DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

Project Name: Radford SWMU 54
SDG No.: B2810
Reviewer: AS
Project No.: 15291524.00000
Date: 4/2/2003

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note: Both coolers @ 2°C
Fld filtered and preserved

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: Sampled 3/3-4/03
digested 3/10/03 3/10/03 HG
analyzed 3/8/03 - ICP 3/11/03 HG

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R". #s -5 pts/Blk r 0.999992				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%? Hg 115%		✓				
	2xCRDL>[sample]>IDL <50% L(+)/R(-) 50%-89% L(+)/UL(-) >110% K						

Note: CRDL

aluminum	160.7	K (2W)
antimony	116.1	K
arsenic	79.5	L/UL
cadmium	111.2	K
cobalt	86.6	L/UL
Copper	58.2	L/UL
lead	119.7	K
nickel	117.4	K
potassium	114.5	K
Selenium	148.0	K
Sodium	78.0	L/UL
thallium	62.6%	L/UL

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?		✓			✓	
	Sample Results > MDL						
	< 5X Blank Contamination B		✓				
4.4	Are there negative blank results with the absolute value > MDL?		✓			✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L		✓				
4.5	Are there reported field blankor trip blank values > ± MDL?		✓			✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						

Soil copies

Note: GW-EB-1 Barium 0.46 µg/L; Calcium 42.3; Cobalt 0.77; Mg 76.7; Mn 0.49; Ni 1.9

GW-EB-2 Barium 0.42 µg/L; Ca 54.9; Co 0.62; Mg 73.8; Mn 0.65; ~~Fe~~ K 97.0

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning ~~and end~~ of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?		✓				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?	✓					
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	✓			✓		

Note: 54MW5 "D"

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		✓		✓		
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L				✓		
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is			✓			✓

Note: 54 MW5 MS / MSD
arsenic 73.1 / 73.2

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓			✓		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓					
10.2	Was a five-fold dilution performed?	✓					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).		✓				

Note: 54 MW5 "L"
sodium J, +

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	✓			✓		

Note: 54MW7 / DUP

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓		
12.2	Were all dilution reflected in the positive results and detection limits?			✓			✓

Note:

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples:						
13.1.2	Number of target compounds in each analysis:						
13.1.3	Number of results rejected and not reported:						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2)						
	% Completeness = 100 %

INORGANIC CASE SUMMARY NARRATIVE
SDG # B2810
PROTOCOL #SW-846

The indicated Sample Delivery Group (SDG) consisting of nine (9) dissolved water samples was received into the laboratory management system (LIMS) on March 4 and 5, 2003 intact and in good condition with Chains of Custody (COC) records in order. Sample ID's reported in this data package are noted by the receiving department on the COC if they differ from those listed by the samplers on the COC.

The samples were analyzed for dissolved TAL metals using analytical methods delineated in SW-846 (Third Edition)-Update III.

SAMPLE IDs:

Customer IDs and correlating laboratory IDs are listed on the cover page.

INSTRUMENTAL QUALITY CONTROL:

All calibration verification solutions (ICV & CCV), blanks (ICB, & CCB), and interference check samples (ICSA & ICSAB) associated with this data were confirmed to be within SW-846 allowable limits.

DISSOLVED SAMPLE QUALITY CONTROL:

The sample quality control verifications (LCSW & PBW) were found to be within acceptable ranges and all dissolved samples were analyzed within the contract specified holding times.

SAMPLE PREPARATION QUALITY CONTROL:

The mercury, sample preparation procedure verifications (LCSW & PBW) were found to be within acceptable ranges and all field samples were prepared and analyzed within the contract specified holding times.

MATRIX RELATED QUALITY CONTROL:

The sample matrix spike, CCN = WG23056-1 (54MW5S) and the sample matrix spike duplicate, CCN = WG23056-2 (54MW5SD) were found to be outside control limits for arsenic. The reported concentrations for this analyte are flagged with an "N" on all associated Form 1 and on Form 5a.

An "N" indicates a matrix-related interference in the sample preparation procedure &/or analysis for the flagged analyte. This is normally the consequence of a relatively high anionic content in the sample or (for some sediments) an inconsistent sample matrix relative to that analyte.

SW-846 control limits for matrix spike recoveries are set at 75% to 125% of the analyte quantity added unless original sample concentrations exceed the true values of these "spikes" by a factor of four or more. In this case, affected analytes are not flagged even if recoveries are outside percentage recovery control limits.

The sample matrix duplicate, CCN = WG23056-3 (54MW5D) was inside control limits for the requested analytes.

SW-846 control limits for duplicate determinations are +/- 20% Relative Percent Difference (RPD) for concentrations greater than or equal to five times the PQL in both the original and duplicate samples, and +/- the PQL for concentrations less than five times the PQL. The RPD is not calculated if both the original and duplicate values fall below the IDL.

A five-fold serial dilution of sample, CCN = B2810-8 (54MW5L) was performed in accordance with SW-846 requirements for ICP analysis.

The adjusted sample concentrations were outside control limits for sodium, which is flagged with an "E" on all associated Form 1, the Cover Page and Form 9.

An "E" indicates that a chemical or physical interference effect was encountered during the analysis of the flagged analyte. As a result of this interference, all values for the analyte in the same matrix must be considered to be estimated quantities.

SW-846 control limits for serial dilution are defined as a deviation less than or equal to 10% in the dilution-adjusted concentrations from the original values for all analyte concentrations with values greater than fifty (50) times their respective Instrument Detection Limit (IDL) in the original sample.

The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

Thomas R. Cole

DATA REPORTING QUALIFIERS FOR INORGANICS

On Form I, under the column labeled "C" for concentration qualifier and "Q" for qualifier, each result is flagged with the specific data reporting qualifiers listed below, as appropriate. Up to five qualifiers may be reported on Form I for each analyte.

The C (concentration) qualifiers used are:

U: This flag indicates the analyte was analyzed for but not detected. This reported value was obtained from a reading that was less than the Instrument Detection Limit (IDL). The IDL will be adjusted to reflect any dilution and, for soils, the percent moisture.

B: This flag indicates the analyte was analyzed for and the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL).

The Q qualifiers used are:

E: This flag indicates an estimated value. This flag is used:

1. When the serial dilution (a five fold dilution for CLP and a five fold dilution for SW-846 method 6010B) results are not within 10%. The analyte concentration must be sufficiently high (minimally a factor of 50X above the IDL in the original sample).

N: This flag indicates the sample spike recovery is outside of control limits.

***:** This flag is used for duplicate analysis when the sample and the sample duplicate results are not within control limits.

The extensions: D, S, SD, L. A, added to the end of the client ID represent as follows:

D:	matrix duplicate
S:	matrix spike
SD:	matrix spike duplicate
L:	serial dilution
A:	post digestion spike

Method Codes:

P:	ICP PLASMA
CV:	MERCURY COLD VAPOR AA
CA:	MIDI-DISTILLATION SPECTROPHOTOMETRIC

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: ____Q2810_____ **Fraction:_SVOCs, PAH, Explosives,Nitroglycerin, Metals**

Lab: _CompuChem_____ **Project Name: __Radford SWMU 54_____**

Reviewer: _____RA, AJ_____ **Date: _____March 7, 2003_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the SVOC analyses, the continuing calibrations analyzed on 12/11/02 and 12/12/02 displayed %Ds greater than the QC limit (i.e., 20%) with a negative bias for atrazine at 57.81% and 60.06%, respectively. All associated sample results were non-detects and were flagged "R,c."

For the explosive analyses, the LCS recoveries for 1,3,5-trinitrobenzne (49%) and nitrobenzene (45%) were less than the lower QC limit (i.e., 50%). All associated sample results were non-detects and were flagged "R,l." The percent completeness was less than the QC limit (i.e., 90%) at 86% due to this anomaly.

For the PAH analyses, the LCS recoveries for naphthalene (25%), acenaphthene (18%) and fluorene (48%) were less than the lower QC limit (i.e., 50%). Positive results were flagged "J,l" and non-detects and were flagged "R,l." The percent completeness was less than the QC limit (i.e., 90%) at 85% due to this anomaly.

Minor Anomalies: For the SVOC analyses, the initial calibration analyzed on 11/25/02 displayed %RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 18.8%, 2,4-dimethylphenol at 17.4%, hexachlorocyclopentadiene at 17.6%, n-nitrosodiphenylamine at 15.8%, 4-chlorophenyl-phenylether at 18.7%, and atrazine at 69.7%. All associated sample results were non-detects and the only failures that were serious enough (i.e., >50%) to affect the non-detects were for atrazine. Atrazine non-detects were flagged "UJ,r" in the associated samples unless previously flagged due to continuing calibration failure.

The CCV analyzed on 12/11/02 at 1504 displayed %Ds greater than the control limit (i.e., 20%) with a negative bias for 2-methylnaphthalene at 24.08%, hexachlorocyclopentadiene at 29.97%, 4-nitrophenol at 22.97%, dibenzofuran at 20.34%, and 4-chlorophenyl-phenylether at 26.57%. The CCV analyzed on

12/12/02 at 1355 displayed %Ds greater than the control limit with a negative bias for 2-methylnaphthalene at 23.81% and with a positive bias for acenaphthylene at 23%. The CCV analyzed on 12/13/02 at 0915 displayed %Ds greater than the control limit with a negative bias for at atrazine at 41.09% and with a positive bias for dimethylphthalate at 20.01%, 3-nitroaniline at 34.23%, diethylphthalate at 22.32%, 4-nitroaniline at 26.67%, and benzo(b)fluoranthene at 22.87%. Non-detects were flagged "UJ,c" for the failures associated with negative biases unless previously flagged due to other anomalies. No positive results were reported for failures associated with positive biases and no data qualifying action was required.

The method blanks contained fluoranthene at 27 ug/Kg and bis(2-ethylhexyl)phthalate at 35 ug/Kg. Positive results were flagged "B,z" in the associated samples. Equipment blank EQB-11 contained bis(2-ethylhexyl)phthalate at 10 ug/L. Positive results were previously flagged due to method blank contamination and no further data qualifying action was required.

The MS/MSD recoveries for 4-nitroaniline (110%/120%) were greater than the upper QC limits. The MSD and %RPD for dibenzofuran (120%/38%) and the %RPDs for 2-methylnaphthalene (38%) and fluorene (35%) were greater than the upper QC limits. No positive results were reported in the parent sample 54SB23B and no data qualifying action was required.

The LCS recoveries for 3-nitoaniline (118%) and 4-nitroaniline (121%) were greater than the upper QC limit. No positive results were reported for these compounds and no data qualifying action was required.

For the PAH analyses, the method blanks contained acenaphthene at 240 ug/Kg, fluoranthene at 6.2 ug/Kg and 8.2 ug/Kg, benzo(b)fluoranthene at 8.7 ug/Kg, dibenzo(a,h)anthracene at 5.8 ug/Kg, benzo(g,h,i)perylene at 6.2 ug/Kg, benzo(a)pyrene at 4.5 ug/Kg, and indeno(1,2,3-cd)pyrene at 8.4 ug/Kg. Positive results less than 5 times the blank concentration were flagged "B,z" in the associated samples.

The recoveries for surrogate p-terphenyl (41%/38%) in sample 54SB24B were less than the lower QC limit. Positive results were flagged "L,s" and non-detects were flagged "UL,s", unless previously flagged due to other anomalies.

The MS/MSD recoveries for naphthalene (25%/44%) and acenaphthene (-51%/-25%) and the MSD recovery for acenaphthylene (-2%) were less than the lower QC limits. All associated results were positive in the parent sample 54SB23B and were flagged "J,m" unless previously flagged due to other anomalies. The %RPDs for all compounds except naphthalene were greater than the QC limit. Positive results were previously flagged in the parent sample 54SB23B and no further data qualifying action was required.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

Fluoranthene exceeded the calibration range in sample 54SB20B and was flagged "E" by the laboratory. This result was previously flagged "J,g" and no further data qualifying action was required. This sample was not reanalyzed at a dilution since the lower result between the two columns was originally reported by the laboratory. Subsequently, upon URS request, the laboratory re-evaluated and re-submitted these results based on the SW-846 requirement of reporting the higher concentration.

For the explosives analyses, the continuing calibration analyzed on 12/15/02 at 1408 displayed a %D greater than the QC limit (i.e., 15%) with a negative bias for tetryl at 28.34% on the initial column. The continuing calibration analyzed on 12/16/02 at 0845 displayed a %D greater than the QC limit with a negative bias for tetryl at 29.8%. Non-detects were flagged "UJ,c" in the associated samples. The continuing calibration analyzed on 12/25/02 at 0813 displayed a %D greater than the QC limit with a negative bias for RDX at 17.48%. No data qualifying action was required since the associated results were non-detects and the %D was acceptable on the other column.

The MSD recovery for 2,4,6-trinitrotoluene (250%) was greater than the upper QC limit. No data qualifying action was required since the sample concentration was greater than 4 times the spiking amount. The RPDs for 1,3,5-trinitrobenzene (42%), 2,4,6-trinitrotoluene (42%), and 4-nitrotoluene (34%) were greater than the QC limit. Positive results were flagged "J,d" in the associated samples.

For the metal analyses, the initial CRDL percent recoveries for cadmium (116%), chromium (84.4%), copper (69%), and sodium (78%) were outside the control limit (i.e., 90-110%). No positive results were reported for cadmium and no data qualifying action was required. Positive results less than 2xCRDL were flagged "L,w" for sodium in the associated samples. All associated sample results were greater than 2xCRDL for chromium and copper and no data qualifying action was required.

The method blank contained barium at 0.043 mg/Kg, magnesium at 6.681 mg/Kg, potassium at 12.809 mg/Kg, and zinc at 0.181 mg/Kg. All associated sample results were greater than 5 times the blank concentration and no data qualifying action was required.

The initial and continuing calibration blanks also contained positive results for barium, magnesium, beryllium, calcium, iron, manganese, potassium and zinc.

All associated sample results were greater than 5 times the blank concentration and no data qualifying action was required.

Equipment blank EQB-10 located in SDG R2810 contained chromium at 0.77 ug/L and sodium at 253 ug/L. All associated sample results were greater than 5 times the blank concentration and no data qualifying action was required.

The RPD for the laboratory duplicate analysis was greater than the QC limit (i.e., 35%) for lead at 44.3%. Positive results were flagged "J,k."

The MS and/or MSD recoveries analyzed on sample 54SB23B were outside the QC limit for antimony (31.9%/32.2%), cadmium (74.1%), lead (159.2%/135.1%), selenium (69%) and thallium (59.5%/61.7%). Positive lead results were previously flagged due to laboratory duplicate anomalies and no further data qualifying action was required. Positive results were flagged "L,m" and non-detects were flagged "UL,m" for the other analytes unless previously flagged due to other anomalies.

The %Ds for the serial dilution analysis were greater than the QC limit (i.e., 10%) for barium (11.2%), calcium (14.2%), iron (13%), magnesium (13.8%), manganese (12.7%), potassium (17.8%) and zinc (17.4%). Positive results were flagged "J,s", unless previously flagged due to other anomalies.

The RPD for copper was greater than the QC limit (i.e., 35%) for the field duplicate pair D-10/54SB21B at 73%. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

Correctable Anomalies: None.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were raised.

Positive TIC results were flagged "NJ,t" in the associated samples. It should be noted that if a given fraction (analysis) is not discussed in this report, it indicates that no anomalies were observed for that fraction. Except for data flagged "R", all data, as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Ranjan

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 2/24/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: Q2810
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

Collect	Extract	Analyzed
12/2/02	12/4/02	12/11/02 J 12/12/02
12/3/02	12/8/02	12/14/02 J 12/13/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes: MB extract 12/9/02 bis(2-ethyl---) 35 ug/kg 10x → B/E
" " 12/14/02 ——— fluoranthene 27 ug/kg <5x B/E

EQB-11 in R2510 bis(2-ethyl at 10 ug/L flag sec. in narr. due to MB.

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: see attached
atrazine ND → R/C in all samples

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery						Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?					✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?					✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?							✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.							
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)							✓
		1 or more <10%	2 or 3 high/low	2 or 3 all low	2 or 3 all high			
	Positives	L	J	L	K			
	Non-detects	R	UJ	UL	NONE			
	Note: The B qualifier remains over surrogate flagging.							

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 4-nitroaniline (MS) 110 > 16-106 (MSD) 120% > QC
see attached
No det. in parent 545523B, no action

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: 3-nitroaniline 118 > 11-105
4-nitroaniline 121 > 10-113 No det, no flag

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 545B21B and D-10 | 545B26B and D-7

bis(2-ethylhexyl) 95 RL=400 55 ok ✓ | are ND | Bis(2-ethylhexyl) 43 B, Z ok ✓

Phf-

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively identified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	✓		

Notes:

TIC → NJ, ✓

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 20			
12.1.2	Number of target compounds in each analysis: 65			
12.1.3	Number of results rejected and not reported: 17			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 98%

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids			
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes: Collected 12/2/02 — Extracted 12/9/02 — Analyzed 12/5/02, 12/8/02, 12/13/02 — 12/16/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		

3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes: EQB-10, EQB-11 in R2510 both NDs ✓

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		

6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.

1,3,5-trinitrobenzene, 2,4,6-TNT, 4-Nitrotoluene RPD 2QC.
Pos. QC

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes: 1,3,5-TNB 4% LCSC
Nitrobenzene 4% LCSC acting as BLS

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 2,4,6-TNB Conc. Low
acting as MS acting as MSD
D.C. Conc. Close to LCSD
acting as

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		✓	
10.1.1	Number of samples: 22			
10.1.3	Number of results rejected and not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness =

DATA VALIDATION WORKSHEET

Nitroglycerin

Reviewer: AJ
Date: 02/05/03
DV Level: II III IV

Review Document:

_X_ Region III Modified for National Functional Guidelines
___ NFG for organic Data review (February 1994)
___ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: Q2810
Test Name: Nitroglycerin
Method No.: 8332-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: COC ID'S: 1032, 1091

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: cooler temps 3.0°C, 2.0°C

sampled 12/02/02, 12/03/02
extracted 12/09/02
analysis 12/19/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes: No field/equipment blanks in this package. ✓ in R2§10 of DV

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).	X		
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits? 68, 79		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits? 15		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD on sample 545B36

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits? 94		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: No LCSD

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.	X		

Notes: D-7 = 545B26B All results ND
D-10 = 545B21B

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			
	% Completeness = 100%

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: G2810
Project No.: 15291524.00000

Project Name: Radford SWMU 54
Reviewer: RA
Date: 2/20/03

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{O}C \pm 2\ ^{O}C$)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes, % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: collect 12/23/02 analyzed 12/11/02 Hg
12/11/12/02 ICP

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%?		✓				
	<50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K						

Note:

Mn, K, Zn all 75X, no flags

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.		✓		✓		

Note: lead 44.3% → J,K

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		✓		✓		
	%R > 125% / 30%< %R < 74% / < 30% Positive: K / L / L Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	✓					✓

Note: antimony 31.9 / 32.2 L Se 69%. L / UL / NA

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: _____R2810_____ **Fraction:_SVOCs, Pest., PCBs, PAH, Explosives, Nitroglycerin, Metals**

Lab: _CompuChem_____ **Project Name: __Radford SWMU 54_____**

Reviewer: _____RA, AJ_____ **Date: _____March 7, 2003_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the SVOC analyses, the continuing calibrations analyzed on 12/10/02, 12/13/02, and 12/15/02 displayed %Ds greater than the QC limit (i.e., 20%) with a negative bias for atrazine at 67.66%, 53.45%, and 70.48%, respectively. All associated sample results were non-detect and were flagged "R,c." The LCS recoveries for 2-methylphenol (35%) and 2,4-dimethylphenol (6%) were less than the lower QC limit. All associated sample results were non-detect and were flagged "R,l."

For the explosive analyses, the LCS recoveries for 1,3,5-trinitrobenzene (48%) and RDX (48%) were less than the lower QC limit (i.e., 50%) for the LCS extracted on 12/10/02. The LCS recoveries were less than the lower QC limit for all compounds for the LCS extracted on 12/13/02. All associated sample results were non-detect and were flagged "R,l." The percent completeness was less than the QC limit (i.e., 90%) at 51% due to this anomaly.

Minor Anomalies: For the SVOC analyses, the initial calibration analyzed on 11/25/02 displayed RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 18.8%, 2,4-dimethylphenol at 17.4%, hexachlorocyclopentadiene at 17.6%, n-nitrosodiphenylamine at 15.8%, and atrazine at 69.7%. All associated sample results were non-detects and the only failure that was serious enough (i.e., >50%) to affect the non-detects was for atrazine. Atrazine non-detects were previously flagged "R,c" in the associated samples. No further data qualifying action was required.

