 5X Blank Contamination B												

Note: 6010 → MB several pos, <5 x B, P, CCBs several pos and neg. all 75x, No action. See above
6020 → MB → pos, V, lead all >5x, No action, ✓ MB → antimony <5x → B, P
6020 → CCB → V, lead, (Se neg.) As, (neg Sb) pos, antimony
ICB, antimony
Hg → ICB at 0.0465 ug/L
all 75x, No action

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	✓			✓								
5.2	Are the ICS AB recoveries within 80% - 120%?	✓			✓								
5.3	Are the results for unspiked analytes (in ICS A) < ± RL?	✓			✓								
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			✓						
	If not...												
	Action: Not Spiked Analytes: < -MDL L(+)/UL(-); > MDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)												

Note: NA Level IV

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓			✓					
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓			✓				

Action:	Solid		Aqueous		
	< LCL	> UCL	< 50%	50% - 79%	> 120%
	L(+)/UL(-)	K(+)	L(+)/R(-)	L(+)/UL(-)	K(+)

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓			✓					
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.												
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	✓			✓			✓					

Note:

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓			✓					
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125% for aqueous matrices or lab limits for soil matrices?		✓			✓		✓					
	%R > 125% 30%< %R < 74% < 30%												
	Positive K L L												
	Non-detect None UL R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.		✓			✓				✓			

Note: 6010 → MS for NR-SED-14 196% for Mg, RPD 27%. 720% → Lim Parent
6010 → MS fo " " 251%. for Ca, RPD. 48%. 720%. → Lim Parent
6020 → MS/MSD for NR-SED-5 selenium 75%. at 64%/65%. Parent + pos → Lim
6020 → MS/MSD for NR-SED-14 <QC for AS (65%/66%) all pos, Lim Lead (71%/40%), Se (58%/60%)

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?				✓			✓					

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓			✓								
10.2	Was a five-fold dilution performed?	✓			✓								
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).		✓			✓							

Note: [redacted]
6010 → Serial dilution for NR-SED-14 710%. for Iron at 106.5%. Pos J/s unless prev flagged for MB.
6020 → Serial dilution for NR-SED-14 Serial Dilution for NR-SED-14 Copper 13.4%, nickel 10.7%, Vanadium 10.8% and AS 14.6%. Pos → J/s unless prev. flagged.

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis? 5%.	✓			✓			✓					
	For sample results > 5 x RL, a control limit of 25% RPD for water and [redacted]% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	✓			✓			✓					

Note: see attached.

[redacted]

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓			✓					
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓			✓					
12.3	Were the Internal Standard recoveries within 30-120%	✓			✓								
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	✓											
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	✓											
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	✓											

Note:

13.0 Completeness Calculation		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓			✓					
13.1.1	Number of samples:												
13.1.2	Number of target compounds in each analysis:												
13.1.3	Number of results rejected and not reported:												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%												

Note:

SERIAL DILUTION
USEPA-6010B

NR-SED-14

Laboratory: TriMatrix Laboratories, Inc.
SDG: 36440-29
Client: URS Group, Inc.
Project: RFAAP SWMU 54 RFI/CMS
Matrix: Soil
% Solids:
Laboratory ID: 6111704-SRD3
QC Batch: 6111704
Lab Source ID: 0611283-11
Sequence: 6111704

Analyte	Initial Sample Result (I)	C	Serial Dilution Result (S)	C	% Difference	Q	Units	QC Limits % Difference
Iron, Total	0.707		1.46		106.5	*	mg/L	10

* Values outside of QC limits

Initial Sample Result (I) was less than 50xMDL (for 6010) or 100xMDL (for 6020), therefore serial dilution is not required.

00459

Quality Control Results – ICP Metals

Calibration

All instrument calibrations and continuing calibrations were method-compliant. Note: instrument reports for ICP include the listing of initial calibration correlation coefficients and internal standard recoveries; those values may either be imbedded with raw data from each run or included as a summary (also within the instrument printout).

Note: TriMatrix interprets the QSM requirement for a "low-level calibration check standard" as one pertaining to a one-point initial calibration. Given that a multi-point initial calibration was performed, the specification for a low-level calibration check either does not apply or has been satisfied since the lowest calibration standard is equivalent in concentration to the reporting limit.

Method Blanks

Chromium was detected at a concentration above one-half the RL (but below the RL) in both initial method blanks. Samples with concentrations greater than five times the associated method blank were redigested. The method blanks associated with the redigested samples were non-detect for Chromium. Except for the two initial method blanks, historical blank data for the period July, 2006 through December, 2006 shows a background level of Chromium consistently less than 1 mg/Kg.

Iron was detected at a concentration above the RL in one of the initial method blanks. Samples with concentrations greater than five times the associated method blank were redigested. Iron was detected at a J-level concentration (but below one-half the RL) in the method blank associated with the redigested samples.

Manganese was detected at a concentration less than or equal to one-half the RL in both initial method blanks. Zinc was detected at a concentration less than or equal to one-half the RL in one of the initial method blanks.

Internal Standard Response

Internal standard responses for all standards, samples, and quality control samples were method-compliant.

Laboratory Control Sample

All Laboratory Control Sample recoveries were in control.

Matrix Spikes

Samples 'NR-SED-14' and 'NR-SED-5' were fortified with all target analytes. See the MS/MSD summaries and Statements of Data Qualification for details.

Serial Dilutions and Post-Digestion Spikes

Serial dilution (SD) and post-digestion spike (PDS) analysis was performed on the samples employed for MS/MSD analysis. One SD value for Iron in sample 'NR-SED-14' exceeded criterion; see Serial Dilution summaries and Statements of Data Qualification for details. All PDS values were in control.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – ICP Metals – (continued)

Sample Results

Please see Section C of the data package.

Note: for all soil samples for metals analysis, a representative subsample is dried and a smaller measured amount of that dried subsample is then digested. Unlike most other parameters for a soil sample that are processed on a wet-weight basis, a Percent Solids value (if determined) for the sample is not applied to the MDL, RL, or to the result.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.

Quality Control Results – ICP/MS Metals

Calibration

All instrument calibrations and continuing calibrations were method-compliant. Note: instrument reports for ICPMS include the listing of initial calibration correlation coefficients and internal standard recoveries; those values may either be imbedded with raw data from each run or included as a summary (also within the instrument printout).

Note: TriMatrix interprets the QSM requirement for a "low-level calibration check standard" as one pertaining to a one-point initial calibration. Given that a multi-point initial calibration was performed, the specification for a low-level calibration check either does not apply or has been satisfied since the lowest calibration standard is equivalent in concentration to the reporting limit.

Method Blanks

Lead was detected at a concentration above one-half the RL (but below the RL) in one of the initial method blanks. All associated samples that were found to contain Lead had concentrations greater than five times the associated method blank and they were not redigested.

Vanadium was detected at a concentration above one-half the RL (but below the RL) in one of the initial method blanks. All associated samples that were found to contain Vanadium had concentrations greater than five times the associated method blank and were not redigested. Vanadium was detected at a concentration below one-half the RL in the other method blank.

Internal Standard Response

Internal standard responses for all standards, samples, and quality control samples were method-compliant.

Laboratory Control Sample

All Laboratory Control Sample recoveries were in control.

Matrix Spike

Sample 'NR-SED-5' was fortified with all target analytes. See the MS/MSD summaries and Statements of Data Qualification for details.

Sample 'NR-SED-14' was fortified with all target analytes. See the MS/MSD summaries and Statements of Data Qualification for details.

Serial Dilutions and Post-Digestion Spikes

Serial dilution (SD) and post-digestion spike (PDS) analysis was performed on the samples employed for MS/MSD analysis. Several SD values exceeded criterion; see Serial Dilution summaries and Statements of Data Qualification for details. All PDS values were in control.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.

Sequence: 6112027

Analyte	Initial Sample Result (I)	C	Serial Dilution Result (S)	C	% Difference	Q	Units	QC Limits % Difference
Arsenic, Total	0.00321		0.00345		7.5 #		mg/L	10
Copper, Total	0.0172		0.0195		13.4	*	mg/L	10
Nickel, Total	0.0159		0.0176		10.7	*	mg/L	10
Selenium, Total	0.000330	J	0.000190	U	42.4 #		mg/L	10
Silver, Total	0.000162	J	0.000190	J	17.3 #		mg/L	10
Thallium, Total	0.000531		0.000580	J	9.2 #		mg/L	10
Vanadium, Total	0.0306		0.0339		10.8	*	mg/L	10

* Values outside of QC limits

Initial Sample Result (I) was less than 50xMDL (for 6010) or 100xMDL (for 6020), therefore serial dilution is not required.

Quality Control Results – Mercury (CVAA)

Calibration

Instrument calibration and continuing calibrations were method-compliant.

Method Blanks

Mercury was not detected at a concentration above one-half the RL.

Laboratory Control Samples

The Laboratory Control Sample recoveries were in control.

Matrix Spikes

Sample 'NR-SED-5' was fortified. Both recoveries and RPD were in control.

Sample 'NR-SED-14' was fortified. Both recoveries and RPD were in control.

Serial Dilutions and Post-Digestion Spikes

Not applicable.

Sample Results

Please see Section C of the data package.

Note: for all soil samples for metals analysis, a representative subsample is dried and a smaller measured amount of that dried subsample is then digested. Unlike most other parameters for a soil sample that are processed on a wet-weight basis, a Percent Solids value (if determined) for the sample is not applied to the MDL, RL, or to the result.

Statements of Data Qualification

There were no statements generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was reviewed and approved by the group supervisor/manager prior to further review by data management staff and the project chemist.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

SDG CASE NARRATIVE

URS Group, Inc.
Radford Army Ammunition Plant
SWMU 54

SDG – 36440-29
JANUARY 9, 2007

This case narrative is applicable to samples collected from SWMU54 at Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on November 9, 2006. The samples were assigned to TriMatrix project sample delivery group (SDG) 36440-29 for analytical services (the Project) to be performed according to:

a) Subcontract NCA-06-1783, URS Project No. 11656351.30013,

b) the Scope of Work (SOW) for the above,

c) Department of Defense Quality Systems Manual for Environmental Laboratories, Final Version 3, January 2006 (by reference)

d) any verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Sample Receipt and Log-in

On November 19, 2006 at 09:00 hrs, two sample coolers containing multiple soil samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on November 8.

The external custody seal affixed to each cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperatures, in °C, were 1.9 and 1.4.

Shipping documents included two field chains-of-custody forms (COC) and associated carrier air bills.

Samples 'NR-SED-14' and 'NR-SED-5' were designated by the Client for MS/MSD analysis for all target parameters.

Samples were assigned to Work Order 0611283and SDG 36440-29.

Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as listed on the COC.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Methods 6010 and 6020A

The acceptance criterion of < 2 x RL was substituted for < 2 x MDL for interference check solution ICS-A.

Analytical Methods

Sample preparation and analytical methods that were employed are per the SOW.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard. The target analyte list was specified by the Client. Proposed RLs were submitted by TriMatrix to the Client prior to the receipt of any samples.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Project-specific Analytes of Concern

No project-specific analytes of concern were identified in the SOW.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed. Although Method 6010B LCS recovery limits are specified in the QSM, limits for Method 6020A are not. However, Method 6010B limits from the QSM were employed for Method 6020A.

Hold Times

All samples were extracted/digested (where applicable) and analyzed within hold time.

Technical Issues

There were no technical issues.

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample for an organic parameter is reanalyzed for confirmation purposes and also reported, the second analysis includes the suffix 'RE1'.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the preceding Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.).

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

STATEMENT OF DATA QUALIFICATIONS

Total Metals by EPA 6000/7000 Series Methods

Qualification: The analyte concentration in the associated MB was greater than or equal to 1/2 the RL. The positive sample result, which was greater than 5 times the MB value, is not considered estimated.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-32 **Fraction:** Explosives_Pesticides_PCBs & Perchlorate

Lab: TriMatrix **Project Name** Radford SWMU 54

Reviewer: RA **Date:** January 29, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the explosives analyses, the matrix spike pair analyzed for sample 54MW2 displayed percent recoveries (%Rs) greater than the upper control limit of 135% for 2,6-dinitrotoluene (335%/331%). The associated parent sample result was non-detect and no data qualifying action was necessary. This matrix spike pair also displayed %Rs less than the lower control limit of 80% for octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine (56%/42%). The associated parent sample result was positive and was flagged "J,m". The second matrix spike pair analyzed for sample 54MW2 also displayed %Rs greater than the upper control limits for 2,4-dinitrotoluene (209%/213%), and octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine (132%/117%). The results from the second analysis were not reported for this sample, and no data qualifying action was necessary.

For the pesticides analyses, the matrix spike pair analyzed for sample 54MW2 displayed %Rs less than the lower control limits for alpha-BHC, first column (55%/56%) and beta-BHC, second column (48%/21%). The associated parent sample results were non-detects and were flagged "UJ,m". This matrix spike pair also displayed %Rs greater than the upper control limits for beta-BHC first column (276%/251%), gamma-BHC, second column (570%/593%), gamma-chlordane, first column (186%/171%), endosulfan I, first column (607%/613%), and heptachlor, first column (441%/414%). The matrix spike pair also displayed a relative percent difference greater than the upper control limit of 17% for beta-BHC, second column at 79%. The associated parent sample results were non-detects and no data qualifying action was necessary.

SDG CASE NARRATIVE

URS Group, Inc.
Radford Army Ammunition Plant
SWMU 54

SDG – 36440-32
JANUARY 16, 2007

This case narrative is applicable to aqueous samples collected from SWMU54 at Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on November 30 and December 1, 2, and 6, 2006. The samples were assigned to TriMatrix project sample delivery group (SDG) 36440-32 for analytical services (the Project) to be performed according to:

a) Subcontract NCA-06-1783, URS Project No. 11656351.30013,

b) the Scope of Work (SOW) for the above,

c) Department of Defense Quality Systems Manual for Environmental Laboratories, Final Version 3, January 2006 (by reference)

d) any verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to laboratory sample ID cross-reference table follows below and on the next page.

Field Sample Name	Sample Matrix	Laboratory Sample ID	Date Sampled	Date Received
54MW6	Water	0612019-01	11/29/06	11/30/06
54MW1	Water	0612019-02	11/29/06	11/30/06
54MW5	Water	0612019-03	11/29/06	11/30/06
EQBK-1	Water	0612019-04	11/29/06	11/30/06

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Review Document:
_X__ Region III Modified for National Functional Guidelines
_X__ SW-846
_X__ Project QAPP/SAP

Project Name: SWMU 54
Project Number:
Laboratory: TriMatrix
SDG No.: 36440-32
Test Name: Explosives
Method No.: 8330

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 ^{O}C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	✓		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	✓		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within	✓		
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

5.0 Laboratory Control Sample (LCS)		Yes	No	NA
5.1	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.2	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
5.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.		✓	

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.2	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.3	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	<10% low high			
	Positives L L K			
	Non-detects R UL No action			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes: The MS/MSD for 54MW2 > QC for
2,6-dinitrotoluene 335%/331%. >135%. Parent ND → No action
<QC for octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine 56%/42%.
Parent pos → J, m < 80%.
and for the confirmation sample 2,4-DNT 209%/213%.
octahydro — 132%/117%.

8.0 Field Duplicate		Yes	No	NA
8.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: NR-PW-6 and DUP-3 Both NDs ✓ NR-SW-8 and DUP-4 Both NPs ✓ 54MW3 and DUP-5 2-Amino 0.8 J 0.77 J OK ✓
54MW3 and DUP-5 4-Amino [redacted] J 0.91 J OK ✓
54MW3 and DUP-5 1,3,5-TNB 0.26 J ND OK ✓ 2,4,6-TNT 0.85 J 0.78 J OK ✓ Octahydro 3.[redacted] J 3.4 J OK ✓

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
10.1.1	Number of samples:			
10.1.2	Number of target compounds in each analysis: 14			
10.1.3	Number of results rejected or not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

Quality Control Results – Nitroaromatic Explosives

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications for both the primary and confirmation columns were method-compliant.

Method Blanks

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Samples

Each Laboratory Control Sample (LCS) was fortified with all target analytes. All recoveries were in control for both the primary column and confirmation column runs.

Matrix Spikes

Samples '54MW2' and 'NR-SW-5' were fortified with all target analytes. All recoveries and RPDs were in control. Since there were detections for some of the target analytes in sample '54MW2', the MS/MSD was also analyzed on the confirmation column and reported.

