DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer: RA
Date: 1/31/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: Q2788
Test Name: 8260B
Method No.: VOC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If the temperature of the cooler was elevated (> 10 °C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP? QAPP say - no HCl preservation.	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous unpreserved - 7 days for aromatic compounds All others - 14 days.		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

collected	analyzed		
11/12/02	11/25/02		
11/11/02	11/24/02	11/25/02	
11/13/02	11/27/02	11/25/02	11/26/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per GCMS, 20 samples, batch, matrix, and level)?	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone) the amount in the associated blank.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.	✓		

Notes: MB 11/24/02 See attached MB also contained laboratory artifacts which were crossed out by reviewer- Pos < 5x or 10x B/E
EB's in R2758 , TB in R2758
acetone, 2-butanone → B/X
MeCl3 toluene
unless prev flagged
toluene B/Y

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 15% and %D < ± 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < CL? CL >0.10 for chloromethane, 1,1-dichloroethane, & bromoform or >0.30 for chlorobenzene & 1,1,2,2-tetrachloroethane. If yes, L(+)/R(-).		✓	

Notes: CC 11/27/02
bromomethane -21.4% NDs → UJ,C

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	✓		
5.2	Are BFB enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
5.3	Have all samples been analyzed within twelve hours of the BFB tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for BFB been met for each instrument used?	✓		
	If the BFB criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?	✓		
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method accuracy cannot be verified.			✓

	1 or more <10%	1 high/low	2 or 3 high/low	2 or 3 all low	2 or 3 all high
Positives	L	J	J	L	K
Non-detects	R	UJ	UJ	UL	NONE

Note: The B qualifier remains over surrogate flagging.

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: see attached comment only
UJ, in in 40SBQC Parent

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓	✓	
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).		✓	
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes: D-1 all <QC ~~UJ~~, D-1RE 1,4-dichloro— <QC UJ UJ use 40554 R,i use RE-analysis
~~40554, 40555 use~~ R,i 40555 use original (prev. flagged) 40553 use original
~~[illegible] QC [illegible]~~ 71551L 4 4 ~~UJ~~ R,i 40552 use re-analysis
(40554) D-1 R,i unless Prev. — See attached

10.0 Field Duplicate		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?			✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			✓

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			✓

Notes: Dos TIC → NJ, t

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 33			
12.1.2	Number of target compounds in each analysis: 48			
12.1.3	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 94%.

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 2/5/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: Q2788
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	✓		
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes: It was noted by lab on COC received 11/12/02 715S11 appeared twice - containers for collection at 14:45 were labeled 715B11. Lab was instructed to use the ID on the containers: 715B11.

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

Collected	Extracted	Analyzed
11/13,02	11/16/02	11/19,02
11/12,02	11/13,02	11/14P2
11/11/02	11/22,02	11/24,02
11/13,02		

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes: → MBs contained TICs which were crossed out in samples. ←

in R2788 (EQB-2 caprolactam 22 ug/L
EQB-1 4 21) ~~[illegible]~~
pos 75 x, no action

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: See attached IC atrazine ND → UJ,r in all pos. J,r for the rest

ND UJ,c or J,c (+)

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

	1 or more <10%	2 or 3 high/low	2 or 3 all low	2 or 3 all high
Positives	L	J	L	K
Non-detects	R	UJ	UL	NONE

Note: The B qualifier remains over surrogate flagging.

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: See attached
Parent sample 405B9C all ND, no flag

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: see attached all ND, no flags

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			✓

Notes:

POS. TIC → NJ16

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = _____

DATA VALIDATION WORKSHEET

Explosives

Reviewer: AJ
Date: 01/29/03
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: Q2788
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	X		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: samples from COC 1014: 40SB88A, 40SB8F received too cold (1.1°C)
No action taken on this.

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes:
sampled 11/12/02, 11/13/02, 11/11/02
extracted 11/14/02, 11/18/02
analysis 11/20/02, 11/21/02
Cooler with samples 40SB88A, 40SB8F too cold (1.1°C) - No action taken.

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			X

Notes: No field /equipment blanks in this data package.

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).		X	
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes: CCAL 028 NFULL45W - 1,3-DNB %D 17.06, 2,4,6-TNB 16.04 - No action taken, all ND.
CCAL 052 NFULL45Y - 1,3-DNB %D 16.04 - No action taken, all ND. CCAL 060 NFULL45Z
2,4,6-TNB %D - 19.32, 4-Nitrotoluene - No action taken since its the last calibration in the batch & no samples follow it.

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	X		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD sample 405896C MS %R Nitrobenzene = 43% MSD %R Nitrobenzene = 3
RPD RDX = 44%
Since all sample results were ND, No action was taken.

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: NO LCSD.

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.	X		

Notes: D-1 is field Dup

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: Ø			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100 %			
	% Completeness = 100 %

DATA VALIDATION WORKSHEET

Polyaromatic Hydrocarbons

Reviewer: RA
Date: 1/23/03
DV Level: II (III) IV
Review Document:

_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: 02788
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

collected	extracted	analyzed	
11/12/02	11/16/02	11/18/02	11/12/02
11/11/02	11/13/02	11/14/02	11/15/02
11/13/02	11/16/02	11/22/02	11/21/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes: EBs in R2788 all ND ✓

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.			

Notes: see attached

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes: 3ur p-terphenyl 2117 50-150 in 40551 POS K/S
QC in 40554, 40552, 405B11F, 405B9F, 405B8F POS K/S

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: Chrysene -953/-930% MS/MSD J/m in LCSD/MC
acenaphthene RPD 60%. ~~Comment only~~

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes: See attached

J/J unless prev flagged

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			
	% Completeness = _____			

Notes:

Test Name: PEST
Method No.: 8081A

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	✓	✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes: It was noted by RD ID for 715B11 did not match between CoC, and Sample label.

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

collected	extracted	analyzed
11/11/02, 11/13/02	11/12/02	11/25/02	11/26/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes:

EBs in RZ788 all ND

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	✓	✓	
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		

Notes: See attached

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Resolution Check Mixture been analyzed at the beginning of every initial calibration sequence, on each GC column and intrument used for analysis?			
5.2	Is the resulution between all adjacent peaks in the Resolution Check Mixture greater than or equal to 60% for both column?			
	Detected target compounds that were not adequately resolved should be qualified with "J". Qualitative identifications may also be questionable if coelution exists. Non-detects with retention times in the region of coelution may not be valid, depending on the extent of the problem. Professional judgement should be used to			
5.3	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning (following the RCM) and the end of every initial calibration sequence, on each GC column and intrument used for analysis? The PEM must also analyzed at the beginning of every other 12-hour analytical period.			
5.4	Is the resulution between all adjacent peaks in the PEM equal to 100% in each calibration (initial and continuing) for both column?			
5.4	Do all standard retention times of each of the single component pesticides and surrogate in all PEM fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			
5.5	Are all PEM %Ds less than or equal to 25%? If No, J(+)/UJ(-).			
5.6	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	✓		
5.7	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	✓		
5.8	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).	✓		

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
6.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?	✓		✓
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
	1 out	high/low	No action	No action
	2 out	2 high same column	K	No action
		2 low same column	L, UL	No action
		mixed same column	J, UJ	No action
		2 high diff columns	J	Not applicable
		2 low diff columns	J, UJ	Not applicable
		mixed diff columns	Professional judgement	Not applicable
	3 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		2 high, 1 low	K (2 high)	J (1 low 2nd column)
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
		other mixed	J, UJ	Not applicable
	4 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		Mixed	J, UJ	Not applicable
	If any recovery is >0% and <10% then L(+)/R(-).			
	If any recovery is 0% then R(+/-).			

Notes: SØSB12A Decachlorobiphenyl 560 > 43-144) one out no flags
4ØSS4 " 161 > " "
4ØSS2 " 38 < 43-144, and tetrachloro-m-xylene 40) 40 < 43-135
↓ L/UL's
re analyses had good surrogates - use those results.

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			✓

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		✓	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes: see attached → J, q

11.0 Pesticide Cleanup Checks (Required when any positive result is reported > 38 ug/Kg for soils) PCBs for?		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			/
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			/
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			/
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			/

Notes: It should be noted that methoxychlor(43) in 40554. Cleanup was not performed.

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
12.1.4	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = _____			

Notes: No R flags

SDG NARRATIVE
SDG #Q2788
PROTOCOL: SW-846

SAMPLE IDENTIFICATIONS:

40SB11B	**40SB12A**	**40SS1**	**40SS4**	**71SS11**
40SB11C	**40SB8A**	**40SS2**	**40SS5**	**71SS12**
40SB11F	**40SB9A**	**40SS3**	**71SB11**	**D-1**

The 15 soil samples listed above were received intact, with proper documentation, in sealed shipping containers, on November 12 through 14, 2002. The samples were scheduled for the requested analyses of the pesticide/PCB fractions. Samples 40SB11B, 40SB11C, and 40SB11F were received at a temperature of 4.6 degrees Celsius. Samples received for organic analysis are required to be preserved at 4 degrees Celsius. The client was contacted, and the laboratory was instructed to proceed with the analyses. As noted on the chain-of-custody (COC) documents, the client identifications for 71SB11 did not match between the COC and the sample label. Our policy is to use the identification found on the sample label in these circumstances. The Client was contacted and analysis proceeded as requested. SW-846, 3rd Edition, Update 3, Sonication extraction (Method 3550B), and Method 8081A/8082 were used to prepare and analyze these samples, with the exceptions and/or additions requested by the client. The percent moisture values of these soil samples ranged from 8 to 42. All pertinent Quality Assurance notices are included in the narrative section, and all pertinent Laboratory notices for SDG # Q2788 are included in the sample data sections.

Pesticides/PCBs

Extraction and analysis holding time requirements were met for all of these samples. Target compounds were confirmed by dual column above the Quantitation Limit (QL) in most of these samples. Manual quantitations were performed on one or more of the process files associated with this SDG, including samples 40SB11C, 40SB12A, 40SB8A, 40SB9A, 40SS2, 40SS3, 40SS4, 40SS5, 71SB11, 71SB12, and D-1. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG. The extracts chain of custody was misplaced and therefore is not included in the chain of custody section of the data package.

Overall QC criteria were met for all initial and continuing calibration standards associated to this SDG. The PEM associated with the ICAL analyzed on 11/06/02 on VARIAN70/72 exceeded the 4,4'-DDT percent breakdown by 1.6 and 0.8 percent respectively. All other PEM associated with the 12-hr period analysis of the samples in this SDG met breakdown criteria. Per SW846 Method 8081A protocol, PEM analysis is not required prior to the analysis of the ICAL.

All of the surrogates met recovery criteria with several exceptions. The recovery of DCB fell above the quality control limits in the analyses of 40SB12A and 40SS4. The baseline integration of the surrogates was reassessed for these samples per client's instruction. TCX and DCB failed recovery criteria in sample 40SS2. Reanalysis of 40SS2 resulted in acceptable recovery.

The associated method blanks met all quality control criteria. The associated Laboratory Control Sample (LCS) met overall accuracy criteria. There is no matrix spike /matrix spike duplicate (MS/MSD) associated with this SDG since the sample designated to prepare the MS/MSD did not have pesticide analysis requested.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Subject: RE: Pesticide cleanup for SDG Q2788

Good morning Roshanak,

I apologize for the slow response. I found that according to the extraction sheet (dated 11/25/02), cleanup was not performed on any of the samples in this SDG.

Chuck Smith

Subject: Pesticide cleanup for SDG Q2788

Hi. I noticed during the review of pesticide in this SDG that no pesticide clean up check CLP forms were provided. Was this done for this SDG? It should have been done since the methoxychlor result in sample 40SS4 is very high at 43 ug/Kg. Please let me know if this clean up was performed and if yes, where we could locate the forms. Thanks.

DATA VALIDATION WORKSHEET

Nitroglycerin

Reviewer: AJ
Date: 01/30/03
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU ~~54~~
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: Q2788
Test Name: Nitroglycerin
Method No.: 8332-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	X		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: cooler temp for COC 1014 samples (SB8A, SB8F) too low at 1.1°C. No action taken.

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.			

Notes: cooler temps COC 1003: 3.2°C, 1004: 3.1°C, 1010: 5.6°C, 1013: 2.0°C, 1014: 1.1°C. No action taken for samples received too cold.
sampled: 11/11/02, 11/12/02, 11/13/02,
extracted: 11/18/02, 11/14/02
analysis: 11/24/02, 11/23/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			X

Notes: No field/equipment blanks in this data package.

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).	X		
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits? 70, 74 %		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits? 60 %		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: ms/msd for this batch from sample 405B9C

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits? 82% 86% 50-150%		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: NO LCSD

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: D-1 =

All results N.D.

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: Ø			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			
	% Completeness = 100%			

Notes:

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: Q2788
Project No.: 15295137.10000

Project Name: Radford SWMU 40/71
Reviewer: RH
Date: 11/28/03

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{O}C \pm 2\ ^{O}C$)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: collected 11/11/02 13:02 5
CVAA (Hg) 11/18/02 Hg
11/16/11/18/02 ICP

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%?		✓				
	<50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K						

Note: CRDL ✓

1000 Ca 89 %

5 Cu 87.6

3 Pb 73

1000 Potassium 65.8 L1W

5 Silver 113 K1W

10 Tl 110.5 K1W

20 Zinc 70.1 L1W

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						
4.4	Are there negative blank results with the absolute value > MDL?	✓				✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L						
4.5	Are there reported field blankor trip blank values > ± MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						

Note: MB neg for ca, zinc acc pos → LIP unless prev flagged
ICB, CCB low levels antimony, mg, mn, Tl and neg for ca, zinc
all <5X or ND, remove flags
EBs in RZ788 pos. bg, Cr, Mn, silver, Sodium, V. Pos sodium <5x → B, JC

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.	✓			✓		

Note:

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		✓		✓		
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L						
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.		✓			✓	

Note: antimony 34.2/136% L/UL,M se 62.9/72.9 L/UL,M unless prev flagged
Pb 210.8/[redacted] 237.9 K,M Tl 48.2/48.2 L/UL,M
Mn 51.5/[redacted] 179.6 AS MSD 227 K,M

9.0 Instrument Detection Limits (IDL) K,M Cu U 125.4 K,M

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓			✓		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓					
10.2	Was a five-fold dilution performed?	✓					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).		✓				

Note:
Potassium 16.1%. J,S unless prev flagged

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?						
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report						

Note: _____

_____

_____

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓		
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note: _____

_____

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples:_____						
13.1.2	Number of target compounds in each analysis:_____						
13.1.3	Number of results rejected and not reported:_____						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = _____

COC # 1014

CompuChem
a division of Liberty Analytical Corporation

QUALITY ASSURANCE NOTICE

Client Dames & Moore / URS / CEC
Case # _____
Type of Analysis Semivolatile Organic Compounds, Polyaromatic Hydrocarbon TCL Pest, TCL Polychlorinated Bph Explosives, Metals
Receipt Date 11-14-02

For some organic and/or inorganic determinations temperature preservation at 4 degrees Celsius is required for environmental samples during shipment to the laboratory and prior to analysis. A temperature tolerance range is generally allowed. Temperature of a representative sample from the shipping container is taken and recorded by the receiving clerk at the time of sample receipt. This temperature is representative of all samples contained in the cooler. The EPA CLP program requires the laboratory make notification when the temperature exceeds 10 degrees Celsius. The State of North Carolina allows a range of 2-4.4° Celsius. Notification to other clients is either client or project dependent.