The CCV analyzed on 12/10/02 at 2245 displayed %Ds greater than the control limit (i.e., 20%) with a negative bias for 2,4-dimethylphenol at 22.97%, caprolactam at 20.89%, and 2-methylnaphthalene at 25.4% and with a positive bias for 2-chloronaphthalene at 21.47%, acenaphthylene at 29.45%, and 2,4-

dinitrophenol at 22.84%. The CCV analyzed on 12/13/02 at 2150 displayed %Ds greater than the control limit with a positive bias for 1,1-biphenyl at 20.66% and with a negative bias for hexachlorocyclopentadiene at 27.48%. The CCV analyzed on 12/15/02 at 1121 displayed %Ds greater than the control limit control limit with a positive bias for bis(2-chloroethoxy)methane at 24.54%, dimethylphthalate at 23.07%, 3-nitroaniline at 50.08%, diethylphthalate at 34.04%, and 4-nitroaniline at 27.16%. Non-detects were flagged "UJ,c" for the failures associated with negative biases unless previously flagged due to other anomalies. No positive results were reported for the failures associated with positive biases and no data qualifying action was required.

The LCS recoveries for acenaphthene (106%), 3-nitroaniline (109%/108%), acenaphthylene (107%), dibenzofuran (112%), diethylphthalate (104%), 4-nitroaniline (120%), benzo(k)fluoranthene (112%), and indeno(1,2,3-cd)pyrene (111%) were greater than the upper QC limit. No positive results were reported for these compounds and no data qualifying action was required.

For the pesticides analyses, the CCV analyzed on 12/11/02 at 1824 displayed a %D greater than the control limit (i.e., 15%) with a negative bias for 4,4-DDT at 16.27%. The CCV analyzed on 12/11/02 at 1855 displayed a %D greater than the control limit with a negative bias for 4,4-DDT at 16.27%. The CCV analyzed on 12/11/02 at 1926 displayed %Ds greater than the control limit with a negative bias for 4,4-DDT at 16.27% and methoxychlor at 15.54%. All associated sample results were non-detects and no data qualifying action was required since the %Ds were acceptable on the alternate column.

The LCS recoveries were greater than the upper QC limit for 4,4-DDT at 190%, endosulfan I at 390%, and 4,4-DDD at 170%. All associated sample results were non-detects and no data qualifying action was required.

For the PAH analyses, the CCV analyzed on 12/19/02 at 0701 displayed a %D greater than the control limit (i.e., 15%) with a negative bias for pyrene at 16.23%. The CCV analyzed on 12/19/02 at 1315 displayed a %D greater than the control limit with a negative bias for pyrene at 16.23%. The CCV analyzed on 12/20/02 at 1422 displayed a %D greater than the control limit with a negative bias for pyrene at 15.88%. All associated sample results were non-detects and no data qualifying action was required since the %Ds were acceptable on the alternate column.

For the explosives analyses, the continuing calibration analyzed on 12/14/02 at 2057 displayed a %D greater than the QC limit (i.e., 15%) with a positive bias for 2,4,6-trinitrotoluene at 19%. The continuing calibration analyzed on 12/20/02 at 1954 displayed a %Ds greater than the QC limit with a positive bias for HMX at 27.89%. All associated sample results were non-detects and no data qualifying

action was required. The continuing calibration analyzed on 12/15/02 at 1408 displayed a %D greater than the QC limit with a negative bias for tetryl at 28.34%. All associated sample results were non-detect and were flagged "UJ,c."

The recovery for surrogate 1,4-dinitrobenzene in sample EQB-14 (140%) was greater than the upper QC limit. All associated sample results were non-detects and no data qualifying action was required.

For the metal analyses, the initial CRDL percent recoveries for aluminum (111.1%), lead (137.7%), selenium (114%), sodium (78%), and thallium (113.4%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "L,w" for sodium and "K,w" for selenium. No positive results were reported for aluminum, lead, and thallium and no data qualifying action was required.

The method blank contained barium at 0.367 ug/L, magnesium at 60.76 ug/L and mercury at 0.107 ug/L. Positive results less than 5 times the blank concentration were flagged "B,p" in the associated samples.

The initial and continuing calibration blanks also contained positive results for barium, magnesium, beryllium, calcium, manganese, and zinc and negative results for calcium and silver. Positive results less than 5 times the blank concentration were flagged "B,o" in the associated samples. Non-detects were flagged "UL,o" for calcium and silver in the associated samples.

Correctable Anomalies: Equipment blank EQB-11 was reported as EQB-10 on the chain of custody. The laboratory corrected the COC to EQB-11.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were raised.

It should be noted that if a given fraction (analysis) is not discussed in this report, it indicates that no anomalies were observed for that fraction. Except for data flagged "R", all data, as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Ranjan

Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?			✓
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-).		✓	

Notes:

Collect	Extract	Analyzed
12/2/02	12/7/02	12/13/02
12/3/02	〃	12/14/02
12/5/02	12/9/02	12/11/02
12/9/02, 12/10/02	12/12/02	12/15/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.			✓

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: $r \geq 0.99$, %RSD $\leq$ 15% and %D $\leq$ 20%		✓	
	For initial Calibration: for %RSD > $\pm$ 15%, but < $\pm$ 50%, J(+) only. for %RSD > $\pm$ 50%, but < $\pm$ 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes:

atrazine RC in all

see attached

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high			
	Positives: L / J / L / K			
	Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: 2-methylphenol (35%) 2,4-dimethylphenol (7% < QC Ri inacl-
see attached signal/QC acc ND, no flags

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓	✓	
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			✓

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 5			
12.1.2	Number of target compounds in each analysis: 65			
12.1.3	Number of results rejected and not reported: 15			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 95 %

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		

3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.			✓

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		

Notes:

See attached
all (ND), acceptable on other column, no flag

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Resolution Check Mixture been analyzed at the beginning of every initial calibration sequence, on each GC column and intrument used for analysis?			✓
5.2	Is the resulution between all adjacent peaks in the Resolution Check Mixture greater than or equal to 60% for both column?			✓

	Detected target compounds that were not adequately resolved should be qualified with "J". Qualitative identifications may also be questionable if coelution exists. Non-detects with retention times in the region of coelution may not be valid, depending on the extent of the problem. Professional judgement should be used to			✓
5.3	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning (following the RCM) and the end of every initial calibration sequence, on each GC column and intrument used for analysis? The PEM must also analyzed at the beginning of every other 12-hour analytical period.			✓
5.4	Is the resulution between all adjacent peaks in the PEM equal to 100% in each calibration (initial and continuing) for both column?			✓
5.4	Do all standard retention times of each of the single component pesticides and surrogate in all PEM fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			✓
5.5	Are all PEM %Ds less than or equal to 25%? If No, J(+)/UJ(-).			
5.6	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).			
5.7	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).			
5.8	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).			

Notes:

6.0 Surrogate Recovery				**Yes**	**No**	**NA**
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?			✓		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			✓		
6.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?			✓		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?					✓
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)					✓
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance

		All low	L, UL	Not applicable
		2 high, 1 low	K (2 high)	J (1 low 2nd column)
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
		other mixed	J, UJ	Not applicable
	4 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		Mixed	J, UJ	Not applicable
	If any recovery is >0% and <10% then L(+)/R(-).			
	If any recovery is 0% then R(+/-).			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?			
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?			

8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: It was noted by lab that a cocktail mixture was used.

Several 7 QC, all ND, no flag

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).			✓
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes:

11.0 Pesticide Cleanup Checks (Required when any positive result is reported > 38 ug/Kg for soils)		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
12.1.4	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100

Subject: 01/07 conference call items

Good afternoon Andrea,

I have attached a pdf file that contains the information concerning the incorrect spike mix used in the extraction of sample EQB-13 (R2810 8081A) and also the volatile forms 2 and 8 for SDGs Q, S and T2788 for evaluating the surrogates and internal standards. There will be no additional charge for the pesticide cleanup. Talk to you soon.

Chuck

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		✓	
10.1.1	Number of samples: 5			
10.1.3	Number of results rejected and not reported: 34			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness =			
	% Completeness = ~~0%~~ 51%

DATA VALIDATION WORKSHEET

Polyaromatic Hydrocarbons

Reviewer: RA
Date: 2/24/03
DV Level: II (III) IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: R2810
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

Collected -	Extracted -	analyzed
12/2/02	12/7/02	12/19/02
12/3/02	"	"
12/5/02	12/10/02	"
12/9/10/02	12/13/02	12/20/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		

3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			✓

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: See attached
all NA, passed in ~~[illegible]~~ the other column, no action

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-), for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			✓
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			✓

6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?			✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			✓

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			
	% Completeness = 100 %

1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: Cooler temps: 3.0°C, 2.0°C, 2.0°C, 2.0°C

Sampled: 12/02/02, 12/03/02, 12/04/02, 12/10/02
Extracted: 12/09/02, 12/13/02
Analysis: 12/19/02, 12/20/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	X		

Notes: The samples in this SDG are not equipment blanks.

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).	X		
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?		X	
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?		X	
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: No MS/MSD set in this batch.

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: NO LCSD

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?		X	
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.			X

Notes: No field duplicates in this batch.

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 5			
10.1.3	Number of results rejected and not reported: Ø			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			
	% Completeness = 100%

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: R2810
Project No.: 15291524.00000

Project Name: Radford SWMU 54
Reviewer: RA
Date: 2/24/03

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓		✓		
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{o}C \pm 2\ ^{o}C$)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes, % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: collect 12/2/3/4/5/10/02 analyzed 12/19/02 Hg) ICP

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%? <50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K		✓				

Note:

al 111.1 @ < ND, no flag
lead 137.7 " " "
Se 114 K low
Na 78 Low pos.
Tl 113.4 all ND no Flag

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓			✓		
	Sample Results > MDL						
	< 5X Blank Contamination B						
4.4	Are there negative blank results with the absolute value > MDL?	✓	✓			✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L						
4.5	Are there reported field blankor trip blank values > ± MDL?			✓			✓
	Sample Results > MDL						
	< 5X Blank Contamination B						

ICB pos, ba, mg, prev. neg. Ca ULO, silver ULO

Note: MB → Ba .367 1:5 303
Mg 60.76 } <5X → B, Z
Hg .107 .535

CCB → pos, ca, ba, be, mg, mn, zinc B, O

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+) — Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.						
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.						

Note: all EBs - Not panned ✓

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.						
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?						
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L						
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.						

Note: N/A all blanks ✓

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓			✓		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?						
10.2	Was a five-fold dilution performed?						
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).						

Note: N/A all blanks

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?						
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report						

Note: N/A

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?			✓			✓
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note: _____

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples:_____						
13.1.2	Number of target compounds in each analysis:_____						
13.1.3	Number of results rejected and not reported:_____						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = _____						

Note: _____

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: ___S2810___ **Fraction: _SVOCs, PAH, Pest, PCBs,Explosives,Nitroglycerin, Metals___**

Lab: _CompuChem___ **Project Name: __Radford SWMU 54_____**

Reviewer: _RA, AJ____ **Date: _____March 17, 2003_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the SVOC analyses, the continuing calibration analyzed on 12/13/02 at 2150 displayed a %D greater than the QC limit (i.e., 20%) with a negative bias for atrazine at 53.45%. All associated sample results were non-detect and were flagged "R,c."

For the pesticide analyses, the recovery for surrogate tetrachloro-m-xylene (0%) in sample 54SB25B was less than the lower QC limit. Non-detects were flagged "R,s."

For the metals analyses, the MS/MSD recoveries for thallium (-92.4%/-66.4%) were less than the QC limit (i.e., 75-125%). All associated sample results were non-detect and were flagged "R,m."

Minor Anomalies: For the SVOC analyses, the initial calibration analyzed on 11/25/02 displayed %RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 18.8%, 2,4-dimethylphenol at 17.4%, hexachlorocyclopentadiene at 17.6%, n-nitrosodiphenylamine at 15.8%, 4-chlorophenyl-phenylether at 18.7%, and atrazine at 69.7%. Positive results were flagged "J,r" and non-detects were flagged "UJ,r" for atrazine in the associated samples since it was the only failure that was serious enough (i.e., >50%) to affect the non-detects; unless previously flagged due to continuing calibration failure.

The CCV analyzed on 12/13/02 at 0915 displayed %Ds greater than the control limit (i.e., 20%) with a negative bias for at atrazine at 41.09% and with a positive bias for dimethylphthalate at 20.01%, 3-nitroaniline at 34.23%, diethylphthalate at 22.32%, 4-nitroaniline at 26.67%, and benzo(b)fluoranthene at 22.87%. The CCV analyzed on 12/13/02 at 2150 displayed a %D greater than the control limit with a negative bias for hexachlorocyclopentadiene at 27.48% and with a positive bias for 1,1-biphenyl at 20.66%. Associated samples were non-detect for the failures associated with negative biases and were flagged "UJ,c", unless

previously flagged due to an initial calibration anomaly. Positive results were flagged "J,c" for the failures associated with positive biases.

The equipment blank EQB-11 contained bis(2-ethylhexyl)phthalate at 10 ug/L. Positive results less than 10 times the blank concentration were flagged "B,x" in the associated samples.

The RPD for the MS/MSD analyzed on sample 54SB33B was greater than the QC limit (i.e., 43%) for 2,4-dimethylphenol at 73%. The associated parent sample result was non-detect and no data qualifying action was taken.

The RPD for the field duplicate pair 54SB31B/D-8 was greater than the QC limit (i.e., 35%) for di-n-buthylphthalate at 113%. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

Several compounds exceeded the calibration range in sample 54SB27A and were flagged "E" by the laboratory. These results were flagged "J,q" by the reviewer. This sample was re-analyzed at a dilution factor of 4 with acceptable results and results from the dilution analyses should be used for the affected compounds.

For the pesticide analyses, the recoveries for surrogate tetrachlo-m-xylene in samples 54SB32BDL (DF=20) (420%), 54SB25B (685%), and 54SB32B (168%) were greater than the upper QC limit. No data qualifying action is required based on one surrogate failure and no data flags were applied. The recovery for surrogate tetrachloro-m-xylene (0%) in sample 54SB25B was less than the lower QC limit. Positive results were flagged "J,s." Surrogates were diluted out in sample 54SB25B (DF=50). No data qualifying action is required since the dilution factor is greater than 10.

The MS/MSD recoveries for beta-BHC (1250%/1500%) analyzed on sample 54SB33B were greater than the upper QC limit (i.e., 150%). The MS recovery for endosulfan I (45%) was less than the lower QC limit (i.e., 50%). These compounds were non-detect in the parent sample 54SB33B and were flagged "UJ,m." The RPD for methoxychlor (46%) was greater than the QC limit (i.e., 40%). This compound was a non-detect in the parent sample 54SB33B and no data qualifying action was taken.

The LCS recovery for 4,4-DDT (160%) was greater than the upper QC limit. Positive results were flagged "J,l" in the associated samples.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

Several compounds exceeded the calibration range in several samples and were flagged "E" by the laboratory. These results were flagged "J,q" by the reviewer. These samples were re-analyzed at different dilutions with acceptable non-detect results. Using professional judgement, the false positive bias was diluted out and the non-detects with elevated detection limits should be used for data interpretation.

For the PAH analyses, the continuing calibration analyzed on 12/20/02 at 0330 displayed a %D greater than the QC limit (i.e., 15%) with a negative bias for pyrene at 15.80%. The continuing calibration analyzed on 12/19/02 at 1315 displayed a %D greater than the QC limit with a negative bias for pyrene at 16.32%. Associated sample results were positive and were flagged "J,c."

The recoveries for surrogate p-terphenyl in samples D-8 (820%/1201%), 54SB34A (46%), and 54SB31B (230%) were outside the QC limit. Positive results were flagged "K,s" in samples D-8 and 54SB31B. Positive results were flagged "L,s" and non-detects were flagged "UL,s" in sample 54SB34A.

The MS/MSD recoveries for naphthalene (31%/44%) were less than the lower QC limits. The positive naphthalene result was flagged "J,m" in the parent sample 54SB33B. The RPDs for pyrene (26%), fluoranthene (31%), benzo(g,h,i)perylene (29%), benzo(a)anthracene (27%) and acenaphthylene (28%) were greater than the QC limit. No positive results were reported for these compounds in the parent sample 54SB33B and no data qualifying action was taken.

The RPD for the field duplicate pair 54SB31B/D-8 were greater than the QC limit (i.e., 35%) for all compounds except naphthalene and phenanthrene. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

Several compounds exceeded the calibration range in some samples and were flagged "E" by the laboratory. These results were previously flagged "J,g" and no further data qualifying action was required. These samples were not reanalyzed at a dilution since the lower results between the two columns were originally reported by the laboratory. Subsequently, upon URS request, the laboratory re-evaluated and re-submitted these results based on the SW-846 requirement of reporting the higher concentration.

For the explosives analyses, the continuing calibration analyzed on 12/17/02 at 2137 displayed a %D greater than the QC limit (i.e., 15%) with a positive bias for

HMX at 19.47% on the initial column. The continuing calibration analyzed on 12/18/02 at 0655 displayed a %D greater than the QC limit with a positive bias for 2,4,6-trinitrotoluene at 16.38% on the initial column. The continuing calibration analyzed on 12/20/02 at 1954 displayed a %D greater than the QC limit with a positive bias for HMX at 27.89% on the initial column. The continuing calibration analyzed on 12/24/02 at 2249 displayed a %D greater than the QC limit with a negative bias for RDX at 22.4% and with a positive bias for 2,4,6-trinitrotoluene at 24.04% and tetryl at 22.51% on the second column. The continuing calibration analyzed on 12/25/02 at 0813 displayed a %D greater than the QC limit with a negative bias for RDX at 17.48% on the second column. The continuing calibration analyzed on 12/26/02 at 2053 displayed %Ds greater than the QC limit with a positive bias for 2,4,6-trinitrotoluene at 34.84% and tetryl at 27.82% on the second column. The continuing calibration analyzed on 12/27/02 at 0435 displayed a %D greater than the QC limit with a positive bias for 2,4,6-trinitrotoluene at 22.43% and with a negative bias for RDX at 25.28% on the second column. Positive results were flagged "J,c" for the failures associated with positive biases. No data flags were applied to the non-detects since the %Ds were acceptable on the other column.

The MS/MSD recoveries for tetryl (43%/43%) were less than the QC limit. The associated sample result was non-detect in the parent sample 54SB33B and was flagged "UJ,m."

The RPD between the two columns was greater than the QC limit (i.e., 40%) for 4-amino-2,6-dinitrotoluene (41.3%) in sample 54SB25B. This result was flagged "J,g."

For the nitroglycerin analyses, the recovery for surrogate 1,4-dinitrobenzene was greater than the upper QC limit at 292% in sample 54SB27A. The associated sample result was a non-detect and no data qualifying action was required.

The RPD between the two columns was greater than the QC limit (i.e., 40%) for nitroglycerin (199.9%) in sample 54SB32B. This result was flagged "J,g."

For the metal analyses, the initial CRDL percent recoveries for chromium (89.2%), iron (113%), lead (69.7%), potassium (63.4%), selenium (141.8%), sodium (112.3%), thallium (69.2%), and zinc (67.8%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "K,w" for sodium in the associated samples. All associated sample results were either greater than 2xCRDL or were previously flagged for the other analytes and no further data qualifying action was required.

The method blank displayed negative results for calcium, thallium and zinc and positive results for iron and nickel. All associated sample results were either

greater than 5 times the blank concentration or were previously flagged due to other anomalies and no further data qualifying action was required.

The initial and continuing calibration blanks also displayed positive results for antimony, iron, and magnesium; and negative results for calcium, lead, thallium, and zinc. All associated sample results were either greater than 5 times the blank concentration or were previously flagged due to other anomalies and no further data qualifying action was required.

Equipment blank EQB-11 located in SDG R2810 contained selenium at 3.4 ug/L. Positive results less than 5 times the blank concentration were flagged "B,x" in the associated samples.

The RPDs for the laboratory duplicate analysis were greater than the QC limit (i.e., 35%) for antimony at 165.7% and lead at 97.9%. Positive results were flagged "J,k."

The MS and/or MSD recoveries analyzed on sample 54SB33B were outside the QC limit for antimony (27.7%/28%) and mercury (44.3%/22.2%). All associated sample results were positive for antimony and were previously flagged due to laboratory duplicate anomalies. No further data qualifying action was required. All associated sample results were positive for mercury and were flagged "L,m."

The %Ds for the serial dilution analysis were greater than the QC limit (i.e., 10%) for barium (11.1%), calcium (10.5%), chromium (12.5%), cobalt (17.3%), copper (11.6%), iron (14.2%), lead (15.6%), magnesium (14%), manganese (15%), nickel (13.2%), vanadium (13.6%) and zinc (11.9%). Positive results were flagged "J,s", unless previously flagged due to other anomalies.

The RPDs for calcium (54%), magnesium (48%) and potassium (37%) were greater than the QC limit (i.e., 35%) for the field duplicate pair D-8/54SB31B. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

Correctable Anomalies: Sample 54SB33A was not analyzed for pesticides and PCBs as requested on the chain of custody. Pesticide fluorosil cleanup was not performed on samples 54SB30A, 54SB32B, and 54SB32A.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were raised.