Sample Results

See Section B. Second-column analysis was needed for nine samples due to tentative detections of one or more target analytes on the primary column. Those confirmation analyses are identified by the laboratory sample ID plus an 'RE1' suffix. The confirmation analyses were performed at a different date and time and, for the two samples for which a tentative detection was confirmed, summary forms and raw data have been included following that for the primary column. Where an analyte was confirmed, the primary column result has been reported (both RPDs were less than 40%). For the remaining seven samples that did not confirm, raw data (only) has been included at the end of the 'Preparation Logs/Miscellaneous Confirmation Column' subsection.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

STATEMENT OF DATA QUALIFICATIONS

Nitroaromatics & Nitramines by EPA Method 8330

Qualification:	The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.	
Analysis:	USEPA-8330	
Sample/Analyte:	0612019-05 54MW2	2,6-Dinitrotoluene
	0612019-05RE1 54MW2	2,4-Dinitrotoluene
Qualification:	The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.	
Analysis:	USEPA-8330	
Sample/Analyte:	0612019-05 54MW2	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine

1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 ^{o}C, then flag L(+)/UL(-).			
1.5	Do any soil samples contain more than 50% water? If yes, no dry weight correction is made and make notes in the DV Report.			✓

Notes:

2.0 Holding Times		Yes	No	NA
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency (one per 20 samples or batch and matrix)?	✓		
3.2	Do any blanks have positive results? If yes, positive sample results should be reported and qualified "B", if the [sample≤5X[blank].		✓	
3.3	Do any field equipment blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve for 1016, 1260, toxaphene, and technical chlordane; and at least one point for the other arochlors reported? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	✓		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	✓		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within the control limits?	✓		
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning, every 12 hours, and at the end of every sequence.	✓		
5.2	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non detect DDT results, DDD/DDE - R(+).	✓		
5.3	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	✓		
5.4	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).	✓		

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? Advisory limit: 60-150%.	✓		
6.3	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.4	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
1 out	high/low	No action	No action
2 out	2 high same column	K	No action
	2 low same column	L, UL	No action
	mixed same column	J, UJ	No action
	2 high diff columns	J	Not applicable
	2 low diff columns	J, UJ	Not applicable
	mixed diff columns	Professional judgement	Not applicable
3 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	2 high, 1 low	K (2 high)	J (1 low 2nd column)
	2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
	other mixed	J, UJ	Not applicable
4 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	Mixed	J, UJ	Not applicable

If any recovery is >0% and <10% then L(+)/R(-).
If any recovery is 0% then R(+/-).

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes: MS/MSD for 54MW2

Pest → alpha-BHC <60% 55%/56% UJm in Parent
beta-BHC 7125% 276%/251% RPD 79%?QC
2nd column 46% 21% UJm in Parent
gamma-BHC ?QC 570%/593%
Gamma-Chlordane ?QC 186%/171%

Endosulfan I ?QC 607%/613%
Heptachlor ?QC 441%/414%

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.2	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 54MW3 and DUP-5 Both NDs ✓

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns <40%? If No, J(+).			✓
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
11.1.1	Number of samples: Pest_____ PCB_____			
11.1.2	Number of target compounds in each analysis: PEST_____ PCB_____			
11.1.3	Number of results rejected and not reported: Pest_____ PCB_____			
11.1.4	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = Pest 100%. PCB 100%.

Quality Control Results – Chlorinated Pesticides

Note: second column (confirmation) data is identified as the compound[2C].

Calibration

Initial instrument calibrations, second source verification (SCV), and continuing calibration verifications (CCV) for both the primary and confirmation columns were method-compliant. However, neither a SCV nor a CCV was analyzed for Toxaphene. Toxaphene is a multi-component pesticide, the referenced method does not require a CCV for multi-component pesticides, and it is assumed that a compliant CCV comprised of single-component pesticides demonstrates the same for a multi-component analyte (i.e., Toxaphene). The DoD QSM is not clear on the matter. The absence of a SCV for Toxaphene was due to laboratory oversight.

Method Blank

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Sample

The Laboratory Control Sample (LCS) was fortified with all single-component target analytes. All recoveries were in control for both the primary column and confirmation column runs. A second LCS for Toxaphene was not analyzed due to laboratory oversight.

Matrix Spikes

Sample '54MW2' was fortified with all single-component target analytes. Most recoveries and RPDs for both the primary column and confirmation column runs were in control; see the MS/MSD summary forms and text qualifiers for details. There was not sufficient sample volume for a second MS/MSD for Toxaphene-only and it is unclear from the DoD QSM whether one is needed.

Sample Results

Please see Section D of the data package. No analytes required confirmation. Due to sample matrix interference, sample '54MW2' and the matrix spike and matrix spike duplicate of that samples could not be evaluated for five target analytes. The sample extract(s) as well as the associated method blank and LCS underwent florisil cleanup and were reanalyzed with no improvement in sample chromatography. Results for the initial sample analyses have been reported and raw data (only) for the reanalyses-with-cleanup are provided at the end of the "Preparation Logs/Miscellaneous" subsection.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was reviewed and approved by the group supervisor/manager prior to further review by data management staff and the project chemist.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

DATA VALIDATION WORKSHEET

Perchlorate

Reviewer: RA
Date: 1/18/07
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number:
Laboratory: TriMatrix
SDG No.: 36440-32
Test Name: Perchlorate
Method No.: E314.0

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample collection, preservation, shipping, and storage condition meet the project controlling documents?	✓		
	Action: No chemical preservation required.			✓
2.2	Have any technical holding times (28 days), determined from date of sampling to date of analysis, (including dilution or reanalysis) been exceeded? If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency? If not, note in DV report.	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the [sample]≤ 5X[associated blank].		✓	
3.3	Do any field equipment blanks blanks have positive results? If Yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve?If no apply R flags.	✓		
4.2	Are all initial calibration correlation coefficient within the control limits (r>0.99)?If no J(+), R (-)	✓		
4.3	Was a instrument performance check (IPC) analyzed at the matrix conductivity threshold (MCT)? If no, verify that the sample chromatograms do not display this interference.	✓		
4.4	Is the $Pd_{A/H}$ < 25% , %recovery between 80-120%, and the retention time shift < 5%, If no, R flag to all results for samples that display this type of interference.	✓		
4.5	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Control limit is <+/- 15%. If no, R (-), J (+).	✓		

Notes:

5.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
5.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
5.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
5.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			✓
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes:

6.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
6.1	Is the LCS/LCSD recovery form present?	✓		
6.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are %R for LCS/LCSD recoveries outside the QC limits(85-115%)? If Yes, for %R > UCL, J(+) only; for %R < LCL,		✓	
6.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits(i.e., 15%)? If Yes, J(+) only.			✓

Notes:

7.0 Field Duplicate		Yes	No	NA
7.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
	For sample results > 5 x RL, use 50% RPD. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 x RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV	✓		

Notes:

All were non-detects.

8.0 aboratory Duplicates		Yes	No	NA
8.1	Was a labduplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
8.2	Are all analyte duplicate results within control limits? If no, J(+) only.	✓		

Notes:

9.0 Detection Limit Verification		Yes	No	NA
9.1	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
9.2	Were sample concentrations above the highest standard run at a dilution? If not, note in DV report.			✓

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.2	Number of samples:			
10.3	Number of target compounds in each analysis:			
10.4	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%			

Notes:

Quality Control Results – Perchlorate

Calibration

All instrument calibrations were method-compliant.

Method Blanks

There were no detections.

Laboratory Control Samples

All Laboratory Control Sample recoveries were in control.

Matrix Spikes

Samples '54MW2' and 'NR-SW-5' were fortified (MS-only, no MSD). Both recoveries (67%, 65%) were in control.

Laboratory Duplicates

Samples '54MW2' and 'NR-SW-5' were analyzed in duplicate; both RPDs were in control.

Sample Results

Please see Section C of the data package.

Corrective Actions

No corrective actions were needed.

Statement of Data Qualifications

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Sample Receipt and Log-in

There were four receipt events.

Receipt Event One

On November 30, 2006 at 09:00 hrs, three sample coolers containing multiple aqueous samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on November 29.

The external custody seal affixed to each cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperatures, in °C, were 1.8, 1.3, and 1.9.

Shipping documents included three field chains-of-custody forms (COC) and associated carrier air bills.

Sample '54MW2' was designated by the Client for MS/MSD analysis for all target parameters.

Samples were assigned to Work Order 0612019 and SDG 36440-32.

Receipt Event Two

On December 1, 2006 at 13:00 hrs, three sample coolers containing multiple aqueous samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on November 30.

The external custody seal affixed to each cooler was intact. All samples were received on ice and most were in good condition. However, one 1-liter amber for each of three samples was received broken. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperatures, in °C, were 0.8, 2.1, and 0.9.

Shipping documents included three field chains-of-custody forms (COC) and associated carrier air bills.

Sample 'NR-SW-5' was designated by the Client for MS/MSD analysis for Method 8330 Explosives and Perchlorate.

Samples were assigned to Work Order 0612020 and SDG 36440-32.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Receipt Event Three

On December 2, 2006 at 09:25 hrs, three sample coolers containing multiple aqueous samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on December 1.

The external custody seal affixed to each cooler was intact. All samples were received on ice and most were in good condition. However, one 1-liter amber for one sample '54MW9' was received broken and a second 1-liter amber for the same sample was received with a loose cap and low sample volume. Sample from that second container was not used. Two additional 1-liter ambers for this sample were received intact. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperatures, in °C, were 2.1, 1.2, and 4.2.

Shipping documents included three field chains-of-custody forms (COC) and associated carrier air bills.

No sample was designated by the Client for MS/MSD analysis.

Samples were assigned to Work Order 0612021 and SDG 36440-32.

Receipt Event Four

On December 6, 2006 at 08:45 hrs, one sample cooler containing multiple aqueous samples was received at TriMatrix via FedEx (the carrier). The cooler had been shipped from the Site on December 5.

The external custody seal affixed to the cooler was intact. All samples were received on ice. However, one 1-liter amber for each of two samples was received broken. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperature, in °C, was 1.9.

Shipping documents included one field chain-of-custody forms (COC) and associated carrier air bill.

No sample was designated by the Client for MS/MSD analysis.

Samples were assigned to Work Order 0612079 and SDG 36440-32.

All Events

Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as listed on the COC.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Method 6020A

The acceptance criterion of < 2 x RL was substituted for < 2 x MDL for interference check solution ICS-A.

Analytical Methods

Sample preparation and analytical methods that were employed are per the SOW.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard. The target analyte list was specified by the Client. Proposed RLs were submitted by TriMatrix to the Client prior to the receipt of any samples.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Project-specific Analytes of Concern

No project-specific analytes of concern were identified in the SOW.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed. Although Method 6010B LCS recovery limits are specified in the QSM, limits for Method 6020A are not. However, Method 6010B limits from the QSM were employed for Method 6020A.

Hold Times

All samples were extracted/digested (where applicable) and analyzed within hold time.

Technical Issues

There were no general technical issues. Any issues unique to a particular parameter will be discussed in the QC section for it.

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample for an organic parameter is reanalyzed for confirmation purposes and also reported, the second analysis includes the suffix 'RE1'.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the preceding Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.).

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

STATEMENT OF DATA QUALIFICATIONS

Organochlorine Pesticides by EPA Method 8081A

Qualification:	Concentration exceeds calibration range	
Analysis:	USEPA-8081A	
	0614201-MS1	Endosulfan I
	0614201-MS1	gamma-BHC (Lindane) [2C]
	0614201-MS1	Heptachlor
	0614201-MSD1	Endosulfan I
	0614201-MSD1	gamma-BHC (Lindane) [2C]
	0614201-MSD1	Heptachlor
Qualification:	Because of sample matrix interference, the analytical result obtained for this analyte is unusable.	
Analysis:	USEPA-8081A	
Sample/Analyte:	0612019-05 54MW2	alpha-BHC
	0612019-05 54MW2	beta-BHC
	0612019-05 54MW2	beta-BHC [2C]
	0612019-05 54MW2	Endosulfan I
	0612019-05 54MW2	gamma-BHC (Lindane) [2C]
	0612019-05 54MW2	Heptachlor
	0614201-MS1	alpha-BHC
	0614201-MS1	beta-BHC
	0614201-MS1	beta-BHC [2C]
	0614201-MS1	Endosulfan I
	0614201-MS1	gamma-BHC (lindane)
	0614201-MS1	Heptachlor
	0614201-MSD1	alpha-BHC
	0614201-MSD1	beta-BHC
	0614201-MSD1	beta-BHC [2C]
	0614201-MSD1	Endosulfan I
	0614201-MSD1	gamma-BHC (lindane)
	0614201-MSD1	Heptachlor
Qualification:	Sample and ms/msd were analyzed, then sent back for cleanup. The cleaned up samples were re-analysed on 12/19/06. The re-analysis of the cleaned up samples had the same contamination problems. The original was reported.	
Analysis:	USEPA-8081A	
Sample/Analyte:	0612019-05 54MW2	
	0614201-MS1	
	0614201-MSD1	
Qualification:	The MS and/or MSD recovery was outside the control limit. The non-spiked sample result is considered estimated.	
Analysis:	USEPA-8081A	
Sample/Analyte:	0612019-05 54MW2	alpha-BHC
	0612019-05 54MW2	beta-BHC [2C]
Qualification:	The MS and/or MSD recovery exceeded the upper control limit. The non-spiked sample result for the same analyte was non-detect and is not qualified.	
Analysis:	USEPA-8081A	
Sample/Analyte:	0612019-05 54MW2	beta-BHC

TriMatrixCOC -- COC

WHITE COPY - REPORT YELLOW COPY - LABORATORY PINK COPY - FIELD

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-33 **Fraction:** Explosives, Pesticides, PCBs & Lead

Lab: TriMatrix **Project Name** Radford SWMU 54

Reviewer: RA **Date:** February 12, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the explosives analyses, the matrix spike duplicate analyzed for sample 54SB83B displayed a percent recovery (%R) greater than the upper control limit of 120% for 3-nitrotoluene at 124%. The associated parent sample result was non-detect and no data qualifying action was necessary.

For the pesticides analyses, the continuing calibration analyzed on 01/20/07 displayed percent differences (%Ds) greater than the control limit of 15% with a positive bias for beta-BHC and delta-BHC at 17%. The associated field sample results were non-detects and no data qualifying action was required.

For the PCBs analyses, PCB-1254 and/or PCB-1260 displayed %Ds greater than the control limit of 40% between the two analytical columns for several samples. These results were flagged "J,g" in the associated samples.

PCB-1254 exceeded the calibration range of the instrument in samples 54SB46A and 54SB46C and was flagged "E" by the laboratory. These results were flagged "J,q" by the reviewer. These samples were re-analyzed at dilution factor of 10 with acceptable results that should be used for data interpretation.

For the lead analyses, the serial dilution analyzed for sample 54SB81B displayed a %D greater than the control limit of 10% at 14%. Positive associated field sample results were flagged "J,s".

Correctable Anomalies: None.

SDG CASE NARRATIVE

URS Group, Inc.
Radford Army Ammunition Plant
SWMU 54

SDG – 36440-33
FEBRUARY 8, 2007

This case narrative is applicable to soil (and aqueous equipment blank) samples collected from SWMU54 at Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on January 10 through January 13, 2007. The samples were assigned to TriMatrix project sample delivery group (SDG) 36440-33 for analytical services (the Project) to be performed according to:

a) Subcontract NCA-06-1783, URS Project No. 11656351.30013,

b) the Scope of Work (SOW) for the above,

c) Department of Defense Quality Systems Manual for Environmental Laboratories, Final Version 3, January 2006 (by reference)

d) any verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to laboratory sample ID cross-reference table follows below and on the next page.

Field Sample Name	Sample Matrix	Laboratory Sample ID	Date Sampled	Date Received
54SB42A	Soil	0701124-01	01/08/07	01/10/07

Project Name: Radford Swmu 54
Project Number:
Laboratory: TriMatrix
SDG No.: 36440-33
Test Name: Explosives
Method No.: 8330

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 ^{O}C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	✓		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	✓		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within	✓		
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

5.0 Laboratory Control Sample (LCS)		Yes	No	NA
5.1	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.2	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
5.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.		✓	

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.2	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.3	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	<10% low high			
	Positives L L K			
	Non-detects R UL No action			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes:

MSD for 545883B 7120. for 3-nitrotoluene at 124%.

Parent ND, No action.

8.0 Field Duplicate		Yes	No	NA
8.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes:

All NDs ✓

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
10.1.1	Number of samples:			
10.1.2	Number of target compounds in each analysis: 14			
10.1.3	Number of results rejected or not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%.			

Notes:

Quality Control Results – Nitroaromatic Explosives

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications for both the primary and confirmation columns were method-compliant.

Method Blanks

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Samples

The soil Laboratory Control Sample (LCS) and aqueous LCS/LCSD were fortified with all target analytes. All recoveries (and RPDs for the LCS/LCSD) were in control for both the primary column and confirmation column runs.

Matrix Spikes

Samples '54SB83B' and '54SB82B'were fortified with all target analytes. All recoveries and RPDs were in control with the exception of the MSD recovery (124%) for 3-Nitrotoluene in sample '54SB83B'. Since there were no detections for any target analyte in either spiked sample, the MS/MSDs were not analyzed on the confirmation column.

Sample Results

See Section B. Second-column analysis was needed for two samples due to tentative detections of one or more target analytes on the primary column. Those confirmation analyses are identified by the laboratory sample ID plus an 'RE1' suffix. The confirmation analyses were performed at a different date and/or time and, for the two samples for which a tentative detection was confirmed, summary forms and raw data have been included following that for the primary column. Where an analyte was confirmed, both sets of sample results have been reported (all RPDs were less than 40%).