Samples that are hand delivered to the laboratory immediately after collection may not meet this criteria. In these cases, the samples shall be considered acceptable if there is evidence that the chilling process has begun, such as arrival on ice.

The temperature of this sample at the time of receipt was determined to be 1.1 °C.

A CompuChem customer service representative contacted the client. The client instructed the Receiving department to:

Hand Delivery/Received on ice ✓
Analyze - qualify with notice ✓
Dispose - client will resample _____

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation

z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: _____Q2788_Part 2_____ **Fraction:**_____PCBs_____

Lab: _CompuChem_____ **Project Name:** __Radford SWMU 40/71_____

Reviewer: _____AS_____ **Date:** _____February 10, 2003_____

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The RPDs between the two columns were greater than the QC limit (i.e., 40%) for all positive field sample results and these results were flagged "J,g".

Correctable Anomalies: None.

Comments: Due to the abundance of organic interference, samples 40SB8F and 40SB9F were run at dilutions. Therefore, the reporting limits were raised.

Sample 40SB8F was received in a cooler that was chilled to 1.1 degrees C, below the 2.0 degrees QC limit. No data qualifying action was taken since the samples were not frozen and the containers were intact.

Signed: Andria Samson

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: Q2788
Test Name: PCB
Method No.: 8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?			
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?			
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?			
1.4	Do sample preservation, collection and storage condition meet method requirement?			
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?		X	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: cooler at 1.1C

40SB12B
40SB12C
40SB8F
40SB9C
40SB9F

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method?			
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).			
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .			

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagentblanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? 1016 & 1260 require a minimum of three peaks and five concentrations. The remaining arochlors are required to run one standard during calibration.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ±20% and %D < ± 15%	✓		
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	✓		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			

Notes:

5.0 Surrogate Recovery

		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?		✓	
5.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.		✓	
5.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.4	If No in Section 5.3, are these sample(s) or method blank(s) reanalyzed?			✓
5.5	If No in Section 5.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
	1 out	high/low	No action	No action
	2 out	2 high same column	K	No action
		2 low same column	L, UL	No action
		mixed same column	J, UJ	No action
		2 high diff columns	J	Not applicable
		2 low diff columns	J, UJ	Not applicable
		mixed diff columns	Professional judgement	Not applicable
	3 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		2 high, 1 low	K (2 high)	J (1 low 2nd column)
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
		other mixed	J, UJ	Not applicable
	4 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		Mixed	J, UJ	Not applicable
	If any recovery is >0% and <10% then L(+)/R(-).			
	If any recovery is 0% then R(+/-).			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunctionwith other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 40SB9C

7.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)? Generally, no action is taken on the basis of field duplicate results. Only discussed in the DV report.			✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		✓	
9.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?		✓	

Notes: Due to high organic materials, 40SB8F and 40SB9F were run at dilutions.
Sulfur cleanup was performed on 40SB9F, 40SB9C, 40SB8F, MS/MSD, LCS, and MB.

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)			
10.1.1	Nunber of samples:_____			
10.1.2	Number of target compounds in each analysis:_____			
10.1.3	Number of results rejected and not reported:_____			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			

Notes:

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

DATA VALIDATION REPORT - Level III Review

SDG No.: _____R2788_____ **Fraction:_VOCs, SVOCs, Pest., PCBs, PAH,___ Explosives, Nitroglycerin, Metals _____**

Lab: _CompuChem_____ **Project Name: __Radford SWMU 40/71_____**

Reviewer: _____RA_____ **Date: _____February 3, 2003_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the VOC analyses, the LCS analyzed on 11/22/02 displayed a percent recovery for 2-hexanone (51%) which was less than the lower QC limit (i.e., 52%). All associated sample results were non-detects and were flagged "R,l."

For the explosive analyses, the LCS recovery for 1,3,5-trinitrobenzene (48%) was less than the lower QC limit (i.e., 50%). All associated sample results were non-detects and were flagged "R,l."

For the PAH analyses, the extraction holding times were grossly exceeded for samples EQB-1RE and EQB-2RE. All associated sample results were non-detects and were flagged "R,h." The original sample results should be used for data interpretation purposes.

Minor Anomalies: For the VOC analyses, the method blank analyzed on 11/22/02 contained 1,2,4-trichlorobenzene at 2 ug/L. The method blank analyzed on 11/28/02 contained 1,1,2-trichloro-1,2,2-trifluoromethane at 4 ug/L and 1,2,4-trichlorobenzene at 1 ug/L. The method blank analyzed on 12/4/02 contained 1,1,2-trichloro-1,2,2-trifluoromethane at 0.6 ug/L, toluene at 0.5 ug/L, chlorobenzene at 0.2 ug/L, styrene at 0.2 ug/L, isopropyl benzene at 0.3 ug/L, 1,3-dichlorobenzene at 0.8 ug/L, 1,4-dichlorobenzene at 0.7 ug/L, 1,2,4-trichlorobenzene at 2 ug/L, and xylene at 0.5 ug/L. Positive results less than 5 times the blank concentration were flagged "B,z" in the associated samples. The method blank also contained laboratory artifacts. These results were crossed out by the reviewer in the associated samples.

The CCV analyzed on 12/4/02 at 0048 displayed %Ds greater than the control limit (i.e., 20%) with a positive bias for trichlorofluoromethane at 24.11% and with a negative bias for dichlorodifluoromethane at 21.89%, carbon disulfide at 34.76%, 2-butanone at 36.82%, 4-methyl-2-pentanone at 29.24%, 2-hexanone at

31.82%, 1,2-dibromo-3-chloropropane at 24.79%, and methyl acetate at 36.12%. Non-detects were flagged "UJ,c" in the associated samples for failures with a negative bias. The CCV analyzed on 11/22/02 at 0103 displayed %Ds greater than the control limit with a positive bias for chloroethane at 27.13% and trichlorofluoromethane at 21.91%. The CCV analyzed on 11/25/02 at 2139 displayed a %D greater than the control limit with a positive bias for 1,1,2,2-tetrachloroethane at 20.47%. The CCV analyzed on 11/26/02 at 0928 displayed %Ds greater than the control limit with a positive bias for 1,1-dichloroethene at 24.11% and carbon disulfide at 25.89%. All associated sample results were non-detects and no data qualifying action was required. The CCV analyzed on 11/28/02 at 0010 displayed %Ds greater than the control limit with a negative bias for dichlorodifluoromethane at 29.58%, chloromethane at 24.8%, and methyl acetate at 26.44%. Non-detects were flagged "UJ,c" in the associated samples.

Acetone exceeded the calibration range in several samples and was flagged "E" by the laboratory. These results were flagged "J,q." These samples were re-analyzed at different dilution factors with acceptable results. Results from the dilution analyses should be used for this compound.

For the SVOC analyses, the method blank analyzed on 11/21/02 contained bis(2-ethylhexyl)phthalate at 2 ug/L. No positive results were reported and no data qualifying action was required.

The initial calibration analyzed on 11/7/02 displayed %RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 17.8%, bis(2-chloroethyl)ether at 17.9%, 2,2-oxybis(1-chloropropane) at 28.3%, 4-methylphenol at 21.1%, n-nitroso-di-n-propylamine at 17.5%, hexachloroethane at 17.7%, naphthalene at 15.3%, 4-chloro-3-methylphenol at 15.3%, 2-methylnaphthalene at 16.1%, 2,4,5-trichlorophenol at 15.2%, dimethylphthalate at 15.8%, acenaphthylene at 22.2%, acenaphthene at 24.4%, dibenzofuran at 20.9%, fluorene at 18.6%, 4,6-dinitro-2-methylphenol at 17.3%, n-nitrosodiphenylamine at 24.9%, 4-bromophenyl-phenylether at 15.8%, atrazine at 57.9%, pentachlorophenol at 15.9%, phenanthrene at 16.2%, anthracene at 15.8%, carbazole at 15.5%, 3,3-dichlorobenzidine at 16.4%, chrysene at 16.5%, benzo(k)fluoranthene at 23.6%, and dibenzo(a,h)anthracene at 16.9%. The initial calibration analyzed on 11/25/02 displayed %RSDs greater than the control limit for benzaldehyde at 18.8%, 2,4-dimethylphenol at 17.4%, hexachlorocyclopentadiene at 17.6%, n-nitrosodiphenylamine at 15.8%, and atrazine at 69.7%. All associated sample results were non-detects and the only failures that were serious enough (i.e., >50%) to affect the non-detects were for atrazine. Atrazine non-detects were flagged "UJ,r" in the associated samples.

The CCV analyzed on 11/22/02 at 1019 displayed a %D greater than the control limit with a negative bias for atrazine at 35.81% and with positive bias for

hexachlorocyclopentadiene at 35.6%, 2,4-dinitrophenol at 25.6%, 4-chlorophenyl-phenylether at 22.6%, and 4,6-dinitro-2-methylphenol at 22.45%. Atrazine non-detects were previously flagged due to initial calibration failure and no further data qualifying action was required. All associated sample results were non-detects for the other compounds and no data qualifying action was required. The CCV analyzed on 11/25/02 at 2041 displayed %Ds greater than the control limit with a negative bias for 4-chlorophenyl-phenylether at 21.6% and atrazine at 52.1%. All associated sample results were non-detects and were flagged "UJ,c" unless previously flagged due to other anomalies. The CCV analyzed on 12/3/02 at 0818 displayed %Ds greater than the control limit with a negative bias for hexachlorocyclopentadiene at 22.2%, 2,4-dinitrophenol at 22.9%, 4-chlorophenyl-phenylether at 22.9%, atrazine at 44.8%, dibenzo(a,h)anthracene at 33.9%, and benzo(g,h,i)perylene at 34.7%, and with a positive bias for 2,2-oxybis(1-chloropropane) at 25.8%. All associated sample results were non-detects. Non-detects were flagged "UJ,c" for failures with a negative bias unless previously flagged due to other anomalies.

The LCS recoveries were greater than the upper QC limit for 2,4-dichlorophenol (120%), 4-chloro-3-methylphenol (132%/ 164%), 2,4,6-trichlorophenol (130%), 3-nitroaniline (110%), n-nitrosodiphenylamine (115%), 4-bromophenyl-phenylether (113%), pentachlorophenol (177%), benzo(k)fluoranthene (110%), benzo(a)pyrene (110%), acenaphthylene (114%), 3-nitroaniline (107%), acenaphthene (120%), dibenzofuran (105%), diethylphthalate (107%), 4-nitroaniline (116%), and atrazine (160%). All associated sample results were non-detects and no data qualifying action was required.

For the pesticides/PCB analyses, the method blank extracted on 11/20/02 contained beta-BHC at 0.043 ug/L and heptachlor at 0.041 ug/L. All associated sample results were non-detects and no data qualifying action was required.

The CCV analyzed on 11/19/02 displayed %Ds greater than the control limit (i.e., 15%) with a positive bias for 4,4-DDT (40.9%/49.9%). The CCVs analyzed on 12/18/02 displayed %Ds greater than the control limit with a positive bias for endrin aldehyde (15.4%/18.2%) and endrin (17.8%). All associated sample results were non-detects and no data qualifying action was required.

The LCS recovery was greater than the upper QC limit for 4,4-DDT at 180%. All associated sample results were non-detects and no data qualifying action was required.

For the PAH analyses, samples EQB-3RE, EQB-4RE, and EQB-5RE were re-extracted outside the holding time by 5, 6, or 7 days. All associated sample results were non-detects and were flagged "UJ,h." The original sample results should be used for data interpretation purposes. These samples were re-extracted since they

were associated with a method blank, extracted on 11/19/02, that displayed positive results for all compounds except phenanthrene. The method blank extracted on 11/20/02 displayed a positive result for chrysene at 0.073 ug/L. Positive results less than 5 times the blank concentration were flagged "B,z" in the associated samples.

The CCV analyzed on 11/27/02 at 0915 displayed %Ds greater than the control limit (i.e., 15%) with a positive bias for dibenzo(a,h)anthracene at 15.6% and benzo(g,h,i)perylene at 16.0%. The CCV analyzed on 11/27/02 at 1914 displayed %Ds greater than the control limit with a positive bias for fluorene at 18.3%. The CCV analyzed on 11/29/02 at 1800 displayed %Ds greater than the control limit with a positive bias for naphthalene at 18.1%, dibenzo(a,h)anthracene at 15.4%, and benzo(g,h,i)perylene at 20.2%. The CCV analyzed on 11/30/02 at 0113 displayed %Ds greater than the control limit with a positive bias for naphthalene at 15.1%, fluoranthene at 15.3%, dibenzo(a,h)anthracene at 15.2%, and benzo(g,h,i)perylene at 19.7%. The CCV analyzed on 12/01/02 at 1803 displayed %Ds greater than the control limit with a positive bias for dibenzo(a,h)anthracene at 16.6%, benzo(g,h,i)perylene at 16.2%, and benzo(a)anthracene at 16.9%. The CCV analyzed on 12/02/02 at 0114 displayed %Ds greater than the control limit with a positive bias for pyrene at 16.1%, benzo(a)anthracene at 17.7%, and benzo(a)pyrene at 19.7%. All associated sample results were non-detects except for pyrene. Pyrene results were previously flagged due to method blank contamination. No further data qualifying action was required.

The RPD between the two columns was greater than the QC limit (i.e., 40%) for pyrene in sample EQB-4. This result was previously flagged for method blank contamination. No further data qualifying action was required.

For the explosives analyses, the initial calibration analyzed on 12/3/02 displayed a %RSD greater than the QC limit (i.e., 20%) for RDX at 51.7%. All associated sample results were non-detects and were flagged "UJ,r". The continuing calibration analyzed on 11/20/02 at 2157 displayed a %D greater than the QC limit (i.e., 15%) with a positive bias for 4-amino-2,6-dinitrotoluene at 19.2%. The continuing calibration analyzed on 11/21/02 at 0714 displayed %Ds greater than the QC limit with a positive bias for 1,3-dinitrobenzene at 16.0% and 4-amino-2,6-dinitrotoluene at 19.0%. All associated sample results were non-detects and no data qualifying action was required. The continuing calibration analyzed on 11/21/02 at 1439 displayed a %D greater than the QC limit with a negative bias for 2,4,6-trinitrotoluene at 19.3%. The continuing calibration analyzed on 12/3/02 at 0612 displayed a %D greater than the QC limit with a negative bias for RDX at 30.2%. The continuing calibration analyzed on 12/3/02 at 1529 displayed a %D greater than the QC limit with a negative bias for RDX at 26.9%, and with a positive bias for HMX at 27.0% and 2,4,6-trinitrotoluene at 20.9%. The continuing calibration analyzed on 12/13/02 at 1419 displayed %Ds greater than

the QC limit with a negative bias for RDX at 21.9% and 3-nitrotoluene at 21.4% and with a positive bias for 1,3-dinitrobenzene at 19.2%. The continuing calibration analyzed on 12/13/02 at 2057 displayed %Ds greater than the QC limit with a negative bias for RDX at 27.3% and 3-nitrotoluene at 22.5% and with a positive bias for 1,3-dinitrobenzene at 23.7%. All associated sample results were non-detects and the failures associated with a negative bias were flagged "UJ,c" unless previously flagged due to other anomalies.

The recovery for surrogate 1,4-dinitrobenzene in sample EQB-6 (34%/34%) were less than the lower QC limit. All associated sample results were non-detects and were flagged "UL,s" unless previously flagged due to other anomalies.