Positive TIC results were flagged "NJ,t" in the associated samples. It should be noted that if a given fraction (analysis) is not discussed in this report, it indicates that no anomalies were observed for that fraction. Except for data flagged "R", all data, as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Ranjan

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 3/10/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: 52810
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

collected	extracted	analyzed	
12/3/02	12/9/02	12/14/02	12/13/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes: EQB-11 in R2810

bis(2-ethylhexyl)ph at 10 ug/L pos<10x→B,x

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: See attached

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / L / K Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 2,4-dimethylphenol 73% & 43% RPD

ND in 545B33B no flag ✓

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

545831B	D-8	RPD	545831B	D-8
2,6-DNT 40	400 U OK ✓	bis(2-ethyl-	140	140 OK ✓
2,4-DNT 76	400 U OK ✓	acenaphthylene	400 U	120 OK ✓
diethylphthalate 140	400 U OK ✓	common phenanthrene		51 OK ✓
n-nitrosodiphenylamine 30	400 U OK ✓	anthracene		51 OK →
di-n-butyl phthalate 130	36 (113%)	fluoranthene		270 OK ✓

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	✓		

Notes:

2,6-Dinitrotoluene, 2,4-dinitrotoluene "E" in 545827A

use result from DF=4

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 20			
12.1.2	Number of target compounds in each analysis: 65			
12.1.3	Number of results rejected and not reported: 8			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 99%

1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?			
1.4	Do sample preservation, collection and storage condition meet method requirement?			
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?			
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes: Sample 545B33A was listed on COC but not analyzed.

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes: Collected 12/3/02 Extracted 12/8/02 analyzed 12/17/02, 12/14/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		

3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes: IN SDG R2810 NDV

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%	✓		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		

Notes:

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Resolution Check Mixture been analyzed at the beginning of every initial calibration sequence, on each GC column and intrument used for analysis?			✓
5.2	Is the resulution between all adjacent peaks in the Resolution Check Mixture greater than or equal to 60% for both column?			✓

	Detected target compounds that were not adequately resolved should be qualified with "J". Qualitative identifications may also be questionable if coelution exists. Non-detects with retention times in the region of coelution may not be valid, depending on the extent of the problem. Professional judgement should be used to			
5.3	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning (following the RCM) and the end of every initial calibration sequence, on each GC column and intrument used for analysis? The PEM must also analyzed at the beginning of every other 12-hour analytical period.			
5.4	Is the resulution between all adjacent peaks in the PEM equal to 100% in each calibration (initial and continuing) for both column?			
5.4	Do all standard retention times of each of the single component pesticides and surrogate in all PEM fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			
5.5	Are all PEM %Ds less than or equal to 25%? If No, J(+)/UJ(-).			
5.6	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	✓		
5.7	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	✓		
5.8	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).	✓		

Notes:

6.0 Surrogate Recovery					**Yes**	**No**	**NA**
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				✓		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				✓		
6.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?					✓	
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?				✓		
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)				✓		
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance			
	1 out	high/low	No action	No action			
	2 out	2 high same column	K	No action			

		2 low same column	L, UL	No action
		mixed same column	J, UJ	No action
		2 high diff columns	J	Not applicable
		2 low diff columns	J, UJ	Not applicable
		mixed diff columns	Professional judgement	Not applicable
	3 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		2 high, 1 low	K (2 high)	J (1 low 2nd column)
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
		other mixed	J, UJ	Not applicable
	4 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		Mixed	J, UJ	Not applicable
	If any recovery is >0% and <10% then L(+)/R(-).			
	If any recovery is 0% then R(+/-).			

Notes: 545B32BDL Tetrachloro-m-xylene 420 > 135 %. OK DF=20
545B32B " 1687 43-135 no action one failure
545B25B " (6%) and 685 % (R, S all)
545B25B surrogates diluted out OK since DF=50 & 10

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: beta-BHC (1250/1500) > 50-150 OK Sample conc. > 4x Spike amt.
endosulfan I MS (45) < 50-150 W,M in 545B33B
RPD 46 > 40%. Methoxychlor ND in ✓ no action

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		

8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: 414-DDT 160 > 50-150
POS → J, 8

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		✓	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes: J/8 unless prev. flagged
also several exceeded criteria "E" 4DD diluted results

11.0 Pesticide Cleanup Checks (Required when any positive result is reported > 38 ug/Kg for soils)		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)		✓	
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?		✓	
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			✓

Notes: heptachlor epoxide 53 ug/kg 545B30A, 200 in 545B32B Not Performed
endosulfan sulfate, heptachlor epoxide in 545B32A

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 7			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
12.1.4	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100

1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: Cooler temps: 2.0°C, 2.0°C, 2.0°C

sampled: 12/03/02,
extracted: 12/10/02
analysis: 12/20/02, 12/19/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		X

Notes: No field /equipment blanks in this data package EA
in SDG R2810 ND ✓ RA

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).	X		
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		X	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?		X	
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.		X	
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes: % Recovery for confirmation column for sample 545B27A was outside of upper control limit (150%) at 292%. All associated sample results were ND, so no action was taken.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits? 93, 91		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits? 2		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD on sample 545833B

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present? Reported on Form I.		X	
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits? 93%.		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: NO LCSD

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.	X		

Notes: D-8 = 545331B – Both N.D.

32D

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	X		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes: 545B32B detected confirmed on 12/23

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: ø			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			
	% Completeness = 100%			

Notes:

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: S2810
Project No.: 15291524.00000

Project Name: Radford SWMU 54
Reviewer: RA
Date: 3/6/03

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: collect 12/3/02 — analyzed 12/15/16/02 ICP; 12/11/02 Hg

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%?		✓				
	<50% 50%-89% >110% 2xCRDL>|sample|>IDL L(+)/R(-) L(+)/UL(-) K						

Note:

CV 89.2 all >2x CRDL, no flag
Iron 113 " " " "
Lead 69.7 " " " "
Potassium 63.4 " " " "
Se 141.8 all prev. pos. in field blank.
Sodium 112.3 pos KIW
Tl 69.2 all ND, MB contamination.
Zinc 67.8 all >2x CRDL, no action

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B					✓	
4.4	Are there negative blank results with the absolute value > MDL?	✓				✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L						
4.5	Are there reported field blankor trip blank values > ± MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						

EQB-11 Se 3.4 ug/L <5X B, Zn in all samples

Note: MB-Ca -5.31 mg/kg Fe 2.469 Ni .144 Zn -.415 all <5X no flag | ICB, CCB, Pos, antimony, Fe, Mg, neg, Ca, lead, thallium, zinc all <5X no flag

all "R/m" 4 no/low flags in all — no action

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓	✓		✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.		✓		✓		

Note: antmony 165.7 pos J1K
lead 97.9

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		✓		✓	✓	
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L						
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	✓			✓		✓

Note: antimony 27.7/28 all pos, prev flagged for lab dup.
Hg 44.3/22.2 all pos → J,m
Tl -92.4/-66.4 all ND → R,m

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓			✓		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓					
10.2	Was a five-fold dilution performed?	✓					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).		✓				

Note: see attached
Pos Js unless PRN.

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report		✓		✓		

Note: Ca, Mg, K ✓ 37%
54% 46%
comment

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓		
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note:

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples: 20						
13.1.2	Number of target compounds in each analysis: 23						
13.1.3	Number of results rejected and not reported: 20						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 95%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: _____T2810_____ **Fraction:** _SVOCs, PAH, Explosives,Nitroglycerin, Metals

Lab: _CompuChem_____ **Project Name:** __Radford SWMU 54_____

Reviewer: _____RA, AJ_____ **Date:** _____April 4, 2003_____

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the SVOC analyses, the initial calibration analyzed on 12/17/02 displayed a %RSD greater than the control limit (i.e., 15%) for atrazine at 86.73%. All associated sample results were non-detect and were flagged "R,r." The continuing calibration analyzed on 12/18/02 displayed a %D greater than the QC limit (i.e., 20%) with a negative bias for atrazine at 65.94%. The continuing calibration analyzed on 12/22/02 displayed a %D greater than the QC limit with a negative bias for atrazine at 68.21%. The continuing calibration analyzed on 12/23/02 displayed a %D greater than the QC limit with a negative bias for atrazine at 51.151%. The continuing calibration analyzed on 1/2/03 displayed a %D greater than the QC limit with a negative bias for atrazine at 76.69%. All associated sample results were previously flagged due to initial calibration anomalies and no further data qualifying action was required.

The extraction holding time was grossly exceeded for sample 54SB46CRE. All associated sample results were non-detect and were flagged "R,h."

The recoveries for all surrogates were less than the lower QC limits at 0% in sample 54SB46C. Positive results were flagged "L,s" and non-detects were flagged "R,s." The surrogate recoveries were acceptable in sample 54SB46CRE. However, the results for this sample were rejected due to holding time anomalies.

The recoveries for all surrogates were less than the lower QC limits at 3% in sample 54SB46A. Non-detects were flagged "R,s." Positive results were previously flagged "L,h" due to holding time anomaly and no further data qualifying action was required. Five surrogate recoveries were less than the lower QC limits in sample 54SB46ADL (DF=15). No data qualifying action was required since the dilution factor is greater than 10 and the results from dilution analysis should be used for this sample.

The LCS extracted on 1/2/03 displayed a recovery for benzaldehyde (7%) which was less than the lower QC limit (i.e., 10%). All results were previously flagged "R,h" in the associated sample 54SB46CRE, and no further data qualifying action was required.

The percent completeness was less than the QC limit (i.e., 90%) at 84% due to these anomalies.

For the explosive analyses, the LCS recovery for 1,3,5-trinitrobenzene (24%) was less than the lower QC limit (i.e., 50%). Non-detects were flagged "R,l" in the associated samples.

For the metals analyses, the MS/MSD recoveries for antimony (28.8/27%) and copper (-6.8%/-21.5%), were less than the lower QC limit (i.e., 75%). Non-detects were flagged "R,m" in the associated samples.

Minor Anomalies: For the SVOC analyses, the extraction holding time was exceeded by one day in samples 54SB46A and 54SB46B. Positive results were flagged "L,h" and non-detects were flagged "UL,h" unless previously flagged due to other anomalies.

The initial calibration analyzed on 12/17/02 displayed %RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 15.27%, hexachlorocyclopentadiene at 25.91%, 2,4,6-trichlorophenol at 15.39%, 2,4-dinitrophenol at 19.31%, 2,4-dinitrotoluene at 16.27%, 4-chlorophenyl-phenylether at 17.19%, 1,1-biphenyl at 15.11%, 3-nitroaniline at 15.92%, 4-nitrophenol at 18.39%, n-nitrosodiphenylamine at 17.90%, and benzo(k)fluoranthene at 18.29%. Positive results were flagged "J,r" unless previously flagged due to other anomalies. No data flags were applied to the non-detects since the failures were not serious enough (i.e., >50%) to affect the non-detects.

The CCV analyzed on 12/23/02 at 1110 displayed a %D greater than the control limit (i.e., 20%) with a negative bias for 2,4-dinitrophenol at 24.44%. Non-detects were flagged "UJ,c" in the associated samples.

The recoveries for all surrogates were less than the lower QC limits in sample 54SB46B. All results were previously flagged due to holding time anomalies and no further data qualifying action was required. The recoveries for all surrogates were less than the lower QC limits in sample 54SB46BDL. Positive results were flagged "L,s" and non-detects were flagged "UL,s", unless previously flagged due to other anomalies. The original sample results should be used for all compounds except diethylphthalate for data interpretation. The result from the dilution analysis should be used for diethylphthalate since the original result is outside the calibration range of the instrument.

The MSD and RPDs were outside the QC limits for 4-chloroaniline (1.1%/189%), 3-nitroaniline (15%/102%), 4-nitroaniline (32%/53%), and 3,3-dichlorobenzidine (2.1%/163%). Non-detects were flagged "UJ,m" for these compounds in the parent sample 54SB49A.

The LCS extracted on 12/11/02 displayed a recovery for atrazine (151%) which was greater than the upper QC limit. All associated field sample results were non-detects and were previously flagged due to an initial calibration anomaly. No further data qualifying action was required.

Diethylphthalate exceeded the calibration range of the instrument in several samples and was flagged "E" by the laboratory. These results were flagged "J,q." These samples were analyzed at different dilution factors with acceptable results and the results from dilution analysis should be used for this compound.

For the Pest/PCB analyses, the CCV analyzed on 12/24/02 at 1941 displayed a %D greater than the QC limit (i.e., 15%) with a positive bias for gamma-BHC (18.55%). The CCV analyzed on 12/27/02 at 2002 displayed %Ds greater than the QC limit with a positive bias for endosulfan sulfate (17.87%/16.26%), 4,4-DDT (16.72%), endrin aldehyde (25.27%), and endrin ketone (15.98%/19.64%). Positive results were flagged "J,c" in the associated samples.

The recoveries for surrogate tetrachloro-m-xylene (TCX) were outside the QC limits in samples 54SB46A (24%) and 54SB49ARE (143%). The recoveries for surrogate decachlorobiphenyl (DCB) were outside the QC limits in samples 54SB49A (191%) and 54SB46BRE (32%). No data qualifying action is required based on one surrogate failure and no data flags were applied. The recoveries for surrogate TCX in sample 54SB46B (330%/381%) were greater than the upper QC limit. Positive results were flagged "J,s" unless previously flagged due to other anomalies. The recoveries for surrogate DCB (170%/28%) and TCX (40%/28%) were outside the QC limits in sample 54SB46ARE. Positive results were flagged "J,s" and non-detects were flagged "UJ,s" unless previously flagged due to other anomalies.

One or both surrogate recoveries were outside the QC limits in samples 54SB46BDL (DF=100), 54SB46ADL (DF=10) and 54SB49ADL (DF=10). No data qualifying action is required since the dilution factors are equal to or greater than 10.

The MS and/or MSD recoveries for aldrin (548%/1428%), beta-BHC (0%/20000%), delta-BHC (274%/310%), 4,4-DDD (176%), 4,4-DDE (1154%/-36%), 4,4,-DDT (210%/357%), dieldrin (219%/176%), endosulfan I (3928%/3690%), endrin aldehyde (167%), heptachlor (583%/750%), heptachlor epoxide (-262%/-762%), methoxychlor (-14%), gamma-chlordane (500%) and alpha-chlordane (190%/381%) were outside the QC limits. Positive results were

flagged "J,m" and non-detects were flagged "UJ,m" in the parent sample, 54SB49A. The RPDs were greater than the QC limits for aldrin (89%), 4,4-DDT (52%), gamma-chlordane (111%) and alpha-chlordane (67%). No positive results were reported in the parent sample and no data qualifying action was required.

The LCS recoveries for 4,4-DDD (230%) and endosulfan II (160%) were greater than the upper QC limit. No positive results were reported and no data qualifying action was required.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

Several compounds exceeded the calibration range in several samples and were flagged "E" by the laboratory. These results were flagged "J,q". These samples were re-analyzed at different dilution factors with acceptable results and results from the dilution analyses should be used for the associated compounds.

For the PAH analyses, the CCV analyzed on 12/28/02 at 1122 displayed a %D greater than the QC limit (i.e., 15%) with a negative bias for benzo(k)fluoranthene at 15.04%. The CCV analyzed on 12/29/02 at 1012 displayed a %D greater than the QC limit with a negative bias for benzo(k)fluoranthene at 21.19%. All associated sample results were positive and were flagged "J,c."

The recovery for surrogate p-terphenyl was less than the lower QC limit (i.e., 50%) in sample 54SB44B. Positive results were flagged "L,s" and non-detects were flagged "UL,s" unless previously flagged due to other anomalies.

The MS and/or MSD recoveries were outside the QC limits for naphthalene (224%/341%), acenaphthene (41%/0%), benzo(b)fluoranthene (-69%/-67%), benzo(a)pyrene (28%), acenaphthylene (-76%/-76%), chrysene (42%), and benzo(a)anthracene (45%). The RPDs were outside the QC limits for acenaphthene (52%), fluorene (37%), phenanthrene (30%), anthracene (38%), fluoranthene (24%), chrysene (26%), benzo(k)fluoranthene (54%), dibenzo(a,h)anthracene (27%), benzo(g,h,i)perylene (27%), benzo(a)anthracene (55%), benzo(a)pyrene (72%), and indeno(1,2,3-cd)pyrene (28%). No data qualifying action was required for naphthalene since the sample result was greater than 4 times the spiking amount. Results associated with the MS/MSD anomalies were positive in the parent sample, 54SB49A, and were flagged "J,m." Positive results associated with RPD anomalies were flagged "J,d" in the parent sample, 54SB49A.

The RPDs between the primary and confirmation columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

For the explosives analyses, the continuing calibration analyzed on 12/28/02 at 1637 displayed %Ds greater than the QC limit (i.e., 15%) with a positive bias for 2,4,6-trinitrotoluene at 17.09% and 2,4-dinitrotoluene at 16.88%. The CCV analyzed on 12/29/02 at 0022 displayed a %D greater than the QC limit with a negative bias for 4-amino-2,6-dinitrotoluene at 16.29% and with a positive bias for 2,4,6-trinitrotoluene at 19.01% and 2,4-dinitrotoluene at 22.49%. The CCV analyzed on 1/3/03 at 0240 displayed a %D greater than the QC limit with a positive bias for 2,4,6-trinitrotoluene at 19.62%. The CCV analyzed on 1/8/03 at 1908 displayed a %D greater than the QC limit with a negative bias for 3-nitrotoluene at 27.97%. The CCV analyzed on 1/9/03 at 0539 displayed a %D greater than the QC limit with a negative bias for 3-nitrotoluene at 26.88%. Positive results were flagged "J,c" for the anomalies associated with positive biases and non-detects were flagged "UJ,c" for the anomalies associated with negative biases.

The MS and/or MSD recoveries were outside the QC limits for HMX (19%/43%), 1,3,5-trinitrobenzene (505%/-35%), 2,4,6-trinitrotoluene (2700%/-950%), and 2-amino-4,6-dinitrotoluene (153%). The RPDs were greater than the QC limits for HMX (76%), 1,3,5-trinitrobenzene (164%), 2,4,6-trinitrotoluene (78%), 2,4-dinitrotoluene (33%), 2,6-dinitrotoluene (43%), 4-amino-2,6-dinitrotoluene (67%), 2-nitrotoluene (33%), and 3-nitrotoluene (33%). Results for the compounds with MS/MSD anomalies were non-detects and were flagged "UJ,m" in the parent sample, 54SB49A. Results for the compounds with RPD anomalies were either non-detect or previously flagged and no further data qualifying action was taken.

The LCS recovery for 1,3,5-trinitrobenzene (24%) was less than the lower QC limit (i.e., 50%). Positive results were flagged "J,l" in the associated samples.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

Several compounds exceeded the calibration range of the instrument in several samples and were flagged "E" by the laboratory. These results were flagged "J,q" unless previously flagged due other anomalies.

For the nitroglycerin analyses, the recoveries for surrogate 1,4-dinitrobenzene (310%/47%) were outside the QC limits in sample 54SB46A. The positive sample result was flagged "J,s."

The continuing calibration analyzed on 1/5/03 at 1626 displayed a %D greater than the QC limit (i.e., 15%) with a positive bias for nitroglycerin at 17.27%. The

associated sample result was previously flagged due to a surrogate recovery anomaly and no further data qualifying action was required.

The MS/MSD recoveries (7100%/2900%) and the RPD (85%) were greater than the upper QC limit. The parent sample result in 54SB49A was a non-detect and no data qualifying action was required.

For the metal analyses, the method blank displayed positive results for barium, copper, magnesium and zinc and a negative result for beryllium. All associated sample results were positive and were greater than 5 times the absolute value of the blank concentration and no data qualifying action was required.

Equipment blanks EQB-11 and EQB-12 located in SDG R2810 contained selenium 3.4 ug/L and chromium at 0.67 ug/L, respectively. Positive results less than 5 times the blank concentration were flagged "B,x" in the associated samples.

The initial and continuing calibration blanks also contained a negative result for chromium and positive results for barium, calcium and magnesium. All associated sample results were positive and were greater than 5 times the absolute value of the blank concentration and no data qualifying action was required.

The initial CRDL percent recoveries for aluminum (114.2%), antimony (112.7%), arsenic (115.5%/79.8%), chromium (87.8%), copper (69.4%), lead (71.3%), nickel (130.4%) and sodium (78.6%/75.4%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "K,w" and non-detects were flagged "UL,w" for antimony and arsenic in the associated samples. All associated sample results were positive and were flagged "L,w" for sodium. All associated sample results were greater than 2xCRDL for the other analytes or were previously flagged and no further data qualifying action was required.

The laboratory duplicate results were greater than the QC limit (i.e., 35%) for antimony (200%), copper (67%), mercury (113%), lead (115.7%), and zinc (39.6%). Positive results were flagged "J,k" and non-detects were flagged "UJ,k" unless previously flagged due to other anomalies.

The MS/MSD pair for sample 54SB49A displayed recoveries for arsenic (68.6%/73.9%), chromium (74.2%), thallium (55.8%/59.7%), mercury (67.6%), selenium (38.6%/47.7%), and zinc (10.2%/18.5%). Positive results were flagged "L,m" and non-detects were flagged "UL,m" unless previously flagged due to other anomalies.

The %Ds for serial dilution analyses were greater than the QC limit (i.e., 10%) for barium (11.2%), calcium (14.5%), cobalt (14.2%), copper (21.8%), iron (13.3%), lead (14.4%), magnesium (13.5%), manganese (12.7%), nickel (12.1%),

potassium (13.4%), vanadium (10.1%) and zinc (15.9%). Positive results were flagged "J,s", unless previously flagged due to other anomalies.