Corrective Actions

No corrective actions were deemed necessary.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 °C, then flag L(+)/UL(-).		✓	
1.5	Do any soil samples contain more than 50% water? If yes, no dry weight correction is made and make notes in the DV Report.		✓	

Notes:

2.0 Holding Times		Yes	No	NA
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency (one per 20 samples or batch and matrix)?	✓		
3.2	Do any blanks have positive results? If yes, positive sample results should be reported and qualified "B", if the [sample≤5X[blank].		✓	
3.3	Do any field equipment blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve for 1016, 1260, toxaphene, and technical chlordane; and at least one point for the other arochlors reported? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	✓		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	✓		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within the control limits?		✓	
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

Pest → CC 1/20/07 beta-BHC, delta-BHC 71% at 17r. w/ pos bias
No action, all NDs ✓

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning, every 12 hours, and at the end of every sequence.	✓		
5.2	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non detect DDT results, DDD/DDE - R(+).	✓		
5.3	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	✓		
5.4	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).	✓		

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? Advisory limit: 60-150%.	✓		
6.3	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.4	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
1 out	high/low	No action	No action
2 out	2 high same column	K	No action
	2 low same column	L, UL	No action
	mixed same column	J, UJ	No action
	2 high diff columns	J	Not applicable
	2 low diff columns	J, UJ	Not applicable
	mixed diff columns	Professional judgement	Not applicable
3 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	2 high, 1 low	K (2 high)	J (1 low 2nd column)
	2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
	other mixed	J, UJ	Not applicable
4 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	Mixed	J, UJ	Not applicable

If any recovery is >0% and <10% then L(+)/R(-).
If any recovery is 0% then R(+/-).

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.2	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 545B42A , DUP-1 RL
PCB-1254 40 J 37 J ~~40~~ OK
PCB-1260 29 J 19 J 40 OK

10.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns <40%? If No, J(+).		✓	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes: PCB-1254 and/or PCB-1260 >D 40% in several samples J/J-
PCB-1254 "E" in 545B46C J/J- use DF=10 result.
" " 545B46A " "

11.0 Data Completeness

		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit 95%$_{aq}$ and 90%$_{so}$)	✓		
11.1.1	Number of samples: Pest_____ PCB_____			
11.1.2	Number of target compounds in each analysis: PEST_____ PCB_____			
11.1.3	Number of results rejected and not reported: Pest_____ PCB_____			
11.1.4	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = Pest 100% PCB 100%			

Notes:

Quality Control Results – Chlorinated Pesticides

Note: second column (confirmation) data is identified as the compound[2C].

Calibration

Initial instrument calibrations, second source verification (SCV), and continuing calibration verifications (CCV) for both the primary and confirmation columns were method-compliant for all target analytes (including Toxaphene) with the following exceptions:

1) increasing responses for beta-BHC (17%) and delta-BHC (17%) in CCV5 associated with calibration 7A23003.

Method Blank

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Sample

Soil and aqueous Laboratory Control Samples (LCS) were fortified with all target analytes. LCS's for the one multi-component analyte (i.e., Toxaphene) were separately extracted/analyzed. All recoveries were in control for both the primary column and confirmation column runs.

Matrix Spikes

Samples '54SB22A' and '54SB82B'were fortified with all target analytes. MS/MSDs for the one multi-component analyte (i.e., Toxaphene) for each sample were separately extracted/analyzed. All recoveries and RPDs for both the primary column and confirmation column runs were in control.

Sample Results

Please see Section C of the data package. No analyte required confirmation.

Corrective Actions

No corrective actions were deemed necessary, including any for samples associated with CCV5 since the responses for the two target analytes were increasing and there were no detections in the samples.

Statements of Data Qualification

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Polychlorinated Biphenyls

Note: second column (confirmation) data is identified as the compound[2C].

Calibration

Initial instrument calibrations, second source verification (SCV), and continuing calibration verifications (CCV) for both the primary and confirmation columns were method-compliant.

Note: Although not required by Method 8082, daily one-point calibration verifications for Aroclors 1221, 1232, 1242, 1248, and 1254 are performed per TriMatrix internal procedures. Due to a LIMS software issue, %D values are not calculated for one-point calibrations, hence their absence on the continuing calibration summary form for each of those Aroclors.

Method Blank

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Sample

Soil and aqueous Laboratory Control Samples (LCS) were fortified with Aroclors 1016 and 1260. All recoveries were in control.

Matrix Spikes

Samples '54SB83B' and '54SB82B'were fortified with Aroclors 1016 and 1260. All recoveries and RPDs for both the primary column and confirmation column runs were in control.

Sample Results

Please see Section D of the data package. There were detections for Aroclors 1254 and/or 1260 in multiple samples. Reanalysis at dilution for samples '54SB46A' and '54SB46C' was needed. Those reanalyses are identified by the laboratory sample ID plus an 'RE1' suffix.

Statements of Data Qualification

See Narrative Attachment 2.

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-33
Project No.: _____

Pb only

Project Name: SWMU54 - Radford
Reviewer: RA
Date: 2/12/07

		6020			6010B			CVAA-Hg			Cyanide		
1.0 Chain of Custody/Sample Condition/Raw Data		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓											
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓											
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓										
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)	✓											
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓											

Note: _____

		6020			6010B			CVAA-Hg			Cyanide		
2.0 Holding Time		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓										

Note: _____

3.0 Instrument Calibration		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".		✓										
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	✓											
3.3	Once per calibration, did a high and low distilled standard recovery within 85-115%? If no, follow 3.6.												
3.4	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".		✓										
3.5	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.		✓										
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP 90%-110%, FOR Hg 80-120%, FOR CN 85-115%.		✓										
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%												
3.7	For ICP & ICPMS, did the CRDL standard recover between 80-120%?		✓										
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K												

Note: _____

4.0 Blanks

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓											
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓											
4.3	Are there reported MB or ICB/CCBs values > MDL?		✓										
	Sample Results > MDL												
	< 5X Blank Contamination B												
4.4	Are there negative blank results with the absolute value > MDL?		✓										
	Sample Results Non-detects > MDL												
	< 5X absolute Blank Contamination UL L												
4.5	Are there reported field blank > ± MDL?		✓										
	Sample Results > MDL												
	< 5X Blank Contamination B												

Note: _____

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	✓											
5.2	Are the ICS AB recoveries within 80% - 120%?	✓											
5.3	Are the results for unspiked analytes (in ICS A) < ± RL?	✓											
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓									
	If not...												
	Action: Not Spiked Analytes: < -MDL L(+)/UL(-); > MDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)												

Note: [redacted] _____

6.0 Laboratory Control Sample (LCS)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	√											
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		√										
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)												

Note:

7.0 Laboratory Duplicates (MSD)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	√											
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.												
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	√											

Note:

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓											
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125% for aqueous matrices or lab limits for soil matrices?	✓											
	%R > 125% 30%< %R < 74% < 30%												
	Positive K L L												
	Non-detect None UL R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.			✓									

Note:

9.0 Instrument Detection Limits (IDL)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓											

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓											
10.2	Was a five-fold dilution performed?	✓											
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).		✓										

Note: ~~NA, Ag only~~

Serial Dilution ~~NA~~.
on 545B81B 7 10%, at 14%.
DOS results → J/s

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓											
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	✓											

Note: 545B51A DUP3 RPD
Pb 5.7 7.1 22% OK ✓

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓											
12.2	Were all dilution reflected in the positive results and detection limits?	✓											
12.3	Were the Internal Standard recoveries within 30-120%	✓											
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	✓											
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	✓											
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	✓											

Note:

13.0 Completeness Calculation		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓											
13.1.1	Number of samples:												
13.1.2	Number of target compounds in each analysis:												
13.1.3	Number of results rejected and not reported:												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2)												
	% Completeness = 100.1												

Note:

Quality Control Results – ICP/MS Metals

Calibration

All instrument calibrations and continuing calibrations were method-compliant. Note: instrument reports for ICPMS include the listing of initial calibration correlation coefficients and internal standard recoveries; those values may either be imbedded with raw data from each run or included as a summary (also within the instrument printout).

Note: TriMatrix interprets the QSM requirement for a "low-level calibration check standard" as one pertaining to a one-point initial calibration. Given that a multi-point initial calibration was performed, the specification for a low-level calibration check either does not apply or has been satisfied since the lowest calibration standard is equivalent in concentration to the reporting limit.

Method Blanks

Lead was not detected.

Internal Standard Response

Internal standard responses for all standards, samples, and quality control samples were method-compliant.

Laboratory Control Sample

All Laboratory Control Sample recoveries were in control.

Matrix Spike

Sample '54SB81B' was fortified with Lead. Both recoveries and the RPD were in control.

Serial Dilutions and Post-Digestion Spikes

Serial dilution (SD) and post-digestion spike (PDS) analysis was performed on the sample employed for MS/MSD analysis. The SD value exceeded criterion; see the Serial Dilution summary and Statements of Data Qualification for details. The PDS value was in control.

Sample Results

Please see Section E of the data package.

Note: for all soil samples for metals analysis, a representative subsample is dried and a smaller measured amount of that dried subsample is then digested. Unlike most other parameters for a soil sample that are processed on a wet-weight basis, a Percent Solids value (if determined) for the sample is not applied to the MDL, RL, or to the result.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Wet Chemistry (Percent Solids)

Calibration

Instrument calibrations (i.e., balance) were in control.

Method Blanks

All method blanks were in control.

Laboratory Control Sample

Not applicable.

Matrix Spikes

Not applicable.

Laboratory Duplicate.

Samples '54SB42A', '54SB3A', '54SB81B', '54SB22A', '54SB83B', and '54SB82B' were analyzed in duplicate; all RPDs were in control.

Sample Results

Please see Section F of the data package.

Corrective Actions

No corrective actions were needed.

Statements of Data Qualification

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was reviewed and approved by the group supervisor/manager prior to further review by data management staff and the project chemist.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

SERIAL DILUTION

USEPA-6020A

54SB81B

Laboratory: TriMatrix Laboratories, Inc.

Client: URS Group, Inc.

Matrix: Soil

% Solids: 85.70

Laboratory ID: 7011922-SRD1

Lab Source ID: 0701158-09

SDG: 36440-33

Project: RFAAP SWMU 54 RFI/CMS

QC Batch: 7011922

Sequence: 7011922

Analyte	Initial Sample Result (I)	C	Serial Dilution Result (S)	C	% Difference	Q	Units	QC Limits % Difference
Lead, Total	0.00983		0.0112		14.0	*	mg/L	10

* Values outside of QC limits

Initial Sample Result (I) was less than 50xMDL (for 6010) or 100xMDL (for 6020), therefore serial dilution is not required.

01728

Sample Receipt and Log-in

There were four receipt events.

Receipt Event One

On January 10, 2007 at 08:45 hrs, one sample cooler containing multiple soil samples was received at TriMatrix via FedEx (the carrier). The cooler had been shipped from the Site on January 9.

The external custody seal affixed to the cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of the cooler was measured via a 'temperature blank' shipped in it; the measured temperature, in °C, was 0.5. No sample was received frozen.

Shipping documents included one field chain-of-custody form (COC) and associated carrier air bill.

No sample was designated by the Client for MS/MSD analysis.

Samples were assigned to Work Order 0701124 and SDG 36440-33.

Receipt Event Two

On January 11, 2007 at 08:50 hrs, one sample cooler containing multiple soil samples was received at TriMatrix via FedEx (the carrier). The cooler had been shipped from the Site on January 10.

The external custody seal affixed to the cooler was intact. All samples were received on ice and in good condition. The receipt temperature of the interior of the cooler was measured via a 'temperature blank' shipped in it; the measured temperature, in °C, was 2.5.

Shipping documents included one field chain-of-custody form (COC) and associated carrier air bill.

Sample '54SB81B' was designated by the Client for MS/MSD analysis for Lead (only).

Samples were assigned to Work Order 0701158 and SDG 36440-33.

Receipt Event Three

On January 12, 2007 at 08:50 hrs, one sample cooler containing multiple soil samples and one equipment blank was received at TriMatrix via FedEx (the carrier). The cooler had been shipped from the Site on January 11.

The external custody seal affixed to the cooler was intact. All samples were received on ice and in good condition. The receipt temperature of the interior of the cooler was measured via a 'temperature blank' shipped in it; the measured temperature, in °C, was 1.3.

Shipping documents included one field chain-of-custody form (COC) and associated carrier air bill.

Sample '54SB22A' was designated by the Client for MS/MSD analysis for Pesticides.

Sample '54SB83B' was designated by the Client for MS/MSD analysis for PCBs and Explosives.

Samples were assigned to Work Order 0701188 and SDG 36440-33.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Receipt Event Four

On January 13, 2007 at 09:00 hrs, one sample cooler containing multiple soil samples and one equipment blank was received at TriMatrix via FedEx (the carrier). The cooler had been shipped from the Site on January 12.

The external custody seal affixed to the cooler was intact. All samples were received on ice and in good condition. The receipt temperature of the interior of the cooler was measured via a 'temperature blank' shipped in it; the measured temperature, in °C, was 0.8. No sample was received frozen.

Shipping documents included one field chain-of-custody form (COC) and associated carrier air bill.

Sample '54SB82B' was designated by the Client for MS/MSD analysis for Pesticides, PCBs, and Explosives.

Samples were assigned to Work Order 0701199 and SDG 36440-33.

All Events

Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as listed on the COC.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Method 6020A

The acceptance criterion of < 2 x RL was substituted for < 2 x MDL for interference check solution ICS-A.

Analytical Methods

Sample preparation and analytical methods that were employed are per the SOW.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard. The target analyte list was specified by the Client. Proposed RLs were submitted by TriMatrix to the Client prior to the receipt of any samples.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Project-specific Analytes of Concern

No project-specific analytes of concern were identified in the SOW.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed. Although Method 6010B LCS recovery limits are specified in the QSM, limits for Method 6020A are not. However, Method 6010B limits from the QSM were employed for Method 6020A.

Hold Times

All samples were extracted/digested (where applicable) and analyzed within hold time.

Technical Issues

There were no general technical issues. Any issues unique to a particular parameter will be discussed in the QC section for it.

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample for an organic parameter is reanalyzed for confirmation purposes and also reported, the second analysis includes the suffix 'RE1'.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the preceding Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.).

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-35 **Fraction:** Explosives

Lab: TriMatrix **Project Name** Radford SWMU 54

Reviewer: RA **Date:** April 27, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: The laboratory control sample (LCS) displayed a percent recovery (%R) less than the lower established laboratory control limit of 80% for octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine at 75%. This %R, however, was within the DOD QSM marginal exceedances control limit of 75-120%. In addition, the LCS analyzed for the confirmation analyses displayed an acceptable %R for this compound at 89%. Using professional judgment, positive associated field sample results were flagged "J,l" and non-detects were flagged "UJ,l".

Minor Anomalies: The matrix spike pair analyzed for sample 54MW-2 displayed %Rs outside the control limits for octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine (66% and 181%). The associated parent sample result was previously flagged for an LCS anomaly and no further data qualifying action was taken. This matrix spike pair also displayed relative percent differences (RPDs) and a %R outside the control limits for 2,4,6-trinitrotoluene (44%) and 2,6-dinitrotoluene (148% and 48%). The associated parent sample results for 2,4,6-trinitrotoluene and 2,6-dinitrotoluene were positive and were flagged "J,d" and "J,m", respectively.

Several compounds displayed RPDs greater than the control limit of 40% between the two analytical columns for several samples. These results were flagged "J,g" in the associated field samples.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: Rayan

DATA VALIDATION WORKSHEET

Explosives

Reviewer: RA
Date: 4/25/07
DV Level: II (III) IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
_X__ SW-846
_X__ Project QAPP/SAP

Project Name: Radford Scmu 54
Project Number: 116563.51
Laboratory: TriMatrix
SDG No.: 36440-35
Test Name: Explosives
Method No.: 8330

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 °C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes:

MS/MSD for 54MW-2 several %R outside QC
octahydro —— 60% / 181 %) Prev. flagged for LCS
2,4,6-trinitrotoluene RPD 44% > 30%. Pos → J,d in Parent
2,6-dinitrotoluene MSD and RPD > QC at 148% and 48%.
Parent pos → J,m

8.0 Field Duplicate		Yes	No	NA
8.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes:

See attached 54MW-10 and DUP-1

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes: RPD for several compds > 40% for several samples. pos → J,q unless prev. flagged.

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 95%$_{aq}$ and 90%$_{so}$)	✓		
10.1.1	Number of samples:			
10.1.2	Number of target compounds in each analysis: 14			
10.1.3	Number of results rejected or not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

SDG CASE NARRATIVE

URS Group, Inc.
Radford Army Ammunition Plant
Quarterly Groundwater Monitoring
SWMU 54

SDG – 36440-35
APRIL 23, 2007

This case narrative is applicable to aqueous samples collected from SWMU54 at Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on March 28 and March 29, 2007. The samples were assigned to TriMatrix project sample delivery group (SDG) 36440-35 for analytical services (the Project) to be performed according to:

a) Subcontract NCA-06-1783, URS Project No. 11656351.30013,

b) the Scope of Work (SOW) for the above,

c) Department of Defense Quality Systems Manual for Environmental Laboratories, Final Version 3, January 2006 (by reference)

d) any verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to laboratory sample ID cross-reference table follows below and on the next page.