For the nitroglycerin analyses, the recovery for surrogate 1,4-dinitrobenzene were less than the lower QC limit (i.e., 50%) in sample EQB-6 (37%/34%). The associated sample result was a non-detect and was flagged "UL,s."

For the metal analyses, the initial CRDL percent recoveries for aluminum (127.9%), antimony (110.8%), calcium (88.8%), copper (83.8%), lead (82%), nickel (111.2%), potassium (65.2%), selenium (152.8%), silver (145%), and zinc (70.3%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "L,w" and non-detects were flagged "UL,w" for calcium, copper, lead, potassium, and zinc in the associated samples. Positive nickel results less than 2xCRDL were flagged "K,w" in the associated samples. Positive aluminum and silver results were previously flagged due to calibration blank contamination and no further data qualifying action was required. No positive results were reported for antimony and selenium, thus, no data qualifying action was required.

The method blanks contained negative results for calcium and zinc and a positive result for silver. All associated sample results were previously flagged due to CRDL anomalies and no further data qualifying action was required.

The initial and continuing calibration blanks also contained positive results for aluminum, antimony, barium, magnesium, beryllium, copper, thallium, and silver and negative results for calcium and zinc. Positive results less than 5 times the blank concentration were flagged "B,o" in the associated samples.

Correctable Anomalies: None.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were raised.

It should be noted that TIC results were flagged "NJ,t" in the associated samples. Except for data flagged "R", all data, as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Ranjan

DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer: RA
Date: 11/4/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: R2788
Test Name: 8260B
Method No.: VOC

.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If the temperature of the cooler was elevated (> 10 °C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?			✓
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP? QAPP say - no HCl preservation.	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-): For aqueous unpreserved - 7 days for aromatic compounds All others - 14 days.		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

collect	analyzed
11/11/02	11/22/02
11/12/02	11/22/02
11/13/02	11/26/02
11/14/02	"
11/15/19/02 11/20/02	11/25/02

.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per GCMS, 20 samples, batch, matrix, and level)?	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone) the amount in the associated blank.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.			✓

Notes: See attached- MBs also contained laboratory artifacts which were crossed off in the associated samples.

Pos → B, E

.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 15% and %D < ± 20%	✓	✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < CL? CL >0.10 for chloromethane, 1,1-dichloroethane, & bromoform or >0.30 for chlorobenzene & 1,1,2,2-tetrachloroethane. If yes, L(+)/R(-).		✓	

Notes: See attached

.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	✓		
5.2	Are BFB enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
5.3	Have all samples been analyzed within twelve hours of the BFB tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for BFB been met for each instrument used?	✓		
	If the BFB criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method accuracy cannot be verified.			✓

	1 or more <10%	1 high/low	2 or 3 high/low	2 or 3 all low	2 or 3 all high
Positives	L	J	J	L	K
Non-detects	R	UJ	UJ	UL	NONE

Note: The B qualifier remains over surrogate flagging.

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: VR LCS analyzed 11/22/02. 2-Hexanone 51% < 52-133%. and results → R, J

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

0.0 Field Duplicate		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	✓		

Notes: TIC → NJ, t
acetone exceeded in several samples "E" → J/q
use diluted results -

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 21			
12.1.2	Number of target compounds in each analysis: 48			
12.1.3	Number of results rejected and not reported: 2			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 99%

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 1/14/03
DV Level: II (III) IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: R2788
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?			✓
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		L	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		L	

Notes:

collected	extract	analyzed
11/12/02	11/19/02	11/22/02
11/13/02, 11/14/02	"	"
11/15/02	"	"
11/18/02, 11/19/02	11/21/02	12/3/02
11/20/02	11/25/02	11/26/02

11/26/01

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes: MB analyzed 11/2/02 bis(2-ethylhexyl)phthalate, 2 ug/L all ND in ars samples, no action-

EB in 4 MS SDG are ars. w/ samples in other SDGs.

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: IC 11/7/02 atrazine 57.88% ND → UJ/V all ND for other failures - no flags

IC 11/25/02 " 69.74% ND " " " "

also see attached CC 11/22/02 atrazine -35.81 prev. all others pos. bias, ND, no flag

11/25/02 neg. bias NDs → UJ/C

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

	1 or more <10%	2 or 3 high/low	2 or 3 all low	2 or 3 all high
Positives	L	J	L	K
Non-detects	R	UJ	UL	NONE

Note: The B qualifier remains over surrogate flagging.

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: See attached
all LCS %R all ND, no action

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

0.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			✓

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness =_____

X NFG - Region III Modifications
___ CLP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: R2788
Test Name: PEST
Method No.: 8081A

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?			✓
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

	collected	extracted	analyzed
	11/13,02	11/12,02	11/17,02	11/19,02
	11/18,02,	11/15,02,	11/14,02	11/20,02	12/18,02
		11/20,02,	11/19,02	11/25,02	11/26,02

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.	V		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.			✓

Notes: MB pos for beta-BHC, heptachlor, ~~Aroclor-1016, Aroclor-1260~~

no pos. in samples, no action.

4.0 Initial and Continuing Calibration

		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		

Notes: see attached all pos. bias all ND, no flags

5.0 GC/ECD Instrument Performance Check

		Yes	No	NA
5.1	Has a Resolution Check Mixture been analyzed at the beginning of every initial calibration sequence, on each GC column and intrument used for analysis?	✓		
5.2	Is the resulution between all adjacent peaks in the Resolution Check Mixture greater than or equal to 60% for both column?	✓		
/	Detected target compounds that were not adequately resolved should be qualified with "J". Qualitative identifications may also be questionable if coelution exists. Non-detects with retention times in the region of coelution may not be valid, depending on the extent of the problem. Professional judgement should be used to			
5.3	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning (following the RCM) and the end of every initial calibration sequence, on each GC column and intrument used for analysis? The PEM must also analyzed at the beginning of every other 12-hour analytical period.			
5.4	Is the resulution between all adjacent peaks in the PEM equal to 100% in each calibration (initial and continuing) for both column?			
5.4	Do all standard retention times of each of the single component pesticides and surrogate in all PEM fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			
5.5	Are all PEM %Ds less than or equal to 25%? If No, J(+)/UJ(-).			
5.6	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	✓		
5.7	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	✓		
5.8	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).	✓		

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
6.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
1 out	high/low	No action	No action
2 out	2 high same column	K	No action
	2 low same column	L, UL	No action
	mixed same column	J, UJ	No action
	2 high diff columns	J	Not applicable
	2 low diff columns	J, UJ	Not applicable
	mixed diff columns	Professional judgement	Not applicable
3 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	2 high, 1 low	K (2 high)	J (1 low 2nd column)
	2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
	other mixed	J, UJ	Not applicable
4 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	Mixed	J, UJ	Not applicable

If any recovery is >0% and <10% then L(+)/R(-).

If any recovery is 0% then R(+/-).

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: 4,4-DDT LCS 180% 38-127%.

all ND, no action

9.0 Field Duplicate

		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).			✓
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes: all ND

11.0 Pesticide Cleanup Checks (Required when any positive result is reported > 38 ug/Kg for soils)		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
12.1.4	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = _____

DATA VALIDATION WORKSHEET

Polyaromatic Hydrocarbons

Reviewer: RA
Date: 1/14/03
DV Level: II (III) IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: R2788
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).	✓		
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.	✓	[redacted]	

Notes:

	collect	extract	analyzed	collected	extract-	analyzed
EQB-1RE	11/12,02	11/13,02	11/19,02	11/14,02	11/15,02	11/19,02
-3h	4	4	4	4	11/27,02	4
-1h	out of	7 → UJ/h	9 (11/27,02) 8 days 7 days	[redacted]	6 days 6 days	11/24/02
-2h	R-extracted			11/18/02	11/20,02	
			EQB-1RE EQB-2RE grossly → R, h			

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		

3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			✓

Notes: See attached Pyrene B, Z in EQB-4, EQB-5

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	✓	✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	✓		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: see attached all ND except pyrene w/pos. bias prev. flagged ✓

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			

6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

LCS OKV

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?			✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			✓

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes: pyrene 18.3% in EQB-4

Prev. flagged for MB, no more action

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples: 10			
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100.			
	% Completeness =

SDG NARRATIVE

SDG R2788
PROTOCOL: SW-846

SAMPLE IDENTIFICATIONS: EQB-1, EQB-2, EQB-3, EQB-4, EQB-5, EQB-6, EQB-7, EQB-8

The six water samples listed above were scheduled for the requested analyses of the PAH fraction. SW-846, 3rd Edition, Update 3, Method 8310 was used to analyze these samples, with the exceptions and/or additions requested by the client. All pertinent Quality Assurance Notices are included in the narrative section, and all pertinent Laboratory Notices for SDG R2788 are included in the sample data sections.

Analysis holding time requirements were met for these samples. There were no target analytes reported above the Contract Required Quantitation Limit (CRQL) in these samples. Manual quantitations were performed on one or more of the process files associated with this SDG. The reasons have been coded with explanations provided in the notice included in the narrative section of the SDG.

Overall QC criteria were met for all initial and continuing calibration standards associated to this SDG. All of the surrogates met recovery criteria in the analyses of the samples. The associated method blanks and Laboratory Control Samples met all quality control criteria.

Method blank PBLKVR was inadvertently spiked with the matrix spiking solution during the extraction process. This blank was associated with samples EQB-1, EQB-2, EQB-3, EQB-4 and EQB-5. There were no target compounds detected above the reporting limit in these samples. Pyrene was reported as an estimated value below the reporting limit in samples EQB-4 and EQB-5 ("J" flagged). These samples were also re-extracted outside of holding time and analyzed. There were no target analytes reported in the analyses of the re-extracted samples. Both sets of data have been reported.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Kerry S. Hinshaw
Gas Chromatography Manager

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

Project Name: Radford SWMU 40/71
Reviewer: RA
Date: 1/15/03

SDG No.: R2788
Project No.: 15295137.10000

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?						
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 °C ± 2 °C)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note:

collected	analyzed	analyzed
11/13/14/02 11/12/02	12/3/4/02 ICP	12/3/02 Hg
11/15/02 11/18/19/02	↓ ↓	

AQuA DV Service

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).						
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%?		✓				
	<50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K						

Note:
aluminum 127.9 POS ≤2xCRDL → K,W ✓
antimony 110.8 all ND, no flag
calcium 88.8 ↓ UL,W ✓
copper 83.8 L, UL, W ✓
lead 82 all ND, UL,W ✓
nickel 111.2 POS → K,W ✓
Potassium 65.2 L,UL,W ✓
Se 152.8 all ND, no flag
Silver 145 L,W ✓
Zinc 70.3 UL,W ✓

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						
4.4	Are there negative blank results with the absolute value > MDL?	✓				✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L			✓			✓
4.5	Are there reported field blankor trip blank values > ± MDL?						
	Sample Results > MDL						
	< 5X Blank Contamination B						

Note: MB → Ca −66.6, ICB, CCB also neg for Ca all prev flagged-
MB, ICB, CCB pos → Silver all prev. flagged
MB, ICB, CCB neg for zinc, all prev. flagged
CCB → pos. antimony all ND ✓
CCB pos Mg pos → B, O
CCB + Silver prev flagged
+ pos. TL all ND

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note: _____

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.						
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.						

Note: _____

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.						
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?						
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L						
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.						

Note: all samples are blanks.
Yes OK

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓			✓		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?						
10.2	Was a five-fold dilution performed?						
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).						

Note:

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?						
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report						

Note: N;A

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?			✓			✓
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note: _____

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples:_____						
13.1.2	Number of target compounds in each analysis:_____						
13.1.3	Number of results rejected and not reported:_____						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = _____						

Note: _____

INORGANIC CASE SUMMARY NARRATIVE
SDG #R2788
PROTOCOL # SW846

The indicated Sample Delivery Group (SDG) consisting of eight (8) water samples was received into the laboratory management system (LIMS) on November 13, 14, 15, 16, 19, 20, 21, 2002 intact and in good condition. Sample ID's reported in this data package are noted by the receiving department on the COC if they differ from those listed by the samplers on the COC. The samples were received at a temperature of 10 and 12 c. The client was contacted and the lab was instructed to proceed with the indicated analyses.

The samples were analyzed for the metallic TAL list using analytical methods delineated in SW846 update III..
The samples received on 11/13/02 and 11/14/02 were received at temperatures of 6.7 and 1.1 c. respectively. The client instructed the lab to proceed with analysis.

SAMPLE IDs:

The cover page contained in this package lists the client ID's and the associated CompuChem numbers which are part of this SDG.

INSTRUMENTAL QUALITY CONTROL:

The calibration verification solutions (ICV, CCV), blanks (ICB, CCB) associated with this data were confirmed to be within allowable limits.

SAMPLE PREPARATION QUALITY CONTROL:

The sample preparation procedure verifications (LCSW & PBW) were found to be within acceptable ranges. All field samples were prepared and analyzed within the contract specified holding times.

MATRIX RELATED QUALITY CONTROL:

The sample matrix quality control was not requested on this SDG. The samples are blanks.
An LCS was performed.

Release of the data contained in this hard copy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Mary K. Powell

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination

DATA VALIDATION WORKSHEET

Explosives

Reviewer: RA
Date: 11/19/03
DV Level: II (III) IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: R2788
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

	collected	extract	analyzed
	11/12/02	11/18/02	11/21/02, 12/13/02
11/14,15/02	11/13/02	〃	〃
11/19/02, 11/18/02		11/22/02	12/3/02

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		

3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			✓

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: IC 124302 RDX 51.7% RSD → UJ/R in ass. samples.
CC see attached 2,4,6-trinitrotoluene UJ/C " "

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes: EQB-6 1,4-dinitrobenzene 34% L39-132
UL/S unless prev.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			

6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes: 1,3,5-trinitrobenzene 48% < 50-150%
R,L in all

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples: 8			
10.1.3	Number of results rejected and not reported: 8			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)

DATA VALIDATION WORKSHEET

Nitroglycerin

Reviewer: _____
Date: _____
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: R2788
Test Name: Nitroglycerin
Method No.: 8332-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

	Collect	Extract	Analyzed
11/14,02, 11/13,02,	11/12,02	11/18,02	11/26,02
	11/15,02	〃	〃
11/19,20,02	11/18,02	11/22,02	〃

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		

3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			✓
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			✓

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	✓		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			✓
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			✓
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes: 1,4-dinitrobenzene 37% EQB-6
34% ULS

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			✓
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			✓

6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	

9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			
	% Completeness = _____

DATA VALIDATION REPORT - Level III Review

SDG No.: _____S2788_____ **Fraction:**_VOCs, SVOCs, Pest., PCBs, PAH,___ __Explosives, Nitroglycerin, Metals___

Lab: _CompuChem_____ **Project Name:** __Radford SWMU 40/71_____

Reviewer: _____RA, AJ_____ **Date:** _____February 25, 2003_____

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the VOC analyses, severe loss of internal standard 1,4-dichlorobenzene was observed in sample 40SB7F. All associated sample results were non-detects and were flagged "R,i." This sample was re-analyzed with similar results. The original sample results should be used for data interpretations. Severe loss of internal standards was observed in samples 40SB3A, 40SB6A, 40SB6F, D-3 and D-4. All results were flagged "R,i" in these samples. These samples were re-analyzed with acceptable recoveries and results from the re-analyses should be used for these samples.