Correctable Anomalies: None.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were elevated.

Positive TIC results were flagged "NJ,t" in the associated samples. Except for data flagged "R", all data, as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Raycon

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 3/24/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: T2810
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).	✓		
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .	✓		

Notes:

collect	extract	analyzed
12/4/02	12/11/02	12/18/02 → 12/19/02
12/4/02	12/19/02	12/22/02 12/23/02

↙
545B46A L/UL/J (unless prep)
545B46B ← 545B46CRE collect 12/4/02 extract. 22 days after collect.
ext: 12/19/02 gross all ND → R/J

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes: EQB-12 in T2910 ND✓

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: IC 12/17/02 atrazine 86.72% RSD all ND → RJ in all samples

Several Y.D. Atrazine prev. ND UJC for 2,4-DNP

8 + ~~5~~
33
30 + 45 + 3

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓	✓	
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?	✓		
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)		✓	

	1 or more <10%	2 or 3 high/low	2 or 3 all low	2 or 3 all high
Positives	L	J	L	K
Non-detects	R	UJ	UL	NONE

Note: The B qualifier remains over surrogate flagging.

Notes: 545B46C 0% for all Surr. R/L/S acceptable Sur. in 545B46CRE but this was rejected due to gross ht.

545B46A DL 5 Surr. recoveries <QC OK since DF=15 use this result
545B46B recoveries for one sur <QC. this sample Prev flagged for ht. no more action
545B46B DL " " " L/UL/S. use original result for ~~compounds~~ all except diethylphthalate unless prev.

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: see attached
U,M in parent 545B49A

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: LCS extracted 1/2/03 benzaldehyde 7% <10-100 [redacted] all samples. no prev. R/h in
" " 12/11/02 atrazine 151% 10-150 all ND prev. filed 545B46CA

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	U		

Notes:

D-11	545B44C	D-11	545B44C
2,6, DNT 29	390 U OKV	diethylphthalate 380 U	130
2,4-DNT 430	390 U OKV	OKV	
N-nitroso 87	390 U OK		
Di-n. butyphthalte 1100	390 U OKV		

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	U		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	U		

Notes: TIC → NJ, E

diethylphthalate "E" in some samples - prev. flagged use diluted results -

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)		✓	
12.1.1	Number of samples: 13			
12.1.2	Number of target compounds in each analysis: 65			
12.1.3	Number of results rejected and not reported: 139			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 84%

11.0 Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes: Not performed.

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
12.1.4	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100 %

_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: 72810
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes: Collected 12/4/02 Extracted 12/11/02 analyzed 12/24/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes: EQB-12 in R2510 NDV ✓

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: See attached assoc. results were positive → J/c

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?		✓	
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes: p-terphenyl 22% < 50% 5458 44B 4UL15 Lowest prev. flagged

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: see attached
failures for MS/MSD all POS, J,M in 545B49A
POS. " RPD → J,d "

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: D-11 all ND
545B44C all ND

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

several 740 %. → J,q unless prev.

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:			
10.1.3	Number of results rejected and not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness =			
	% Completeness = 100 %.

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{o}C \pm 2\ ^{o}C$)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes, % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: collected 12/3/4/02 — 4
analyzed 12/13/15/02 ICP; 12/13/02 Hg

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%? <50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K		✓				

Note:

Al 114.2 all 72xCRDL no action
antimony 112.7 K|W
arsenic 115.5, 79.8 K|W, UL|W
chromium 87.8
copper 69.4 all 72xCRDL no action
lead 71.3
nickel 130.4
Sodium 78.6, 75.4 L|W

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						
4.4	Are there negative blank results with the absolute value > MDL?	✓				✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L						
4.5	Are there reported field blankor trip blank values > ± MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						

EQB-11 12/4/02 Se 3.4 ug/L pos < 5x B, X

EQB-12 12/4/02 Cr .67 ug/L all 5x no flag

Note: MB → Ba .044 mg/kg, Be -.010, copper .187, Mg 3.948, zinc .233 — all 5x no flag

ICB, CCB pos. Ba, Ca, Mg, neg. Cr. all 5x, no flag

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.		✓			✓	

Note: antimony 200%.

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?						

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓					
10.2	Was a five-fold dilution performed?	✓					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).		✓				

Note: See attached
J's unless prev.

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report		✓		✓		

Note: _____

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓		
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note: _____

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples: 20						
13.1.2	Number of target compounds in each analysis: 23						
13.1.3	Number of results rejected and not reported: 17						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 96%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure: poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: _____U2810_____ **Fraction:_SVOCs, Pest., PCBs, PAH, Explosives, Nitroglycerin, Metals_____**

Lab: _CompuChem_____ **Project Name: __Radford SWMU 54_____**

Reviewer: _____RA, AJ_____ **Date: _____March 10, 2003_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the SVOC analyses, the continuing calibrations analyzed on 12/18/02 and 12/19/02 displayed %Ds greater than the QC limit (i.e., 20%) with a negative bias for atrazine at 65.94% and 72.38%, respectively. All associated sample results were non-detects and were flagged "R,c."

For the explosive analyses, the LCS recovery for 1,3,5-trinitrobenzene (43%) was less than the lower QC limit (i.e., 50%). All associated sample results were non-detects and were flagged "R,l."

Minor Anomalies: For the SVOC analyses, the initial calibration analyzed on 12/17/02 displayed RSDs greater than the control limit (i.e., 15%) with a positive bias for benzaldehyde at 15.27%, hexachlorocyclopentadiene at 25.91%, 1,1-biphenyl at 15.11%, 2,4-dinitrophenol at 19.31%, 4-nitrophenol at 19.31%, 2,4-dinitrotoluene at 16.27%, 4-chlorophenyl-phenylether at 17.19%, n-nitosodiphenylamine at 17.9%, atrazine at 86.72%, and benzo(k)fluoranthene at 18.29%. No positive results were reported for these compounds and no data qualifying action was required.

The MS recovery for atrazine (180%) was greater than the upper QC limit. These results were previously flagged due to calibration failure and no further data qualifying action was required.

For the pesticides analyses, the CCV analyzed on 12/16/02 at 1956 displayed a %D greater than the QC limit (i.e., 15%) with a positive bias for endosulfan II at 16.72%. The CCV analyzed on 12/17/02 at 0211 displayed %Ds greater than the QC limit with a positive bias for delta-BHC at 21.35%, gamma-BHC at 16.11%, 4,4-DDD at 18.58%, 4,4-DDT at 18.27%, endrin at 17.51%, and endrin aldehyde at 16.07%. Positive results were flagged "J,c" in the associated samples.

The MS/MSD recoveries for beta-BHC (421%/355%), 4,4-DDD (242%/210%), 4,4-DDT (158%/153%), and the MS recoveries for endosulfan II (168%) and alpha-chlordane (158%) were greater than the upper QC limits. No positive results were reported for these compounds in the parent sample 54SB55B and no data qualifying action was required.

The LCS recoveries for 4,4-DDD (240%) and endosulfan II (160%) were greater than the upper QC limits. No positive results were reported for these compounds and no data qualifying action was required.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

For the PAH analyses, the RPD for the MS/MSD analyses for acenaphthene (22%) was greater than the QC limit. The positive naphthalene result was flagged "J,d" in the parent sample 54SB41A.

Naphthalene and acenaphthene results were outside the QC limit for the field duplicate pair D-12/54SB55A. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

For the explosives analyses, the continuing calibration analyzed on 12/31/02 at 0756 displayed a %D greater than the QC limit (i.e., 15%) with a positive bias for 2,4-dinitrotoluene at 18.31%. The continuing calibration analyzed on 12/31/02 at 1853 displayed a %D greater than the QC limit with a positive bias for 2,4,6-dinitrotoluene at 30.79%. The continuing calibration analyzed on 1/1/03 at 0410 displayed %Ds greater than the QC limit with a positive bias for 2,4,6-dinitrotoluene at 29.58% and 2,4-dinitrotoluene at 25.22%. The continuing calibration analyzed on 1/1/03 at 1241 displayed a %D greater than the QC limit with a positive bias for 2,4-dinitrotoluene at 28.12%. The continuing calibrations analyzed on 1/6/03 at 1129 and 2306 displayed %Ds greater than the QC limit with a negative bias for 3-nitrotoluene at 27.24% and 27.89%, respectively. No positive results were reported for the compounds associated with the positive biases and no data flags were applied. No data flags were applied to the non-detects associated with negative biases since the %Ds were acceptable on the alternate column.

The MS/MSD recoveries for 1,3,5-trinitrobenzene (8%/0%) were less than the lower QC limit. This result was previously flagged due to LCS failure in the

parent sample 54SB41A and no further data qualifying action was required. The %RPD for 4-amino-2,6-dinitrotoluene (58%) was greater than the QC limit. No positive results were reported and no data qualifying action was required

For the metal analyses, the method blank contained barium at 0.047 mg/Kg, calcium at 1.133 mg/Kg, magnesium at 6.796 mg/Kg, and zinc at 0.296 mg/Kg. All associated sample results were greater than 5 times the blank concentration and no data qualifying action was required.

Equipment blank EQB-14 located in SDG R2810 contained copper at 1.6 ug/L and selenium at 3.7 ug/L. Equipment blank EQB-12 located in SDG R2810 contained chromium at 0.67 ug/L. Positive results less than 5 times the blank concentration were flagged "B.x" in the associated samples.

The initial and continuing calibration blanks also displayed a negative result for arsenic and positive results for barium, beryllium, calcium and magnesium. All associated sample results were positive and were greater than 5 times the blank concentration. No data qualifying action was required.

The initial CRDL percent recoveries for aluminum (114.2%), antimony (112.7%), arsenic (79.8%), copper (69.4%), lead (71.3%), nickel (130.4%), and sodium (75.4%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "L,w" and non-detects were flagged "UL,w" for arsenic, copper and sodium in the associated samples. All associated sample results were greater than 2xCRDL for the other analytes and no further data qualifying action was required.

The %RPDs for laboratory duplicates were greater than the QC limit (i.e., 35%) for lead (129%) and zinc (39.8%). Positive results were flagged "J,k" in the associated samples.

The MS and or MSD recoveries for antimony (32%/34.8%), arsenic (74.5%), selenium (73.1%), thallium (63.6%), and zinc (63.6%/68.9%) were less than the lower QC limit. Positive results were flagged "L,m" and non-detects were flagged "UL,m" unless previously flagged due to other anomalies.

The %Ds for serial dilution analyses were greater than the QC limit (i.e., 10%) for all analytes except aluminum, antimony, arsenic, cadmium, selenium, silver and sodium. Positive results were flagged "J,s" unless previously flagged due to other anomalies.

Aluminum, copper, and mercury results were outside the QC limits for the field duplicate pair D-12/54SB55A. The results for all analytes except calcium and selenium were outside the QC limits for the field duplicate pair D-13/54SB47B.

No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

Correctable Anomalies: The sample ID for D-13 was incorrectly reported as DUP-13 by the laboratory. Correction was made on the Form Is by the reviewer.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were raised. The chain of custodies were not signed by the laboratory. No data qualifying action was taken.

Positive TIC results were flagged "NJ,t" in the associated samples. It should be noted that if a given fraction (analysis) is not discussed in this report, it indicates that no anomalies were observed for that fraction. Except for data flagged "R", all data, as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Ranjan

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 2/4/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: U2810
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

	collected	extracted	analyzed
	12/9/02, 12/10/02	12/13/02	12/19/02
	12/5/02	4	4

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes: EQB-13, -14 in RZ810 ND✓

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: See attached atrazine NDs → RIC in all

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high			
	Positives: L / J / L / K			
	Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: atrazine MS 130% & 150% prev. flagged ✓

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: D-12 , 545855A all ND all ND

D-13 , 545847B all ND all ND

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	✓		

Notes:

pos TIC → NJ, t

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 20			
12.1.2	Number of target compounds in each analysis: 65			
12.1.3	Number of results rejected and not reported: 20			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 95% ✓

Method No.: 8081A

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes: collect 12/9/02 extract 12/13/02 analyzed 12/16/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		

3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		

Notes:

ICC attached

Pos J,C.

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Resolution Check Mixture been analyzed at the beginning of every initial calibration sequence, on each GC column and intrument used for analysis?	✓		✓
5.2	Is the resulution between all adjacent peaks in the Resolution Check Mixture greater than or equal to 60% for both column?	✓		✓

	Detected target compounds that were not adequately resolved should be qualified with "J". Qualitative identifications may also be questionable if coelution exists. Non-detects with retention times in the region of coelution may not be valid, depending on the extent of the problem. Professional judgement should be used to			✓
5.3	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning (following the RCM) and the end of every initial calibration sequence, on each GC column and intrument used for analysis? The PEM must also analyzed at the beginning of every other 12-hour analytical period.			✓
5.4	Is the resulution between all adjacent peaks in the PEM equal to 100% in each calibration (initial and continuing) for both column?			✓
5.4	Do all standard retention times of each of the single component pesticides and surrogate in all PEM fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			✓
5.5	Are all PEM %Ds less than or equal to 25%? If No, J(+)/UJ(-).			✓
5.6	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	✓		
5.7	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	✓		
5.8	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).	✓		

Notes:

6.0 Surrogate Recovery					**Yes**	**No**	**NA**
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				✓		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				✓		
6.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?				✓		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?						✓
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						✓
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance

2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes: collected 12/9/02, 12/10/02 extracted 12/17/02 analyzed 1/1/03 - 1/31/03

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		

3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes: EQB-13, EQB-14 in K2510 ND ✓

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: No pos. for Pos. bias
neg bias acceptable on the other column, no flags

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		

6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 1315-TNB 8/0, all rev >RL)

RPD>QC 4-amino — no pos, no flag

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes: 1315-TNB 43%<QC all ND >RL

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 545B47B all ND, D-13 all ND | 545B55A all ND, D-12 all ND

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: 20			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness =			
	% Completeness = 93%

Test Name: Nitroglycerin
Method No.: 8332-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?		X	
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?			X
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: COC 1039 - not signed by lab.
COC 1040 - not signed by lab.

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: cooler temps 2.0°C, 2.2°C, 2.0°C

sampled 12/4, 12/9, 12/10
extracted 12/17
analysis 01/04, 01/06

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			X

Notes: NO equipment / field blanks submitted in this batch

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).	X		
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS %R - 110% MSD %R - 100% % RPD - 10%

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: LCS %R 100%

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.	X		

Notes: 2 field dups in this batch

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			
	% Completeness = 100%

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: U2810
Project No.: 15291524.00000

Project Name: Radford SWMU 54
Reviewer: RA
Date: 2/26/03

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{o}C \pm 2\ ^{o}C$)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes, % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: collected analyzed
12/5/02 12/10/02 12/16/02 Hg
6 12/15/02 ICP

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%? <50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K		✓				

Note:

Al 114.2 all 2xCRDL no flag

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	

Action:	Solid		Aqueous		
	< LCL	> UCL	< 50%	50% - 79%	> 120%
	L(+)/UL(-)	K(+)	L(+)/R(-)	L(+)/UL(-)	K(+)

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.		✓		✓		

Note: lead 129 % } POS J, K
zinc 39.8 %

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		✓		✓		
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L						
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	✓					✓

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓		
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note: _____

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples: _____						
13.1.2	Number of target compounds in each analysis: _____						
13.1.3	Number of results rejected and not reported: _____						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100						

Note: _____

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: _____V2810_____ **Fraction:** _SVOCs, PAH, Explosives,Nitroglycerin, Metals

Lab: _CompuChem_____ **Project Name:** __Radford SWMU 54_____

Reviewer: _____RA, AJ_____ **Date:** _____March 7, 2003_____

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the SVOC analyses, the initial calibration analyzed on 12/17/02 displayed a %RSD greater than the control limit (i.e., 15%) for atrazine at 86.09%. All associated sample results were non-detect and were flagged "R,r". The continuing calibration analyzed on 12/22/02 displayed a %D greater than the QC limit (i.e., 20%) with a negative bias for atrazine at 82.8%. All associated sample results were non-detects and were flagged "R,c."

For the explosive analyses, the LCS recoveries for 1,3,5-trinitrobenzene (0%) and nitrobenzene (47%) were less than the lower QC limit (i.e., 50%). All associated sample results were non-detects and were flagged "R,l." The percent completeness was less than the QC limit (i.e., 90%) at 86% due to this anomaly.

For the metals analyses, the MS/MSD recoveries for thallium (0%/0%) were less than the lower QC limit (i.e., 75%). All associated sample results were non-detects and were flagged "R,m."

Minor Anomalies: For the SVOC analyses, the CCV analyzed on 12/22/02 at 1129 displayed %Ds greater than the control limit (i.e., 20%) with a positive bias for hexachlorocyclopentadiene at 44.42%, 2,4-dinitrophenol at 31.56%, 4,6-dinitro-2-methylphenol at 25.44%, indeno(1,2,3-cd)pyrene at 22.3%, and benzo(g,h,i)perylene at 22.8%. All associated sample results were non-detect and no data qualifying action was required. The CCV analyzed on 12/26/02 at 1110 displayed a %D greater than the control limit with a negative bias for atrazine at 45.64%. All associated sample results were previously flagged due to initial calibration failure and no further data qualifying action was required.

The recoveries for all surrogates except 2,4,6-tribromophenol were less than the lower QC limits in sample D-14. Positive results were flagged "L,s" and non-

detects were flagged "UL,s", unless previously flagged due to other anomalies. This sample was re-extracted and re-analyzed with similar results. The original sample results should be used for data interpretations.

The RPD for the MS/MSD analysis was greater than the QC limit for diethylphthalate at 50%. The associated sample result was a non-detect in the parent sample 54SB52A and no data qualifying action was required.

The LCS recoveries for atrazine (164%/154%) were greater than the upper QC limit. No positive results were reported for these compounds and no data qualifying action was required.

The 2,6-dinitrotoluene (183%), 2,4-dinitrotoluene (194%), diethylphthalate (84%), n-nitrosodiphenylamine (147%), di-n-butylphthalate (176%), and bis(2-ethylhexyl)phthalate(64%) results were outside the QC limit for the field duplicate pair D-14/54SB42A. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

For the PAH analyses, the CCV analyzed on 12/30/02 at 0152 displayed a %D greater than the QC limit (i.e., 15%) with a negative bias for benzo(k)fluoranthene at 15.89%. Positive results were flagged "J,c" in the associated samples. No data flags were applied to the non-detect results since the %D was acceptable on the other column.

The LCS recoveries for naphthalene (25%), acenaphthene (18%), and fluorene (48%) were less than the lower QC limit (i.e., 50%). Positive results were flagged "J,l" in the associated samples, unless previously flagged for high RPD between the two column concentrations.

The RPD (62%) and MS/MSD (47%/25%) recoveries for naphthalene and the RPD for acenaphthylene (22%) were outside the QC limit for the matrix spike pair analyzed on sample 54SB52A. Naphthalene was flagged "UJ,m" in the parent sample 54SB52A. No positive results were reported for acenaphthylene in the parent sample 54SB52A and no data flags were applied.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for some compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

The absolute value of naphthalene and benzo(b)fluoranthene results were greater than 4 times the RL for the field duplicate pair D-14/54SB42A. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

For the explosives analyses, the continuing calibration analyzed on 1/1/03 at 0410 displayed %Ds greater than the QC limit (i.e., 15%) with a positive bias for 2,4,6-

trinitrotoluene at 29.58% and 2,4-dinitrotoluene at 25.22% on the first column. The continuing calibration analyzed on 1/1/03 at 1241 displayed a %D greater than the QC limit with a positive bias for 2,4-dinitrotoluene at 28.12% on the first column. The continuing calibrations analyzed on 1/3/03 at 1345 and 2149 displayed %Ds greater than the QC limit with a positive bias for 2,4-dinitrotoluene at 18.23% and 16.35%, respectively on the first column. Positive results were flagged "J,c" in the associated samples. The continuing calibration analyzed on 1/7/03 at 1333 displayed a %D greater than the QC limit with a negative bias for 3-nitrotoluene at 23.68% on the second column. The continuing calibration analyzed on 1/7/03 at 2356 displayed %Ds greater than the QC limit with a negative bias for tetryl at 28.94% and 3-nitrotoluene at 22.8% on the second column. No data qualifying action was required since the associated sample results were non-detect and the %Ds were acceptable on one of the two columns.

The MS recoveries for 1,3,5-trinitrobenzene (13%) and 2,4,6-trinitrotoluene (19%) were less than the lower QC limit. These results were previously flagged in the parent sample D-14 and no further data qualifying action was required. The RPDs for HMX (34%), 1,3,5-trinitrobenzene (124%), and 2,4,6-trinitrotoluene (54%) were greater than the QC limit. No positive results were reported in the parent sample D-14 and no data qualifying action was required.

For the nitroglycerin analyses, the MS/MSD recoveries (-1170%/-1180%) were less than the lower QC limit. No data qualifying action was required since the sample concentration was greater than 4 times the spiking amount.