Field Sample Name	Sample Matrix	Laboratory Sample ID	Date Sampled	Date Received
54MW-8	Water	0703452-01	03/27/07	03/28/07
DUP-1	Water	0703452-02	03/27/07	03/28/07
54MW-10 Dup	Water	0703452-03	03/27/07	03/28/07
54MW-7	Water	0703452-04	03/27/07	03/28/07
54MW-9	Water	0703452-05	03/27/07	03/28/07
54MW-4	Water	0703452-06	03/27/07	03/28/07
54MW-6	Water	0703452-07	03/27/07	03/28/07
54MW-1	Water	0703467-01	03/28/07	03/29/07
54MW-5	Water	0703467-02	03/28/07	03/29/07
54MW-2	Water	0703467-03	03/28/07	03/29/07
54MW-3	Water	0703467-04	03/28/07	03/29/07
EB-1	Water	0703467-05	03/28/07	03/29/07

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Sample Receipt and Log-in

There were two receipt events.

Receipt Event One

On March 28, 2007 at 09:10 hrs, two sample coolers containing multiple water samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on March 27.

The external custody seal affixed to each cooler was intact. The samples were received on ice and in good condition. Given the absence of temperature blanks in the coolers, the receipt temperature of the interior of each cooler was estimated by averaging the measured temperatures of three randomly selected samples; the average temperatures, in °C, were 4.9 and 3.9.

Shipping documents included two field chains-of-custody form (COC) and associated carrier air bill.

No sample was designated by the Client for MS/MSD analysis.

Samples were assigned to Work Order 0703452 and SDG 36440-35.

Receipt Event Two

On March 29, 2007 at 09:00 hrs, one sample cooler containing multiple water samples was received at TriMatrix via FedEx (the carrier). The cooler had been shipped from the Site on March 28.

The external custody seal affixed to the cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of the cooler was measured via a 'temperature blank' shipped in it; the measured temperature, in °C, was 1.9.

Shipping documents included one field chain-of-custody form (COC) and associated carrier air bill.

Sample '54MW-2' was designated by the Client for MS/MSD analysis.

Samples were assigned to Work Order 0703467 and SDG 36440-35.

Both Events

Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as listed on the COC.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Analytical Methods

Sample preparation and analytical methods that were employed are per the SOW.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard. The target analyte list was specified by the Client. Proposed RLs were submitted by TriMatrix to the Client prior to the receipt of any samples.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Project-specific Analytes of Concern

No project-specific analytes of concern were identified in the SOW, however, it is assumed that Method 8330 target analytes are of concern.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed.

Hold Times

All samples were extracted/digested (where applicable) and analyzed within hold time.

Technical Issues

There were no general technical issues. Any issues unique to a particular parameter will be discussed in the QC section for it.

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample for an organic parameter is reanalyzed for confirmation purposes and also reported, the second analysis includes the suffix 'RE1'.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the preceding Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.).

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Nitroaromatic Explosives

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications for both the primary and confirmation columns were DoD QSM and method-compliant.

Method Blanks

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Samples

The Laboratory Control Samples (LCS) was fortified with all target analytes. All recoveries were in control for both the primary column and confirmation column runs with the exception of HMX (75%) on the primary column.

Matrix Spikes

Sample '54MW-2' was fortified with all target analytes. Most recoveries and RPDs on the primary and confirmation columns were in control; see the matrix spike summary forms and text qualifiers for details.

Sample Results

See Section B. Second-column analysis was needed for multiple samples due to tentative detections of one or more target analytes on the primary column. Of those samples where one or more analytes were confirmed, those confirmation analyses are identified by the laboratory sample ID plus an 'RE1' suffix. The confirmation analyses were performed at a different date and/or time and, for the two samples for which a tentative detection was confirmed, summary forms and raw data have been included following that for the primary column. Where an analyte was confirmed, both sets of sample results have been reported.

Corrective Actions

No corrective actions were taken.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

4/23/07
Date

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

STATEMENT OF DATA QUALIFICATIONS

Nitroaromatics & Nitramines by EPA Method 8330

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8330

Sample/Analyte:	
0703467-03 54MW-2	2,6-Dinitrotoluene
0703467-03 54MW-2	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine
0703467-03RE1 54MW-2	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine

Qualification: The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8330

Sample/Analyte:	
0703467-03 54MW-2	2,4,6-Trinitrotoluene
0703467-03 54MW-2	2,6-Dinitrotoluene
0703467-03RE1 54MW-2	2,4,6-Trinitrotoluene
0703467-03RE1 54MW-2	2-Nitrotoluene
0703467-03RE1 54MW-2	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine

Qualification: The RPD between the detected values from the primary and confirmation analyses exceeded 40%. The higher concentration result has been reported.

Analysis: USEPA-8330

Sample/Analyte:	
0703452-01 54MW-8	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine
0703452-01RE1 54MW-8	4-Nitrotoluene
0703452-02RE1 DUP-1	2,4-Dinitrotoluene
0703452-03 54MW-10	2,6-Dinitrotoluene
0703467-02 54MW-5	2,4,6-Trinitrotoluene
0703467-02RE1 54MW-5	4-Amino-2,6-dinitrotoluene
0703467-02RE1 54MW-5	4-Nitrotoluene
0703467-03 54MW-2	2,6-Dinitrotoluene
0703467-03RE1 54MW-2	2-Amino-4,6-dinitrotoluene
0703467-03RE1 54MW-2	4-Amino-2,6-dinitrotoluene

Qualification: The LCS recovery was outside of the control limit with no allowed marginal exceedances. The result for this analyte in any sample from the associated QC batch is considered qualified.

Analysis: USEPA-8330

0703431-BS1	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine

TriMatrixCOC -- COC

WHITE COPY - REPORT YELLOW COPY - LABORATORY PINK COPY - FIELD

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination	n	Failed Signal to noise ratio		

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-38 **Fraction:** Explosives

Lab: TriMatrix **Project Name** Radford SWMU 54

Reviewer: RA **Date:** July 2, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The continuing calibration analyzed on 6/13/07 at 0245 displayed a percent difference (%D) greater than the control limit of 15% with a negative bias for tetryl at 18.0%. The continuing calibration analyzed on 6/13/07 at 0740 displayed %Ds greater than the control limit with a negative bias for tetryl at 19.20% and 2,6-dinitrotoluene at 16.3%. The associated field sample results were non-detects and were flagged "UJ,c".

The matrix spike pair analyzed for sample 54MW-2 displayed percent recoveries greater than the upper control limits for 2,6-dinitrotoluene (169%/169%) and 4-nitrotoluene (150%). This matrix spike pair also displayed a relative percent difference (RPD) greater than the control limit for 2-nitrotoluene at 43%. The associated parent sample results were non-detects and no data qualifying action was necessary.

The RPDs between the two analytical columns were greater than the control limit of 40% for 4-amino-2,6-dinitrotoluene in sample 54MW-5 at 41.4%, 1,3,5-trinitrobenzene in sample 54MW-3 at 53.1%, and HMX in sample 54MW-2 at 59.8%. These results were flagged "J,g" in these samples.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: Rayan

Project Name: SWMU54
Project Number: 116560351.30005
Laboratory: Tri Matrix
SDG No.: 36440-38
Test Name: Explosives
Method No.: 8330

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 ^{O}C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".			
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".			
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within the		✓	
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

CCV 6113107 0245 tetryl %D 18.0% neg bias

CCV 6113107 0740 tetryl %D 19.2% neg bias, 2/6-DNT 16.3% neg bias also.

All NDs, UJ/C in 8 samples.

5.0 Laboratory Control Sample (LCS)		Yes	No	NA
5.1	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.2	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
5.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.			✓

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are surrogate recoveries within acceptance criteria for all samples and method blanks?			
6.2	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.3	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

	<10%	low	high
Positives	L	L	K
Non-detects	R	UL	No action

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes:

The MS/MSD for 54MW-2 7QC for
2,6-Dinitrotoluene 169%/169%. all NDs in Parent,
RPD>30%. for 2-nitrotoluene at 43%.
MSD for 4-nitrotoluene >130%. at 150%. No action ✓

8.0 Field Duplicate		Yes	No	NA
8.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: DUP-1 54MW-4 RL
1,3,5-Trinitrobenzene 0.16 ND 5 OK ✓

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes: The RPDs >40% for several compds in several samples. → J/g.

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 95%$_{aq}$ and 90%$_{so}$)	✓		
10.1.1	Number of samples:			
10.1.2	Number of target compounds in each analysis: 14			
10.1.3	Number of results rejected or not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%.			

Notes:

SDG CASE NARRATIVE

URS Group, Inc.
Radford Army Ammunition Plant
Quarterly Groundwater Monitoring
SWMU 54

SDG – 36440-38
JUNE 28, 2007

This case narrative is applicable to aqueous samples collected from SWMU54 at Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on June 7, 2007. The samples were assigned to TriMatrix project sample delivery group (SDG) 36440-38 for analytical services (the Project) to be performed according to:

a) Subcontract NCA-06-1783, URS Project No. 11656351.30013,

b) the Scope of Work (SOW) for the above,

c) Department of Defense Quality Systems Manual for Environmental Laboratories, Final Version 3, January 2006 (by reference)

d) any verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to laboratory sample ID cross-reference table follows below and on the next page.

Field Sample Name	Sample Matrix	Laboratory Sample ID	Date Sampled	Date Received
54MW-5	Water	0706134-01	06/05/07	06/07/07
54MW-9	Water	0706134-02	06/05/07	06/07/07
54MW-3	Water	0706134-03	06/05/07	06/07/07
Eq Blank	Water	0706134-04	06/05/07	06/07/07
DUP-1	Water	0706134-05	06/05/07	06/07/07
54MW-6	Water	0706134-06	06/05/07	06/07/07
54MW-10	Water	0706134-07	06/05/07	06/07/07
54MW-8	Water	0706134-08	06/05/07	06/07/07
54MW-1	Water	0706134-09	06/05/07	06/07/07
54MW-2	Water	0706134-10	06/05/07	06/07/07
54MW-4	Water	0706134-11	06/05/07	06/07/07
54MW-7	Water	0706134-12	06/05/07	06/07/07

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Sample Receipt and Log-in

On June 7, 2007 at 09:00 hrs, three sample coolers containing multiple water samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on June 6.

The external custody seal affixed to each cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperatures, in °C, were 1.5, 0.7, and 1.0. No sample was received frozen.

Shipping documents included three field chains-of-custody form (COC) and associated carrier air bills.

Sample 54MW-2 was designated by the Client for MS/MSD analysis.

Samples were assigned to Work Order 0706134 and SDG 36440-38.

Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as listed on the COC.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

Due to the loss of the equipment blank sample, collected by the Client for dioxin/furan analysis, during shipment to SGS/Paradigm Laboratories that URS had retained for that analysis, the Client requested that one of two containers received at TriMatrix for sample 'Eq Blank' be shipped to that laboratory. That sample was shipped on June 11, 2007 for delivery the next day; no confirmation of receipt was received by TriMatrix.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Analytical Methods

Sample preparation and analytical methods that were employed are per the SOW.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard. The target analyte list was specified by the Client. Proposed RLs were submitted by TriMatrix to the Client prior to the receipt of any samples.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Project-specific Analytes of Concern

No project-specific analytes of concern were identified in the SOW, however, it is assumed that Method 8330 target analytes are of concern.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed.

Hold Times

All samples were extracted/digested (where applicable) and analyzed within hold time.

Technical Issues

There were no general technical issues. Any issues unique to a particular parameter will be discussed in the QC section for it.

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample is reanalyzed for confirmation purposes, is confirmed, and also reported, the second analysis includes the suffix 'RE1'. If the confirmation was not performed simultaneously, the second set of sample results is reported on a second Form 1 since that confirmation analysis did not occur at the same time and/or date.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the preceding Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.).

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Nitroaromatic Explosives

Note: data for second column confirmation analysis follows that provided for primary column analysis.

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications for both the primary and confirmation columns were DoD QSM and method-compliant.

Method Blank

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Sample

The Laboratory Control Sample (LCS) was fortified with all target analytes. All recoveries were in control for both the primary column and confirmation columns.

Matrix Spikes

Sample '54MW-2' was fortified with all target analytes. Most recoveries and RPDs on the primary and confirmation columns were in control; see the matrix spike summary forms and text qualifiers for details.

Sample Results

See Section B. Second-column analysis was needed for multiple samples due to tentative detections of one or more target analytes on the primary column. Of those samples where one or more analytes were confirmed, those confirmation analyses are identified by the laboratory sample ID plus an 'RE1' suffix. The confirmation analyses were performed at a different date and/or time and, for the samples for which a tentative detection was confirmed, summary forms and raw data have been included following that for the primary column. Where an analyte was confirmed, both sets of sample results have been reported.

Corrective Actions

No corrective actions were deemed necessary.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

TriMatrixCOC -- COC WHITE COPY - REPORT YELLOW COPY - LABORATORY PINK COPY - FIELD

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-41 **Fraction:** Explosives

Lab: TriMatrix **Project Name** Radford SWMU 54

Reviewer: RA **Date:** October 18, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The matrix spike pair analyzed for sample 54MW2 displayed percent recoveries less than the lower control limit of 80% for HMX at 30% and 19%, respectively. The associated parent sample result was positive and was flagged "J,m".

The relative percent differences (RPDs) between the two analytical columns were greater than the control limit of 40% for 2-nitrotoluene in sample 54MW2 at 81.6%, 2,4,6-trinitroluene in sample 54MW5 at 41.8%, and HMX in sample 54MW7 at 45.2%. These results were flagged "J,g" in these samples. The higher results should be used for data interpretation purposes.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: R ayan

SDG CASE NARRATIVE

URS Group, Inc.
Radford Army Ammunition Plant
Quarterly Groundwater Monitoring
SWMU 54

SDG – 36440-41
OCTOBER 16, 2007

This case narrative is applicable to aqueous samples collected from SWMU54 at Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on September 21, 2007. The samples were assigned to TriMatrix project sample delivery group (SDG) 36440-41 for analytical services (the Project) to be performed according to:

a) Subcontract NCA-06-1783, URS Project No. 11656351.30013,

b) the Scope of Work (SOW) for the above,

c) Department of Defense Quality Systems Manual for Environmental Laboratories, Final Version 3, January 2006 (by reference)

d) any verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to laboratory sample ID cross-reference table follows below and on the next page.

Field Sample Name	Sample Matrix	Laboratory Sample ID	Date Sampled	Date Received
54MW9	Water	0709448-01	09/18/07	09/21/07

DATA VALIDATION WORKSHEET

Explosives

Reviewer: RA
Date: 10/18/07
DV Level: II III IV

Review Document:

_X__ Region III Modified for National Functional Guidelines
_X__ SW-846
_X__ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 116570 73 . 20000
Laboratory: TriMatrix
SDG No.: 36440-41
Test Name: Explosives
Method No.: 8330

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 ^{O}C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	✓		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	✓		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within the	✓		
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

5.0 Laboratory Control Sample (LCS)		Yes	No	NA
5.1	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.2	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
5.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.			✓

Notes:

6.0 Surrogate Recovery				Yes	No	NA
6.1	Are surrogate recoveries within acceptance criteria for all samples and method blanks?			✓		
6.2	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?					✓
6.3	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)					✓
		<10%	low	high		
	Positives	L	L	K		
	Non-detects	R	UL	No action		

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes:

MS/MSD for 54MW2 < 80% for HMX 30%/19%.

Parent positive → J/M

8.0 Field Duplicate		Yes	No	NA
8.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 54MW-7 & DUP-1 RL

HMX 2.5 J 2.4 J 5 OK ✓

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes: 2-Nitrotoluene in 54MW2 81.6% HMX in 54MW7 45.2% J/J

2,4,6-TNT in 54MW5 41.8% higher results should be used.

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
10.1.1	Number of samples:			
10.1.2	Number of target compounds in each analysis: 14			
10.1.3	Number of results rejected or not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

Project-specific Analytes of Concern

No project-specific analytes of concern were identified in the SOW, however, it is assumed that Method 8330 target analytes are of concern.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed.

Hold Times

All samples were extracted/digested (where applicable) and analyzed within hold time.

Technical Issues

There were no general technical issues. Any issues unique to a particular parameter will be discussed in the QC section for it.

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample is reanalyzed for confirmation purposes, is confirmed, and also reported, the second analysis includes the suffix 'RE1'. If the confirmation was not performed simultaneously, the second set of sample results is reported on a second Form 1 since that confirmation analysis did not occur at the same time and/or date.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the preceding Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.).

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Nitroaromatic Explosives

Note: data for second column confirmation analysis follows that provided for primary column analysis.

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications for both the primary and confirmation columns were DoD QSM and method-compliant.

Method Blank

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Sample

The Laboratory Control Sample (LCS) was fortified with all target analytes. All recoveries were in control for both the primary column and confirmation columns.

Matrix Spikes

Sample 54MW2 was fortified with all target analytes. All recoveries except those for HMX on both the primary and confirmation columns were in control; see the matrix spike summary forms and text qualifiers for details. All RPDs were in control.