For the SVOC analyses, the CCV analyzed on 11/26/02 at 0856 displayed a %D greater than the control limit (i.e., 20%) with a negative bias for atrazine at 58.9%. Non-detects were flagged "R,c" in the associated samples.

Minor Anomalies: For the VOC analyses, the method blanks contained toluene at 1 ug/Kg, 2 ug/Kg, 4 ug/Kg, and 130 ug/Kg, 1,1,2-trifluoro-1,2,2-trifluoroethane at 1 ug/Kg, 1,2,4-trichlorobenzene at 1ug/Kg, 4 ug/Kg, and 51 ug/Kg, 1,3-dichlorobenzene at 0.5 ug/Kg and 0.3 ug/Kg, 1,2-dichlorobenzne at 0.5 ug/Kg and 0.3 ug/Kg, 1,4-dichlorobenzene at 0.4 ug/Kg and 0.3 ug/Kg, and bromomethane at 1 ug/Kg and 50 ug/Kg. Positive results less than 5 times the blank concentration were flagged "B,z" in the associated samples. The trip and equipment blanks were located in SDG R2788. These blanks contained positive results for toluene, 1,2,4-trichlorobenzene and methylene chloride. Positive methylene chloride results less than 10 times the blank concentration were flagged "B,x" in the associated samples. Positive toluene and 1,2,4-trichlorobenzene results in the associated samples were either previously flagged due to method blank contamination or were greater than 5 times the blank concentration and no further data qualifying action was required.

Samples 40SB4CRE, 40SB3ARE, 40SB3BRE, 40SB3CRE, 40SB4BRE, 40SB6ARE, 40SB6FRE, 40SB6CRE, D-2RE, D-3RE, and D-4RE were analyzed one day outside the holding time. Positive results were flagged "L,h" and non-detects were flagged "UL,h" unless previously flagged due to other anomalies. These samples were re-analyzed since the internal standard recoveries were outside the QC limit for the original sample analyses.

The recoveries for internal standards fluorobenzene and chlorobenzene were less than the lower QC limit in sample 40SB7F. The recoveries for internal standard fluorobenzene were less than the lower QC limit in samples 40SB4B, 40SB4C, 40SB3B, and 40SB3C. Positive associated results were flagged "J,i" and non-detects were flagged "UJ,i" unless previously flagged due to other anomalies. This sample was re-analyzed with similar results. The original sample results should be used for data interpretations. The recoveries for internal standard 1,4-dichlorobenzene were less than the lower QC limit in samples D-2, 40SB6C and D-2RE. Positive associated results were flagged "J,i" and non-detects were flagged "UJ,i" unless previously flagged due to other anomalies. The original sample results should be used for data interpretations since the samples were re-analyzed outside the holding time.

The CCV analyzed on 11/27/02 at 1017 displayed a %D greater than the control limit (i.e., 20%) with a negative bias for bromomethane at 21.4%. Non-detects were flagged "UJ,c" in the associated samples.

The CCV analyzed on 11/28/02 at 1236 displayed %Ds greater than the control limit with a negative bias for dichlorodifluoromethane at 28.2%, chloromethane at 25.0%, 2-butanone at 22.2% and methyl acetate at 28.0%. Positive results were flagged "J,c" and non-detects were flagged "UJ,c" in the associated samples.

The CCV analyzed on 11/29/02 at 1124 displayed %Ds greater than the control limit with a positive bias for chloroethane at 21.5%, styrene at 20.6%, 1,2-dibromo-3-chloropropane at 28.1%, and methylcylcohexane at 22.0%. All associated sample results were previously flagged due to other anomalies and no further data qualifying action was required.

The recoveries for one or more surrogates were greater than the upper QC limit in samples 40SB7F, 40SB6A, 40SB6F, 40SB7FRE, D-3, 40SB4B, 40SB4C, D-4, 40SB3A, 40SB3B, and 40SB3C. Positive results were flagged "K,s" in samples 40SB4B, 40SB4C, 40SB3B, and 40SB3C. No data flags were applied to the other samples since they were either previously flagged due to other anomalies or were not used for data interpretations.

The MS recovery for acetone (47%) was less than the lower QC limit. This result was previously flagged in the parent sample 40SB3B and no further data qualifying action was required.

The %RPDs for acetone, 2-butanone and total xylene were greater than the QC limit in the field duplicate pair 40SB7F/D-2. The %RPD for acetone was greater than the QC limit in the field duplicate pair 40SB4C/D-4. No action is required based on field duplicate anomalies and no data flags were applied.

For the SVOC analyses, the initial calibration analyzed on 11/7/02 displayed %RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 17.8%, bis (2-chloroethyl)ether at 17.88%, 4-methylphenol at 21.06%, 2,4,5-trichlorophenol at 15.23%, 2,2-oxybis(1-chloropropane) at 28.3%, n-nitroso-di-n-propylamine at 17.5%, hexachloroethane at 17.7%, naphthalene at 15.3%, 4-chlroro-3-methylphenol at 15.3%, 2-methyl naphthalene at 16.1%, dimethylphthalate at 15.8%, acenapthylene at 22.3%, acenaphthene at 24.4%, dibenzofuran at 20.9%, fluorene at 18.6%, 4,6-dinitro-2-methylphenol at 17.3%, n-nitrosodiphenylamine at 24.9%, 4-bromophenyl-phenylether at 15.8%, atrazine at 57.9%, pentachlorophenol at 15.9%, phenanthrene at 16.2%, anthracene at 15.7%, carbazole at 15.5%, 3,3-dichlorobenzidine at 16.4%, chrysene at 16.5%, benzo(k)fluoranthene at 23.6%, and dibenzo(a,h)anthracene at 16.9%. Non-detects were flagged "UJ,r" for atrazine since the failure was serious enough (i.e., > 50%) to affect the non-detects. Positive results were flagged "J,r" for the other compounds in the associated samples. The initial calibration analyzed on 11/25/02 displayed %RSDs greater than the control limit for benzaldehyde at 18.8%, bis(2-chloroethoxy)methane at 17.4%, %, n-nitrosodiphenylamine at 15.8% and atrazine at 69.7%. Positive results were flagged "J,r" unless previously flagged due to other anomalies.

The CCV analyzed on 11/19/02 at 0949 displayed %Ds greater than the control limit (i.e., 20%) with a negative bias for atrazine at 24.79%, and with a positive bias for 3,3-dichlorobenzidine at 25.2% and benzo(b)fluoranthene at 20.67%. All associated sample results were non-detects for 3,3-dichlorobenzidine and benzo(b)fluoranthene and no data qualifying action was required. Atrazine results were previously flagged and no further data qualifying action was required.

The CCV analyzed on 11/20/02 at 1939 displayed a %D greater than the control limit with a positive bias for 4-chlorophenyl-phenylether at 28.3% and with a negative bias for atrazine at 31.3%. Atrazine results were previously flagged and no positive results were reported for 4-chlorophenyl-phenylether. No further data qualifying action was required.

The CCV analyzed on 11/22/02 at 1019 displayed a %D greater than the control limit with a negative bias for atrazine at 35.8%, and with a positive bias for hexachlorocyclopentadiene at 35.6%, 2,4-dinitrophenol at 25.6%, 4-chlorophenyl-phenylether at 22.6%, and 4,6-dinitro-2-methylphenol at 22.5%. Atrazine non-detects were flagged "UJ,c" in the associated samples. Positive results were flagged "J,c" for the other compounds in the associated samples.

The CCV analyzed on 11/26/02 at 0856 displayed a %D greater than the control limit with a negative bias for bis(2-chloroethoxy)methane at 22.4%. Non-detects were flagged "UJ,c" in the associated samples.

The MS/MSD pair for sample 40SB3B displayed recoveries for 4-chloro-3-methylphenol (130%/150%), the MSD recoveries for 2-nitrophenol (120%), 2,4-dimethylphenol (140%), and 2,4-dichlorophenol (130%) which were greater than the upper QC limit. No positive results were reported for these compounds and no data qualifying action was required.

The LCS recoveries were greater than the upper QC limits for phenol (160%), 2-chlorophenol (149%), 4-methylphenol (101%), 2-nitrophenol (166%), 2,4-dimethylphenol (176%), 2,4-dichlorophenol (191%), naphthalene (120%), 4-chloro-3-methylphenol (177%), 3-nitroaniline (118%), fluorene (130%), n-nitrosodiphenylamine (130%), and pantachlorophenol (168%). Positive results were flagged "J,l" in the associated samples.

The %RPD for bis(2-ethylhexyl)phthalate was greater than the QC limit in the field duplicate pair 40SB7F/D-2. No action is required based on field duplicate anomalies and no data flags were applied.

For the pesticides analyses, the CCV analyzed on 11/28/02 at 0119 displayed %Ds greater than the control limit (i.e., 15%) with a positive bias for delta-BHC at 17.79% and endosulfan sulfate at 25.72%. No positive results were reported for these compounds in the associated samples and no data qualifying action was taken.

The CCV analyzed on 11/27/02 at 1707 displayed %Ds greater than the control limit with a positive bias for delta-BHC at 15.11% and endosulfan sulfate at 20.81%. No positive results were reported for these compounds in the associated samples and no data qualifying action was taken.

The CCV analyzed on 11/28/02 at 0528 displayed %Ds greater than the control limit with a positive bias for delta-BHC at 16.13% and endosulfan sulfate at 23.89%. No positive results were reported for these compounds in the associated samples and no data qualifying action was taken.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for several compounds in several samples. These results were flagged "J,g."

For the PCB analyses, the recovery for surrogate tetrachloro-m-xylne in sample D-3 (383%) was greater than the upper QC limit. No action is required based on one surrogate failure and no data flags were applied.

The %RPD for PCB–1254 was greater than the QC limit in the field duplicate pair 40SB7F/D-2. No action is required based on field duplicate anomalies and no data flags were applied.

PCB-1254 exceeded the calibration range in sample D-3 and was flagged "E" by the laboratory. This result was flagged "J,q." This sample was re-analyzed at a dilution factor of 5 with acceptable results and the result from dilution analysis should be used for this compound.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for several compounds in several samples. These results were flagged "J,g."

For the PAH analyses, the method blank contained pyrene at 12 ug/Kg and benzo(b)flouranthene at 43 ug/Kg. Positive results less than 5 times the blank concentration were flagged "B,z."

The CCV analyzed on 11/19/02 at 0426 displayed %Ds greater than the control limit (i.e., 15%) with a positive bias for pyrene at 16.48%, benzo(b)fluoranthene at 15.34%, and acenaphthylene at 18.63%. The CCV analyzed on 11/21/02 at 0059 displayed %Ds greater than the control limit with a positive bias for fluorene at 16.88% and benzo(g,h,i)perylene at 15.39%. The CCV analyzed on 11/21/02 at 0735 displayed %Ds greater than the control limit with a positive bias for benzo(g,h,i)perylene at 18.08% and acenaphthylene at 15.39%. The CCV analyzed on 11/21/02 at 1410 displayed a %D greater than the control limit with a positive bias for acenaphthene at 17.78%. The CCV analyzed on 11/22/02 at 0958 displayed a %D greater than the control limit with a positive bias for acenaphthylene at 15.99%. The CCV analyzed on 11/22/02 at 1301 displayed %Ds greater than the control limit with a positive bias for fluorene at 17.27% and acenaphthylene at 19.44%. The CCV analyzed on 11/24/02 at 0457 displayed a %D greater than the control limit with a positive bias for acenaphthene at 19.38% and dibenzo(a,h)anthracene at 16.14%. The CCV analyzed on 11/24/02 at 1209 displayed %Ds greater than the control limit with a positive bias for acenaphthene at 17.38%, benzo(k)fluoranthene at 30.64%, and dibenzo(a,h)anthracene at 23.76% and with a negative bias for benzo(b)fluoranthene at 17.66%. The CCV analyzed on 11/25/02 at 2325 displayed a %D greater than the control limit with a positive bias for acenaphthene at 18.6%. The CCV analyzed on 11/26/02 at 0524 displayed %Ds greater than the control limit with a positive bias for fluorene at

15.48% and acenaphthylene at 15.48%. Positive results were flagged "J,c" for the failures with a positive bias and non-detects were flagged "UJ,c" for the failures with a negative bias in the associated samples.

The surrogate recoveries for p-terphenyl were less than the lower QC limit in samples 40SB10A and 40SB7A. Positive results were flagged "L,s" and non-detects were flagged "UL,s." The surrogate recoveries for p-terphenyl were greater than the upper QC limit in samples 40SB8C, 40SB6F, D-2, D-3 and 40SB7F. Positive results were flagged "K,s" in the these samples unless previously flagged due to other anomalies.

The %RPD for naphthalne (28%) and benzo(k)fluoranthene (34%) were less than the lower QC limit. Positive results were flagged "J,d" unless previously flagged due to other anomalies.

Several compounds exceeded the calibration range of the instrument and were flagged "E" by the laboratory. These results were flagged "J,q" unless previously flagged due to other anomalies. The associated samples were not analyzed at higher dilution factors since the laboratory originally reported the lower results between the two columns. The new Form Is provided by the laboratory, report the higher results.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for several compounds in several samples. These results were flagged "J,g" unless previously flagged due to other anomalies.

For the explosive analyses, one method blank contained HMX at 0.38 mg/Kg. No positive results were reported in the associated samples and no data qualifying action was taken.

The continuing calibration analyzed on 11/21/02 at 1439 displayed %Ds greater than the QC limit (i.e., 15%) with a negative bias for 2,4,6-trinitrotoluene at 19.32% and with a positive bias for 4-amino-2,6-dinitrotoluene at 19.96% and 4-nitrotoluene at 18.71%. Non-detects were flagged "UJ,c" for 2,4,6-trinitrotoluene in the associated samples. No positive results were reported for 4-nitrotoluene and 4-amino-2,6-dinitrotoluene in the associated samples and no data qualifying action was taken. The continuing calibration analyzed on 11/22/02 at 0100 displayed a %D greater than the QC limit with a positive bias for 4-nitrotoluene at 20.32%. No positive results were reported and no data qualifying action was taken. The continuing calibration analyzed on 11/22/02 at 2331 displayed a %D greater than the QC limit with a negative bias for 2,4,6-trinitrotoluene at 35.98% and with a positive bias for 4-nitrotoluene at 21.96%, 3-nitrotoluene at 17.56% and 2,4-dinitrotoluene at 23.49%. The continuing calibration analyzed on 11/23/02 at 0909 displayed a %D greater than the QC limit with a negative bias

for 2,4,6-trinitrotoluene at 18.95% and with a positive bias for 1,3,5-trinitrobenzne at 17.38%, 1,3-dinitrobenzene at 23.32%, 4-nitrotoluene at 29.3%, 3-nitrotoluene at 25.49% and 2,4-dinitrotoluene at 32.01%. Non-detects were flagged "UJ,c" for 2,4,6-trinitrotoluene in the associated samples. No positive results were reported for the other compounds and no data qualifying action was taken.

The MSD recovery for 1,3,5-trinitrobenzene (48%) was less than the lower QC limit (i.e., 50%). This result was flagged "UJ,m" in the parent sample 40SB3B.

For the metal analyses, the method blanks contained a negative result for calcium and positive results for barium, magnesium and zinc. All associated sample results were positive and were greater than 5 times the blank concentration. No data flags were applied. The equipment blanks located in SDG R2788 contained barium, iron and sodium at low concentrations. Positive sodium results less than 5 times the blank concentration were flagged "B,x" in the associated samples. Positive barium and iron results were greater than 5 times the blank concentration and no data qualifying action was required. The initial and continuing calibration blanks also contained positive results for calcium, aluminum, barium, beryllium, iron, magnesium and zinc. All associated sample results were either greater than 5 times the blank concentration or were previously flagged. No further data qualifying action was required.