The absolute value of nitroglycerin result was greater than 4 times the RL for the field duplicate pair D-14/54SB42A. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

For the metal analyses, the method blank displayed detections greater than the MDL for antimony at 0.121 mg/Kg, calcium at –5.946 mg/Kg, and zinc at –0.284 mg/Kg. Positive antimony results less than 5 times the blank concentration were flagged "B,p" in the associated samples. All associated sample results were positive and were greater than 5 times the blank concentration for calcium and zinc, thus, no data qualifying action was required.

Equipment blank EQB-14 located in SDG R2810 contained copper at 1.6 ug/L and selenium at 3.7 ug/L. Positive results less than 5 times the blank concentration were flagged "B,x" in the associated samples.

The initial and continuing calibration blanks also contained negative results for antimony, arsenic, calcium, iron, sodium and zinc and positive results for magnesium, selenium and potassium. All associated sample results were positive and were either greater than 5 times the blank concentration or were previously

flagged due to method blank contamination. No further data qualifying action was required.

The initial CRDL percent recoveries for aluminum (128.1%), iron (110.9%), lead (83.7%), potassium (69.1%), selenium (123.4%), sodium (118%), thallium (86.2%), and zinc (68.1%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "K,w" for sodium in the associated samples. All associated sample results were greater than 2xCRDL for the other analytes or were previously flagged and no further data qualifying action was required.

The MS/MSD pair for sample 54SB52A displayed recoveries for antimony (35.8%/38.1%) which were less than the lower QC limit. All associated sample results were positive and were flagged "L,m", unless previously flagged due to other anomalies.

The %Ds for serial dilution analyses were greater than the QC limit (i.e., 10%) for nickel (10.4%) and potassium (15.1%). Positive results were flagged "J,s", unless previously flagged due to other anomalies.

The RPD for lead was greater than the QC limit (i.e., 35%) at 41% for the field duplicate pair D-14/54SB42A. No data qualifying action is required based on field duplicate anomalies and no data flags were applied.

Correctable Anomalies: Several compounds were incorrectly flagged "B by the laboratory for the PAH analyses. These flags were removed by the reviewer.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were elevated. The chain of custodies were not signed by the laboratory. No data qualifying action was taken.

Positive TIC results were flagged "NJ,t" in the associated samples. Except for data flagged "R", all data, as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Rangan

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 2/27/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: V2810
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓	✓	
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes: Not signed by lab, comment

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		L	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

	collected	extract	analyzed
	12/10/02	12/16/02	12/22/02
	"	12/24/02	12/26/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes:

GBB-14 in R2810 ND ✓

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: CC 12/22/02 atrazine -82.8 ND → R/C

see attached

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?	✓		
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)		✓	
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / L / K Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes: Spl dilution D-14 → L,UL,S unless prev. flagged ... if Confirmed results HS
D-14 RE L,UL,S
D-14 RE base-neutral L,UL,S

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: diethylphthalate 50% 7QC pos ⇒ J,d in all samples. unless prev. flagged

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: Atrazine 164, 154% 7QC all prev. flagged-

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		✓	

Notes:

545B42A		%RPD	D-14	545B42A	D-14	%RPD
2,6-Dinitrotoluene	830	183%	37	di-n-butylphthalate	12000	750	176%
2,4-DNT	12000	144%	170	bis(2-ethylhexyl	490	250	64%
diethylphthalate	4900	84%	2000				
N-nitrosodiphenylamine	1400	147%	210				

COMMENT

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	✓		

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 12 ✓			
12.1.2	Number of target compounds in each analysis: 46			
12.1.3	Number of results rejected and not reported: 10			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)

DATA VALIDATION WORKSHEET

Polyaromatic Hydrocarbons

Reviewer: RM
Date: 2/26/03
DV Level: II (III) IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: V2510
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓	✓	
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes: Not signed by lab, comment

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes: Collect 12/10/02 extract 12/16/02 analyzed 1/8/03, 1/29/03 1/9/03

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		

3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			

Notes: EQB-14 in R2SIC ND✓

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: ccc criteria met
Res, J,C
no flag to ND since acceptable on the other column-

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		

6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: Naphthalene 47/25, RPD 62 UJm in parent 545B52A

2a naphthylene RPD 70 QC No RPD, no flag

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			✓
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		✓	

Notes: D-14 545B42A

Naphthalene 1 ~~[illegible]~~ 50 U 660

Benzo(b) fluoranthene 9.9 U 92 comment

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

Solid 7.10% → J/g

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness =			
	% Completeness = 100%

4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	X		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS %R = -1170% MS/MSD sample D-14 a FD of SB42A
MSD %R = -1180% the parent sample is ND, therefore I flagged D-14 only as ~~the~~ no action ~~it~~

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits? 120% 50-150%		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: NO LCSD

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.		X

pos either 5X or were prev. MB

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+) — Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.	✓			✓		

Note:

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		✓		✓		
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L						
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	✓					✓

Note: antimony 35.8/38.1 Lim unless Prep flagged
Thallium 0/0 all ND → Rim

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓			✓		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓					
10.2	Was a five-fold dilution performed?	✓					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).		✓				

Note:
Nickel 10.4
K 15.1 J's in all samples

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report		✓		✓		

Note: 545842A / D-14 Pb 41% RPD

comment

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓		
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note:

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples: 11						
13.1.2	Number of target compounds in each analysis: 23						
13.1.3	Number of results rejected and not reported: 11						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 95%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: ___W2810 & X2810____ **Fraction:** ___Explosives, Nitroglycerin, Metals____

Lab: _____CompuChem_____ **Project Name:** _____Radford SWMU 54_____

Reviewer: _____JA, AJ_____ **Date:** _____March 3, 2003_____

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the explosive analyses, the LCS recoveries for HMX (29%), 1,3,5-trinitrobenzene (40%), RDX (18%), 1,3-dinitrobenzene (40%), 2,4,6-trinitrotoluene (35%), tetryl (46%), nitrobenzene (35%), 2,4-dinitrotoluene (48%), 2,6-dinitrotoluene (35%), 2-amino-4,6-dinitrotoluene (38%), 4-amino-2,6-dinitrotoluene (33%), 2-nitrotoluene (41%), 4-nitrotoluene (33%), and 3-nitrotoluene (36%) were less than the lower QC limit (i.e., 50%). All positive detections, except those previously flagged due to blank contamination, were flagged "J,l" and non-detects were flagged "R,l". The percent completeness was less than the QC limit (i.e., 90%) at 4.8% due to this anomaly.

Minor Anomalies: For the explosive analyses, the method blank contained 2,4,6-trinitrotoluene at 0.58 µg/L. The positive 2,4,6-trinitrotoluene result in sample 54DPW2 was flagged "B,z". The continuing calibration verification (CCV) analyzed on 12/29/02 at 00:22 displayed %Ds on the primary column (C18) greater than the control limit (i.e., 15%) with a positive bias for 2,4,6-trinitrotoluene at 19.01% and 2,4-dinitrotoluene at 22.49%, and with a negative bias for 4-amino-2,6-dinitrotoluene at 16.29%. The CCV analyzed on 12/29/02 at 08:53 displayed %Ds on the primary column (C18) greater than the control limit with a positive bias for 2,4,6-trinitrotoluene at 28.14% and 2,4-dinitrotoluene at 31.96%, and with a negative bias for 4-amino-2,6-dinitrotoluene at 17.45%. The CCV analyzed on 1/3/03 at 02:40 displayed a %D on the primary column (C18) greater than the control limit with a positive bias for 2,4,6-trinitrotoluene at 19.62%. The CCV analyzed on 1/10/03 at 02:30 displayed %Ds on the confirmation column (Pinnacle Cyano) greater than the control limit with a positive bias for HMX at 15.21% and with a negative bias for 3-nitrotoluene at 15.97%. Since all associated sample results were previously flagged due to other QC failures, no further data qualifying action was taken.

The 1,4-dinitrobenzene surrogate recoveries were less than the lower control limit (i.e., 39%) on both columns in sample 54DPW2 (14% and 30%). The retention time for this surrogate was slightly outside the retention time window on the primary column (C18). Since all results in this sample were previously flagged due to other QC failures, no further data qualifying action was taken.

The MS/MSD recoveries for 2,4,6-trinitrotoluene (36%/42%) were less than the lower control limit (i.e., 50%) in the 54DPW2 MS/MSD pair. The relative percent difference was greater than the acceptance limit (i.e., 30%) for 2-nitrotoluene at 40%. Since all associated sample results were previously flagged due to other QC failures, no further data qualifying action was taken.

For the nitroglycerin analyses, the 1,4-dinitrobenzene surrogate recovery was less than the lower control limit (i.e., 50%) on the primary column in sample 54DPW2 (16%). The nitroglycerin was not detected in this sample and the non-detect result was flagged "UL,s".

The MS/MSD recoveries for nitroglycerin (38%/35%) were less than the lower control limit (i.e., 50%) in the 54DPW2 MS/MSD pair. Since the nitroglycerin result in parent sample 54DPW2 was previously flagged due to surrogate recovery failure, no further data qualifying action was taken.

For the total metal analyses (W2810), the CRDL percent recoveries for aluminum (111.1%), lead (137.7%), selenium (114.0%), sodium (78%), and thallium (113.4%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "K,w" for aluminum, lead, and selenium in the associated samples. All associated sample results were either non-detects for thallium or greater than 2xCRDL for sodium and no data qualifying action was required.

The preparation blank contained barium at 0.361 µg/L, magnesium at 58.302 µg/L, silver at -0.808 µg/L, and zinc 1.424 µg/L. Silver was also detected in one continuing calibration blank at -0.7 µg/L. Silver was not detected in the associated samples and non-detects were flagged "UL,p" due to the possibility of a negative drift in the instrument that may give rise to a detection limit with a low bias. Since barium, magnesium, and zinc results were greater than five times the blank concentration in the associated samples, no data qualifying action was taken.

Antimony, arsenic, barium, calcium, magnesium, potassium, and zinc were also detected in the initial calibration blank (ICB) and/or continuing calibration blanks (CCBs) at low levels. Since all results in the associated samples were either non-detects or greater than five times the blank concentration, no data qualifying action was taken.

For the dissolved metal analyses (X2810), the CRDL percent recoveries for aluminum (112.0%), cadmium (116.0%), copper (67%), potassium (117.3%), selenium (66.0%), and sodium (79.8%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "K, w" for aluminum and potassium and were flagged "L,w" for selenium in the associated samples. Copper was not detected in the associated samples and non-detects were flagged "UL,w". All associated sample results were either non-detects for cadmium or greater than 2xCRDL for sodium and no data qualifying action was required.

The preparation blank contained barium at 0.38 µg/L, magnesium at 63.285 µg/L, and zinc at 1.18 µg/L. Barium, beryllium, copper, and magnesium were also detected in the initial calibration blank (ICB) and/or continuing calibration blanks (CCBs) at low levels. Since all results in the associated samples were either non-detects or greater than five times the blank concentration, no data qualifying action was taken.

The MS/MSD recoveries for arsenic (52.2% and 52.3%) and thallium (69.5% and 74.7%) were less than the lower control limit (i.e., 75%) in the 54DPW1 MS/MSD pair. The post-digestion spike analysis was not performed by the laboratory. Arsenic and thallium were not detected in the associated samples and non-detects were flagged "UL,m".

The serial dilution %D was greater than the QC limit (i.e., 10%) for zinc at 10.5%. Positive zinc results were flagged "J,s" in all samples.

Correctable Anomalies: None.

Comments: Except for data flagged "R", all data, as qualified, are usable for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Explosives

Reviewer: JA
Date: 3/5/03
DV Level: II (III) IV
Review Document:

_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: W2810
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓	✓	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

Cooler temp 3.8°C

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

Date Collected	Date Extracted	H.T.	Date Analyzed.	H.T.
12/11/02	12/13/02	2 days	12/29/02	16 days
			1/3/02	21 days

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			✓

Notes: PBLKCY 2,4,6-Trinitrotoluene 0.5J ug/L → 54PPW2 B,x
PBLKAA All NDs.

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	✓	✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			✓
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).		✓	
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: I. Cal 12/27/02 (VARIAN74). All %RSDs or r^2 were in control on both columns
C. Cal. see attached.

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?		✓	
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.		✓	
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes: 54PPW2 1,4-dinitrobenzene 14%/30% (39-132%) L/UL.

⊗ Surrogate retention time was shifted

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD – 544PW2. 2,4,6-Trinitrotoluene MS = 36%, MSD = 42%. (SV-150R)
2-nitrotoluene RPD = 40% (30%)

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present? only LCS	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits? only LCS			✓
	Action: If Yes, J(+) only.			

Notes: PLCSCY (12/13/02 extracted). All LCS %Rs were ~~in control~~ less than LCL.
PLCSAA (12/18/02 extracted) All %Rs were in control.
→ MS/MSD

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?			✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			✓

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		✓	
10.1.1	Number of samples: 3 x 14 = 42			
10.1.3	Number of results rejected and not reported: ~~14~~ 40			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 4.8%			
	% Completeness = 4.8%.

DATA VALIDATION WORKSHEET

Nitroglycerin

Reviewer: AJ
Date: 02/06/05
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: W2810
Test Name: Nitroglycerin
Method No.: 8332-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: cooler temp 8.3°C

sampled 12/11/02
extracted 12/13/02
analysis 01/06/03

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits? 54% 150%	X		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD 5408 W2
MS %R = 38% MSD %R = 55% RPD = 10%

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits? 54%		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: No LCSD

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?		X	
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.			X

Notes:
No field duplicates in this batch.

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓	X	
10.1.1	Number of samples: 3		(JA)	
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = ~~total~~ 100% (JA)			
	% Completeness = ~~total~~ 100% (JA)

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{O}C \pm 2\ ^{O}C$)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes, % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note: Cooler temp 3.8°c.

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note:

	Date Collected	Date Analyzed	H.T.
ICP	12/11/02	12/19/02	8 days
Hg	12/11/02	12/19/02	8 days

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%?		✓				
	<50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K						

Note:

CRDL

Al	111.1%.	K(+)	K, UJ
Pb	137.7%	↓	K, UJ
Se	114.0%	↓	K, UJ
Na	78.0%	L/UL	All results > 2x CRDL
Tl	113.4%.	K(+).	All NDs
Hg	120% / OK.		No limits.

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B					✓	
4.4	Are there negative blank results with the absolute value > MDL?	✓				✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L			✓			✓
4.5	Are there reported field blankor trip blank values > ± MDL?						
	Sample Results > MDL						
	< 5X Blank Contamination B						

Note: See attached.

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?		✓				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?	✓					
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.	✓			✓		

Note: Lab dup: 574PW1 All %RPDs were in control

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?	✓			✓		
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L						
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.			✓			✓

Note: MS/MSD - 544DPW1 All %Rs were in control
- No post-digestion spike - not needed.

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓			✓		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓					
10.2	Was a five-fold dilution performed?	✓					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).	✓					

Note: ICP Serial dilution. All %Ds were in control.

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?			✓			✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report			✓			✓

Note: _____

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?			✓			✓
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note: _____

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples: 3						
13.1.2	Number of target compounds in each analysis: _____						
13.1.3	Number of results rejected and not reported: 0						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure

DATA VALIDATION REPORT - Level III Review

SDG No.: H2L120252 **Fraction:** Perchlorate

Lab: STL-Knoxville **Project Name:** Radford_SWMU_54

Reviewer: Andrea_Sansom **Date:** March 3, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The continuing calibration blanks displayed estimate concentrations of perchlorate at 0.294 ug/L and 0.417 ug/L. The analyst has performed manual integrations that eliminate extraneous baseline from the integrated area that determine sample concentrations but did not perform manual integrations for the continuing calibration blanks. Using professional judgment, the associated field sample result that was slightly less than five times the blank concentration, 54DPW3 at 2.0 ug/L, was not qualified.

Correctable Anomalies: None.

Comments: None.

EPA method - Modified for USEPA Region III Modifications to NFGs (Inorganic)

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: STL-Knoxville
SDG No.: H2L120252
Test Name: Perchlorate
Method No.: E314.0

1.0 Laboratory Deliverables		Yes	No	NA
1.1a	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.1b	Do sample ID Numbers on COC match those in report?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes, % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		
	Action: Resolve any discrepancies before proceding further.			

Notes:

54DPW1 FEPM6 H2L120252
54DPW2 FEPMK
54DPW3 FEPML

2.0 Holding Times and Preservation		Yes	No	NA
2.1	Do sample collection, preservation, shipping, and storage condition meet the requirement of the relevant Project Controlling Documents (PCDs)?	✓		
	Action: No chemical preservation required.			
2.2	Have technical holding times (28 days), determined from date of sampling to date of analysis (including dilution or reanalysis) been exceeded? If yes, apply J(+)/UJ(-) to all associated analytes.		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, apply J(+)/R(-) to all associated analytes.		✓	

Notes: GW sampled 12/11/02 prepped 12/17
pH 7 analyzed 12/18 /

Cooler 3°C

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were required blanks (MB) prepared/submitted at the appropriate frequency? If not, note in DV report.	✓		
3.2	Do any method blanks have positive results above the MDL? Action: If Yes, positive associated sample results less than 5X the concentration in the blank should be qualified "B" indicating the result is qualitatively suspect.		✓	
3.3	After correcting for method blank contamination, do any field/equipment/trip blanks have positive results? If so, apply the same rules given above based on the highest blank value of those associated with the sample.			✓

Notes:

MB - ND open CCB 0.294 ppb
closing CCB 0.417 ppb - baseline N/A

4.0 Initial and Continuing Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.2	Are all initial calibration correlation coefficients within the control limits (i.e., r > 0.99)? If No, apply "R" to all non-detects; "J" to positive results for all samples associated with the calibration.	✓		
4.3	Was a instrument performance check (IPC) analyzed at the matrix conductivity threshold (MCT)? If no, verify that the sample chromatagrams do not display this interference.	✓		
4.4	Is the Pd_{MH} < 25%, % recovery between 80-120%, and the retention time shift < 5%. If No, apply R to all results for sample that display this type of interference.	✓		
4.5	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Control limit: ≤ ± 15%. If No, apply "R" to all non-detects; "J*" to positive results for all samples associated with the calibration. Positive results are to be used only qualitatively.	✓		

Notes:

4 - 400 ppb MCT - 7.12% D
2 1st order
r = 0.9986 CCC 192.432/200

ICV 0.67% D
(2° Source)

10.67
10.64
10.64
10.70
10.63
10.59

5.0 Matrix Spikes

		Yes	No	NA
5.1	Was a matrix spike analyzed at required frequency per the PCDs?			✓
5.2	Is the %R for the matrix spike and matrix spike duplicate outside the QC limits?			✓
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

6.0 Laboratory Control Samples (LCS/LCSDs)

		Yes	No	NA
6.1	Were LCS analyzed at required frequency per the PCDs?	✓		
6.2	Are there any LCS and/or LCSD recoveries outside the QC limits (i.e., 85-115%)?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
6.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits (i.e., 15%)?			✓
	Action: If Yes, J(+) only.			

Notes:

LCS 87%

7.0 Field Duplicates

		Yes	No	NA
7.1	Was a field duplicate submitted/analyzed at an appropriate frequency of one per ten?			✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			✓

Notes:

8.0 Laboratory Duplicates (sample duplicate or matrix spike duplicate)		Yes	No	NA
8.1	Was a duplicate analyzed at the correct frequency?			✓
8.2	Are all analyte duplicate results within control limits? If No, J(+) only. Note in DV report any instance where one or another of the pair was positive while the other was negative.			✓

Notes:

External MS/MSD ✓

9.0 Analyte Identification and Detection Limit Verification		Yes	No	NA
9.1	Do retention times in calibrations and samples fall within appropriately developed and applied windows? If not, look for uniform shifts. Failing that, flag all results "R" as qualitatively suspect.	✓		
9.2	Verify quantitative results. Do manual calculations agree with reported values to within rounding error? If not, increase audit. If additional errors are found, require resubmission. Notify PM immediately.	✓		
9.3	Do detection/reporting limits meet those required by the QAPP and were they properly adjusted for dilution factors and dry weight equivalent of wet weight aliquot)? If not, note affected sample Ids in DV report.	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit: 90%)	✓		
10.1.1	Number of samples: _____			
10.1.2	Number of target compounds in each analysis: _____			
10.1.3	Number of results rejected and not reported: _____			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

DATA VALIDATION REPORT - Level III Review

SDG No.: H3C040115 **Fraction:** Perchlorate

Lab: STL/Knoxville **Project Name:** Radford SMWU 54

Reviewer: GF **Date:** April 15, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the *National Functional Guidelines for Inorganic Data Review* as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: All data are usable based on the data reviewed.

FJH0V	001	54MW6	03/03/03	15:05
FJH00	002	GW/EB-1	03/03/03	15:30

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Notes:

6.0 Laboratory Control Samples (LCS/LCSDs)		Yes	No	NA
6.1	Were LCS analyzed at required frequency per the PCDs?	✓		
6.2	Are there any LCS and/or LCSD recoveries outside the QC limits (i.e., 85-115%)?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
6.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits (i.e., 15%)?		✓	
	Action: If Yes, J(+) only.			