Sample Results

See Section B. Second-column analysis was needed for multiple samples due to tentative detections of one or more target analytes on the primary column. Of those samples where one or more analytes were confirmed, those confirmation analyses are identified by the laboratory sample ID plus an 'RE1' suffix. The confirmation analyses were performed at a different date and/or time and, for the samples for which a tentative detection was confirmed, summary forms and raw data have been included following that for the primary column. Where an analyte was confirmed, both sets of sample results have been reported.

Corrective Actions

No corrective actions were deemed necessary.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

STATEMENT OF DATA QUALIFICATIONS

Nitroaromatics & Nitramines by EPA Method 8330

Qualification:	The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.	
Analysis:	USEPA-8330	
Sample/Analyte:	0709448-05 54MW2	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine
	0709448-05RE1 54MW2	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine
Qualification:	The RPD between the detected values from the primary and confirmation analyses exceeded 40%. The lower concentration result has been reported.	
Analysis:	USEPA-8330	
Sample/Analyte:	0709448-05 54MW2	2-Nitrotoluene
	0709448-06 54MW5	2,4,6-Trinitrotoluene
	0709448-07 54MW7	Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine

Sample Receipt and Log-in

On September 21, 2007 at 08:30 hrs, three sample coolers containing multiple water samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on September 20.

The external custody seal affixed to each cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperatures, in °C, were 1.2, 3.6, and 2.1.

Shipping documents included three field chains-of-custody (COC) and associated carrier air bills.

Sample 54MW2 was designated by the Client for MS/MSD analysis.

Given the absence of a sample collection time for the field duplicate (DUP-1) and the collection time of midnight that would then be assigned by TriMatrix's LIMS, TriMatrix assigned a collection time of 12:00 hours.

Samples were assigned to Work Order 0709448 and SDG 36440-41.

Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as listed on the COC.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Analytical Methods

Sample preparation and analytical methods that were employed are per the SOW.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard. The target analyte list was specified by the Client. Proposed RLs were submitted by TriMatrix to the Client prior to the receipt of any samples.

TriMatrixCOC -- COC WHITE COPY - REPORT YELLOW COPY - LABORATORY PINK COPY - FIELD

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination

DATA VALIDATION REPORT - Level III Review

SDG No.: SWM054-GWQ2 **Fraction:** Perchlorate

Lab: Columbia Analytical Services **Project Name** Radford SWMU 54

Reviewer: RA **Date:** April 23, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The percent recoveries were diluted out for the matrix spike pair analyzed for sample 54MW-2. No data qualifying action was required since the original sample result was greater than 4 times the spike amount.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable for their intended purpose based on the data reviewed.

Project Name: SWMU 54
Project Number: 116363351.30007
Laboratory: Columbia Analytical
SDG No.: ~~R27368445~~ SWMO54-GW02
Test Name: Perchlorate
Method No.: 6850

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample collection, preservation, shipping, and storage condition meet the project controlling documents?	✓		
	Action: No chemical preservation required.			✓
2.2	Have any technical holding times (28 days), determined from date of sampling to date of analysis, (including dilution or reanalysis) been exceeded? If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency? If not, note in DV report.	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the [sample]≤ 5X[associated blank].		✓	
3.3	Do any field equipment blanks blanks have positive results? If Yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve?If no apply R flags.	✓		
4.2	Are all initial calibration correlation coefficient within the control limits (r>0.99)?If no J(+), R (-)	✓		
4.3	Was an ICV analyzed and are %RSDs < 15%? If no J(+), UJ(-)	✓		
4.4	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Are %Ds < 25%. If no, R (-), J (+).	✓		

Notes:

5.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
5.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
5.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?(75-125% for water and soil)	✓		
5.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (i.e., 15%)?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes:

MS/MSD Not calculated → outside QC limits. No action, original sample result 54MW-2 was > 4x spike amt.

6.0 Laboratory Control Sample(LCS)		Yes	No	NA
6.1	Is the LCS recovery form present?	✓		
6.2	Was LCS analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Is the %R for LCS outside the QC limits(85-115% for water and soil)? If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).		✓	
6.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits(i.e., 15%)? If Yes, J(+) only.			✓

Notes:

7.0 Field Duplicate		Yes	No	NA
7.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
	For sample results > 5 x RL, use 50% RPD. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 x RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV	✓		

Notes:

DUP-1 and 54MW-10

Perchlorate 2.9 2.9 OKV %RPD = 0%.

8.0 Laboratory Duplicates		Yes	No	NA
8.1	Was a lab duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
8.2	Are all analyte duplicate results within control limits (i.e., RPD < 15%)? If no, J(+) only.	✓		

Notes:

9.0 Internal Standards		Yes	No	NA
9.1	Are internal standard areas of every sample and blank within +/-30% of the ICV or CCV? If no, J(+), UJ(-)	✓		
	If the IS area count criteria is not met, corrective action should be taken to resolve the problem and the entire batch should			
	be re-analyzed.			✓

10.0 Detection Limit Verification		Yes	No	NA
10.1	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
10.2	Were sample concentrations above the highest standard run at a dilution? If not, note in DV report.	✓		

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit 90%)	✓		
11.2	Number of samples:			
11.3	Number of target compounds in each analysis:			
11.4	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100%			

Notes:

CASE NARRATIVE
COMPANY: URS
PROJECT: SWM054-GWQ2
SUBMISSION #: R2736845

Samples were collected on 03/27/07 – 03/28/07 and received at CAS/Rochester on 03/29/07 in good condition at a cooler temperature of 1 °C. A Level 4 Data package has been delivered.

PERCHLORATE ANALYSIS

Twelve water samples were analyzed for Perchlorate by LC/MS method 6850 with DOD modifications from the DOD Perchlorate Handbook. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All the initial and continuing calibration criteria were met for all analytes.

Site-specific QC was done on sample 54MW-2. The recoveries were diluted out due to the level of Perchlorate detected in the sample. The RPD was within QC limits. The Blank Spike (LCS) and LODV spike recoveries were within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

ORGANIC QUALIFIERS

U - Indicates compound was analyzed for but not detected. The sample quantitation limit must be corrected for dilution and for percent moisture.

J - Indicates an estimated value. The flag is used either when estimating a concentration for tentatively identified compounds, or when the data indicate the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit and greater than the MDL. This flag is also used for DoD instead of "P" as indicated below.

N - Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds, where the identification is based on a mass spectral library search.

P - This flag is used for a pesticide/Aroclor target analyte when there is a greater than 40% (25% for CLP) difference for detected concentrations between the two GC columns. The concentration is reported on the Form I and flagged with a "P" ("J" for DoD).

Q - for DoD only – indicates a pesticide/Aroclor target is not confirmed. This flag is used when there is ≥ 100% difference for the detected concentrations between the two GC columns.

C - This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B - This flag is used when the analyte is found in the associated blank as well as in the sample.

E - This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. If a sample or extract is re-analyzed at a higher dilution factor, as in the "E" flag above, the "DL" suffix is appended to the sample number on the Form I for the diluted sample, and ALL concentration values reported on that Form I are flagged with the "D" flag.

A - This flag indicates that a TIC is a suspected aldol-condensation product.

X - As specified in Case Narrative.

* - This flag identifies compounds associated with a quality control parameter which exceeds laboratory limits.

Cooler Receipt And Preservation Check Form

Project/Client URS Submission Number RQ-36845

Cooler received on 3-29-07 by: KE COURIER: CAS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	(YES)	NO			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)? see below	(YES)	NO			
4.	Did any VOA vials have significant air bubbles?	YES	NO	(N/A)		
5.	Were Ice or Ice packs present?	(YES)	NO			
6.	Where did the bottles originate?	(CAS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	1°				
	Is the temperature within 0° - 6° C?:	(Yes)	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 3-29-07 10:32

Thermometer ID: 161 or (IR GUN) Reading From: Temp Blank or (Sample Bottle)

If out of Temperature, Client Approval to Run Samples _____

PC Secondary Review: MLP 3/29/07

Cooler Breakdown: Date: 3-29-07 by: KE

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

		YES	NO	Sample I.D.	Reagent	Vol. Added	Final pH
pH	Reagent						
≥12	NaOH						
≤2	HNO_3						
≤2	H_2SO_4						
Residual Chlorine (+/-)	for TCN & Phenol						

YES = All samples OK NO = Samples were preserved at lab as listed PC OK to adjust pH_____

VOC Vial pH Verification (Tested after Analysis) Following Samples Exhibited pH > 2		

PC Secondary Review: _____

Other Comments:

1 Bottle from Loc. 54 MW-2 fell onto the floor, and the cap broke, losing most of the sample from the bottle. This is the QC Location and there are 2 other bottles that are O.K.
KE 3-29-07

DATA VALIDATION REPORT - Level III Review

SDG No.: R2738024 **Fraction:** Perchlorate

Lab: Columbia Analytical Services **Project Name** Radford SWMU 54

Reviewer: RA **Date:** June 26, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The percent recoveries were diluted out for the matrix spike pair analyzed for sample 54MW-2. No data qualifying action was required since the original sample result was greater than 4 times the spike amount.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable for their intended purpose based on the data reviewed.

Signed: Rayan

Project Name: SWMU54
Project Number:
Laboratory: Columbia Analytical
SDG No.: R2738024
Test Name: Perchlorate
Method No.: 6850

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample collection, preservation, shipping, and storage condition meet the project controlling documents?	✓		
	Action: No chemical preservation required.			✓
2.2	Have any technical holding times (28 days), determined from date of sampling to date of analysis, (including dilution or reanalysis) been exceeded? If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency? If not, note in DV report.	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the [sample]≤ 5X[associated blank].		✓	
3.3	Do any field equipment blanks blanks have positive results? If Yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve?If no apply R flags.	✓		
4.2	Are all initial calibration correlation coefficient within the control limits (r>0.99)?If no J(+), R (-)	✓		
4.3	Was an ICV analyzed and are %RSDs < 15%? If no J(+), UJ(-)	✓		
4.4	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Are %Ds < 25%. If no, R (-), J (+).	✓		

Notes:

5.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
5.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
5.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?(75-125% for water and soil)	✓		
5.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (i.e., 15%)?	✓	✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes:

MS/MSD for 54MW-2

%Rs diluted out. No action sample result 74X spike amt.

6.0 Laboratory Control Sample(LCS)		Yes	No	NA
6.1	Is the LCS recovery form present?	✓		
6.2	Was LCS analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Is the %R for LCS outside the QC limits(85-115% for water and soil)? If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).		✓	
6.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits(i.e., 15%)? If Yes, J(+) only.		✓	

Notes:

7.0 Field Duplicate		Yes	No	NA
7.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
	For sample results > 5 x RL, use 50% RPD. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 x RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV	✓		

Notes:

54MW-4 and DUP-1

RD RD

8.0 Laboratory Duplicates		Yes	No	NA
8.1	Was a lab duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
8.2	Are all analyte duplicate results within control limits (i.e., RPD < 15%)? If no, J(+) only.	✓		

Notes:

9.0 Internal Standards		Yes	No	NA
9.1	Are internal standard areas of every sample and blank within +/-30% of the ICV or CCV? If no, J(+), UJ(-)	✓		
	If the IS area count criteria is not met, corrective action should be taken to resolve the problem and the entire batch should			
	be re-analyzed.	✓		

10.0 Detection Limit Verification		Yes	No	NA
10.1	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
10.2	Were sample concentrations above the highest standard run at a dilution? If not, note in DV report.			✓

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit 90%)	✓		
11.2	Number of samples:			
11.3	Number of target compounds in each analysis:			
11.4	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100%

CASE NARRATIVE
COMPANY: URS
PROJECT: SWM054
SUBMISSION #: R2738024

Samples were collected on 06/05/07 and received at CAS/Rochester on 06/07/07 in good condition at a cooler temperature of 4 °C. A Level 4 Data package has been delivered.

PERCHLORATE ANALYSIS

Thirteen water samples were analyzed for Perchlorate by LC/MS method 6850 with DOD modifications from the DOD Perchlorate Handbook. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All the initial and continuing calibration criteria were met for all analytes.

Site-specific QC was done on sample 54MW-2. The recoveries were diluted out due to the level of Perchlorate detected in the sample and have been flagged with a "D". The RPD was within QC limits. The Blank Spike (LCS) and LODV spike recoveries were within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

ORGANIC QUALIFIERS

U - Indicates compound was analyzed for but not detected. The sample quantitation limit must be corrected for dilution and for percent moisture.

J - Indicates an estimated value. The flag is used either when estimating a concentration for tentatively identified compounds, or when the data indicate the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit and greater than the MDL. This flag is also used for DoD instead of "P" as indicated below.

N - Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds, where the identification is based on a mass spectral library search.

P - This flag is used for a pesticide/Aroclor target analyte when there is a greater than 40% (25% for CLP) difference for detected concentrations between the two GC columns. The concentration is reported on the Form I and flagged with a "P" ("J" for DoD).

Q - for DoD only – indicates a pesticide/Aroclor target is not confirmed. This flag is used when there is ≥ 100% difference for the detected concentrations between the two GC columns.

C - This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B - This flag is used when the analyte is found in the associated blank as well as in the sample.

E - This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. If a sample or extract is re-analyzed at a higher dilution factor, as in the "E" flag above, the "DL" suffix is appended to the sample number on the Form I for the diluted sample, and ALL concentration values reported on that Form I are flagged with the "D" flag.

A - This flag indicates that a TIC is a suspected aldol-condensation product.

X - As specified in Case Narrative.

* - This flag identifies compounds associated with a quality control parameter which exceeds laboratory limits.

Cooler Receipt And Preservation Check Form

Project/Client URS Submission Number R2738014

Cooler received on 6/7/07 by: CM COURIER: CAS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	(YES)	NO	
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO	
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO	
4.	Did any VOA vials have significant air bubbles?	YES	NO	(N/A)
5.	Were **Ice** or **Ice packs** present?	(YES)	NO	
6.	Where did the bottles originate?	(CAS/ROC,)	CLIENT	
7.	Temperature of cooler(s) upon receipt:	4		

Is the temperature within 0° - 6° C?:	(Yes)	Yes	Yes	Yes	Yes
If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 6/7/07 1005

Thermometer ID: 161 or (IR GUN) Reading From: Temp Blank or (Sample Bottle)

If out of Temperature, Client Approval to Run Samples _____

PC Secondary Review: _____

Cooler Breakdown: Date: 6/7/07 by: _____

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	YES	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

		YES	NO	Sample I.D.	Reagent	Vol. Added	Final pH
pH	Reagent						
≥12	NaOH						
≤2	HNO_3						
≤2	H_2SO_4						
Residual Chlorine (+/-)	for TCN & Phenol						

YES = All samples OK NO = Samples were preserved at lab as listed PC OK to adjust pH _____

VOC Vial pH Verification (Tested after Analysis) Following Samples Exhibited pH > 2

DATA VALIDATION REPORT - Level III Review

SDG No.: R2739859 **Fraction:** Perchlorate

Lab: Columbia Analytical Services **Project Name** Radford SWMU 54

Reviewer: RA **Date:** October 17, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable for their intended purpose based on the data reviewed.

Signed: Rayem

ACCREDITED IN ACCORDANCE WITH nelac

2005 SEAL OF EXCELLENCE PROGRAM

ORGANIC QUALIFIERS

U - Indicates compound was analyzed for but not detected. The sample quantitation limit must be corrected for dilution and for percent moisture.

J - Indicates an estimated value. The flag is used either when estimating a concentration for tentatively identified compounds, or when the data indicate the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit and greater than the MDL. This flag is also used for DoD instead of "P" as indicated below.

N - Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds, where the identification is based on a mass spectral library search.

P - This flag is used for a pesticide/Aroclor target analyte when there is a greater than 40% (25% for CLP) difference for detected concentrations between the two GC columns. The concentration is reported on the Form I and flagged with a "P" ("J" for DoD).

Q - for DoD only – indicates a pesticide/Aroclor target is not confirmed. This flag is used when there is ≥ 100% difference for the detected concentrations between the two GC columns.

C - This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B - This flag is used when the analyte is found in the associated blank as well as in the sample.

E - This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. If a sample or extract is re-analyzed at a higher dilution factor, as in the "E" flag above, the "DL" suffix is appended to the sample number on the Form I for the diluted sample, and ALL concentration values reported on that Form I are flagged with the "D" flag.

A - This flag indicates that a TIC is a suspected aldol-condensation product.

X - As specified in Case Narrative.

* - This flag identifies compounds associated with a quality control parameter which exceeds laboratory limits.