The initial CRDL percent recoveries for aluminum (136.6%), antimony (124%), arsenic (131%), barium (112%), beryllium (116%), cadmium (115%), cobalt (112%), lead (126%), potassium (122%), selenium (121%) and thallium (118%) were greater than the upper QC limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "K,w" unless previously flagged due to other anomalies.

The %RPDs for the laboratory duplicates were greater than the QC limit (i.e., 35%) for magnesium (55.4%) and potassium (38.1%). Positive results were flagged "J,k" unless previously flagged due to other anomalies.

The MS and or MSD recoveries for antimony (33.7%/34.4%), arsenic (74.2%), barium (69.4%/74.7%), beryllium (74.6%/73.6%), cadmium (70.9%/73.7%), chromium (62.8%), cobalt (74.5%), copper (66.2%), nickel (70.2%), selenium (46.6%/39.9%), thallium (30.5%/39.8%), vanadium (74.6%), and zinc (70.8%) were less than the lower control limit (i.e., 75-125%). Positive results were flagged "L,m" and non-detects were flagged "UL,m" unless previously flagged due to other anomalies.

The serial dilution %Ds for barium (31.2%), beryllium (33.5%), calcium (36.1%), chromium (32.4%), cobalt (33.2%), copper (42.8%), iron (35.6%), magnesium (32.5%), manganese (34.7%), nickel (37.1%), potassium (27.1%), vanadium

(30.8%) and zinc (39%) were greater than the QC limit (i.e., 10%). Positive results were flagged "J,s" unless previously flagged due to other anomalies.

The %RPDs for aluminum, arsenic, barium, cadmium, calcium, copper, iron, magnesium, manganese, potassium, silver, sodium, and vanadium were greater than the QC limit in the field duplicate pair 40SB7F/D-2. No action is required based on field duplicate anomalies and no data flags were applied.

Correctable Anomalies: Samples 40SB3A, 40SB3B, 40SB3C, 40SB4B, 40SB4C, D-3, and D-4 were not listed on the chain of custodies.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were raised.

It should be noted that the positive TIC results were flagged "NJ,t" in the associated samples. It should be noted that if a given fraction (analysis) is not discussed in this report, it indicates that no anomalies were observed for that fraction. Except for data flagged "R", all data as qualified, are usable for their intended purpose based on the data reviewed.

Samples 40SB6A, 40SB6C, 40SB6F, 40SB7B, 40SB7C, 40SB7F, 40SB8C and D-2 were received in a cooler that was chilled to 1.1 degrees C, below the 2.0 degrees QC limit. No data qualifying action was taken since the samples were not frozen.

Signed: Ranjan

DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer: RA
Date: 2/14/03
DV Level: II (III) IV
Review Document:
__X__ NFG - Region III Modifications
__X__ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: S2788
Test Name: 8260B
Method No.: VOC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If the temperature of the cooler was elevated (> 10 °C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP? QAPP say - no HCl preservation.	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous unpreserved - 7 days for aromatic compounds All others - 14 days.	✓		
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

Collected	Analyzed
11/13/02	11/26/02, 11/27/02, (11/28/02)
11/14/02	11/27/02, 11/28/02 (11/29/02)

40SB4CRE, 40SB3ARE, 40SB3BRE, 40SB3CRE, 40SB4BRE one day outside ht L/UL/h unless flagged for MB. D-4RE, 40SB6ARE, 40SB6FRE, 40SB6CRE, D-2RE, D-3RE

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per GCMS, 20 samples, batch, matrix, and level)?	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone) the amount in the associated blank.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.	✓		

Notes: See attached POS <5x → B,Z

11/14/02 EQB-3 MCl3 3 1,2,4-TCB 0.8 ug/L → 7 5x no flag

11/15/02 EQB-4 " 3

11/14/02 TRIP blank MCl3 3 toluene 1 MCl3 B,7C

(over flagged) LOD+

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 15% and %D < ± 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < CL? CL >0.10 for chloromethane, 1,1-dichloroethane, & bromoform or >0.30 for chlorobenzene & 1,1,2,2-tetrachloroethane. If yes, L(+)/R(-).		✓	

Notes: See attached

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	✓		
5.2	Are BFB enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
5.3	Have all samples been analyzed within twelve hours of the BFB tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for BFB been met for each instrument used?	✓		
	If the BFB criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery							Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?						✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?							✓	
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?						✓		
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.								
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method accuracy cannot be verified.								✓
		1 or more <10%	1 high/low	2 or 3 high/low	2 or 3 all low	2 or 3 all high			
	Positives	L	J	J	L	K			
	Non-detects	R	UJ	UJ	UL	NONE			
	Note: The B qualifier remains over surrogate flagging.								

Notes: See attached

Pos Kis unless prev.

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: acetone 47% < 50-150 Prev flagged in parent 405B3B
NO more action

		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).		✓	
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes: See attached

405B7F all out, J|UJ|i re-analyzed w/similar, use original
V14- DCB-d4 (-95%) → Rii in acs. compds.

D-2 re-analyzed w/similar/J|UJ|i use original
405B6A all out re-analyzed good use re-analyses

405B6C 1 out, re-analyses outside ht. use original
R|UJ|i

D-3 all 3 out - re-analyses all good use re-analyses
405B4B, 405B4C one out use original re-analyse outside ht- J|UJ|i

10.0 Field Duplicate

		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)? For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.	✓		
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		✓	

Notes:

405B7F	D-2	RPD	405B7F	D-2	%RPD	405B4C	D-4	RPD

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification

		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	✓		

Notes: POS TIC → NJ, E

12.0 Data Completeness

		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 2/18/03
DV Level: II (III) IV
Review Document:
_X_ NFG - Region III Modifications
_X_ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: S2788
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

collected	Extracted	Analyzed
11/13/02	11/23/02	11/26/02
"	11/16/02	11/20/02, 11/22/02
11/14/02	11/18/02	11/19/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ( ); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: CC 1112/02 0856 atrazine -58.9 ND → R, C
attached

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		/
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?	✓		✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)	✓		✓
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / L / K Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: see attached
MS | MSD > QC and ND in parent 405B3B no action

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: see attached
Pos → J

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

74.5 ~~150~~ 86.5

10.0 Field Duplicate

		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

405B4C	D-4	% RPD
bis(2-ethylhexyl)phthalate	83	86	30% OK
Di-n-Octyl ph	500U	210	OK

405B75	D-2	% RPD
n-nitrosodi-	1400	1300	7% OK
Phenanthrene	34J	450U	OK
Di-n-butPh-	100	73	31% OK
bis(2-eth)	1800	2700	40% comment

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification

		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).			
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?			
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			

Notes:

TIC → NJ1 ~~t~~

12.0 Data Completeness

		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)			
12.1.1	Number of samples: 20			
12.1.2	Number of target compounds in each analysis: 65			
12.1.3	Number of results rejected and not reported: 9			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 96%

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: S2788
Test Name: PEST
Method No.: 8081A

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓	✓	
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: ~~4058B10A, 4058B6A, 4058B7A Not on COCs~~ RA
They are all there!

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

Collected	Extracted	Analyzed
11/3/02	11/26/02	12/1/02
11/14/02	〃	11/28/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes: EBs in another SDG.

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		

Notes: See attached
NDs, no flags

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Resolution Check Mixture been analyzed at the beginning of every initial calibration sequence, on each GC column and intrument used for analysis?			
5.2	Is the resulution between all adjacent peaks in the Resolution Check Mixture greater than or equal to 60% for both column? Detected target compounds that were not adequately resolved should be qualified with "J". Qualitative identifications may also be questionable if coelution exists. Non-detects with retention times in the region of coelution may not be valid, depending on the extent of the problem. Professional judgement should be used to determine the need to qualify data as unusable (R).			
5.3	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning (following the RCM) and the end of every initial calibration sequence, on each GC column and intrument used for analysis? The PEM must also analyzed at the beginning of every other 12-hour analytical period.			
5.4	Is the resulution between all adjacent peaks in the PEM equal to 100% in each calibration (initial and continuing) for both column?			
5.4	Do all standard retention times of each of the single component pesticides and surrogate in all PEM fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			
5.5	Are all PEM %Ds less than or equal to 25%? If No, J(+)/UJ(-).			
5.6	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).			
5.7	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).			
5.8	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).			

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?			
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			
6.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?			
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
1 out	high/low	No action	No action
2 out	2 high same column	K	No action
	2 low same column	L, UL	No action
	mixed same column	J, UJ	No action
	2 high diff columns	J	Not applicable
	2 low diff columns	J, UJ	Not applicable
	mixed diff columns	Professional judgement	Not applicable
3 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	2 high, 1 low	K (2 high)	J (1 low 2nd column)
	2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
	other mixed	J, UJ	Not applicable
4 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	Mixed	J, UJ	Not applicable

If any recovery is >0% and <10% then L(+)/R(-).

If any recovery is 0% then R(+/-).

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?		✓	✓
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		✓

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		✓	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?			

Notes: Several > 40% → J/g

11.0 Pesticide Cleanup Checks (Required when any positive result is reported > 38 ug/Kg for soils)		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)			
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
12.1.4	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness =

DATA VALIDATION WORKSHEET

PCBs

Reviewer: RA
Date: 2/24/03
DV Level: II III IV

Review Document:

X SW-846 - 8081/8082
X NFG - Region III Modifications
___ CLP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: 82788
Test Name: PCB
Method No.: 8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".		✓	
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

collected	extract	analyzed
11/13/02	11/16/02	11/19/02, 12/4/02
11/14/02	11/18/02	4, 11/22/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? 1016 & 1260 require a minimum of three peaks and five concentrations. The remaining arochlors are required to run one standard during calibration.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%	✓		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			

Notes:

5.0 Surrogate Recovery

		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
5.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.4	If No in Section 5.3, are these sample(s) or method blank(s) reanalyzed?			1
5.5	If No in Section 5.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			

	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
	1 out	high/low	No action	No action
	2 out	2 high same column	K	No action
		2 low same column	L, UL	No action
		mixed same column	J, UJ	No action
		2 high diff columns	J	Not applicable
		2 low diff columns	J, UJ	Not applicable
		mixed diff columns	Professional judgement	Not applicable
	3 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		2 high, 1 low	K (2 high)	J (1 low 2nd column)
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
		other mixed	J, UJ	Not applicable
	4 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		Mixed	J, UJ	Not applicable
	If any recovery is >0% and <10% then L(+)/R(-).			
	If any recovery is 0% then R(+/-).			

Notes:

D-3 Tetrachloro-m-xylene 3837 43-135 no action required

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)? Generally, no action is taken on the basis of field duplicate results. Only discussed in the DV report.	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓	✓	

Notes: 405B4C D-4 405B7F D-2
All ND All ND PCB-1254 450 170 RL=62
> QC
comment only

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		✓	
9.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes:

several > 40% → J(+)

Aroclor-1254 "E" in D-3 → J(+)

use DF=5 result

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Nunber of samples:_____			
10.1.2	Number of target compounds in each analysis:_____			
10.1.3	Number of results rejected and not reported:_____			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____

DATA VALIDATION WORKSHEET

Polyaromatic Hydrocarbons

Reviewer: AJ
Date: 02/11/03
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: S2788
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	X		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: No CoC's in data package

samples from COC 1014: 6A, 6C, 6F, 7A, 7B, 7C, 7F, D-2 received at 1.1°C, below the 2.0°C QC criteria. No action taken

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: see above temperature comment for COC 1014.
Cooler Temps 2.0°C, 2.5°C, 1.1°C, 2.0°C

Sampled: 11/13/02, 11/14/02
extracted: 11/16/02, 11/18/02
analysis: 11/19/02, 11/22/02, 11/21/02, 12/09/02, 11/24/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)			
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".			
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			

Notes: MB : PBLK45 (11/19, 11/22)
PBLKVJ (11/21, 11/26) positive hits for pyrene + Benzo b fluoranthene. Flagged B, Z, all positive results < 5 x blank result.
PBLKYZ (12/09)

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).		X	
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes: CCV 085PPNA4NH - %D pyrene = 16.48%, benzob flouranthene = 15.34%, acenapthylene = 18.63%, Flagged associated samples J, c
CCV 008QPNA4NO - %D flourene = 16.88%, benzo ghi perylene = 15.39% - No action taken, results ND → over

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%		X	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?		X	
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes: %R 40SB7A (1st column run) = 43% - L/UL, s all results
%R 40SB10A (2nd column run) = 24% - L/UL, s all results
%R 40SB7A (2nd column run) = 44% - already flagged from 1st run.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits? 50-150%		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	X		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: RPD: Napthalene = 28%, Benzo k fluoranthene = 34%. Flagged positives J, d.

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits? 50-150%		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: NO LCSD

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.	X		

Notes: D-2
D-3
D-4

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns. J, 9	X		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: Ø			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			
	% Completeness = 100%

DATA VALIDATION WORKSHEET

Explosives

Reviewer: AJ
Date: 01/28/03
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: 52788
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?		X	
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	X		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

COC 1014 samples received too cold (1.1°C) see letter from lab.
No action taken.

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: Cooler temps: 2.0°C, 1.1°C, 2.0°C, 2.5°C
↑ below QC criteria of 2.0°C No action taken

sampled 11/13/02, 11/14/02
extracted 11/19/02
analysis 11/21/02, 11/22/02, 11/23/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".	X		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			X

Notes: PBLKVA - Hmx 0.38 - No action taken since all results ND.
No equipment/field blanks in this batch

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.			

Notes: CCV060NFULL4SZ: 2,4,6 TNT %D - 19.32 % (UJ, C ND's) 4-NT %D: 18.71 % - no action. ND's.
CCV072NFULL4TA: 4-NT %D: 20.32% - no action all ND's. →

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150 %	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	X		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MSD %R 1,3,5TNB = 48%. ~~No action taken since~~ all results were ND UJ in 405B8B

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: D-2 / 405B7F } All results ND. So nothing
D-3 / 405B4F } to address here.
D-4 / 405B4C }

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: Ø			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100 %			
	% Completeness = 100 %			

Notes:

COC # 1014

CompuChem
a division of Liberty Analytical Corporation

QUALITY ASSURANCE NOTICE

Client Dames & Moore / URS / CLC
Case # _____
Type of Analysis Semivolatile Organic Compounds, Polyaromatic Hydrocarbons TCL Pest, TCL Polychlorinated Biphenyl Explosives, Metals
Receipt Date 11-14-02

For some organic and/or inorganic determinations temperature preservation at 4 degrees Celsius is required for environmental samples during shipment to the laboratory and prior to analysis. A temperature tolerance range is generally allowed. Temperature of a representative sample from the shipping container is taken and recorded by the receiving clerk at the time of sample receipt. This temperature is representative of all samples contained in the cooler. The EPA CLP program requires the laboratory make notification when the temperature exceeds 10 degrees Celsius. The State of North Carolina allows a range of 2-4.4° Celsius. Notification to other clients is either client or project dependent.

Samples that are hand delivered to the laboratory immediately after collection may not meet this criteria. In these cases, the samples shall be considered acceptable if there is evidence that the chilling process has begun, such as arrival on ice.

The temperature of this sample at the time of receipt was determined to be 1.1 °C.