Notes:

7.0 Field Duplicates		Yes	No	NA
7.1	Was a field duplicate submitted/analyzed at an appropriate frequency of one per ten?	✓		✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		✓

Notes:

8.0 Laboratory Duplicates (sample duplicate or matrix spike duplicate)		Yes	No	NA
8.1	Was a duplicate analyzed at the correct frequency?	✓		
8.2	Are all analyte duplicate results within control limits? If No, J(+) only. Note in DV report any instance where one or another of the pair was positive while the other was negative.	✓		

Notes:

9.0 Analyte Identification and Detection Limit Verification		Yes	No	NA
9.1	Do retention times in calibrations and samples fall within appropriately developed and applied windows? If not, look for uniform shifts. Failing that, flag all results "R" as qualitatively suspect.	✓		
9.2	Verify quantitative results. Do manual calculations agree with reported values to within rounding error? If not, increase audit. If additional errors are found, require resubmission. Notify PM immediately.			Level IIB
9.3	Do detection/reporting limits meet those required by the QAPP and were they properly adjusted for dilution factors and dry weight equivalent of wet weight aliquot)? If not, note affected sample Ids in DV report.	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit: 90%)	✓		
10.1.1	Number of samples: 2			
10.1.2	Number of target compounds in each analysis: 1			
10.1.3	Number of results rejected and not reported: 0			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			

Notes:

PROJECT NARRATIVE
H3C040115
Revised

This report has been revised to include the appropriate title page.

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation was included with the original report.

Sample Receipt

There were no problems with the condition of samples received.

Quality Control

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ, California DHS ELAP Cert. #2423, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906 (SDWA, 5/14/01-6/21/02), Hawaii DOH, Illinois EPA Cert. #000510, Indiana DOH Cert. #C-TN-02, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-576, South Carolina DHEC Lab ID #84001, Tennessee DOH Lab ID #02014, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center, US EPA Perchlorate Approval and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure

DATA VALIDATION REPORT - Level III Review

SDG No.: H3C050120 **Fraction:** Perchlorate

Lab: STL/Knoxville **Project Name:** Radford SMWU 54

Reviewer: GF **Date:** April 15, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the *National Functional Guidelines for Inorganic Data Review* as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: All data are usable based on the data reviewed.

Signed: Gregory Hoppe

SAMPLE SUMMARY

H3C050120

WO #	SAMPLE#	CLIENT SAMPLE ID	SAMPLED DATE	SAMP TIME
FJK4R	001	54MW5	03/04/03	08:50
FJK4V	002	54MW7	03/04/03	08:50
FJK4X	003	GW/DUP-1	03/04/03	
FJK41	004	54MW4	03/04/03	12:30
FJK42	005	54MW3	03/04/03	13:55
FJK44	006	54MW2	03/04/03	15:10
FJK45	007	GW/EB-2	03/04/03	15:30

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Review Document:

Perchlorate

EPA method - Modified for USEPA Region III Modifications to NFGs (Inorganic)

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: STL-Knoxville
SDG No.: H3C050120
Test Name: Perchlorate
Method No.: E314.0

1.0 Laboratory Deliverables		Yes	No	NA
1.1a	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.1b	Do sample ID Numbers on COC match those in report?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % sol	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		
	Action: Resolve any discrepancies before proceding further.			

Notes:

2.0 Holding Times and Preservation		Yes	No	NA
2.1	Do sample collection, preservation, shipping, and storage condition meet the requirement of the relevant Project Controlling Documents (PCDs)?	✓		
	Action: No chemical preservation required.			
2.2	Have technical holding times (28 days), determined from date of sampling to date of analysis (including dilution or reanalysis) been exceeded? If yes, apply J(+)/UJ(-) to all associated analytes.		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, apply J(+)/R(-) to all associated analytes.		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were required blanks (MB) prepared/submitted at the appropriate frequency? If not, note in DV report.	✓		
3.2	Do any method blanks have positive results above the MDL? Action: If Yes, positive associated sample results less than 5X the concentration in the blank should be qualified "B" indicating the result is qualitatively suspect.		✓	
3.3	After correcting for method blank contamination, do any field/equipment/trip blanks have positive results? If so, apply the same rules given above based on the highest blank value of those associated with the sample.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.2	Are all initial calibration correlation coefficients within the control limits (i.e., r > 0.99)? If No, apply "R" to all non-detects; "J" to positive results for all samples associated with the calibration.	✓		
4.3	Was a instrument performance check (IPC) analyzed at the matrix conductivity threshold (MCT)? If no, verify that the sample chromatagrams do not display this interference.	✓		
4.4	Is the $Pd_{A/H}$ < 25%, % recovery between 80-120%, and the retention time shift < 5%. If No, apply R to all results for sample that display this type of interference.	✓		
4.5	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Control limit: ≤ ± 15%. If No, apply "R" to all non-detects; "J*" to positive results for all samples associated with the calibration. Positive results are to be used only qualitatively.	✓		

Notes:

5.0 Matrix Spikes		Yes	No	NA
5.1	Was a matrix spike analyzed at required frequency per the PCDs?	✓		
5.2	Is the %R for the matrix spike and matrix spike duplicate outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

6.0 Laboratory Control Samples (LCS/LCSDs)		Yes	No	NA
6.1	Were LCS analyzed at required frequency per the PCDs?	✓		
6.2	Are there any LCS and/or LCSD recoveries outside the QC limits (i.e., 85-115%)?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
6.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits (i.e., 15%)?		✓	
	Action: If Yes, J(+) only.			

Notes:

7.0 Field Duplicates		Yes	No	NA
7.1	Was a field duplicate submitted/analyzed at an appropriate frequency of one per ten?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 54MW7 and GW1Dup1
ND ND

8.0 Laboratory Duplicates (sample duplicate or matrix spike duplicate)		Yes	No	NA
8.1	Was a duplicate analyzed at the correct frequency?	✓		
8.2	Are all analyte duplicate results within control limits? If No, J(+) only. Note in DV report any instance where one or another of the pair was positive while the other was negative.	✓		

Notes:

9.0 Analyte Identification and Detection Limit Verification		Yes	No	NA
9.1	Do retention times in calibrations and samples fall within appropriately developed and applied windows? If not, look for uniform shifts. Failing that, flag all results "R" as qualitatively suspect.	✓		
9.2	Verify quantitative results. Do manual calculations agree with reported values to within rounding error? If not, increase audit. If additional errors are found, require resubmission. Notify PM immediately.	✓		lab
9.3	Do detection/reporting limits meet those required by the QAPP and were they properly adjusted for dilution factors and dry weight equivalent of wet weight aliquot)? If not, note affected sample Ids in DV report.	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit: 90%)	✓		
10.1.1	Number of samples: 7			
10.1.2	Number of target compounds in each analysis: 1			
10.1.3	Number of results rejected and not reported: Ø			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			

Notes:

PROJECT NARRATIVE
H3C050120
Revised

This report has been revised to include the appropriate title page.

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation was included with the original report.

Sample Receipt

There were no problems with the condition of samples received.

Quality Control

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ, California DHS ELAP Cert. #2423, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906 (SDWA, 5/14/01-6/21/02), Hawaii DOH, Illinois EPA Cert. #000510, Indiana DOH Cert. #C-TN-02, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-576, South Carolina DHEC Lab ID #84001, Tennessee DOH Lab ID #02014, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center, US EPA Perchlorate Approval and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 59077_(Revision 1) **Fraction:** Dioxin/Furan

Lab: Triangle **Project Name:** Radford SWMU_54

Reviewer: Andrea_Sansom **Date:** April 17, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: Sample 54SB25B displayed a positive detection for 2,3,7,8-TCDF that was not reported from the alternate column DB225. This result was flagged "R,p".

Minor Anomalies: The closing continuing calibration analyzed on 12/12/02 at 1010 displayed an internal standard %D greater than the control limit (i.e., 30%) with a negative bias for $^{13}C_{12}$-OCDD at 34.2%. The associated positive field sample results were flagged "J,c".

The laboratory flag "X" indicates that the associated PCDF peak/s has the same retention time as diphenyl ether and that the diphenyl ether contribution to the total PCDF value is greater than ten percent. All PCDF results influenced by this co-elution have been reported as estimate maximum possible concentrations (EMPCs) and were flagged "J,w".

Correctable Anomalies: None.

Comments: The positive 2,3,7,8-TCDF detection for samples 54SB32A, 54SB32B, and 54SB33A on the DB-5 column were re-analyzed on a DB-225 column that is more suitable for the determination of this congener. The DB-225 result for this congener should be used for data interpretation. This concentration has been appropriately used to determine the toxicity equivalent factor.

The laboratory flag "J" represents a reported concentration that was less than the linear range of the initial calibration and an estimate sample result.

Signed: Andrea Sansom

DATA VALIDATION WORKSHEET

Reviewer: AS
Date: 3/12/2003
DV Level: II III IV
Review Document:
__X__ SW-846 __X__ Project QAPP/SAP __X__ NFG EPA 540-R-02-003 (August 2002)

Dioxins and Furans Analysis

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Triangle
SDG No.: 59077
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	

Notes: *cooler 3C*

54SB25A *54SB32A*
54SB25B *54SB32B*
54SB30A *54SB33A*
54SB30B *54SB33B*

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C_+2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	X		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		X	

Notes: *sampled 12/3/02*
extracted 12/9/02
analyzed 12/12/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	X		
3.2	Do any blanks have positive results? Action: If yes, an action level of 5 times the blank value is used to qualify sample results "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			X

Notes:

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	X		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-".		X	
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.		X	
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥2.5:1 ; CCC ≥10:1) If no, apply "R" to estimated detection limits.	X		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	X		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51
7	M+2/M+4	1.04	0.88- 1.2
8	M+2	0.89	0.76- 1.02

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	X		

Notes: *ICAL 6/7/02 SF56072, six points, all ratios within limits, %RSD<15%; ass tune at >10000, peak valley at 12%*

CCC S026239 12/11/02 2234, all ratios within limits, %D for targets<20%, RT within limits, S/N 1250:1; ass tune at >10000, peak valley at 14%

1,3,6,8-TCDF at 36.1% and 1,3,6,8-TCDD at 36% - positive bias, not targets & not used for totals, no action taken.

CCC S026253 12/12/02 1010, all ratios within limits, average used, RT within limits, S/N >10:1; ass tune at >10000

1,3,6,8-TCDF at 41%, 1,2,7,8-TCDF at 20.2%, 1,3,6,8-TCDD at 34.1%, and 1,3,7,9-TCDD at 24.7% - positive bias, not targets & not used for totals, no action taken.

$^{13}C_{12}$-OCDD -34.2% - method allows for using average - associated positives flagged "J,c".

ICAL 6/15/02 PF56152, six points, all ratios within limits, %RSD<15%; ass tune at >10000, peak valley at 6%

CCC P024533 12/12/02 1718, all ratios within limits, %D<20%, RT within limits, S/N > 10:1; ass tune at >10000, peak valley at 8%

CCC P024547 12/13/02 0419, all ratios within limits, %D<20%, RT within limits, S/N >10:1; ass tune at >10000, peak valley at 11%

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	X		
5.1a	Is the resolving power ≥10,000 with m/z 304.9824? If not, apply "R".	X		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	X		
5.2	Was a window defining mix analyzed defining descriptor switching times of scan ranges? If not, flag total homologue results "J+/UJ-".	X		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≥ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	X		

Notes:	**SF, DB5**	**PF, DB225**
	RTCHK S026240 12/11/02 2333	*P024532 RTCHK 12/12/02 1625*
		P024534 RS-100 12/12/02 1821

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: *54SB33B*

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	X		
7.2	Was an LCS analyzed for each batch?	X		
7.3	Are there any percent recoveries outside the QC limits of ±20% for targets and ±30% for reference compounds?		X	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	X		
8.2	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	X		

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			X
9.2	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.			X

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range, if not apply J.		X	
10.2	Is the signal to noise ion ratios ≥2.5:1 for positive results? If not, flag "J".	X		
10.3	Is the ion abundance ratio within 10% of the ratio in the most current CCC for positive results? If no, this result should be reported as an EMPC.	X		
10.4	Are the two identification peak apexs within 2 seconds for positive identifications? If not, flag "R".	X		
10.5	Was a second column confirmation used for positive 2,3,7,8-TCDF? If no, apply "R" to the 2,3,7,8-TCDF results.		X	
10.6	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	X		

Notes:

54SB25B displayed a positive detection for 2,3,7,8-TCDF that was not reported from the alternate column DB225, applied R.

11.0 Data Completeness		Yes	No	NA
11.1	Is the percent completeness within the control limits? (Control limit 90%)	X		
11.1.1	Number of samples: 8			
11.1.2	Number of target compounds in each analysis: 17			
11.1.3	Number of results rejected and not reported: 1			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 99%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 59094r1_(Revision 1) **Fraction:** Dioxin/Furan

Lab: Triangle **Project Name:** Radford SWMU_54

Reviewer: Andrea_Sansom **Date:** April 17, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The closing continuing calibration analyzed on 12/22/02 at 0042 displayed internal standard %Ds greater than the control limit (i.e., 30%) with a negative bias for $^{13}C_{12}$-OCDD at 37.7% and $^{13}C_{12}$-PeCDD at 32.6%. The associated positive field sample results were flagged "J,c".

The method blank displayed a positive estimate detection for 1,2,3,4,6,7,8,9-OCDD at 0.52 pg/g. The four associated field samples displayed positive detections greater than five times the blank concentrations, thus, no data qualifying action was taken.

The ion abundance ratio was not met for $^{13}C_{12}$-1,2,3,6,7,8-HxCDD, $^{13}C_{12}$-1,2,3,4,7,8-HxCDD, and $^{13}C_{12}$-HpCDD for sample 54SB49A. The ion abundance ratio was not met for $^{13}C_{12}$-OCDD for the dilution of sample 54SB49A. Since the associated sample results were positive and did not display ion abundance ratios outside the control limits for the associated analytes, no data qualifying action was taken. The internal standard percent recoveries were greater than the upper control limit (i.e., 135%) for $^{13}C_{12}$-OCDD at 233% and $^{13}C_{12}$-1,2,3,6,7,8-HxCDD at 152% for the dilution analysis of sample 54SB49A. The internal standard percent recovery was greater than the upper control limit for $^{13}C_{12}$-2,3,7,8-TCDF at 146% for the 12/21/02 analysis of sample 54SB49A. The associated positive sample results were flagged "J,i".

The laboratory flag "X" indicates that the associated PCDF peak/s has the same retention time as diphenyl ether and that the diphenyl ether contribution to the total PCDF value is greater than ten percent. All PCDF results influenced by this co-elution have been reported as estimate maximum possible concentrations (EMPCs) and were flagged "J,w".

The laboratory flag "E" denotes a reported concentration that exceeds the upper linear range of the initial calibration. These results were flagged "J,q", unless previously qualified for a calibration anomaly. The laboratory ran a dilution of ten for these results and the result from the dilution should be used for data interpretation. The data validator has manually corrected these concentrations used to determine the toxicity equivalent factors.

Correctable Anomalies: None.

Comments: The positive 2,3,7,8-TCDF detection for samples 54SB46A, 54SB46B, and 54SB49A on the DB-5 column were re-analyzed on a DB-225 column that is more suitable for determination of this congener. The DB-225 result for this congener should be used for data interpretation. This concentration has been appropriately used to determine the toxicity equivalent factor.

The laboratory flag "J" represents a reported concentration that was less than the linear range of the initial calibration and an estimate sample result.

DATA VALIDATION WORKSHEET

Reviewer: AS
Date: 33/11/03
DV Level: II III IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002)

Dioxins and Furans Analysis

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Triangle
SDG No.: 59113
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	

Notes: *cooler 4C*

54SB46A
54SB46B
54SB49A
54SB49B

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ±2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	X		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		X	

Notes: *sampled 12/4/02*
extracted 12/17/02
analyzed 12/21, 22 ,& 26/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	X		
3.2	Do any blanks have positive results? Action: If yes, an action level of 5 times the blank value is used to qualify sample results "B".	X		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			X

Notes:

1,2,3,4,6,7,8,9-OCDD 0.52 pg/g J

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	X		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-".	X		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.		X	
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥2.5:1 ; CCC ≥10:1) If no, apply "R" to estimated detection limits.	X		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	X		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51
7	M+2/M+4	1.04	0.88- 1.2
8	M+2	0.89	0.76- 1.02

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	X		

Notes: *ICAL 6/14/02 WF56142, six points, all ratios within limits, %RSD<15%; ass tune at >10000, peak valley at 10%*

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			X
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			X
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	X		
7.2	Was an LCS analyzed for each batch?	X		
7.3	Are there any percent recoveries outside the QC limits of ±20% for targets and ±30% for reference compounds?		X	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.		X	
8.2	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	X		

Notes: *The ion abundance ratio was not met for $^{13}C_{12}$-1,2,3,6,7,8-HxCDD, $^{13}C_{12}$-1,2,3,4,7,8-HxCDD, and $^{13}C_{12}$-HpCDD for sample 54SB49A.*

The ion abundance ratio was not met for $^{13}C_{12}$-OCDD for the dilution of sample 54SB49A.

Since the associated sample results were positive and did not display ion ratios out for the associated analytes, no data qualifying action was taken.

The %R was greater than the upper control limit for $^{13}C_{12}$-OCDD at 233% and $^{13}C_{12}$-1,2,3,6,7,8-HxCDD at 152% for the dilution of sample 54SB49A.

Positive associated field sample results were flagged J,i.

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			X
9.2	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.			X

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range, if not apply J.		X	
10.2	Is the signal to noise ion ratios ≥2.5:1 for positive results? If not, flag "J".	X		
10.3	Is the ion abundance ratio within 10% of the ratio in the most current CCC for positive results? If no, this result should be reported as an EMPC.	X		
10.4	Are the two identification peak apexs within 2 seconds for positive identifications? If not, flag "R".	X		
10.5	Was a second column confirmation used for positive 2,3,7,8-TCDF? If no, apply "R" to the 2,3,7,8-TCDF results.	X		
10.6	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is the percent completeness within the control limits? (Control limit 90%)	X		
11.1.1	Number of samples:			
11.1.2	Number of target compounds in each analysis:			
11.1.3	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 59113_(Revision 1) **Fraction:** Dioxin/Furan

Lab: Triangle **Project Name:** Radford SWMU_54

Reviewer: Andrea_Sansom **Date:** April 17, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The closing continuing calibration analyzed on 12/14/02 at 1046 displayed an internal standard %D greater than the control limit (i.e., 30%) for $^{13}C_{12}$-OCDD at 40.8%. The associated positive field sample results were flagged "J,c".

The method blank displayed positive estimate detections for 1,2,3,4,6,7,8,9-OCDD at 1.5 pg/g, 1,2,3,4,7,8-HxCDF at 0.14 pg/g, 1,2,3,4,6,7,8,9-OCDF at 0.50 pg/g, and total HxCDF at 0.14 pg/g. The method blank also displayed estimate maximum possible concentrations (EMPCs) for 1,2,3,4,6,7,8-HpCDD at 0.42 pg/g and total HpCDD at 0.42 pg/g. The two associated field samples displayed positive detections greater than five times the blank concentrations, thus, no data qualifying action was taken.

The laboratory flag "X" indicates that the associated PCDF peak/s has the same retention time as diphenyl ether and that the diphenyl ether contribution to the total PCDF value is greater than ten percent. All PCDF results influenced by this co-elution have been reported as EMPCs and were flagged "J,w".

The laboratory flag "E" applied to the sample 54SB48A's OCDD result denotes a reported concentration that exceeds the upper linear range of the initial calibration. The data validator would have applied "J,q" to this result, however, this result was previously qualified for a calibration anomaly.

Correctable Anomalies: None.

Comments: The positive 2,3,7,8-TCDF detection for samples 54SB48A and 54SB55A on the DB-5 column were re-analyzed on a DB-225 column, which is more suitable to the determination of this congener. The DB-225 result for this congener should be used for data interpretation. This concentration has been appropriately used to determine the toxicity equivalent factor.

DV Level: II III IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002)

Dioxins and Furans Analysis

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Triangle
SDG No.: 59113
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?		x	
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	

Notes: cooler 4C — 54SB55A
54SB55B and 54SB48B that are on COC can be found in SDG 59113H, appear to be grouped by necessity of second column confirmation for TCDF — 54SB48A

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	x		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		x	

Notes: sampled 12/9/02
extracted 12/11/02
analyzed 12/14&16/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	x		
3.2	Do any blanks have positive results? Action: If yes, an action level of 5 times the blank value is used to qualify sample results "B".	x		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			x

Notes:					
	1,2,3,4,6,7,8-HpCDD	0.42 pg/g J; EMPC	1,2,3,4,6,7,8,9-OCDF	0.5 pg/g J
	1,2,3,4,6,7,8,9-OCDD	1.5 pg/g J	total HpCDD	0.42 pg/g J; EMPC
	1,2,3,47,8-HxCDF	0.14 pg/g J	total HxCDF	0.14 pg/g

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	x		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-".	x		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.		x	
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥2.5:1 ; CCC ≥10:1) If no, apply "R" to estimated detection limits.	x		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	x		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51
7	M+2/M+4	1.04	0.88- 1.2
8	M+2	0.89	0.76- 1.02

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	x		

Notes: ICAL 6/7/02 SF56072, six points, all ratios within limits, %RSD<15%; ass tune at >10000, peak valley at 13%

CCC S026295 12/13/02 2344, all ratios within limits, %D<20%, RT within limits, S/N 1250:1; ass tune at >10000, peak valley at 14%

CCC S026308 12/14/02 1046, all ratios within limits, average used, RT within limits; ass tune at >10000

$^{13}C_{12}$-OCDD -40.8% - method allows for using average - associated positives flagged "J,c".