DATA VALIDATION WORKSHEET

Perchlorate

Reviewer: RA
Date: 10/17/07
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford Sump 54
Project Number: 11657073.20000
Laboratory: Columbia Analytical
SDG No.: R2739859
Test Name: Perchlorate
Method No.: 6850

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample collection, preservation, shipping, and storage condition meet the project controlling documents?	✓		
	Action: No chemical preservation required.			✓
2.2	Have any technical holding times (28 days), determined from date of sampling to date of analysis, (including dilution or reanalysis) been exceeded? If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency? If not, note in DV report.	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the [sample]≤ 5X[associated blank].		✓	
3.3	Do any field equipment blanks blanks have positive results? If Yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve?If no apply R flags.	✓		
4.2	Are all initial calibration correlation coefficient within the control limits (r>0.99)?If no J(+), R (-)	✓		
4.3	Was an ICV analyzed and are %RSDs < 15%? If no J(+), UJ(-)	✓		
4.4	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Are %Ds < 25%. If no, R (-), J (+).	✓		

Notes:

5.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
5.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
5.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?(75-125% for water and soil)		✓	
5.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (i.e., 15%)?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes:

6.0 Laboratory Control Sample(LCS)		Yes	No	NA
6.1	Is the LCS recovery form present?	✓		
6.2	Was LCS analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Is the %R for LCS outside the QC limits(85-115% for water and soil)? If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).		✓	
6.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits(i.e., 15%)? If Yes, J(+) only.		✓	

Notes:

7.0 Field Duplicate		Yes	No	NA
7.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
	For sample results > 5 x RL, use 50% RPD. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 x RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV	✓	✓	

Notes: S4MW7 and DUP-1
ND ND

8.0 Laboratory Duplicates		Yes	No	NA
8.1	Was a lab duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
8.2	Are all analyte duplicate results within control limits (i.e., RPD < 15%)? If no, J(+) only.	✓		

Notes:

9.0 Internal Standards		Yes	No	NA
9.1	Are internal standard areas of every sample and blank within +/-30% of the ICV or CCV? If no, J(+), UJ(-)	✓		
	If the IS area count criteria is not met, corrective action should be taken to resolve the problem and the entire batch should			
	be re-analyzed.			✓

10.0 Detection Limit Verification		Yes	No	NA
10.1	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
10.2	Were sample concentrations above the highest standard run at a dilution? If not, note in DV report.			✓

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit 90%)	✓		
11.2	Number of samples:			
11.3	Number of target compounds in each analysis:			
11.4	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100%			

Notes:

CASE NARRATIVE
COMPANY: URS
PROJECT: RFAAD-SWMU 54-QTR 4
SUBMISSION #: R2739859

Samples were collected on 09/18/07 – 9/19/07 and received at CAS/Rochester on 09/21/07 in good condition at a cooler temperature of 2 °C. A Level 4 Data package has been delivered.

PERCHLORATE ANALYSIS

Twelve water samples were analyzed for Perchlorate by LC/MS method 6850 with DOD modifications from the DOD Perchlorate Handbook. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

All the initial and continuing calibration criteria were met for all analytes.

Site-specific QC was done on sample 54MW2. The recoveries and RPD were within QC limits. The Blank Spike (LCS) and LODV spike recoveries were within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

Cooler Receipt And Preservation Check Form

Project/Client URS Submission Number R2739859

Cooler received on 9/21/07 by: AP **COURIER:** CAS (UPS) FEDEX VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	(YES)	NO			
2.	Were custody papers properly filled out (ink, signed, etc.)?	YES	NO			
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO			
4.	Did any VOA vials have significant air bubbles?	YES	NO	(N/A)		
5.	Were **Ice** or **Ice packs** present?	(YES)	NO			
6.	Where did the bottles originate?	(CAS/ROC), CLIENT				
7.	Temperature of cooler(s) upon receipt:	1.8				
	Is the temperature within 0° - 6° C?:	(Yes)	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 09/21/07 09:45

Thermometer ID: 161 or (IR GUN) Reading From: Temp Blank or (Sample Bottle)

If out of Temperature, Client Approval to Run Samples _____

PC Secondary Review: MM 9/21/07

Cooler Breakdown: Date: 9/21/07 by: AMA

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

		YES	NO	Sample I.D.	Reagent	Vol. Added	Final pH
pH	Reagent						
≥12	NaOH						
≤2	HNO_3						
≤2	H_2SO_4						
Residual Chlorine (+/-)	for TCN & Phenol						

YES = All samples OK NO = Samples were preserved at lab as listed PC OK to adjust pH _____

VOC Vial pH Verification (Tested after Analysis) Following Samples Exhibited pH > 2

PC Secondary Review: _____

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-330 **Fraction:** Dioxin/Furan

Lab: Paradigm Analytical **Project Name** SWMU54

Reviewer: RA **Date:** March 7, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The method blank displayed positive detections for OCDD at 0.0168 ng/L and 1,2,3,4,6,7,8-HpCDD at 0.00346 ng/L. The associated positive field sample results for OCDD were less than ten times the method blank concentration and were flagged "B,z." Equipment blank, EQBK-1 located in SDG G296-333 displayed positive detections for 1,2,3,4,6,7,8-HpCDD at 0.00119 ng/L, 1,2,3,7,8-PeCDF at 0.000651 ng/L, and 2,3,4,7,8-PeCDF at 0.000782 ng/L. The associated field sample results were non-detects and no data qualifying action was necessary.

The ongoing precision result (OPR) displayed a percent recovery greater than the upper control limit of 130% for OCDF at 133%. The associated field sample results were non-detects and no data qualifying action was necessary.

The OPR and OPRD displayed percent recoveries less than the lower control limit of 40% for the extraction standard 13C12-OCDD at 31.4% and 35.6%, respectively. These are quality control samples, and no data qualifying action was taken.

Sample 54MW2 displayed a detection reported by the laboratory as estimated maximum possible concentration (EMPC). This EMPC displayed an ion abundance ratio outside the method criterion of a theoretical ratio +/- 15% but within the EPA Region III criterion of +/- 25%, and was qualified as "J,w".

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method with the exception of anomalies discussed above. All data are usable as qualified for their intended purpose based on the data reviewed.

X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002) X NFG Region III Draft Guidance (March 1999)

Project Name: Radford SWMU54
Project Number: 11654351.30007
Laboratory: SGS
SDG No.: G296-330
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓		✓

Notes: MB → OCDD at 0.0168 ng/L and 1,2,3,4,6,7,8-HpCDD at 0.00346 ng/L
and dojap HpCDD-2 at 0.00346

EQ. blank, EQBK-1 in SDG G296-333
1,2,3,4,6,7,8-HpCDD 0.00119 ng/L
1,2,3,7,8-PeCDF 0.000651 ng/L) NDs, No action

Lowest B, 2 in both samples.
10

NDs in both.

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.	✓		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits	
4	M/M+2	0.77	0.65- 0.89	
5	M+2/M+4	1.55	1.32- 1.78	
6	M+2/M+2	1.24	1.05- 1.43	
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	
~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?		✓	
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?	✓		
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes: OPR [redacted] 130%. for OCDF 133%. [redacted]

Both NDs in the samples, No action

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,	✓		
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.	✓		
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?			✓
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.			✓
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.

For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.

For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).

11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes:

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%.

Case Narrative
SGS Project: **G296-330**
Project Name: **SWMU 54**

For Method: 8290

- The submitted samples were accepted into the lab on November 30th, 2006 and extracted on December 17th, 2006 by method 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for method 8290.
- The OPR associated with workgroup WG14022 has a recovery for OCDF which is above the method QC limits. OCDF was not detected in any of the submitted samples.
- The OPR and the OPRD from WG14022 have recoveries for $^{13}C_{12}$-OCDD which is below the method QC limits.

SGS

List of Qualifiers

B Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.

EDL "Estimated Detection Limit"

EMPC "Estimated Maximum Possible Concentration"

ppt Parts-per-trillion (pg/g; ng/L)

V Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

Outside quality control limits

* See case narrative

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A Amount detected is less than the Lower Calibration Limit.

J Amount detected is between the Method Detection Limit and the Lower Calibration Limit.

E Amount detected is greater than the Upper Calibration Limit.

S The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).

Q Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).

I Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).

DPE Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-333 **Fraction:** Dioxin/Furan

Lab: Paradigm Analytical **Project Name** SWMU54

Reviewer: RA **Date:** March 7, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The method blank displayed a positive detection for OCDD at 0.0117 ng/L. The associated positive field sample results for OCDD were less than ten times the method blank concentration and were flagged "B,z." Equipment blank, EQBK-1 displayed positive detections for 1,2,3,4,6,7,8-HpCDD at 0.00119 ng/L, 1,2,3,7,8-PeCDF at 0.000651 ng/L, 2,3,4,7,8-PeCDF at 0.000782 ng/L, total HpCDDs at 0.00221 ng/L, and total PeCDFs at 0.00143 ng/L. Positive associated field sample results less than five times the equipment blank concentrations were flagged "B,x."

Several samples displayed detections reported by the laboratory as estimated maximum possible concentrations (EMPCs). In cases where the EMPC displayed an ion abundance ratio outside the method criterion of a theoretical ratio +/- 15% but within the EPA Region III criterion of +/- 25%, the EMPC was qualified as "J,w". In cases where the EMPC displayed an ion abundance ratio greater than the EPA Region III criterion of +/- 25%, the EMPC was changed to a non-detect.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method with the exception of anomalies discussed above. All data are usable as qualified for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Dioxins and Furans Analysis

Reviewer: RA
Date: 12/28/06
DV Level: II (III) IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002) X NFG Region III Draft Guidance (March 1999)

Project Name: SWMU 54
Project Number: 116560351.30007
Laboratory: Pardigm, SGS
SDG No.: G296-333
Method No.: 8290

1.0 General: Chain-of-Custody

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times

		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓		

Notes: MB → OCDD at 0.0117 ng/L <10x B/c in all samples
EQBLANK → EQBK-1 1,2,3,4,6,7,8-HpCDD at 0.00119 ng/L
1,2,3,7,8-PeCDF at 0.000651 J
2,3,4,7,8-PeCDF at 0.000782 J
total HpCDD- 0.00221 , total PeCDFs 0.00143

<5 times B/c in Samples

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits	
4	M/M+2	0.77	0.65- 0.89	
5	M+2/M+4	1.55	1.32- 1.78	
6	M+2/M+2	1.24	1.05- 1.43	
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	
~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

Not in this SDG.

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.			✓
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,	✓		
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.			
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?			✓
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

	For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.			
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			
11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes:

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 3			
12.1.2	Number of target compounds in each analysis: 17			
12.1.3	Number of results rejected and not reported: 0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100.1

SGS

Case Narrative
SGS Project: **G296-333**
Project Name: **SWMU 54**

For Methods: 8290

- The submitted samples were accepted into the lab on December 1st, 2006 and extracted on December 13th, 2006 by method 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by GC/MS for method 8290.
- The LMB associated with workgroup WG14015 has a recovery for $^{13}C_{12}$-OCDD which is below the QC limits established in the method. Data is validated based on acceptable detection limits and signal-to-noise ratios.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision

e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-334 **Fraction:** Dioxin/Furan

Lab: Paradigm Analytical **Project Name** SWMU54

Reviewer: RA **Date:** March 7, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The method blank displayed a positive detection for OCDD at 0.0117 ng/L. The associated positive field sample results for OCDD were less than ten times the method blank concentration and were flagged "B,z." Equipment blank, EQBK-1 located in SDG G296-333 displayed positive detections for 1,2,3,4,6,7,8-HpCDD at 0.00119 ng/L, 1,2,3,7,8-PeCDF at 0.000651 ng/L, 2,3,4,7,8-PeCDF at 0.000782 ng/L, total HpCDDs at 0.00221 ng/L, and total PeCDFs at 0.00143 ng/L. Positive associated field sample results less than five times the equipment blank concentration were flagged "B,x."

The method blank displayed a percent recovery less than the lower control limit of 40% for the extraction standard 13C12-OCDD at 30.8%. Since the method blank is a quality control sample, no data qualifying action was necessary.

Sample 54MW7 displayed a detection reported by the laboratory as estimated maximum possible concentration (EMPC). This EMPC displayed an ion abundance ratio outside the method criterion of a theoretical ratio +/- 15% but within the EPA Region III criterion of +/- 25%, and was qualified as "J,w".

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method with the exception of anomalies discussed above. All data are usable as qualified for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET
Dioxins and Furans Analysis

Reviewer: RA
Date: 1/3/07
DV Level: II (III) IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002) X NFG Region III Draft Guidance (March 1999)

Project Name: SWMU 54
Project Number: 116560351
Laboratory: SGS
SDG No.: G2960-334
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓		

Notes: MB → OCDD at 0.0117 ng/L <10X → B, Z
EqBlank from SDG G2960-333, EQBK-1 → 1,2,3,4,6,7,8-HpCDD 0.00119 ng/L <5X → B, X
1,2,3,7,8-PeCDF 0.000651 J
2,3,4,7,8-PeCDF 0.000782
Total HpCDDs 0.00221 ng/L
Total PeCDFs 0.00143 ng/L

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits	
4	M/M+2	0.77	0.65- 0.89	
5	M+2/M+4	1.55	1.32- 1.78	
6	M+2/M+2	1.24	1.05- 1.43	
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	
~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".		✓	

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

Not in this SDG.

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards

		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes: The MB %R<40% for 13C12-OCDD at 30.8%. This is a QC sample, No action ✓

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.	✓		
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes: 54MW3 ng/L and DUP-5 EDL
OCDF 0.00217 ND 0.00587 CCV

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,			
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.	✓		
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?			✓
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.

For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.

For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).

11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes:

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

Case Narrative
SGS Project: **G396-334**
Project Name: **SWMU 54**

For Methods: 8290

- The submitted samples were accepted into the lab on December 6th, 2006 and extracted on December 13th, 2006 by method 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for method 8290.
- The LMB associated with workgroup WG14015 has a recovery for $^{13}C_{12}$-OCDD which is below the method QC limits.

SGS

List of Qualifiers

B Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.

EDL "Estimated Detection Limit"

EMPC "Estimated Maximum Possible Concentration"

ppt Parts-per-trillion (pg/g; ng/L)

V Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

Outside quality control limits

* See case narrative

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A Amount detected is less than the Lower Calibration Limit.

J Amount detected is between the Method Detection Limit and the Lower Calibration Limit.

E Amount detected is greater than the Upper Calibration Limit.

S The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).

Q Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).

I Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).

DPE Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

SGS

Case Narrative
SGS Project: **G396-334**
Project Name: **SWMU 54**

For Methods: 8290

- The submitted samples were accepted into the lab on December 6th, 2006 and extracted on December 13th, 2006 by method 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for method 8290.
- The LMB associated with workgroup WG14015 has a recovery for $^{13}C_{12}$-OCDD which is below the method QC limits.

List of Qualifiers

B	Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.
EDL	"Estimated Detection Limit"
EMPC	"Estimated Maximum Possible Concentration"
ppt	Parts-per-trillion (pg/g; ng/L)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.
#	Outside quality control limits
*	See case narrative

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A	Amount detected is less than the Lower Calibration Limit.
J	Amount detected is between the Method Detection Limit and the Lower Calibration Limit.
E	Amount detected is greater than the Upper Calibration Limit.
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).
Q	Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).
DPE	Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-346 **Fraction:** PCB Congeners & Dioxin/Furans

Lab: Paradigm Analytical **Project Name** Radford SWMU 54

Reviewer: RA **Date:** March 8, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the PCB-Congeners analyses, the method blank displayed positive detections for several congeners. The associated field sample results were greater than five times the method blank concentrations and no data qualifying action was necessary.

Sample 54SB46A displayed a percent recovery (%R) less than the lower control limit of 25% for the extraction standard 13C-4-DiCB at 23.3%. The associated field sample result, 8-DiCB was positive and was flagged "J,i". This sample also displayed a %R less than the lower control limit of 30% for the cleanup standard 13C-178-HpCB at 26.6%. No data qualifying action was necessary since this is a cleanup standard and no compounds are quantified from it.

For sample 54SB46A, several extraction standards displayed signal to noise ratios less than 10 as follows: 13C-19-TrCB at 6%, 13C-37-TrCB at 6%, 13C-189-HpCB at 7%, 13C-205-OcCB at 5%, 13C-208-NoCB at 4%, and 13C-206-NoCB at 4%. The associated field sample results were positive and were flagged "J,n".

Several compounds exceeded the calibration range of the instrument in both samples and were flagged "E" by the laboratory. These results were flagged "J,q" by the reviewer, unless previously flagged for other anomalies.

Sample 54SB46C displayed detections for two congeners that were flagged "K" by the laboratory. It was confirmed by the laboratory that these were estimated maximum possible concentrations (EMPCs). The ion abundance ratio was within the EPA Region III criterion of +/- 25% for congener 81 and this result was flagged "J,w". The ion abundance ratio was outside the EPA Region III criterion of +/- 25% for congener 169 and this result was changed to a non-detect.

For the dioxin-furans analyses, the method blanks displayed positive detections for several compounds. Positive associated field sample results less than ten times the method blank concentrations for OCDD and OCDF and less than five times the method blank concentrations for the other compounds were flagged "B,z".

Sample 54SB40A displayed a %R less than the lower control limit of 40% for the extraction standard 13C12-OCDD at 39.7%. The associated field sample results were positive and were flagged "J,i".

The field duplicate pair 54SB42A/DUP-1 displayed results for 2,3,7,8-TCDF with a relative percent difference greater than the control limit of 50% at 149%. These results were flagged "J,f" for these samples.

Several compounds exceeded the calibration range of the instrument in several samples and were flagged "E" by the laboratory. These results were flagged "J,q" by the reviewer, unless previously flagged for other anomalies.