A CompuChem customer service representative contacted the client. The client instructed the Receiving department to:

Hand Delivery/Received on ice ✓
Analyze - qualify with notice ✓
Dispose - client will resample _____

QUALITY ASSURANCE NOTICE

Client Dames & Moore / URS / CLC
Case # _____
Type of Analysis Semivolatile Organic Compounds, Polyaromatic Hydrocarbons TCL Pest, TCL Polychlorinated Biphenyl Explosives, Metals
Receipt Date 11-14-02

For some organic and/or inorganic determinations temperature preservation at 4 degrees Celsius is required for environmental samples during shipment to the laboratory and prior to analysis. A temperature tolerance range is generally allowed. Temperature of a representative sample from the shipping container is taken and recorded by the receiving clerk at the time of sample receipt. This temperature is representative of all samples contained in the cooler. The EPA CLP program requires the laboratory make notification when the temperature exceeds 10 degrees Celsius. The State of North Carolina allows a range of 2-4.4° Celsius. Notification to other clients is either client or project dependent.

Samples that are hand delivered to the laboratory immediately after collection may not meet this criteria. In these cases, the samples shall be considered acceptable if there is evidence that the chilling process has begun, such as arrival on ice.

The temperature of this sample at the time of receipt was determined to be 1.1 °C.

A CompuChem customer service representative contacted the client. The client instructed the Receiving department to:

Hand Delivery/Received on ice ✓
Analyze - qualify with notice ✓
Dispose - client will resample _____

DATA VALIDATION WORKSHEET

Nitroglycerin

Reviewer: AJ
Date: 01/30/03
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 54 46/71
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: S2788
Test Name: Nitroglycerin
Method No.: 8332-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?		X	
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	X		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids			
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?			

Notes: missing COC's for samples 40SB3A, 40SB3B, 40SB3C, 40SB4B, 40SB4C, D-3, D-4
COC 1014 samples: 40SB16A, 40SB16C, 40SB16F, 40SB17A, 40SB17B, 40SB17C, 40SB17F, D-2, received by lab at 1.1°C. No action taken.

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		X	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.			

Notes: samples from COC 1014 preserved too cold. No action taken.

sampled - 11/13/02, 11/14/02
received - 11/19/02
analysis - 11/24/02, 11/25/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	~~X~~
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		~~X~~

Notes: ~~No field equipment blanks in this batch~~
all ND in R27885
RA

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).	X		
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).	X		
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD done on sample 405B3B

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: NO LCSD performed

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report. All results N.D.	X		

Notes:

D-2 405B7F
D-3 405B4F
D-4 405B4C

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 20			
10.1.3	Number of results rejected and not reported: Ø			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100 %			
	% Completeness = 100 %			

Notes:

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: S2788
Project No.: 15295137.10000

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: _____T2788_____ **Fraction:_VOCs, SVOCs, Pest., PCBs, PAH,___ __Explosives, Nitroglycerin, Metals___**

Lab: _CompuChem_____ **Project Name: __Radford SWMU 40/71_____**

Reviewer: _____RA_____ **Date: _____February 24, 2003_(revision 1)___**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the VOC analyses, severe loss of internal standards were observed in samples 40SB5A, 40SB5F, 40SB5C, 40SB4A, 40SB4F, and 40SB2F. All results were flagged "R,i" in these samples. These samples were re-analyzed with acceptable recoveries and results from the re-analyses should be used for these samples. For the metals analyses, the MS/MSD recoveries for copper (-46.41%/-62.5%) and thallium (5.4%/11.4%) were less than the lower QC limit (i.e., 75%). Positive copper results were previously flagged due to laboratory duplicate anomalies and no further data qualifying action was required. Non-detects were flagged "R,m " for copper and thallium in the associated samples.

Minor Anomalies: For the VOC analyses, the method blank analyzed on 11/28/02 contained toluene at 4 ug/Kg, 1,3-dichlorobenzene at 0.5 ug/Kg, 1,4-dichlorobenzene at 0.4 ug/Kg, 1,2-dichlorobenzne at 0.5 ug/Kg, and 1,2,4-trichlorobenzene at 4 ug/Kg. The method blank analyzed on 11/29/02 contained bromomethane at 1 ug/Kg, toluene at 2 ug/Kg, 1,3-dichlorobenzene at 0.3 ug/Kg, 1,4-dichlorobenzene at 0.3 ug/Kg, 1,2-dichlorobenzne at 0.3 ug/Kg, and 1,2,4-trichlorobenzne at 1 ug/Kg. The method blank analyzed on 12/3/02 contained methyl acetate at 100 ug/Kg. The method blank analyzed on 12/2/02 contained toluene at 3 ug/Kg, 1,3-dichlorobenzene at 0.3 ug/Kg, 1,4-dichlorobenzene at 0.3 ug/Kg, 1,2-dichlorobenzne at 0.2 ug/Kg, and 1,2,4-trichlorobenzne at 0.8 ug/Kg. Positive results less than 5 times the blank concentration were flagged "B,z" in the associated samples. The method blank also contained positive TIC results. These results were manually crossed out on the result forms by the reviewer in the associated samples. The trip and equipment blanks were located in SDG R2788. These blanks contained positive results for toluene and methylene chloride. Positive methylene chloride results less than 10 times the blank concentration were flagged "B,x" in the associated samples. Positive toluene results were previously flagged and no further data qualifying action was required.

Samples 40SB4FRE, 40SB4ARE, 40SB5ARE, 40SB5CRE, and 40SB5FRE were analyzed 4 or 5 days outside the holding time. These samples were re-analyzed since the original samples had low internal standards. Positive results were flagged "L,h" and non-detects were flagged "UL,h" unless previously flagged due to other anomalies.

The initial calibration analyzed on 1/28/02 displayed a %RSD greater than the control limit (i.e., 15%) for toluene at 25.4%. All associated sample results were previously flagged due to other anomalies and no further data qualifying action was required.

The CCV analyzed on 11/29/02 at 1124 displayed %Ds greater than the control limit (i.e., 20%) with a positive bias for chloroethane at 21.5%, acetone at 29.72%, styrene at 20.56%, 1,2-dibromo-3-chloropropane at 28.1%, and methylcyclohexane at 22.04%. Positive results were flagged "J,c" in the associated samples. The CCV analyzed on 12/2/02 at 1217 displayed %Ds greater than the control limit with a negative bias for bromomethane at 23.47%, carbon disulfide at 31.56%, and methyl acetate at 24.76%. All associated sample results were previously flagged due to other anomalies and no further data qualifying action was required. The CCV analyzed on 12/3/02 at 1100 displayed a %D greater than the control limit with a positive bias for trichlorofluoromethane at 21.53% and with a negative bias for carbon disulfide at 27.18% and methyl acetate at 21.12%. All associated sample results were previously flagged due to other anomalies and no further data qualifying action was required.

The recoveries for all surrogates were greater than the QC limit in samples 40SB5A, 40SB5F, 40SB5C, 40SB4A, and 40SB4F. These results were previously flagged due to internal standard anomalies. No further data qualifying action was required.

The MS/MSD recoveries for bromomethane (20%/19%), 1,2-dibromo-3-chloropropane (180%/190%), the MSD recoveries for carbon disulfide (31%), 4-methyl-2-pentanone (180%), 2-hexanone (170%), 1,1,2,2-tetrachloroethane (160%), and the RPD for chloroethane were outside the QC limit. The LCS recoveries were acceptable. This could be due to sample matrix interference. Bromomethane was flagged "UJ,m" and carbon disulfide was flagged "J,m" in the parent sample TESTPIT2F. No positive results were reported for the other compounds and no further data qualifying action was required.

The recoveries for internal standard 1,4-dichlorobenzene were less than the lower QC limit in samples TESTPIT2F and 40SB2FRE. All associated sample results were non-detects and were flagged "UJ,i".

For the SVOC analyses, equipment blanks located in SDG R2788 contained caprolactam at 21 ug/L and 22 ug/L. No positive results were reported and no data qualifying action was required.

The initial calibration analyzed on 11/25/02 displayed %RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 18.7%, 2,4-dimethylphenol at 17.4%, hexachlorocyclopentadiene at 17.6%, n-nitrosodiphenylamine at 15.8%, and atrazine at 69.7%. Positive results were flagged "J,r" for benzaldehyde, 2,4-dimethylphenol, and hexachlorocyclopentadiene in the associated samples. Non-detects were flagged "UJ,r" for atrazine since the failure was serious enough (i.e., > 50%) to affect the non-detects.

The CCV analyzed on 11/29/02 at 2129 displayed a %D greater than the control limit (i.e., 20%) with a negative bias for atrazine at 58.3%. All associated sample results were previously flagged and no additional data qualifying action was required. The CCV analyzed on 12/9/02 at 1330 displayed %Ds greater than the control limit with a negative bias for 2-methylnaphthalene at 20.57%, hexachlorobenzene at 20.01% and atrazine at 54.31%. Positive results were flagged "J,c" and non-detects were flagged "UJ,c" unless previously flagged due to other anomalies.

The RPDs for the MS/MSD analyses were greater than the QC limits for benzaldehyde at 52%, 3-nitroaniline at 49%, and 3,3-dichlorobenzidine at 65%. The MS/MSD and LCS recoveries were acceptable and no data qualifying action was taken.

The bis(2-ethylhexyl)phthalate results were outside the QC limit for the field duplicate pair D-5/40SB1F. No action is required based on this failure and no data flags were applied.

For the pesticides analyses, the CCV analyzed on 12/11/02 displayed %Ds greater than the control limit (i.e., 15%) with a negative bias for 4,4-DDT at 16.27% and methoxychlor at 15.54%. All associated sample results were non-detects and were flagged "UJ,c."

The MS/MSD recoveries for beta-BHC (169%/157%), delta-BHC (12%/23%), 4,4-DDT (190%/167%), endosulfan sulfate (45%/38%), and endrin aldehyde (14%/18%), the MS recovery for alpha-BHC (48%), and the %RPD for delta-BHC (62%) were outside the QC limit. Non-detects were flagged "UJ,m" for delta-BHC, endosulfan sulfate, endrin aldehyde, and alpha-BHC in the parent sample TESTPIT2F. No positive results were reported for the other compounds and no further data qualifying action was taken.

The RPD between the two columns was greater than the QC limit (i.e., 40%) for aroclor-1254 in sample 71SS13 (47.8%). This result was flagged "J,g".

For the PCB analyses, the CCVs analyzed on 11/21/02 at 1656 and 2029 displayed %Ds greater than the control limit (i.e., 15%) with a positive bias for aroclor-1260 at 16.48% and 17.21%, respectively. The CCVs analyzed on 12/13/02 at 0942 and 1349 displayed %Ds greater than the control limit with a positive bias for aroclor-1260 at 18% and 21.4%, respectively. Positive results were flagged "J,c" in the associated samples.

The recovery for surrogate tetrachloro-m-xylene was greater than the upper QC limit in sample 40SB4F at 264%. No action is required based on one surrogate failure and no data flags were applied.

The %RPDs for aroclor-1254 (37%) and aroclor-1260 (63%) were greater than the control limit (i.e., 35%) for the field duplicate pair D-5/40SB1F. No action is required based on this failure and no data flags were applied.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for aroclor-1254 and aroclor-1016 in sample 40SB1F, aroclor-1254 in samples 40SB2F and 40SB4F, and aroclor-1260 in samples 71SB11F and D-5. These results were flagged "J,g."

For the PAH analyses, the CCV analyzed on 11/28/02 at 0225 displayed %Ds greater than the control limit (i.e., 15%) with a positive bias for acenaphthene at 16.39%, fluorene at 15.16%, and acenaphthylene at 15.18%. The CCV analyzed on 11/28/02 at 0937 displayed %Ds greater than the control limit with a positive bias for acenaphthene at 18.7%, dibenzo(a,h)anthracene at 15.2%, benzo(g,h,i)perylene at 17.72%, and acenaphthylene at 15.4%. The CCV analyzed on 12/01/02 at 1803 displayed %Ds greater than the control limit with a positive bias for pyrene at 15.03%, dibenzo(a,h)anthracene at 16.64%, benzo(g,h,i)perylene at 16.2%, and benzo(a)anthracene at 16.88%. The CCV analyzed on 12/02/02 at 0114 displayed %Ds greater than the control limit with a positive bias for pyrene at 16.15%, chrysene at 15.27%, benzo(b)fluoranthene at 15.82%, benzo(g,h,i)perylene at 17.69%, and benzo(a)pyrene at 19.7%. The CCV analyzed on 12/02/02 at 0750 displayed %Ds greater than the control limit with a positive bias for fluorene at 15.14%, benzo(k)fluoranthene at 18.16%, benzo(g,h,i)perylene at 18.63%, and benzo(a)pyrene at 22.78%. Positive results were flagged "J,c" in the associated samples.

The MS/MSD recoveries for all compounds except fluorene, phenenthrene, anthracene, and fluornathene were outside the QC limit. This could be due to sample matrix interference. All associated sample results were non-detects and were flagged "UJ,m" in the parent sample TESTPIT2F.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for several compounds in several samples. These results were flagged "J,g."

The %RPDs for acenaphthene (154%), benzo(a)anthracene (127%), and acenaphthylene (144%) were greater than the control limit (i.e., 35%) for the field duplicate pair D-5/40SB1F. No action is required based on this failure and no data flags were applied.

For the explosives analyses, the initial calibration analyzed on 12/3/02 displayed a %RSD greater than the QC limit (i.e., 15%) for RDX at 51.7%. All associated sample results were non-detects and were flagged "UJ,r."

The continuing calibration analyzed on 11/22/02 at 2331 displayed a %D greater than the QC limit (i.e., 20%) with a negative bias for 2,4,6-trinitrotoluene at 35.98%, and with a positive bias for 2,4-dinitrotoluene at 23.49%, 4-nitrotoluene at 21.96% and 3-nitrotoluene at 17.58%. The continuing calibration analyzed on 11/23/02 at 0909 displayed a %D greater than the QC limit with a negative bias for 2,4,6-trinitrotoluene at 18.95%, and with a positive bias for 1,3-dinitrobenzene at 23.32%, 2,4-dinitrotoluene at 32.01%, 4-amino-2,6-dinitrotoluene at 20.02%, 4-nitrotoluene at 29.3% and 3-nitrotoluene at 25.49%. The continuing calibration analyzed on 12/3/02 at 0612 displayed a %D greater than the QC limit with a negative bias for RDX at 30.2%. The continuing calibration analyzed on 12/3/02 at 1529 displayed a %D greater than the QC limit with a negative bias for RDX at 26.87% and with a positive bias for HMX at 27.02% and 2,4,6-trinitrotoluene at 20.87%. The continuing calibration analyzed on 12/4/02 at 0001 displayed a %D greater than the QC limit with a negative bias for RDX at 25.32% and with a positive bias for HMX at 28.96% and 2,4,6-trinitrotoluene at 25.78%. The continuing calibration analyzed on 12/4/02 at 0918 displayed a %D greater than the QC limit with a negative bias for RDX at –6.03%. All associated sample results were non-detects and were flagged "UJ,c" unless previously flagged due to other anomalies.

The MS/MSD recoveries for 2,4,6-trinitrotoluene (210%/155%) were greater than the upper QC limit (i.e., 150%). The 2,4,6-trinitrotoluene result in the parent sample TESTPIT2F was a non-detect and no data qualifying action was required. For the nitroglycerin analyses, the recovery for surrogate 1,4-dinitrobenzene was greater than the upper QC limit (i.e., 50%) in sample D-5 at 420%. This sample was re-analyzed with a similar recovery in sample D-5RR (420%). No positive results were reported and no data qualifying action was required. The original sample result should be used for data interpretation purposes.