ICAL 6/15/02 PF56152, six points, all ratios within limits, %RSD<15%; ass tune at >10000, peak valley at 6%

CCC P024582 12/16/02 1828, all ratios within limits, %D<20%, RT within limits, S/N 5000:1; ass tune at >10000, peak valley at 6%

CCC P024596 12/17/02 0525, all ratios within limits, %D<20%, RT within limits, S/N 5000:1; ass tune at >10000, peak valley at 24%

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	x		
5.1a	Is the resolving power ≥10,000 with m/z 304.9824? If not, apply "R".	x		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	x		
5.2	Was a window defining mix analyzed defining descriptor switching times of scan ranges? If not, flag total homologue results "J+/UJ-".	x		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≥ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	x		

Notes:	**DB5**	**DB225**	
	RTCHK S026292 12/13/02 1917	P024580 RTCHK 12/16/02 1227	P024597 RTCHK 12/17/02
	RTCHK S026309 12/14/02 end of sequence	P024583 RS-100 12/16/02 1929	P024598 RS-100 12/17/02

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			x
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			x
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			x
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			x
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	x		
7.2	Was an LCS analyzed for each batch?	x		
7.3	Are there any percent recoveries outside the QC limits of ±30% for targets and ±30% for reference compounds?		x	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	x		
8.2	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	x		

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			x
9.2	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			x

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range, if not apply J.		x	
10.2	Is the signal to noise ion ratios ≥2.5:1 for positive results? If not, flag "J".	x		
10.3	Is the ion abundance ratio within 10% of the ratio in the most current CCC for positive results? If no, this result should be reported as an EMPC.	x		
10.4	Are the two identification peak apexs within 2 seconds for positive identifications? If not, flag "R".	x		
10.5	Was a second column confirmation used for positive 2,3,7,8-TCDF? If no, apply "R" to the 2,3,7,8-TCDF results.	x		
10.6	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	x		

Notes: 54SB48A 1,2,3,4,6,7,8,9-OCDD result exceeds the linear range of the instrument, laboratory qualified as "E" - method does not require a dilution for this analyte was previously flagged "J,c" therefore no further action was taken.

11.0 Data Completeness		Yes	No	NA
11.1	Is the percent completeness within the control limits? (Control limit 90%)	x		
11.1.1	Number of samples:			
11.1.2	Number of target compounds in each analysis:			
11.1.3	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness =

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure

DATA VALIDATION REPORT - Level III Review

SDG No.: 59113H (Revision 1) **Fraction:** Dioxin/Furan

Lab: Triangle **Project Name:** Radford SWMU_54

Reviewer: Andrea Sansom **Date:** April 17, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: The laboratory flag "J" represents a reported concentration that was less than the linear range of the initial calibration and an estimate sample result.

DATA VALIDATION WORKSHEET

Reviewer: Andrea
Date: 3/11/2003
DV Level: II III IV
Review Document:
_X_ SW-846 _X_ Project QAPP/SAP _X_ Region III

Dioxins and Furans Analysis

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Triangle
SDG No.: 59113H
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?		x	
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Does sample preservation, collection and storage meet method requirement?	x		

Notes: cooler 4C
54SB55A and 54SB48A that are on COC can be found in SDG 59113, appear to be grouped by necessity of second column confirmation for TCDF
54SB55B
54SB48B

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method?	x		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-).		x	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		x	

Notes: sampled 12/9/02
extracted 12/12/02
analyzed 12/18/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared at the appropriate frequency?	x		
3.2	Do any blanks have positive results? Action: If yes, an action level of 5 times the blank value is used to qualify sample results "U".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			x

Notes:

4.0 Instrument Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply R.	x		
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	x		
4.2	Was the CCV analyzed every 12 hours? If no, J(+)/UJ(-) all samples analzed after the last passing CCV.	x		
4.3	Are all target compound %RSDs or %Rs within ±20%? If not apply "R".	x		
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).	x		
4.4	Are all reference %RSDs or %Rs within ±30%? If not apply "R".	x		

Notes: ICAL 6/7/02 SF56072, six points, all ratios within limits, %RSD<15%; ass tune at >10000, peak valley at 13%

CCC S026379 12/18/02 1710, all ratios within limits, %D<20%, RT within limits, S/N 428:1; ass tune at >10000, peak valley at 15%

CCC S026393 12/19/02 0449, all ratios within limits, %D<20%, RT within limits, S/N 1667:1; ass tune at >10000, peak valley at 14%

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are Tuning forms present for each start of a twelve hour sequence? If not, apply "R".	x		

Notes: RTCHK S026380 12/18/02 1826

RS-100 S026381 12/18/02 1914

RTCHK S026394 12/19/02 0554

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			x
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			x
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			x
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			x
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?		X	
	If Yes, J(+) only.			

Notes:

8.0 Internal Standard and Clean-Up Standard Recovery		Yes	No	NA
8.1	Are standard recoveries for all samples within 40-135% for all samples? If no, apply R.	X		

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			x
9.2	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			x

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range, if not apply J.	X		
10.2	For positives, are the ion ratios passing and signal to noise greater than 2.5? If not, contact Lab.	X		
10.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is the percent completeness within the control limits? (Control limit 90%)	X		
11.1.1	Number of samples:			
11.1.2	Number of target compounds in each analysis:			
11.1.3	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness =

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

APPENDIX H.2
Additional Characterization Work Instructions Sampling
2004

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-17 **Fraction: Explosives, Nitroglycerin, Pesticides, Polychlorinated Biphenyls, & Metals**

Lab: TriMatrix **Project Name: Radford SWMU 54**

Reviewer: Andrea Sansom **Date: November 1, 2004**

This report presents the findings of a review of the referenced data. The report consists of this summary, a list of field samples submitted with this sample delivery group, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the explosive analyses, the following continuing calibrations displayed percent differences (%Ds) greater than the control limit (i.e., 15%):

Date	Time	Column	Analyte	%D	Bias
08/24/2004	0402	CN	Tetryl	20.3	-
08/24/2004	1528	C18	2,4-Dinitrotoluene	15.2	+
08/26/2004	1657	CN	Tetryl	15.3	-
08/26/2004	2234	CN	HMX	15.7	-
09/01/2004	1546	CN	Tetryl	15.3	-

For the CN column tetryl anomalies, no data qualifying action was taken for the associated field sample results that were non-detect on the C18 column since this column displayed acceptable %Ds. The positive tetryl result on the C18 column for field sample 54GW56 analyzed at a dilution factor of two was reported as non-detect because it was not confirmed on the alternate CN column. Since the CN column displayed a negative bias, this sample result was flagged "UJ,c". The associated field sample 2,4-dinitrotoluene results were non-detect while the continuing calibration displayed a positive bias. The associated HMX field sample result was positive and reported from the C18 column instead of the CN column that displayed the low bias anomaly. Therefore, no data qualifying action was taken.

The matrix spike pair performed on field sample 54GW56 displayed recoveries greater than the upper control limit of 150% for 4-amino-2,6-dinitrotoluene at 675% and 777%. The parent sample was non-detect, thus, no data qualifying action was taken. This matrix spike pair displayed acceptable recoveries (123%/140%) upon an analytical dilution factor of two and re-analysis. The diluted non-detect result for 4-amino-2,6-dinitrotoluene should be used for data interpretation.

The field duplicate pair 54GW59 and DUP-3 displayed a relative percent difference greater than the control limit of 25% for 2,4,6-trinitrotoluene at 89.5%. This field duplicate pair also displayed differences greater than the control limit of plus or minus two times the reporting limit for 4-amino-2,6-dinitrotoluene and octahydro-1,3,5,7-tetranitro-1,3,5,7-

tetrazocine. The parent sample displayed a statistically low surrogate recovery for 4-nitroaniline at 37%, although passing with a recovery greater than the lower control limit of 30%. These parent sample results are negatively biased; therefore, associated positive parent sample results were flagged "L,f" while the non-detect result was flagged "UL,f". The field duplicate pair 54GW64 and DUP-9 displayed acceptable precision.

Several positive field sample results displayed %Ds greater than the control limit of 40% between the two analytical column concentrations. These results were flagged "J,g". The concentration of 2,4,6-trinitrotoluene reported for field sample 54GW56 was above the linear range of the initial calibration. This result was flagged "J,q". The diluted analytical result for this compound should be used for data interpretation.

For the nitroglycerin analyses, the continuing calibrations analyzed on 08/30/2004 at 0833 and at 1132 displayed %Ds greater than the control limit (i.e., 15%) with a positive bias at 15.3% and 15.1%, respectively. The associated field sample results were non-detect, thus, no data qualifying action was required.

The matrix spike pair performed on field sample 54GW56 displayed recoveries outside the control limits for nitroglycerin with recoveries exceeding 1000% on the primary column and 0% recoveries on the alternate column. The laboratory cites interference from an adjacent peak identified as 2,4,6-trinitrotoluene. The sample was analyzed at a dilution factor of twenty along with a set of post digestion spikes. The post digestion spike recoveries were acceptable at 118% and 127% on the primary column. The laboratory reported results for this sample from the dilution. As per the laboratory, 2,4,6-trinitrotoluene did not interfere with the other field sample results for nitroglycerin due primarily to the less concentrated levels of interferent present. Most of the field sample extracts required a confirmation analyses on the alternate column due to a positive detection on the primary column. Upon analysis on the alternate column, no peak was identified and nitroglycerin was reported as non-detect. The data user should use these non-detect results with caution.

For the pesticides analysis, the initial calibration verification displayed a %D greater than the control limit of 15% for the co-elution of d-BHC and heptachlor on the rear column at 18.9%. Since the associated field samples were non-detect on the front column, no data qualifying action was required. The closing continuing calibration displayed %Ds greater than the control limit of 15% for 4,4'-DDD on the front column with a negative bias at 16.8% and for the co-elution of d-BHC and heptachlor on the rear column with a positive bias at 17.6%. The associated field samples were non-detect for these compounds on the alternate column that displayed passing %Ds, thus, no data qualifying action was required. The opening and closing DDT breakdown standards displayed percent breakdowns greater than the control limit of 15% on the rear column at 15.20% and 20.21%, respectively. Since the associated field sample results were non-detect for 4,4'-DDT, 4,4'-DDE, and 4,4'DDD, no data qualifying action was necessary.

For the metals analyses, the instrument initial and/or continuing calibration blanks displayed negative estimate detections for magnesium, manganese, potassium, sodium, and zinc. The associated positive field sample result was less than five times the absolute value of the negative blank detection for zinc and was flagged "L,o". All other associated field sample results were non-detect and were flagged "UL,o". The initial calibration blank displayed a positive estimate detection for antimony at 0.78 ug/L. The associated positive field sample result was less than five times the blank concentration and was flagged "B,o".

The method blanks displayed the following detections:

Batch	Analyte	Concentration (ug/L)
98708-127	Total Manganese	-4.056
98709-127	Dissolved Manganese	-4.799
98744-127	Antimony	1.34
	Chromium	0.28

The manganese and antimony method blank detections were attributed to instrument drift; therefore, no data qualifying action was taken based on these detections. The associated positive field sample result for chromium was less than five times the blank concentration and was flagged "B,p".

Several coolers containing field samples 54MW1, 54MW6 and MWEQB-5 for metals analyses and 54GW56, 54GW56MS, 54GW56MSD, 54GW57, 54GW58, 54GW59, 54GW60, 54GW61, 54GW62, 54GW63, 54GW66, 54GW67, 54GW69, and DUP-3 for explosives analysis were received by the laboratory with temperatures less than the lower control limit of 2.0°C at 1.9°C, 1.8°C, 1.9°C, 1.1°C, 1.1°C, 0.8°C, and 1.3°C. Since the containers were received intact and aliquots were not frozen, no impact on data quality was anticipated and no data qualifying action was taken.

The cooler containing field samples 54GW65, 54GW66, 54GW68, and 54GW70 for explosives analysis was received by the laboratory at a temperature greater than the upper control limit of 6.0°C at 8.9°C. Since these temperatures were less than 10°C, no impact on data quality objectives was anticipated and no data qualifying action was taken.

The cooler containing the field sample EQB-4 for pesticides and polychlorinated biphenyls analyses was received by the laboratory at a temperature greater than the upper control limit at 11.3°C. Since the equipment blank frequency of collection was one per day, recollection of this sample was not possible. All sample results were non-detect and were flagged "UJ,k". The field samples 54GW66, 54GW67, and 54GW69 collected on 08/20/2004 and submitted for explosives analyses were received by the laboratory with a cooler temperature of 14.6°C. These aliquots were discarded and the sample points were re-collected on 08/23/2004.

Correctable Anomalies: The chain of custody and the sample container label had different collection times for sample 54MW1. As directed by the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.

Comments: One of the twelve liter amber bottles was received broken by the laboratory for field sample 54GW56 that was assigned as a parent sample for matrix spike analyses. Sufficient volume remained for the laboratory to complete the requested parameters. No anomalies were encountered if a given fraction was not mentioned. All data are usable, as qualified, for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Explosives

Reviewer: Andrea Sansom
Date: 10/29/2004
DV Level: II III IV
Review Document:
_X_ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
_X_ Project QAPP/SAP

Project Name: Radford SWMU41
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-17
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids (for		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes: *One of the twelve liter amber bottles was received broken by the laboratory for field sample 54GW56 that was assigned as a parent sample for matrix spike analyses. Sufficient volume remained for the laboratory to complete the requested parameters.*

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		x	
	Action: If the temperature of the cooler was elevated (> 10 ℃), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes: *Field coolers exceed limits, <10C: no action.*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			x

Notes: *EQB-1, EQB-2, and EQB-3 are associated with soil boring samples located in other SDGs, detections are essentially irrelevant to this report.*
All equipment used for GW samples was dedicated and/or disposable, no EQB required.

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		x	
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	x		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?	x		
6.4	Are there any RPD for MS/MSD recoveries outside the QC limits not to exceed 60%?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:	54GW56	MS	MSD	RPD	
	4-amino-2,6-dinitrotoluene (40-150%)	**675%**	**777%**	14%	***4-amino-2,6-dinitrotoluene displayed high recoveries due to interference by***
	-amino-2,6-dinitrotoluene DF2 (40-150%)	123%	140%	13%	***adjacent target analyte 2,4,6-TNT***
					4-amino-2,6-dinitrotoluene displayed acceptable recoveries upon dilution

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			x
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		x	

Notes: *54GW59 and DUP-3*

54GW64 and DUP-9

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.		x	
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	20			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			x

Notes: *EQB-1, EQB-2, and EQB-3 are associated with soil boring samples located in other SDGs, detections are essentially irrelevant to this report. All equipment used for GW samples was dedicated and/or disposable, no EQB required.*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		x	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	x		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		x	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: *54GW56* ***Nitroglycerin displayed high recoveries due to interference by the adjacent non-target analyte 2,4,6-TNT***

Nitroglycerin displayed acceptable post spike recoveries upon dilution

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			x
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes: *54GW59 and DUP-3*

54GW64 and DUP-9

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		x	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	x		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-17
Test Name: PEST/PCB
Method No.: 8081A/8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do any soil samples contain more than 50% water?	X		
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		X	

Notes: *Field coolers exceed limits, <10C: no action; >10C but < 20C: J/UJ,k*
When >10C, samples were recollected if possible.

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	X		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.			X

Notes: *EQB-1, EQB-2, and EQB-3 are associated with soil boring samples, located in other SDGs, detections are essentially irrelevant to this repo.*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	X		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	X		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows? If No, the associated sample result should be carefully evaluated.	X		

Notes:

5.0 GC/ECD Instrument Performance Check for Pesticides		Yes	No	NA
5.1	Is the 4,4'-DDT breakdown </= to 15%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).		X	
5.2	Is the endrin breakdown </= to 15%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	X		

Notes:

6.0 Surrogate Recovery					Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				X		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				X		
6.3	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?				X		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?						X
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						X
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance			
	1 out	high/low	No action	No action			
	2 out	2 high same column	K	No action			
		2 low same column	L, UL	No action			
		mixed same column	J, UJ	No action			
		2 high diff columns	J	Not applicable			
		2 low diff columns	J, UJ	Not applicable			
		mixed diff columns	Professional judgement	Not applicable			
	3 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		2 high, 1 low	K (2 high)	J (1 low 2nd column)			
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)			
		other mixed	J, UJ	Not applicable			
	4 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		Mixed	J, UJ	Not applicable			
	If any recovery is >0% and <10% then L(+)/R(-).						
	If any recovery is 0% then R(+/-).						

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			X
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 30-150%?			
7.4	Are there any RPDs outside the QC limits not to exceed 60%?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

only 4 equipment blanks reported in this SDG, no FD required.

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 30-150%?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		X	
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			X
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

only 4 equipment blanks reported in this SDG, no FD required.

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).	X		
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Pesticide Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes: *CLP requirement, not provided*

Case narrative indicates mercury was used to remove sulfur due to the possibility of degradation of some pesticide target analytes with use of the recommended cleanup with activated copper.

12.0 Data Completeness				Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	Pest	PCB	X		
	Number of samples:	4	4			
	Number of target compounds in each analysis:	21	7			
	Number of results rejected and not reported:	0	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)					
	% Completeness =	100%	100%

DATA VALIDATION WORKSHEET
INORGANIC - ICP/ICPMS/CVAA
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-17
Project No.: 21355035.20001

Project Name: Radford SWMU54
Reviewer: Andrea Sansom
Date: 10/29/2004

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	x			x			x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x			x			x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x			x			x		
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)		x			x			x	
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	x			x			x		

Note: *The chain of custody and the sample container label had a different collection time for sample 54MW1. As directed from the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.*

Field coolers exceed limits, <10C: no action.

2.0 Holding Time		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		x			x			x	

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".	7+BLK			4+BLK			5+BLK		
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	x			x			x		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	x			x			x		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based	x			x			x		
3.5	Were ICV/CCV reported from mutiple exposures (3 for ICP or 2 for CVAA) with passing %RSD (ICP < 5% or CVAA < 10%)? If no, contact project chemist for laboratory resolution.	x			x			x		
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP: 90%-110% & Hg: 80-120%	x			x			x		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%									
3.7	For one point curves on ICP & ICPMS, did the CRDL standard recover between 80-120%?			x			x	100%		
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K									

Note: _____

4.0 Blanks

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	x			x			x		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	x			x			x		
4.3	Are there reported MB or ICB/CCBs values > MDL?	x				x			x	
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?		x		x				x	
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?	x			x				x	
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note: *EQB-1, EQB-2, and EQB-3 are associated with soil boring samples, located in other SDGs, detections are essentially irrelevant to this report.*

MWEQB-5 associtaed with 54MW1 and 54MW6 was non -detect

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	x			x					
5.2	Are the ICS AB recoveries within 80% - 120%?	x			x					
5.3	Are the results for unspiked analytes (in ICS A) < ± MDL?		x			x				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?		x			x				
	If not...									
	Action: Not Spiked Analytes Spiked analytes (ICS AB analytes)									
	< -IDL > IDL < 50% 50% - 79% >120%									
	L(+)/UL(-) K(+) L(+)/R(-) L(+)/UL(-) K(+)									

Note:

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	x			x			x		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		x			x			x	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)									

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.			x	x					x
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.			x	x					x

Note: *54MW1 (T/D Mn) passed*

Full list metals for this aquoues matrix SDG was for equipment blanks only, no MS/MSD performed or required.

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.			x	x					x
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?									
	%R > 125% 30%< %R < 74% < 30%			x	x					x
	Positive K L L									
	Non-detect None UL R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.			x	x					x

Note: *54MW1 (T/D Mn) passed*

Full list metals for this aquoues matrix SDG was for equipment blanks only, no MS/MSD performed or required.

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	x			x			x		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?			x	x					
10.2	Was a five-fold dilution performed?			x	x					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).			x			ND			

Note: *54MW1 (T/D Mn) passed*

Full list metals for this aquoues matrix SDG was for equipment blanks only, no serial dilution performed or required.

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?			x			x			x
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report			x			x			x

Note: *EQB-1, EQB-2, and EQB-3 are associated with soil boring samples.*

For the remaining samples for total and dissolved Mn, see MS/MSD for field duplicate precision as no field duplicate sample was collected.