Several samples displayed detections reported by the laboratory as EMPCs. In cases where the EMPC displayed an ion abundance ratio outside the method criterion of a theoretical ratio +/- 15% but within the EPA Region III criterion of +/- 25%, the EMPC was qualified as "J,w". In cases where the EMPC displayed an ion abundance ratio greater than the EPA Region III criterion of +/- 25%, the EMPC was changed to a non-detect.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed. Please note that detection limits were raised in several samples due to dilutions.

Case Narrative
SGS Project: **G296-346**
Project Name: **TWNU 54**

For Methods: 8290 & 1668A

- The submitted samples were accepted into the lab on January 10th, 2007 and extracted between January 11th and January 29th, 2007 by method 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for methods 8290 and 1668A.
- Sample **54SB40A** (Dioxin) has a recovery for $^{13}C_{12}$-OCDD which is below the QC limits established by the method. The data is validated based on a favorable EDL and signal-to-noise ratio.
- The OPR associated with workgroup WG14070 (PCB) has recoveries for ^{13}C-4-DiCB and ^{13}C-19-TrCB which are below the method's QC limits. The data is validated based on a favorable signal-to-noise ratio.
- Samples **54SB46A** and **54SB46C** (PCB) required 10X dilutions in order to improve the quality of the data for many of the target analytes due to interferences. The dilution factor is notated on the form 1's.
- Samples **54SB46A** and **54SB46C** (PCB) have several extraction standards with ion ratios falling outside of the QC limits established by the method. This is most likely attributed to the lower signal-to-noise ratios caused by the sample dilutions. Additionally, sample **54SB46A** has recoveries for ^{13}C-4-DiCB and ^{13}C-178-HpCB which fall below the method's QC limits.

SGS

List of Qualifiers

B Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.

EDL "Estimated Detection Limit"

EMPC "Estimated Maximum Possible Concentration"

ppt Parts-per-trillion (pg/g; ng/L)

V Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

Outside quality control limits

* See case narrative

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A Amount detected is less than the Lower Calibration Limit.

J Amount detected is between the Method Detection Limit and the Lower Calibration Limit.

E Amount detected is greater than the Upper Calibration Limit.

S The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).

Q Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).

I Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).

DPE Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

DATA VALIDATION WORKSHEET
PCB Congeners

Reviewer: RA
Date: 3/24/07
DV Level: II (III) IV
Review Document:
X SW-846 X Project QAPP/SAP
X NFG Region III Draft Guidance (April 2004)

Project Name: SWMU54
Project Number: 116056351
Laboratory: SGS
SDG No.: G296-346
Method No.: 1668A

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 2-3 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Recommended holding time in the Method is one year. If yes, J(+)/UJ(-). No holding time or preservation requirements are promulgated by EPA for non-water matrices), use professional judgement.		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.		✓	

Notes: *If there are no field blanks, the narrative should include acaution to the user that field blanks were not available for review and any contamination due to field conditions or cross contamination could not be assessed.*

The MB displayed several pos. detections. All sample results were >5X, No action

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/ ± 20% for analytes analyzed by isotope dilution or +/- 35% for analytes analyzed by internal std method? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
7	~~M+2/M+4~~	1.05	0.89 1.21
8	~~M+2/M+4~~	0.89	0.76 1.02
9	~~M+2/M+4~~	~~0.77~~	~~0.65~~ ~~0.89~~
~~10~~	~~M+2/M+4~~	~~0.69~~	~~0.59~~ ~~0.79~~

Notes:

5.0 GC/MS Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start ~~of a 12 hour~~ and end of each analytical sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 330.9792? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Are all IPR, OPR and VER standards within the method QC limits? Results for analytes that do not meet either IPR or OPR requirements should be flagged "J"/"UJ". If analyte is not recovered for an OPR sample, results must be flagged "R" for that analyte.	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

OPR/OPRD was performed ✓

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS recovery form present?			
7.2	Was an LCS analyzed for each batch?			
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?			
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards

		Yes	No	NA
8.1	Are internal standard recoveries for all samples within the method QC limits?If no, apply J/UJ to associated targets.		✓	
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.		✓	

Notes: Sample 545B46A extraction std. 13C-4-DiCB at 23.3% <25-150%. the associated compd 8-DiCB was pos → J,i (cleanup std 13C-178-HpCB at 26.6% < 30-139%.) this is a cleanup std, so no compds are quantified from it. No more action.
Sample 545B46A several ex-stds had signal to noise <10 see below:

13C-19-TrCB at 6%.
13C-37-TrCB at 6%.
13C-189-HpCB at 7%.
13C-205-OcCB at 5%.
13C-208-NoCB at 4%.
13C-206-NoCB at 4%.

and sample results were positive → J,n
* also a couple out in OPR and OPRD, No action since these are QC samples.

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.		✓	
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 3 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥3 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.7	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.	✓		

Notes: Several compds exceeded calib 9E4 by the lab → J(+) unless prev. flagged for other anomalies.
Note: DLs raised in both samples due to dilutions.

11.0 Ion abundance criteria and EMPC		Yes	No	NA
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			

Notes: Sample 545846 displayed one EMPC, 81-TeCB with an ion ratio within the expanded Region III limit → J, UJ

and one EMPC 169-HxCB outside 25%. → Changed to ND

12.0 Data Completeness		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)			
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported: 0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

DATA VALIDATION WORKSHEET

Dioxins and Furans Analysis

Reviewer: RA
Date: 3/5/07
DV Level: II (III) IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002) X NFG Region III Draft Guidance (March 1999)

Project Name: Radford SWMU 54
Project Number: 11656351
Laboratory: SGS
SDG No.: 6246-346
Method No.: 8290

1.0 General: Chain-of-Custody

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times

		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			✓

Notes: The MBs displayed pos. detections. Ass. field sample results <5X, B/A
<10X for OCDD/OCDF

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits	
4	M/M+2	0.77	0.65- 0.89	
5	M+2/M+4	1.55	1.32- 1.78	
6	M+2/M+2	1.24	1.05- 1.43	
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	
~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

OPR/OPRD was performed ok

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards

		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.		✓	
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.		✓	

Notes: Sample 545B40A Ex. Std 13C12-OCDD <40%. at 39.7%.
and Sample results Pos → J, i

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.		✓	
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes: See attached 545B42A) DUP-1, 2,3,7,8-TCDF outside QC 149%. RPD → J, f

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓	✓	
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,	✓		
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.		✓	
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?	✓		
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes: Several compds exceeded the calib range and were flagged "E" by the lab. These were flagged "UJ/J" by reviewer.

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

	For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.			
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			
11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes: Several EMPCs were reported. If ion ratio ≤ 25% → J, UJ
if " " > 25% → changed to NDSV

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)		✓	
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%			

Method 8290
Lab Method Blank

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination	n	Failed Signal to noise ratio		

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-347 **Fraction:** Dioxin/Furans

Lab: Paradigm Analytical **Project Name** Radford SWMU 54

Reviewer: RA **Date:** February 27, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The method blanks displayed positive detections for OCDD, 2,3,7,8-TCDF, 2,3,4,7,8-PeCDF, 1,2,3,6,7,8-HxCDF, 2,3,4,6,7,8-HxCDF, 1,2,3,7,8,9-HxCDF, 1,2,3,4,6,7,8-HpCDF, OCDF, total HpCDDs, total TCDFs, total PeCDFs, total HxCDFs, and total HpCDFs. Positive associated field sample results less than ten times the method blank concentrations for OCDD and OCDF, and less than five times the method blank concentrations for the other affected compounds were flagged "B,z".

The field duplicate pair 54SB78B/DUP-3 displayed a relative percent difference greater than the control limit of 50% for total TCDFs at 65.3%. These results were flagged "J,f" in these samples.

Several samples displayed detections reported by the laboratory as estimated maximum possible concentrations (EMPCs). In cases where the EMPC displayed an ion abundance ratio outside the method criterion of a theoretical ratio +/- 15% but within the EPA Region III criterion of +/- 25%, the EMPC was qualified as "J,w". In cases where the EMPC displayed an ion abundance ratio greater than the EPA Region III criterion of +/- 25%, the EMPC was changed to a non-detect.

Correctable Anomalies: The letter S in the sample IDs was reported as 5 by the laboratory. For example, sample 54SB50A was reported as 545B50A. These were manually corrected on the result forms by the reviewer.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: Rayan

Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002) X NFG Region III Draft Guidance (March 1999)

Project Name: SWMU 54
Project Number: 114563511.30007
Laboratory: SGS
SDG No.: G296-347
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓		✓

Notes: See attached <10x for OCDD, OCDF and <5x for others → B, Z

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits	
4	M/M+2	0.77	0.65- 0.89	
5	M+2/M+4	1.55	1.32- 1.78	
6	M+2/M+2	1.24	1.05- 1.43	
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	
~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?		✓	
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓	✓	

Notes: ~~Sample 545B78B Cleanup Std 13C12-1,2,3,4,7,8-HxCDF 7135% at 598% → J/A~~ CA

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.		✓	
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes: 545B76B and Dup-3 RPD

1,2,3,4,6,7,8-HpCDD	1.22	1.62 okv	28%.
OCDD	34.7	48.9	34% okv
2,3,7,8-TCDF	~~EMPC~~ .255	0.276 okv	7.9% ✓
Total HxCDDs	0.504	0.692	31% ✓
Total HpCDDs	4.05	5.68	~~33.8%~~ okv
Total TCDFs	0.461	0.234	65.3% → J, f

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,	✓		
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.	✓		
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?	✓		
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

	For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.			
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).	✓		
11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes: EMPCs were reported.
if ion/ratio <25%, J, UJ
if ion/ratio >25% → ND

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

Case Narrative
SGS Project: **G296-347**
Project Name: **SWMU 54 RFI**

For Method: 8290

- The submitted samples were accepted into the lab on January 10th, 2007 and extracted on January 23rd and January 24th, 2007 by method 3540C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for method 8290.

SGS

List of Qualifiers

B Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.

EDL "Estimated Detection Limit"

EMPC "Estimated Maximum Possible Concentration"

ppt Parts-per-trillion (pg/g; ng/L)

V Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

Outside quality control limits

* See case narrative

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A Amount detected is less than the Lower Calibration Limit.

J Amount detected is between the Method Detection Limit and the Lower Calibration Limit.

E Amount detected is greater than the Upper Calibration Limit.

S The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).

Q Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).

I Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).

DPE Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-348 **Fraction:** PCB Congeners & Dioxin/Furans

Lab: Paradigm Analytical **Project Name** Radford SWMU 54

Reviewer: RA **Date:** March 1, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the PCB-Congeners analyses, the method blank displayed positive detections for several congeners. Positive associated equipment blank results less than five times the method blank concentrations were flagged "B,z".

The equipment blank displayed detections for several congeners that were flagged "K" by the laboratory. It was confirmed by the laboratory that these were estimated maximum possible concentrations (EMPCs). These results were previously flagged for method blank contamination except for congener 66. The ion abundance ratio was outside the EPA Region III criterion of +/- 25%, and this result was changed to a non-detect.

For the dioxin-furans analyses, the aqueous and soil method blanks displayed positive detections for several compounds. Positive associated field sample results less than five times the method blank concentrations were flagged "B,z". The equipment blanks also displayed positive detections for several compounds. The associated field sample results were greater than five times the equipment blank concentrations, and no data qualifying action was taken.

Several samples displayed detections reported by the laboratory as EMPCs. In cases where the EMPC displayed an ion abundance ratio outside the method criterion of a theoretical ratio +/- 15% but within the EPA Region III criterion of +/- 25%, the EMPC was qualified as "J,w". In cases where the EMPC displayed an ion abundance ratio greater than the EPA Region III criterion of +/- 25%, the EMPC was changed to a non-detect.

The OCDD result in sample 54SB27A exceeded the calibration range of the instrument and was flagged "E" by the laboratory. This result was flagged "J,q" by the reviewer.

Correctable Anomalies: The letter S in the sample IDs was reported as 5 by the laboratory. For example, sample 54SB27A was reported as 545B27A. These were manually corrected on the result forms by the reviewer.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Project Number: 11656351
Laboratory: SGS
SDG No.: 6296-348
Method No.: 1668A

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 2-3 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Recommended holding time in the Method is one year. If yes, J(+)/UJ(-). No holding time or preservation requirements are promulgated by EPA for non-water matrices), use professional judgement.		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓		

Notes: *If there are no field blanks, the narrative should include acaution to the user that field blanks were not available for review and any contamination due to field conditions or cross contamination could not be assessed.*

MB displayed Pos. results, B,Z. Yes < Ex.

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/ ± 20% for analytes analyzed by isotope dilution or +/- 35% for analytes analyzed by internal std method? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
~~7~~	~~M+2/M+4~~	1.05	0.89 1.21
~~8~~	~~M+2/M+4~~	0.89	0.76 1.02
~~9~~	~~M+2/M+4~~	~~0.77~~	~~0.65~~ ~~0.89~~
~~10~~	~~M+2/M+4~~	~~0.69~~	~~0.59~~ ~~0.79~~

Notes:

5.0 GC/MS Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start ~~of a 12 hour~~ and end of each analytical sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 330.9792? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Are all IPR, OPR and VER standards within the method QC limits? Results for analytes that do not meet either IPR or OPR requirements should be flagged "J"/"UJ". If analyte is not recovered for an OPR sample, results must be flagged "R" for that analyte.	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?			
7.2	Was an LCS analyzed for each batch?			
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?			
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within the method QC limits?If no, apply J/UJ to associated targets.			
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 3 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥3 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.7	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC		Yes	No	NA
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			

Notes: Several EMPCs were reported. These were changed to NDs.

12.0 Data Completeness		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported: 0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

OPR/OPRD was performed.

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.	✓		
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

	545B58C	EDL	DUP-5		545B58C	DUP-5	RPD
1,2,3,6,7,8-HxCDD	0.15	0.5	ND OK✓	total HpCDDs	14.1	11.9	17% OK✓
1,2,3,7,8,9-HxCDD	0.282		0.255 OK				
1,2,3,4,6,7,8-HpCDD	4.89		4.09 RPD=18% OK✓				
OCDD	279		246 RPD=13% OK✓				
total P_2CDDs	0.165	0.5	ND OK✓				
total HxCDDs	3		2.15 RPD=33% OK✓				

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,	✓		
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.		✓	
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?	✓		
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

	For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.			
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			
11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes: for EMPC if ratio outside 15%. but within Region III 25% J JIW
ion abundance ratio >25% J changed to NDs ✓

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%			

Method 8290
Lab Method Blank

SGS

Case Narrative
SGS Project: **G296-348**
Project Name: **SWMU 54 RFI**

For Methods: 8290 & 1668A

- The submitted samples were accepted into the lab on January 11th, 2007 and extracted between January 22nd and January 26th, 2007 by methods 3540C and 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for methods 8290 and 1668A..

SGS

List of Qualifiers

B	Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.
EDL	"Estimated Detection Limit"
EMPC	"Estimated Maximum Possible Concentration"
ppt	Parts-per-trillion (pg/g; ng/L)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.
#	Outside quality control limits
*	See case narrative

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A	Amount detected is less than the Lower Calibration Limit.
J	Amount detected is between the Method Detection Limit and the Lower Calibration Limit.
E	Amount detected is greater than the Upper Calibration Limit.
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).
Q	Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).
DPE	Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

Chain of Custody Seal: (Circle)
INTACT BROKEN ABSENT

Requested Turnaround Time and Special Instructions:

7

White - Retained by Lab
Yellow - Returned with Report
Pink - Retained by Sampler

Sample Receipt Checklist (SRC)

SGS Environmetal Services Inc.

Client: **URS** Lab Proj. ID: **G296-348**

Client Proj. ID: **SWMU 54 RFI**

1. X Shipped — Notes:
   __ Hand Delivered

2. __ Proper, full, and complete documentation — Notes:
   (unique sample identification on durable label with indelible ink, location of collection, date/time of collection, collector's name, preservation type, sample type (method/matrix))
   X Acceptable documentation (but, incomplete)
   __ Unacceptable documentation

3. X Custody Tape on Container — Notes:
   __ No Custody Tape

4. X Samples Intact* — Notes:
   (are in appropriate container, are not damaged, and do not show signs of contamination)
   __ Samples Broken / Leaking
   __ VOA Vials Checked for Air Bubbles

5. X Chilled on Receipt* Actual Temp.(s) in °C: 1.9 — Notes:
   __ Ambient on Receipt
   __ Walk-in on Ice; Coming down to temp.
   __ Received out of temperature protocol

6. X Sufficient Sample Submitted — Notes:
   __ Insufficient Sample Submitted

7. X Samples Preserved Correctly* — Notes:
   (see preservative checklist where applicable)
   __ Improper Preservative(s)
   __ None recommended (N/A)

8. X Received Within Holding Time — Notes:
   __ Not Received Within Holding Time
   __ N/A

9. X No Discrepancies Noted — Notes:
   __ Discrepancies Noted

Comments:

* = Rejection of sample is required when not marked; Contact client services immediately for a resolution.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-349 **Fraction:** PCB Congeners & Dioxin/Furans

Lab: Paradigm Analytical **Project Name** Radford SWMU 54

Reviewer: RA **Date:** March 1, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the PCB-Congeners analyses, the method blank displayed positive detections for several congeners. Positive associated field sample results less than five times the method blank concentrations were flagged "B,z".