For the metal analyses, the initial CRDL percent recoveries for aluminum (130%), arsenic (86.7%), copper (64.6%), nickel (119.8%), potassium (117.4%), selenium (126.4%), sodium (76.8%), and thallium (76.7%) were outside the control limit

(i.e., 90-110%). Positive results less than 2xCRDL were flagged "L,w" and non-detects were flagged "UL,w" for arsenic, copper, and sodium in the associated samples. Positive selenium results less than 2xCRDL were flagged "K,w" in the associated samples. Positive nickel and potassium results were greater than 2xCRDL and no data qualifying action was required. Thallium non-detects were previously flagged due to matrix spike failure and no further data qualifying action was required.

The method blanks contained positive results for barium, copper, magnesium, potassium, and zinc. All associated sample results were greater than 5 times the blank concentration and no data qualifying action was required. The equipment blanks located in SDG R2788 contained barium and sodium at low concentrations. All associated sample results were greater than 5 times the blank concentration and no data qualifying action was required. The initial and continuing calibration blanks also contained positive results for barium, magnesium, calcium, beryllium, copper, potassium, and a negative result for arsenic. All associated sample results were either greater than 5 times the blank concentration or were previously flagged. No further data qualifying action was required.

The laboratory duplicate results were outside the QC limit for all analytes except antimony, beryllium, potassium, silver, and antimony. Positive results were flagged "J,k" and non-detects were flagged "UJ,k" unless previously flagged due to other anomalies.

The MS/MSD recoveries for antimony (49.7%/60.1%) and the MS recovery for chromium (141.2%) were outside the control limit (i.e., 75-125%). Positive results were flagged "L,m" and non-detects were flagged "UL,m" for antimony. Positive chromium results were previously flagged due to laboratory duplicate anomalies and no further data qualifying action was required.

The serial dilution %D for potassium (10.4%) was greater than the QC limit (i.e., 10%). Positive results were flagged "J,s."

The %RPDs for arsenic (85%), iron (115%), magnesium (42%), manganese (44%), mercury (138%), nickel (38%), potassium (65%), selenium (138%), and vanadium (40%) were greater than the control limit (i.e., 35%) for the field duplicate pair D-5/40SB1F. No action is required based on this failure and no data flags were applied.

Correctable Anomalies: None.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were raised.

It should be noted that the positive TIC results were flagged "NJ,t" in the associated samples. Except for data flagged "R", all data, as qualified, are usable for their intended purpose, based on the data reviewed.

Signed: Ranjan

DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer: RA
Date: 1/23/03
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: T2788
Test Name: 8260B
Method No.: VOC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If the temperature of the cooler was elevated (> 10 °C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".		✓	
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP? QAPP say - no HCl preservation.	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous unpreserved - 7 days for aromatic compounds All others - 14 days.	✓		
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

collected	analyzed	
11/15/02	11/29/02	405B4FRE 5days
11/14/02	11/28/02	405B5FRE 4days
11/18/02	11/29/02	405B5CRE 4 4
11/20/02	11/29/02	405B9FRE 4
SOIL		

12/3/02 → 12/2/02

L, UL, h unless flagged for blank contamination

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per GCMS, 20 samples, batch, matrix, and level)?	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone) the amount in the associated blank.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.	✓		

Notes: See attached pos<5x B, Z
↓EQB from SDG R2788 MCl3 <10x → B, X toluene were prev flagged no more
trip " " all prev. flagged

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 15% and %D < ± 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < CL? CL >0.10 for chloromethane, 1,1-dichloroethane, & bromoform or >0.30 for chlorobenzene & 1,1,2,2-tetrachloroethane. If yes, L(+)/R(-).		✓	

Notes: IC 11/28/02 toluene 25.4 %RSD pos results were prev. flagged -
Several %D7 QC See attached.

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	✓		
5.2	Are BFB enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
5.3	Have all samples been analyzed within twelve hours of the BFB tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for BFB been met for each instrument used?	✓		
	If the BFB criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?		✓	
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method accuracy cannot be verified.			✓
		1 or more <10% / 1 high/low / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high		
	Positives: L / J / J / L / K			
	Non-detects: R / UJ / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes: All Surr. & QC 405B5A
405B5F
405B5C
405B6A
405B 4F

Pos K/S unless prev flagged

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: see attached LCS ori; NO action.

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).		✓	
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes: ~~405B5A all <QC~~ severe loss of IS for 405B5A, 405B5F, 405B5C, 405B4A, 405B4F, 405B2F, all rejected use re-analyses.
TESTPIT2F 1,4-dichlorobenzene < QC associated results ND, UJ, i
405B2FRE " " "

10.0 Field Duplicate		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes:

405B1F and [redacted] D-5

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	✓		

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓	✓	
12.1.1	Number of samples: 26			
12.1.2	Number of target compounds in each analysis: 48			
12.1.3	Number of results rejected and not reported: 268			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 79%			

Notes:

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 1/14/03
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: ~~15291537.~~10000
Laboratory: Compuchem
SDG No.: T2788
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	✓	✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

	collected	extracted	analyzed	
11/18/02	11/15/02	11/25/02	12/9/02	11/30/02
	11/14/02	"	11/30/02	
	11/20/02	11/22/02	11/29/02	11/30/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes: EQB-1 Caprolactam 21 ug/L
EQB-2 " 22 " in SDG R2758

NO POS, no flags

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

	1 or more <10%	2 or 3 high/low	2 or 3 all low	2 or 3 all high
Positives	L	J	L	K
Non-detects	R	UJ	UL	NONE

Note: The B qualifier remains over surrogate flagging.

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: see attached %RPDs out for several. MS/MSD OK, no action.

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		✓	✓

Notes: see attached 405B1F, D-5

bis(2-ethylhexyl)phthalate results outside QC

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			✓

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness =_____			

Notes:

COMMENTS: _____

DATA VALIDATION WORKSHEET

Polyaromatic Hydrocarbons

Reviewer: RA
Date: 1/23/03
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: T2788
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

collected	extracted	analyzed	
11/14/02	11/19/02	12/15/02	12/18/02
11/15/02	11/19/02	12/14/02	12/17/02
11/18/02	11/20/02	12/2/02	12/14/02
11/20/02	11/25/02	12/8/02	12/17/02

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes: MB analyzed 12/13/02 pyrene 8.1 ug/kg extracted 11/19/02 EB in SDG R2750 as ND
MB 4 extract 11/25/02 benzo(b)fluoranthene 3.4 ug/kg (5x → B, Z

4.0 Initial and Continuing Calibration

		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	✓	✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: See attached pos J,C

5.0 Surrogate Recovery

		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: see attached LCS OK, comment

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			✓
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		✓	✓

Notes:

	405B1F	D-5	RPD
acenaphthene	440	3400	(154)
fluoranthene	280	310 OKV	
chrysene	3700	3000 OKV	
benzo(b)fluo	98	230 V OKV	
benzo(a)anthracene	320	3700	27
acenaphthylene	320	2000	(144)

comment

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes: see attached - Pos J/g unless prev flagged-

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			
	% Completeness = _____

Laboratory: Compuchem
SDG No.: T2788
Test Name: PEST
Method No.: 8081A

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

	collected	Extracted	analyzed
11/18/02 11/14/02	11/15/02	11/26/02	12/11/02
	11/20/02	4	5

Soil

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes: EQ blanks in R2788 all ND ✓

4.0 Initial and Continuing Calibration

		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		

Notes: CC 12111,02 4,4-DDT -16.27
Methoxychlor -15.54 all ND, UJ, C in all

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Resolution Check Mixture been analyzed at the beginning of every initial calibration sequence, on each GC column and intrument used for analysis?			
5.2	Is the resulution between all adjacent peaks in the Resolution Check Mixture greater than or equal to 60% for both column?			
	Detected target compounds that were not adequately resolved should be qualified with "J". Qualitative identifications may also be questionable if coelution exists. Non-detects with retention times in the region of coelution may not be valid, depending on the extent of the problem. Professional judgement should be used to			
5.3	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning (following the RCM) and the end of every initial calibration sequence, on each GC column and intrument used for analysis? The PEM must also analyzed at the beginning of every other 12-hour analytical period.			
5.4	Is the resulution between all adjacent peaks in the PEM equal to 100% in each calibration (initial and continuing) for both column?			
5.4	Do all standard retention times of each of the single component pesticides and surrogate in all PEM fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			
5.5	Are all PEM %Ds less than or equal to 25%? If No, J(+)/UJ(-).			
5.6	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).			
5.7	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).			
5.8	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).			

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
6.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
1 out	high/low	No action	No action
2 out	2 high same column	K	No action
	2 low same column	L, UL	No action
	mixed same column	J, UJ	No action
	2 high diff columns	J	Not applicable
	2 low diff columns	J, UJ	Not applicable
	mixed diff columns	Professional judgement	Not applicable
3 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	2 high, 1 low	K (2 high)	J (1 low 2nd column)
	2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
	other mixed	J, UJ	Not applicable
4 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	Mixed	J, UJ	Not applicable

If any recovery is >0% and <10% then L(+)/R(-).

If any recovery is 0% then R(+/-).

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: see attached comment only

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			✓

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		✓	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes: 71 5513 aroclor-1254 J,q

11.0 Pesticide Cleanup Checks (Required when any positive result is reported > 38 ug/Kg for soils)		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
12.1.4	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = _____

Test Name: PCB
Method No.: 8082

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

collected	extracted	analyzed
11/15/02	11/19/02	11/2/02
11/14/02	"	" 12/13/02
11/18/02	11/20/02	11/22/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes: EB in SDG R2788 all ND

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? 1016 & 1260 require a minimum of three peaks and five concentrations. The remaining arochlors are required to run one standard during calibration.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			

Notes:

CC 11/2/02 at 1656 Aroclor-1260 16.48%.
11/2/02 " 2029 " 17.21%.

CC 12/13/02 at 0942 ↓ 18%. Pos. → J, c
" " 1341 ↓ 21.4%.

5.0 Surrogate Recovery

		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
5.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.4	If No in Section 5.3, are these sample(s) or method blank(s) reanalyzed?			✓
5.5	If No in Section 5.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
1 out	high/low	No action	No action
2 out	2 high same column	K	No action
	2 low same column	L, UL	No action
	mixed same column	J, UJ	No action
	2 high diff columns	J	Not applicable
	2 low diff columns	J, UJ	Not applicable
	mixed diff columns	Professional judgement	Not applicable
3 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	2 high, 1 low	K (2 high)	J (1 low 2nd column)
	2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
	other mixed	J, UJ	Not applicable
4 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	Mixed	J, UJ	Not applicable

If any recovery is >0% and <10% then L(+)/R(-).

If any recovery is 0% then R(+/-).

Notes: 405B4F TCX 26% 743-135 No action based on one failure.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			✓
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			✓
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			✓
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			✓
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: NO MS/MSD were provided.

7.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)? Generally, no action is taken on the basis of field duplicate results. Only discussed in the DV report.	✓		✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		✓	✓

Notes:

	406B1F	0-5	
1016	250	220 U	OKU
Aroclor-1254	1400	960	(37% RPD)
" -1260	500	260	(63% RPD)

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).		✓	
9.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes: several > 40%. → J, g

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Nunber of samples:_____			
10.1.2	Number of target compounds in each analysis:_____			
10.1.3	Number of results rejected and not reported:_____			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____

DATA VALIDATION WORKSHEET

Explosives

Reviewer: RA
Date: 1/22/03
DV Level: II (III) IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: T2788
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	√		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	√		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		√	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	√		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	√		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	√		
	Action: If the temperature of the cooler was elevated (> 10 ^{O}C), then flag all positive results with a "J" and all non-detects "UJ".			√
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		√	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		√	

Notes:

collected	extracted	analyzed
11/14/02 > 11/15/02	11/20/02	12/3/02 > 11/23/02
11/18/02	11/21/02	12/4/02
11/20/02	11/26/02	12/4/02

Soil

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes: EQ blanks in SDG R27858 are ND

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes: IC 12/3/02 RDX %RSD 51.7% acid ND in assoc. samples → UJ/R
See attached acid ND neg. biased UJ/C unless prev flagged for IC failure

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 2416 - trinitrotoluene MS/MSD 210/155 / 50-150%.
no action

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes: 4-amino-2,6-dinitrotoluene 160 / 50-150 all ND, no flags

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 405B1 F1 D-5
all ND

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			
	% Completeness = _____

DATA VALIDATION WORKSHEET

Nitroglycerin

Reviewer: RA
Date: 1/21/03
DV Level: II III IV

Review Document:

_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: T2788
Test Name: Nitroglycerin
Method No.: 8332-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 ^{O}C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

collected	extracted	analyzed
11/15/02	11/20/02	12/1/02 > 11/25/02
11/14/02	"	11/25/02
11/18/02	11/21/02	11/26/02
11/20/02	11/26/02	12/5/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes: EQ blanks in SDG RZ788 all ND

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	✓		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			✓
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			✓
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?	✓	✓	
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			✓
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes: 1,4-dinitrobenzene TQC 50-150
D-5 420%.
re-analyzed D-5RR 420 %. ND, no flag

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		✓
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		✓

Notes: 405B1F1 D-5 all ND

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			
	% Completeness = _____

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: T2788
Project No.: 15295137.10000

Project Name: Radford SWMU 40/71
Reviewer: RH
Date: 1/24/03

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{o}C \pm 2\ ^{o}C$)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: collected 11/14/15, 18/20/02 — analyzed 11/26/02 (4) 11/27/02 (4 ICP) Hg

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%?		✓				
	<50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K						

Note: all 130%.
As 86.7 LiW, ULiW
Copper 64.6 ULiW, LiW
nickel 119.8
Potassium 117.4
Se 126.4 KiW
Na 76.8 LiW
Tl 76.7 ~~ULiW~~ RiM

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						
4.4	Are there negative blank results with the absolute value > MDL?	✓				✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L						
4.5	Are there reported field blankor trip blank values > ± MDL?						
	Sample Results > MDL						
	< 5X Blank Contamination B						

Note: MB→ba 0.043, copper .205, Mg 6.737, Potassium 12.744, zn .147 mg/kg all 75x, no flag ICB, CCB also low levels ba, Mg, Cu, Be, Cu, K, and neg. as all either pre or 75x. flags see EQ blanks in R2488 also low levels ba, cr, Mn, sodium all 75x blank

5.0 ICP Interference Check Sample (ICS)

Silver 3, 2.7 ug/L pos<5x ⇒ B/x

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)						

Note: _____

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	

Action:	Solid		Aqueous		
	< LCL	> UCL	< 50%	50% - 79%	> 120%
	L(+)/UL(-)	K(+)	L(+)/R(-)	L(+)/UL(-)	K(+)

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.		✓		✓	✓	

Note: ~~Al, Sb, beryllium, Ca, K, Mg, Na~~ outside QC for all except antimony beryllium, potassium, silver, sodium

J/UJ, K unless prev.

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		✓		✓		
	%R > 125% 30%< %R < 74% < 30%						
	Positive K L						
	Non-detect None UL R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.			✓			✓

Note: antimony 49.7/60.1 → 40L#, Cr 141.2 all prev. due to lab dup-
copper -46.4/-62.5 pos prev. flagged for lab dup, ND → R, m
Thallium 5.4/11.4 all ND → R, m

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?						