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?			x			x			x
12.2	Were all dilutions reflected in the positive results and detection limits?			x			x			x
12.3	Were the Internal Standard recoveries within 30-120% (6020) or 80-120% (6010B)?	x			x					
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	x								
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	x								
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	x								

Note:

13.0 Completeness Calculation		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	x			x			x		
13.1.1	Number of samples: 3+3									
13.1.2	Number of target compounds in each analysis: 2+24									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. **If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form.** If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). **Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.**

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. **If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form.** If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). **Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.**

Container Size (mL)	Original Vol. of Preservative (mL)
Container Type 5:	NaOH
500	2.5
1000	5.0

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. **If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form.** If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). **Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.**

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. **If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form.** If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). **Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.**

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-18

Fraction: Explosives, Nitroglycerin, Pesticides, Polychlorinated Biphenyls, & Metals

Lab: TriMatrix

Project Name: Radford SWMU 54

Reviewer: Andrea Sansom

Date: November 8, 2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: For the explosive analyses, the continuing calibration analyzed on 08/25/2004 at 1910 displayed a percent difference greater than the control limit (i.e., 15%) on column C18 with a negative bias for HMX at 15.6%. The field sample extracts that were analyzed on the CN column that displayed acceptable continuing calibrations exhibited non-detect results. Since only one column is required to pass to report valid non-detect results, no data qualifying action was taken. All other HMX results were reported as non-detect from the C18 column and were flagged "UJ,c". The continuing calibration analyzed on 08/26/2004 at 1657 displayed a percent difference greater than the control limit on column CN with a negative bias for tetryl at 15.3%. All field sample extracts were analyzed on the C18 column that displayed acceptable continuing calibrations and non-detect results. Since only one column is required to pass to report valid non-detect results, no data qualifying action was taken.

For the pesticides analyses, the laboratory control spike displayed percent recoveries less than the laboratory lower control limits for alpha-chlordane at 56%, gamma-chlordane at 55%, and endrin ketone at 57%. Since these recoveries were greater than the QAPP lower control limit of 30%, no data qualifying action was taken. The surrogate recovery was greater than the laboratory generated upper control limit (i.e., 137%) for tetrachloro-m-xylene for 54SB58A at 142% and 54SB58C at 143%. Since these recoveries were less than the QAPP upper control limit of 150%, no data qualifying action was taken. The initial calibration verifications displayed percent differences greater than the control limit of 15% for the following:

Date	Time	Instrument	Column	Analyte	Percent Difference	Bias
09/01/2004	1413	158	A	Endosulfan sulfate	16.0%	+
				Endrin aldehyde	16.3%	+
				Endrin ketone	15.5%	+
09/22/2004	1209	158	A	d-BHC	18.0%	+
			B	most analytes	>15%	-

Since the associated field samples were reported non-detect from the column that displayed a positive bias, no data qualifying action was required. The continuing calibrations displayed the following percent differences greater than the control limit of 15%:

Date	Time	Column	Analyte	Percent Difference	Bias
09/01/2004	1941	A	4,4'-DDD	27.6%	+
			b-BHC	15.3%	+
			Methoxychlor	21.1%	+
		B	4,4'-DDE	16.1%	+
			Endosulfan sulfate	21.8%	-
09/02/2004	0137	B	Endosulfan sulfate	19.1%	-
			Methoxychlor	25.7%	-
09/15/2004	2136	B	4,4'-DDD	21.4%	-
			a-BHC	15.9%	+
			b-BHC	16.8%	+
09/16/2004	0034	B	4,4'-DDD	25.6%	-
			4,4'-DDT	17.8%	-
			b-BHC	27.3%	-
			d-BHC	24.4%	-
			Methoxychlor	20.0%	-
0925/2004	0041	A	4,4'-DDD	22.2%	-
			4,4'-DDT	16.7%	-
			b-BHC	22.2%	-
			d-BHC	26.5	-
			Methoxychlor	21.0%	-
		B	4,4'-DDD	15.3%	-
			a-BHC	15.6%	-
			Endrin	16.0%	-
			Heptachlor	16.2%	-
			Methoxychlor	16.8%	-

For the anomalous compounds that displayed a positive bias, the associated field sample results were either non-detect or reported positive using the concentration found on the passing column, thus, no data qualifying action was taken. For the anomalous compounds that displayed a negative bias, the associated field sample results were reported non-detect from the alternate passing column. Since only one column is required to pass to report a non-detect result, no data qualifying action was necessary. For anomalous compounds that displayed a negative bias on both analytical columns, the associated field sample results were non-detect and were flagged "UJ,c". One exception is the methoxychlor result for 54SB57A. The lower of the two concentrations was reported from column A that displayed a positive bias while the alternate column B displayed a negative bias in the continuing calibration. Since this result was previously flagged for dual column imprecision, no further data qualifying action was taken. Field sample 54SB57A displayed positive detections with a relative percent difference greater than 40% between the two analytical column concentrations. These results were flagged "J,g".

For the polychlorinated biphenyls analyses, the matrix spike pair performed on 54SB57B displayed a matrix spike recovery greater than the laboratory generated upper control limit of 134% for 1260 at 145%. This matrix spike pair also displayed a relative percent difference greater than the laboratory generated limit of 20% for 1016 at 23%. Since these

recoveries were within the QAPP specified recovery limits of 30-150% and precision limit of less than 60%, no data qualifying action was taken.

For the metals analyses, the instrument initial and/or continuing calibration blanks displayed negative estimate detections less than the reporting limit for barium, iron, manganese, sodium, and vanadium. The associated positive field sample results were greater than five times the absolute value of the negative blank detections, thus, no data qualifying action was required. The associated non-detect field sample results for sodium were flagged "UL,o". The initial and/or continuing calibration blanks displayed positive estimate detections less than the reporting limit for aluminum, magnesium, sodium, and zinc. The associated positive field sample results less than five times the blank concentrations were flagged "B,o". The method blank for batch 98672-123 displayed the following detections:

Analyte	Concentration (mg/Kg)
Aluminum	17.4
Magnesium	31.9
Zinc	1.36

These detections were attributed to instrument drift; therefore, no data qualifying action was taken. The equipment blank EQB-1 displayed positive estimate detections for antimony at 0.986 ug/L and iron at 13.93 ug/L. The positive equipment blank result for antimony was previously qualified due to continuing calibration blank detections and no further data qualifying action was taken. Positive field sample results for iron were greater than five times the equipment blank detection and no data qualifying action was required. Although the matrix spike pair performed on sample 54SB57B displayed acceptable recoveries greater the laboratory generated lower control limit of 51% for selenium at 62% and 63%, the post digestion spike recovery was less than the lower control limit of 75% for selenium at 70%. The laboratory reported the concentration of selenium for this sample as calculated from the method of standard additions. The serial dilution performed on sample 54SB57B displayed percent differences greater than the control limit of 10% for cobalt at 13.6%, nickel at 15.4%, and zinc at 12.1%. The associated field sample results were positive and were flagged "J,s".

Correctable Anomalies: The chain of custody and the sample container label had a different collection time for sample 54SB59B. As directed by the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.

Comments: A cooler containing all field samples for metals analyses and 54SB59B, 54SB59C, and DUP-2 for all analyses were received by the laboratory with a temperature less than the lower control limit of 2.0°C at 1.9°C. Since the containers were received intact and aliquots were not frozen, no impact to data quality was anticipated and no data qualifying action was taken. Due to the abundance of target element lead, samples 54SB57A and 54SB56A were analyzed at dilutions for this constituent only. The reporting limits for lead were elevated appropriately. All data are usable, as qualified, for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Reviewer: Andrea Sansom
Date: 11/8/2004
DV Level: II III IV
Review Document:
_X_ Region III Modified for National Functional Guidelines
___ NFG for organic Data review (February 1994)
_X_ Project QAPP/SAP

Explosives

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-18
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	X		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids (for		X	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: *The chain of custody and the sample container label had a different collection time for sample 54SB59B. As directed from the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.*

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: *Two coolers at 1.9C and 4.2C.*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	X		

Notes: *EQB-1, EQB-2, and EQB-3 are non-detect*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		X	
6.4	Are there any RPD for MS/MSD recoveries outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 54SB57B MS MSD RPD

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB57C and DUP-1*
54SB59C and DUP-2

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	X		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.			X
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		X		
	Number of samples:	17			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

DATA VALIDATION WORKSHEET

Nitroglycerin

Reviewer: Andrea Sansom
Date: 11/8/2004
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-18
Test Name: Nitroglycerin
Method No.: 8330-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids (for		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes: *The chain of custody and the sample container label had a different collection time for sample 54SB59B. As directed from the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.*

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".	X		
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: *Two coolers at **1.9C** and 4.2C.*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	X		

Notes: *EQB-1, EQB-2, and EQB-3 are non-detect*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: *54SB57B*

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB57C and DUP-1*
54SB59C and DUP-2

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 17			
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

DATA VALIDATION WORKSHEET

Pesticides/PCBs

Reviewer: Andrea Sansom
Date: November 8, 2004
DV Level: II III IV

Review Document:
X SW-846 - 8081/8082
X NFG - Region III Modifications
___ CLP

Project Name: Radford SWMU54
Project Number: 21355035.20001
Laboratory: TriMatrix
SDG No.: 36440-18
Test Name: PEST/PCB
Method No.: 8081A/8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do any soil samples contain more than 50% water?	X		
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: *The chain of custody and the sample container label had a different collection time for sample 54SB59B. As directed from the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.*

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		X	

Notes: *Two coolers at **1.9C** and 4.2C.*

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	X		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	X		

Notes: *EQB-1, EQB-2, EQB-3, & EQB-4 are non-detect*

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	X		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	X		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		Pest	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows? If No, the associated sample result should be carefully evaluated.	X		

Notes:

5.0 GC/ECD Instrument Performance Check for Pesticides		Yes	No	NA
5.1	Is the 4,4'-DDT breakdown </= to 15%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	X		
5.2	Is the endrin breakdown </= to 15%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	X		

Notes:

6.0 Surrogate Recovery					Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				X		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				X		
6.3	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?				X		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?						X
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						X
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance			
	1 out	high/low	No action	No action			
	2 out	2 high same column	K	No action			
		2 low same column	L, UL	No action			
		mixed same column	J, UJ	No action			
		2 high diff columns	J	Not applicable			
		2 low diff columns	J, UJ	Not applicable			
		mixed diff columns	Professional judgement	Not applicable			
	3 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		2 high, 1 low	K (2 high)	J (1 low 2nd column)			
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)			
		other mixed	J, UJ	Not applicable			
	4 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		Mixed	J, UJ	Not applicable			
	If any recovery is >0% and <10% then L(+)/R(-).						
	If any recovery is 0% then R(+/-).						

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 30-150%?		X	
7.4	Are there any RPDs outside the QC limits not to exceed 60%?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: *54SB57B*

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 30-150%?		X	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			X
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: *54SB57C and DUP-1*
54SB59C and DUP-2

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		Pest	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Pesticide Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes: *CLP requirement, not provided*

Case narrative indicates mercury was used to remove sulfur due to the possibility of degradation of some pesticide target analytes with use of the recommended cleanup with activated copper.

12.0 Data Completeness				Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	Pest	PCB	X		
	Number of samples:	17	17			
	Number of target compounds in each analysis:	21	7			
	Number of results rejected and not reported:	0	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)					
	% Completeness =	100%	100%

DATA VALIDATION WORKSHEET
INORGANIC - ICP/ICPMS/CVAA
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-18
Project No.: 21355035.20001

Project Name: Radford SWMU54
Reviewer: Andrea Sansom
Date: 10/29/2004

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	x			x			x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x			x			x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x			x			x		
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{o}C $\pm$ 2 ^{o}C)		x			x			x	
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	x			x			x		

Note: *The chain of custody and the sample container label had a different collection time for sample 54SB59B. As directed from the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.*

*Two coolers at **1.9C** and 4.2C.*

2.0 Holding Time		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		x			x			x	

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".	7+BLK			4+BLK			5+BLK		
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	x			x			x		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	x			x			x		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based	x			x			x		
3.5	Were ICV/CCV reported from mutiple exposures (3 for ICP or 2 for CVAA) with passing %RSD (ICP < 5% or CVAA < 10%)? If no, contact project chemist for laboratory resolution.	x			x			x		
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP: 90%-110% & Hg: 80-120%	x			x			x		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%									
3.7	For one point curves on ICP & ICPMS, did the CRDL standard recover between 80-120%?			x			x	105%		
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K									

Note: *TriMatrix incorporated a higher calibration standard to limit the number of required analytical dilutions for Al, Ba, Ca, Fe, Mn, and K.*

TriMatrix felt this would affect the low end of the curve creating more error at the non-detect detection limit of an acceptable CCB or MB.

TriMatrix elevated these reporting limits by a factor of five for this reason, while still meeting the project DQOs.

URS requested a new MDL study or processing through the new curve and/or to elevate the MDL as well.

Evaluation of the CCBs and MB was performed down to the MDL for both positive and negative detections.

4.0 Blanks

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	x			x			x		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	x			x			x		
4.3	Are there reported MB or ICB/CCBs values > MDL?		x		x				x	
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?		x		x				x	
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?	x			x				x	
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note:

EQB-1 Sb 0.986 ug/L J B,o

Fe 13.93 ug/L J

EQB-2 Non-detect

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	x			x					
5.2	Are the ICS AB recoveries within 80% - 120%?	x			x					
5.3	Are the results for unspiked analytes (in ICS A) < ± MDL?		x			x				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?		x			x				
	If not...									
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)									

Note:

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	X			X			X		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		X			X			X	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)									

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	X			X			X		
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	X			X			X		

Note: *54SB57B*

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	x			x			x		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?									
	%R > 125% 30%< %R < 74% < 30%	x			x			x		
	Positive K L L									
	Non-detect None UL R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.		Se		x					x

Note: *54SB57B - passed, PDS by 6020 for Se low @ 70%*

Selenium for this sample was reported by MSA.

9.0 Instrument Detection Limits (IDL)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	x			x			x		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	x			x					
10.2	Was a five-fold dilution performed?	x			x					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).		x			x				

Note: *54SB57B -Co by 6010B @ 14%, Ni by 6020 @ 15%, Zn by 6010B @ 12%*

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	x			x			x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	x			x			x		

Note: *54SB57C and DUP-1*

54SB59C and DUP-2

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	x			x			x		
12.2	Were all dilutions reflected in the positive results and detection limits?	x					x			x
12.3	Were the Internal Standard recoveries within 30-120% (6020) or 80-120% (6010B)?	x			x					
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	x								
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	x								
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	x								

Note:

13.0 Completeness Calculation		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	x			x			x		
13.1.1	Number of samples: 17									
13.1.2	Number of target compounds in each analysis: 23									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

Comments

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-19

Fraction: Explosives, Nitroglycerin, Pesticides, Polychlorinated Biphenyls, & Metals

Lab: TriMatrix

Project Name: Radford SWMU 54

Reviewer: Andrea Sansom

Date: November 8, 2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: For the explosive analyses, the continuing calibration analyzed on 08/26/2004 at 1657 displayed a percent difference greater than the control limit (i.e., 15%) on column CN with a negative bias for tetryl at 15.3%. The continuing calibrations analyzed on column CN displayed percent differences greater than the control limit with a positive bias on 09/04/2004 at 1241 for 1,3-dinitrobenzene at 15.5% and at 1753 for 2,6-dinitrotoluene at 18.0%. All field sample extracts were non-detect for tetryl on the C18 column that displayed acceptable continuing calibrations. All field samples were non-detect for 1,3-dinitrobenzene and 2,6-dinitrotoluene on one of the two analytical columns despite the positive bias indicated on the CN column. Since only one column is required to pass to report valid non-detect results, no data qualifying action was taken.

For the pesticides analyses, the laboratory control spike for extraction batch 99444-123 displayed percent recoveries less than the laboratory lower control limits for 4,4'-DDD at 56%, alpha-chlordane at 56%, gamma-chlordane at 55%, and endrin ketone at 57%. Since these recoveries were greater than the QAPP lower control limit of 30%, no data qualifying action was taken. The matrix spike duplicate performed on field sample 54SB63B displayed percent recoveries greater than the laboratory generated upper control limits for beta-BHC at 140% and heptachlor epoxide at 135%. This matrix spike pair also displayed relative percent differences greater than the laboratory generated control limits for 4,4'-DDD at 40% and methoxychlor at 46%. Since these excursions were within QAPP specified recovery limits of 30-150% and the precision limit of less than 60%, no data qualifying action was taken. The continuing calibrations displayed the following percent differences greater than the control limit of 15%:

Date	Time	Instrument	Column	Analyte	Percent Difference	Bias
09/15/2004	2136	158	B	4,4'-DDD	21.4%	-
				alpha-BHC	15.9%	+
				beta-BHC	16.8%	+

Date	Time	Instrument	Column	Analyte	Percent Difference	Bias
09/16/2004	0332	158	A	4,4'-DDD	18.4%	-
				Methoxychlor	15.9%	-
			B	alpha-BHC	20.3%	+
				beta-BHC	16.0%	+
				gamma-BHC	15.4%	+
09/16/2004	0034	199	B	4,4'-DDD	25.6%	-
				4,4'-DDT	17.8%	-
				beta-BHC	27.3%	-
				delta-BHC	24.4%	-
				Methoxychlor	20.0%	-
	0636			4,4'-DDD	30.4%	-
				4,4'-DDE/Endosulfan I	16.5%	-
				4,4'-DDT	18.4%	-
				alpha-BHC	17.0%	-
				beta-BHC	21.9%	-
				delta-BHC	25.5%	-
				Methoxychlor	21.4%	-
	1238			4,4'-DDD	27.9%	-
				4,4'-DDE/Endosulfan I	18.0%	-
				4,4'-DDT	19.9%	-
				alpha-BHC	18.8%	-
				beta-BHC	20.8%	-
				delta-BHC	24.8%	-
				gamma-BHC	17.6%	-
				Methoxychlor	22.8%	-
09/25/2004	0041	158	A	4,4'-DDD	22.2%	-
				4,4'-DDT	16.7%	-
				beta-BHC	22.2%	-
				delta-BHC	26.5%	-
				Methoxychlor	21.0%	-
			B	4,4'-DDD	15.3%	-
				alpha-BHC	15.6%	-
				Endrin	16.0%	-
				Heptachlor	16.2%	-
				Methoxychlor	16.8%	-

For the anomalous compounds that displayed a positive bias, the associated field sample results were non-detect, thus, no data qualifying action was taken. For the anomalous compounds that displayed a negative bias, the associated field sample results were reported non-detect from the alternate passing column. Since only one column is required to pass to report a non-detect result, no data qualifying action was necessary. For anomalous compounds that displayed a negative bias on both analytical columns, the associated field sample results were non-detect and were flagged "UJ,c".

For the metals analyses, the instrument initial and/or continuing calibration blanks displayed negative estimate detections less than the reporting limit for barium, iron, manganese, potassium, and vanadium. The associated field sample results were positive and greater than five times the absolute value of the negative blank detections, thus, no data qualifying action was required. The initial and/or continuing calibration blanks displayed positive estimate detections less than the reporting limit for aluminum, magnesium, and

zinc. The associated field sample results were positive and greater than five times the blank detections, thus, no data qualifying action was required. The method blanks displayed the following detections:

Batch	Analyte	Concentration (mg/Kg)
98617-124	Selenium	0.049
98692-124	Aluminum	22.8
	Iron	3.93
	Magnesium	35.8
	Zinc	1.58

Positive associated field sample results less than five times the blank concentration for selenium were flagged "B,p". The other detections were attributed to instrument drift; therefore, no data qualifying action was taken. The equipment blank EQB-3 displayed positive estimate detections for chromium at 0.314 ug/L, iron at 9.478 ug/L, and zinc at 7.216 ug/L. The positive equipment blank result for chromium was previously qualified due to a method blank detection and no further data qualifying action was taken. Positive field sample results for iron and zinc were greater than five times the equipment blank detections and no data qualifying action was required. Although the matrix spike pair performed on sample 54SB63B displayed acceptable recoveries greater the laboratory generated lower control limit of 51% for selenium at 67% and 67%, the post digestion spike recovery was less than the lower control limit of 75% for selenium at 69%. The laboratory reported the concentration of selenium for this sample as calculated from the method of standard additions. The serial dilution performed on sample 54SB63B displayed a percent difference greater than the control limit of 10% for magnesium at 12.6%. The associated field sample results were positive and were flagged "J,s". By 6020, samples DUP 4 (122.6%), 54SB63A (120.9%), 54SB67B (130.9%), and 54SB67C (127.9%) exceeded the upper control limit of 120% for the internal standard used to quantitate arsenic, nickel, and selenium. Samples were analyzed at a dilution factor of two with passing internal standard recoveries. The elevated method detection limits multiplied by three were still less than the project required reporting limits.

Correctable Anomalies: The chain of custody and the sample container label had a different collection time for sample 54SB64B. As directed by the field sampler, the laboratory used the collection time from the sample container label for log-in purposes.

Comments: All coolers were received by the laboratory with temperatures less than the lower control limit of 2.0°C at 0.0°C, 1.6°C, and 0.7°C. Since the containers were received intact and aliquots were not frozen, no impact to data quality was anticipated and no data qualifying action was taken. Due to the abundance of target element lead, all samples were analyzed at dilutions for this constituent only. The reporting limits for lead were elevated appropriately. If a given fraction was not discussed, no anomalies were encountered. All data are usable, as qualified, for their intended purpose based on the data reviewed.