Sample 54SB57A displayed ion ratios for 13C-19-TrCB, 13C-208-NoCB, and 13C-209-DeCB that were outside the method control limits but within the Region III expanded control limits of +/- 25%. No data qualifying action was taken.

Sample 54SB57A displayed detections for several congeners that were flagged "K" by the laboratory. It was confirmed by the laboratory that these were estimated maximum possible concentrations (EMPCs). In cases where the ion abundance ratio was outside the EPA Region III criterion of +/- 25%, the results were changed to a non-detect, except where previously flagged for method blank contamination.

For the dioxin-furans analyses, the aqueous and soil method blanks displayed positive detections for several compounds. Positive associated field sample results less than ten times the method blank concentration for OCDD and less than five times the method blank concentrations for the other compounds were flagged "B,z". The equipment blank, EQBK-4 also displayed positive detections for several compounds. The associated field sample results were greater than five times the equipment blank concentrations, and no data qualifying action was necessary.

Several samples displayed detections reported by the laboratory as EMPCs. In cases where the EMPC displayed an ion abundance ratio outside the method criterion of a theoretical ratio +/- 15% but within the EPA Region III criterion of +/- 25%, the EMPC was qualified as "J,w". In cases where the EMPC displayed an ion abundance ratio

greater than the EPA Region III criterion of +/- 25%, the EMPC was changed to a non-detect.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed. It should be noted that detection limits were raised for the PCB-Congeners analyses of sample 54SB57A due to dilutions.

List of Qualifiers

B Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.

EDL "Estimated Detection Limit"

EMPC "Estimated Maximum Possible Concentration"

ppt Parts-per-trillion (pg/g; ng/L)

V Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

Outside quality control limits

* See case narrative

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A Amount detected is less than the Lower Calibration Limit.

J Amount detected is between the Method Detection Limit and the Lower Calibration Limit.

E Amount detected is greater than the Upper Calibration Limit.

S The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).

Q Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).

I Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).

DPE Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

Review Document:
__X__ SW-846 __X__ Project QAPP/SAP __X__ NFG Region III Draft Guidance (April 2004)

Project Name: Radford s wmu5
Project Number: 11656351
Laboratory: SGS
SDG No.: G296-349
Method No.: 1668A

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 2-3 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Recommended holding time in the Method is one year. If yes, J(+)/UJ(-). No holding time or preservation requirements are promulgated by EPA for non-water matrices), use professional judgement.		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓	✓	

Notes: *If there are no field blanks, the narrative should include acaution to the user that field blanks were not available for review and any contamination due to field conditions or cross contamination could not be assessed.*

The MB → several positive hits POS results <5x → B,Z

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/ ± 20% for analytes analyzed by isotope dilution or +/- 35% for analytes analyzed by internal std method? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
7	~~M+2/M+4~~	1.05	0.89 1.21
8	~~M+2/M+4~~	0.89	0.76 1.02
9	~~M+2/M+4~~	~~0.77~~	~~0.65 0.89~~
~~10~~	~~M+2/M+4~~	~~0.69~~	~~0.59 0.79~~

Notes:

5.0 GC/MS Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start ~~of a 12 hour~~ and end of each analytical sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 330.9792? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Are all IPR, OPR and VER standards within the method QC limits? Results for analytes that do not meet either IPR or OPR requirements should be flagged "J"/"UJ". If analyte is not recovered for an OPR sample, results must be flagged "R" for that analyte.	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

See below

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

OPR/OPRD OK ✓

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards

		Yes	No	NA
8.1	Are internal standard recoveries for all samples within the method QC limits?If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		

Notes: The recovery of extraction std 13C-19-TrCB 19.9% <30-140% in OPR. No action, this is a QC sample.

Sample 545B57A had ion ratios for 13C-19-TrCB, 13C-208-NoCB and 13C-209-DeCB outside the method QC limits. But they were within the Region III expanded limit of +/- 25%, No action required. ✓

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 3 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥3 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.7	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.	✓		

Notes:

DLs raised due to DF of 5.

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			

Notes: "K" flagged by lab are EMPCs. Where the ratio was outside +/- 25%) changed to NDs unless prev. flagged for MB.

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported: 0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

Review Document:
__X__ SW-846 __X__ Project QAPP/SAP __X__ NFG EPA 540-R-02-003 (August 2002) __X__ NFG Region III Draft Guidance (March 1999)

Project Name: SWMU 54
Project Number: 11605635.1
Laboratory: SGS
SDG No.: G2a6-349
Method No.: 8290

1.0 General: Chain-of-Custody

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times

		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓		

Notes: Aqueous and Soil MB pos hits ⇒ <5X, and <10X for OCDD B/Z
EQBK-4 pos. hits. and. field sample results either >5X or were previously flagged for MB. No more action.

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits	
4	M/M+2	0.77	0.65- 0.89	
5	M+2/M+4	1.55	1.32- 1.78	
6	M+2/M+2	1.24	1.05- 1.43	
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	
~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end ~~of every 12 hours~~ of each analytical sequence with no time limit, as per STL SOP? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start ~~of a 12 hour~~ and end of each analytical sequence with no time limit, as per STL SOP? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

OPR/OPRD was done ✓

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.	✓		
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

	545B38C		Dup-6	% RPD
1,2,3,7,8,9-HxCDD	0.106	Pg/g	0.146	0K Pg/g
1,2,3,4,6,7,8-HpCDD	3.18		3.69	15% OK
OCDD	214		271	23%
OCDF	ND	EDL=0.93	0.481	OK
total H_x CDD	1.24		1.34	8% OK
total HpCDDs	9.93		11.2	12% OK

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,	✓		
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.	✓		
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?	✓		
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.

For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.

For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).

11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes: EMPC within Region III expanded → J/UJ
outside changed to NDs

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis: 18			
12.1.3	Number of results rejected and not reported: 0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%			

Method 8290

SGS

Case Narrative
SGS Project: **G296-349**
Project Name: **SWMU 54 RFI**

For Methods: 8290 & 1668A

- The submitted samples were accepted into the lab on January 12th, 2007 and extracted between January 16th and January 26th, 2007 by methods 3540C and 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for methods 8290 and 1668A.
- Sample **54SB57A** (PCB) required a 5X dilution in order to improve the quality of the data for many of the target analytes due to interferences. The dilution factor is notated on the form 1's.
- Samples **54SB57A** (PCB) has an ion ratio for ^{13}C-19-TrCB which is outside of the QC limits established by the method. This is most likely attributed to the lower signal-to-noise ratios caused by the sample dilution.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-350 **Fraction:** Dioxin/Furans

Lab: Paradigm Analytical **Project Name** Radford SWMU 54

Reviewer: RA **Date:** February 19, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The aqueous method blank displayed positive detections for 1,2,3,7,8-PeCDD at 0.00102 ng/L, 1,2,3,4,6,7,8-HpCDD at 0.0037 ng/L, OCDD at 0.048 ng/L, 1,2,3,7,8-PeCDF at 0.00094 ng/L, 1,2,3,6,7,8-HxCDF at 0.0012 ng/L, total PeCDDs at 0.00102 ng/L, total HpCDDs at 0.0037 ng/L, total PeCDFs at 0.00094 ng/L, and total HxCDFs at 0.0012 ng/L. The associated equipment blank result for OCDD was less than ten times the method blank concentration and was flagged "B,z". The associated equipment blank results less than five times the method blank concentration for the other affected compounds were also flagged "B,z".

The soil method blank displayed positive detections for 1,2,3,4,6,7,8-HpCDD at 0.384 pg/g, OCDD at 2.89 pg/g, 2,3,7,8-TCDF at 0.358 pg/g, 1,2,3,7,8-PeCDF at 0.110 pg/g, 2,3,4,7,8-PeCDF at 0.102 pg/g, total HpCDDs at 0.384 pg/g, total TCDFs at 0.564 pg/g, and total PeCDFs at 0.212 pg/g. Positive associated field sample results for OCDD were greater than ten times the method blank concentration and no data qualifying action was necessary. Positive associated field sample results less than five times the method blank concentration for the other affected compounds were flagged "B,z".

The matrix spike analyzed for sample 54SB82B displayed a percent recovery greater than the upper control limit of 125% for OCDD at 134%. This matrix spike pair also displayed a relative percent difference greater than the control limit of 20% for OCDD at 21.4%. The associated parent sample results was positive and was flagged "J,m".

Several samples displayed detections reported by the laboratory as estimated maximum possible concentrations (EMPCs). In cases where the EMPC displayed an ion abundance ratio outside the method criterion of a theoretical ratio +/- 15% but within the EPA Region III criterion of +/- 25%, the EMPC was qualified as "J,w". In cases where the EMPC displayed an ion abundance ratio greater than the EPA Region III criterion of +/- 25%, the EMPC was changed to a non-detect.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed. It should be noted that detection limits were raised in several samples due to dilutions.

Signed: Rajan

DATA VALIDATION WORKSHEET

Dioxins and Furans Analysis

Reviewer: RA
Date: 2/14/07
DV Level: II (III) IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002)
X NFG Region III Draft Guidance (March 1999)

Project Name: SWMU54
Project Number: 11054351
Laboratory: SGS
SDG No.: G296-350
Method No.: 8290

1.0 General: Chain-of-Custody

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times

		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓		

Notes: MBs displayed pos. detections. <10x for OCDD and <5x for others → B/Z
EQBK-6 also displayed pos for OCDD, 1,2,3,7,8-PeCDF which were prev. flagged B/Z and 2,3,4,7,8-PeCDF

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL > 2.5:1 ; CCC >10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits	
4	M/M+2	0.77	0.65- 0.89	
5	M+2/M+4	1.55	1.32- 1.78	
6	M+2/M+2	1.24	1.05- 1.43	
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	
~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?	✓		
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

The MS for 545B82B %R>125 for OCDD at 134%. and RPD 720%. at 21.4%.

Parent POS → J, UJ

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards

		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.	✓		
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

OCDD	364	405	11%				

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.	✓		
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect, U(+).	✓		
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.	✓		
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?	✓		
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

	For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.			
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			
11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes: EMPCs were reported by the lab:
According to Region III, whose ion ratios >25% → ~~NJ~~ Changed to NDs
" " " <25% → outside Method QC but within expanded → J, W

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100			

Method 8290

Case Narrative
SGS Project: **G296-350**
Project Name: **SWMU 54 RFI**

For Methods: 8290

- The submitted samples were accepted into the lab on January 12th, 2007 and extracted on January 22nd and January 29th, 2007 by methods 3540C and 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for method 8290.

SGS

List of Qualifiers

B	Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.
EDL	"Estimated Detection Limit"
EMPC	"Estimated Maximum Possible Concentration"
ppt	Parts-per-trillion (pg/g; ng/L)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.
#	Outside quality control limits
*	See case narrative

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A	Amount detected is less than the Lower Calibration Limit.
J	Amount detected is between the Method Detection Limit and the Lower Calibration Limit.
E	Amount detected is greater than the Upper Calibration Limit.
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).
Q	Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).
DPE	Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-389 **Fraction:** Dioxin/Furans

Lab: Paradigm Analytical **Project Name** Radford SWMU 54

Reviewer: RA **Date:** July 2, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The method blank displayed positive detections for 1,2,3,4,7,8-HxCDF at 0.00332 ng/L, 1,2,3,4,6,7,8-HpCDF at 0.0130 ng/L, and OCDF at 0.0262 ng/L. The positive associated equipment blank result less than ten times the method blank concentration for OCDF and less than five times the method blank concentrations for the other compounds were flagged "B,z". The equipment blank, Eq Blank also displayed positive detections for several compounds. The associated field sample results were non-detects, and no further data qualifying action was necessary.

The equipment blank displayed detections reported by the laboratory as estimated maximum possible concentrations (EMPCs). In both cases the EMPC displayed an ion abundance ratio within the EPA Region III criterion of +/- 25%, and was qualified as "J,w".

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET
Dioxins and Furans Analysis

Reviewer: RA
Date: 7/23/07
DV Level: II (III) IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002) X NFG Region III Draft Guidance (March 1999)

Project Name: SWMU54
Project Number: [redacted]1165435
Laboratory: SGS
SDG No.: G296-359
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B". (use 10X for OCDD/OCDF data) TEQ values should not be calculated for isomers flagged B.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	✓		

Notes: MB several positive hits, see attached 25X for HxCDF, HpCDF and <10X for OCDF B/Z in EB.

EB also several positive hits. All samples were NDs, no more action.

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-"; by greater than 50%, "J+/R-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "N+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits	
4	M/M+2	0.77	0.65- 0.89	
5	M+2/M+4	1.55	1.32- 1.78	
6	M+2/M+2	1.24	1.05- 1.43	
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	
~~7~~	~~M+2/M+4~~	~~1.04~~	~~0.88- 1.20~~	N/A for APPIX
~~8~~	~~M+2~~	~~0.89~~	~~0.76- 1.02~~	N/A for APPIX

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed at the same frequency as calibrations that defines descriptor switching times of scan ranges? If not, make a note in DV Report.	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

OPR/OPRD was analyzed ✓

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards

		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		
8.3	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.	✓		
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

54MW-4 and DUP-1

Both NDs ✓

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.	✓		
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.			✓
10.4	Is the signal to noise ≥ 2.5 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥ 2.5 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Are the two identification peak apexs within 2 seconds for positive identifications? If not, result is reported as non-detect,	✓		
10.7	Are polychlorinated diphenyl ether (PCDPE) interferences in the PCDPE channel with a S/N ratio > 2.5 and with a RT within ± 2 seconds? If yes, qualify positive furan results I.		✓	
10.8	Was a second column confirmation used for positive 2,3,7,8-TCDF?	✓		
	If no, apply "R" to the positive 2,3,7,8-TCDF results.			
	If yes, calculate the %D between the two column results, report the lower of the two values if the %D is > 25% and qualify J.			
10.9	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.10	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
11.1	Are Isotopic ratios for a detected analyte within the following established control limits...?	✓		

# Cl ion atoms	Ion Type	Theoretical	Control Limits	RIII Expanded Limits
4	M/M+2	0.77	0.65- 0.89	0.58- 0.96
5	M+2/M+4	1.55	1.32- 1.78	1.16- 1.94
6	M+2/M+2	1.24	1.05- 1.43	0.93- 1.55
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59	0.38- 0.64
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51	0.33- 0.55
7	M+2/M+4	1.04	0.88- 1.2	0.78- 1.30
8	M+2	0.89	0.76- 1.02	0.67- 1.11

	For positive field sample results with ion abundance ratios outside the method control limits but within the expanded RIII limits, The laboratory should report the concentration as an estimated maximum possible concentration (EMPC). Region III requires this type of result to be reported as true PCDD/PCDF isomer. The validator shall also qualify J.			
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			
11.2	RIII separates 2,3,7,8-chlorinated isomers from total isomers for each congener group and reports results as 2,3,7,8-chlorine substituted and 'Other Total' PCDD/PCDF isomers. If laboratory did not report these separate, make a note in the DV report.	✓		

Notes: EB displayed 2 EMPCs.
1,2,3,4,7,8-H_xCDD true ion abundance ratio within both method criterion of +/- 15% and EPA RIII criterion of +/- 25%. ⇒ J (W).

2,3,4,6,7,8-H_xCDF ratio outside 15% but within EPA RIII 25%
⇒ J (W)

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%.

Case Narrative
SGS Project: **G296-389**
Project Name: **SWMU54 GW-Q3**

For Method: 8290

- The submitted samples were accepted into the lab on June 12th, 2007 and extracted on June 19th, 2007 by method 3520C. The sample extracts and associated QC extracts were then processed through clean-up by method 3630/3620 and analyzed by HRGC/HRMS for Method 8290.

List of Qualifiers: Dioxin's

B Analyte was detected in the Lab Method Blank at a level above the Reporting Limit.

EDL "Estimated Detection Limit"

EMPC "Estimated Maximum Possible Concentration"

ppt Parts-per-trillion (pg/g; ng/L)

V Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

Outside quality control limits

* Indicates that the ion-ratio fails high or low; analyte reported as an EMPC

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A Amount detected is less than the Lower Method Calibration Limit.

J Amount detected is between the Method Detection Limit and the Lower Calibration Limit.

E Amount detected is greater than the Upper Calibration Limit.

S The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).

Q Indicates the presence of a quantitative interference. This situation may result in an underestimation of the affected analyte(s).

I Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).

DPE Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s).

Data Qualifiers: PCB's

SGS

B	Analyte was detected in the Lab Method Blank (LMB) at a concentration greater than 20pg/L or 5 pg/g, and the concentration in the associated sample is less than 10 times the LMB concentration.
U	Identifies a compound as not being detected.
C	Data refers to the first of the co-eluting congeners.
Cx	Data is listed under the lowest numerical congener number in the group where 'x' references the lowest congener.
EDL	Estimated Detection Limit
T	Retention time shift.
ppt	Parts-per-trillion (pg/g; ng/L)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A	Amount detected is less than the Lower Calibration Limit.
J	Amount detected is between the Method Detection Limit and the Lower Calibration Limit.
K	Data is being reported with a failing ratio and should be considered as an estimated value.
E	Amount detected is greater than the Upper Calibration Limit.
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).
Q	Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).
#	Outside quality control limits
*	See case narrative

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination	n	Failed Signal to noise ratio