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓					
10.2	Was a five-fold dilution performed?	✓					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).		✓				

Note: Potassium 10.4%. pos → J, S

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report		✓			✓	

Note: 405B1F – D-S
Arsenic, iron, magnesium, Mn, Hg, nickel, Potassium, Selenium, vanadium >ac – comment – See attached

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓		
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note:

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples: 20						
13.1.2	Number of target compounds in each analysis: 23						
13.1.3	Number of results rejected and not reported: 21						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 98%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence

DATA VALIDATION REPORT - Level III Review

SDG No.: _____U2788_____ **Fraction: _VOCs, SVOCs, Pest., PCBs, PAH, ___ Explosives, Nitroglycerin, Metals _____**

Lab: _CompuChem_____ **Project Name: __Radford SWMU 40/71_____**

Reviewer: _____RA, AJ_____ **Date: _____February 14, 2003_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the VOC analyses, severe loss of internal standards were reported in samples TESTPIT1F and TESTPIT1F2. All associated sample results were flagged "R,i". These samples were re-analyzed with better recoveries and the results from re-analyses should be used for these samples.

For the SVOC analyses, the CCV analyzed on 11/29/02 at 2129 displayed a %D greater than the control limit (i.e., 20%) with a negative bias for atrazine at 58.29%. All associated sample results were non-detects and were flagged "R,c."

For the metals analyses, the MS/MSD recoveries for antimony (25.7%/29.4%) and thallium (-6.7%/8.5%) were less than the lower QC limit (i.e., 75-125%). Non-detects were flagged "R,m" in the associated samples. Positive results were previously flagged due to other anomalies and no further data qualifying action was required.

Minor Anomalies: For the VOC analyses, the method blank analyzed on 12/1/02 contained methylene chloride at 0.6 ug/Kg, toluene at 3 ug/Kg, 1,4-dichlorobenzene at 0.3 ug/Kg and 1,2,4-trichlorobenzene at 0.6 ug/Kg. The method blank analyzed on 12/2/02 contained toluene at 3 ug/Kg, 1,3-dichlorobenzene at 0.3 ug/Kg, 1,4-dichlorobenzene at 0.3 ug/Kg, 1,2-dichlorobenzene at 0.2 ug/Kg, and 1,2,4-trichlorobenzene at 0.8 ug/Kg. Positive results less than 10 times the blank concentration for methylene chloride and less than 5 times the blank concentration for the other compounds were flagged "B,z" in the associated samples. The trip and equipment blanks located in SDG R2788 contained positive results for toluene. These results were previously flagged for method blank contamination and no further data qualifying action was required.

The ICV analyzed on 11/28/02 displayed a %RSD greater than the control limit (i.e., 15%) with a positive bias for toluene at 25.45%. These results were previously flagged for method blank contamination and no further data qualifying action was required.

The CCV analyzed on 12/1/02 at 1629 displayed %Ds greater than the control limit (i.e., 20%) with a negative bias for dichlorodifluoromethane at 28.05% and bromomethane at 39.86%. The CCV analyzed on 12/2/02 at 1217 displayed %Ds greater than the control limit with a negative bias for bromomethane at 23.47%, carbon disulfide at 31.56%, and methyl acetate at 24.76%. Positive results were flagged "J,c" and non-detects were flagged "UJ,c" in the associated samples.

The internal standard areas for chlorobenzene-d_5 and 1,4-dichlorobenzene-d_4 in sample TESTPIT1FRE and 1,4-dichlorobenzene-d4 in sample TESTPIT1F2RE were less than the QC limit. Positive results were flagged "J,i" and non-detects were flagged "UJ,i" for the associated compounds.

For the SVOC analyses, the initial calibration analyzed on 11/25/02 displayed %RSDs greater than the control limit (i.e., 15%) for benzaldehyde at 18.78%, 2,4-dimethylphenol at 17.40%, hexachlorocyclopentadiene at 17.61%, n-nitrosodiphenylamine at 15.84%, and atrazine at 69.75%. Non-detects were flagged "UJ,r" for atrazine unless previously flagged due to other anomalies. Positive results were flagged "J,r" for the other compounds in the associated samples.

The CCV analyzed on 12/3/02 at 0818 displayed %Ds greater than the control limit with a negative bias for hexachlorocyclopentadiene at 22.2%, 2,4-dinitrophenol at 22.9%, 4-chlorophenyl-phenylether at 22.9%, atrazine at 44.8%, dibenzo(a,h)anthracene at 33.9%, and benzo(g,h,i)perylene at 34.7% and with a positive bias for 2,2-oxybis(1-chloropropane) at 25.8%. Positive results were flagged "J,c" and non-detects were flagged "UJ,c" unless previously flagged due to other anomalies.

The internal standard area for perylene-d_{12} was less than the QC limit in sample TESTPIT1F2. Positive results were flagged "J,i" and non-detects were flagged "UJ,i" for the associated compounds. This sample was re-analyzed at a dilution factor of 2 with acceptable recoveries and results from the dilution analyses should be used for the affected compounds.

For the pesticides analyses, the CCVs analyzed on 11/21/02 at 2128, 2148, 2208, 2128 displayed a %D greater than the control limit (i.e., 15%) with a positive bias for 4,4,-DDT at 59.92%, 59.92%, 59.92%, and 70.71%, respectively. The CCV analyzed on 11/21/02 at 2128 displayed a %D greater than the control limit with a positive bias for methoxychlor at 16.21%. All associated sample results were

non-detects and no data qualifying action was required. The CCV analyzed on 12/17/02 at 1604 displayed a %D greater than the control limit with a negative bias for methoxychlor at 15.76%. No data qualifying action was required since the %D was acceptable on the other column and the associated samples were non-detects for methoxychlor.

The recovery for surrogate tetrachloro-m-xylene (1900%) was greater than the upper QC limit (i.e., 135%) in sample TESTPIT1F. No action was required since this sample was analyzed at a dilution factor of 20. The recoveries for surrogate decachlorobiphenyl (40%/33%) and tetrachloro-m-xylene (40%) were less than the lower QC limit in sample TESTPIT1F2. Positive results were flagged "L,s" and non-detects were flagged "UL,s" unless previously flagged due to other anomalies.

The LCS recoveries for 4,4-DDT (130%/140%) were greater than the upper QC limit (i.e., 128%). All associated sample results were non-detects and no data qualifying action was required.

For the PAH analyses, recoveries for surrogate, p-terphenyl were greater than the upper QC limit (i.e., 150%) in samples TESTPIT1F (430%) and TESTPIT1F2 (160%). No action was required since these samples were analyzed at dilution factors greater than 10.

Samples EQB-3RE, EQB-4RE, and EQB-5RE were re-extracted outside the holding time by 5, 6, or 7 days. All associated sample results were non-detects and were flagged "UJ,h." The original sample results should be used for data interpretation purposes. These samples were re-extracted since they were associated with a method blank, extracted on 11/19/02, that displayed positive results for all compounds except phenanthrene. The method blank extracted on 11/20/02 displayed a positive result for chrysene at 0.073 ug/L. Positive results less than 5 times the blank concentration were flagged "B,z" in the associated samples.

The %RPDs were greater than the QC limit for all compounds except anthracene in the field duplicate pair 40SB13C/D-6. No action is required based on field duplicate anomalies and no data flags were applied.

The RPDs between the two columns were greater than the QC limit (i.e., 40%) for several compounds in several samples. These results were flagged "J,g."

For the explosives analyses, the initial calibration analyzed on 12/3/02 displayed a %RSD greater than the QC limit (i.e., 20%) for RDX at 51.7%. All associated sample results were non-detects and were flagged "UJ,r."

The continuing calibration analyzed on 12/3/02 at 1529 displayed %Ds greater than the QC limit (i.e., 15%) with a positive bias for HMX at 27.02% and tetryl at 20.87% and with a negative bias for RDX at 26.87%. The continuing calibration analyzed on 12/4/02 at 0001 displayed %Ds greater than the QC limit (i.e., 15%) with a positive bias for HMX at 28.96% and tetryl at 25.78% and with a negative bias for RDX at 25.32%. The continuing calibrations analyzed on 12/4/02 at 0918 and 1427 displayed %Ds greater than the QC limit with a negative bias for RDX at 26.03% and 32.28%, respectively. The continuing calibration analyzed on 12/4/02 displayed a %D greater than the QC limit with a positive bias for HMX at 26.65% and with a negative bias for RDX at 28.12%. RDX non-detects were previously flagged due to initial calibration failure and no further data qualifying action was required. No positive results were reported for the other compounds and no data qualifying action was required.

For the metal analyses, the initial CRDL percent recoveries for aluminum (299.5%), antimony (77.1%), arsenic (72.8%), cadmium (123.5%), calcium (123.5%), copper (78.2%), iron (169.7%), lead (75.3%), magnesium (117.3%), selenium (137.4%), sodium (79.3%), and thallium (85.8%) were outside the control limit (i.e., 90-110%). Positive results less than 2xCRDL were flagged "L,w" for antimony and "K,w" for cadmium and selenium in the associated samples. Positive results were either greater than 2xCRDL or were previously flagged for the other analytes, therefore, no further data qualifying action was required.

The equipment blanks located in SDG R2788 contained positive results for barium, copper, iron, potassium and sodium. Positive sodium results less than 5 times the blank concentration were flagged "B,x" in the associated samples. Positive results for the other analytes were greater than 5 times the blank concentration and no data qualifying action was required. The method blanks contained positive results for barium, magnesium and zinc. All associated sample results were greater than 5 times the blank concentration and no data qualifying action was required.

The initial and continuing calibration blanks also contained positive results for barium, magnesium, beryllium and calcium and negative results for arsenic. Positive arsenic results less than 5 times the blank concentration were flagged "L,o" in the associated samples. Positive results for the other analytes were greater than 5 times the blank concentration and no data qualifying action was required.

The %RPDs for the laboratory duplicates were greater than the QC limit (i.e., 35%) for copper (47.5%) and zinc (40.2%). Positive results were flagged "J,k" in all samples. The laboratory flagged calcium and magnesium results "*" for

laboratory duplicate failures. These flags were removed by the reviewer since the QC limit used by the laboratory was 20% and not the recommended 35%.

The MS recoveries for arsenic (56.6%), selenium (63.6%), and vanadium (127.1%) outside the QC limit (i.e., 75-125%). Arsenic results were previously flagged due to calibration blank contamination and no further data qualifying action was required. Positive results were flagged "L,m" for selenium and "K,m" for vanadium unless previously flagged due to other anomalies.

The %D for the serial dilution analysis was greater than the QC limit (i.e., 10%) for zinc at 19.4%. Positive results were flagged "J,s" unless previously flagged due to other anomalies.

Correctable Anomalies: None.

Comments: Due to the abundance of target compounds, most of the samples were analyzed at dilutions for all organic analyses and some inorganic analyses. Therefore, the reporting limits were raised.

It should be noted that TIC results were flagged "NJ,t" in the associated samples. Except for data flagged "R", all data as qualified, are usable for their intended purpose based on the data reviewed.

Signed: Ranjan

DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer: RA
Date: 2/6/03
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: U2788
Test Name: 8260B
Method No.: VOC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If the temperature of the cooler was elevated (> 10 ^{O}C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".		✓	
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP? QAPP say - no HCl preservation.	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous unpreserved - 7 days for aromatic compounds All others - 14 days.		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

Collected	analyzed
11/19/02	12/1/02
11/20/02	4

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per GCMS, 20 samples, batch, matrix, and level)?	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone) the amount in the associated blank.	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.	✓		

Notes: MB 12,2,02 toluene 3 1,3 DCB ·3, 1,4-DCB ,3, 1,2-DCB ·2
1,2,4- TCB 0.8 Pos <5x → B, E
MB 12,2,02 MC13 0.6, toluene 3, 1,4-DCB ·3, 1,2,4-TCB 0.6
<10x B, E, <5x B, E for others
trip & pos toluene equip in SDG R2788 Were prev. for MB, no more

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 15% and %D < ± 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < CL? CL >0.10 for chloromethane, 1,1-dichloroethane, & bromoform or >0.30 for chlorobenzene & 1,1,2,2-tetrachloroethane. If yes, L(+)/R(-).		✓	

Notes: IC 11,28,02 toluene 25.45% RSD Pos Prev. due to MB, no more action
see attached
ND's → UJ/C Pos J/C

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	✓		
5.2	Are BFB enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
5.3	Have all samples been analyzed within twelve hours of the BFB tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for BFB been met for each instrument used?	✓		
	If the BFB criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery							Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?						✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?						✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?								✓
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.								
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method accuracy cannot be verified.								✓
		1 or more <10%	1 high/low	2 or 3 high/low	2 or 3 all low	2 or 3 all high			
	Positives	L	J	J	L	K			
	Non-detects	R	UJ	UJ	UL	NONE			
	Note: The B qualifier remains over surrogate flagging.								

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

Not in this SDG.

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).		✓	
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes: Chlorobenzene-d5 and 1,4-dichlorobenzene < QC in TESTPIT1F and R
1,4-DCB < QC in TESTPIT1F2 and also re-
re-analyses had better recoveries. use re-analyses
TESTPIT1FRE, TESTPIT1F2RE, J, UJ, i unless prev.

10.0 Field Duplicate		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes:

405B13C		RL	D-6	RPD
Carbon disulfide	1		1	0%
acetone	48	20	20	OK ✓
Trichloroethene	1		1	0%
Xylene(total)	2		240	OK
methylcyclohexane	0.9		8U	OK ✓

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			✓

Notes: TICs → NJ+

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:_____			
12.1.2	Number of target compounds in each analysis:_____			
12.1.3	Number of results rejected and not reported:_____			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness =_____

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: RA
Date: 2/4/03
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: U2788
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

Collected	extracted	analyzed
11/20,02) 11/19/02	11/22/02	11/30,02
11/20/02	"	12/3/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	✓		

Notes:

EBs in R2798 are ND

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	✓		
4.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15% and %D ≤ 20%		✓	
	For initial Calibration: for %RSD > ± 15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		✓	

Notes: see attached atrazine UJ,r in all Pos J,r for others unless prev.

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	✓		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	✓		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	✓		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / L / K Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).		✓	
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes: TESTPIT1F2 Perylene-d12 <QC use DF=2 results ✓ for the affected compds only.

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 405B13C D-6
n-nitrosodiphenyl amine 400U 78 OK ✓

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).	✓		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			✓

Notes: TIC → NJ / L

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 7			
12.1.2	Number of target compounds in each analysis: 65			
12.1.3	Number of results rejected and not reported: 5			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 98%

X NFG - Region III Modifications
___ CLP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: U2788
Test Name: PEST / PCB
Method No.: 8081A / 8082

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

collected	extracted	analyzed
11/19/02	11/20/02	11/22/02
11/20/02	11/25/02	12/17/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		✓	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		

Notes: see attached

4,4-DDT 59.92%. 4,4-DDT 70.71

~~RPE in 4050B/A~~ no flag

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Resolution Check Mixture been analyzed at the beginning of every initial calibration sequence, on each GC column and intrument used for analysis?			
5.2	Is the resulution between all adjacent peaks in the Resolution Check Mixture greater than or equal to 60% for both column?			
	Detected target compounds that were not adequately resolved should be qualified with "J". Qualitative identifications may also be questionable if coelution exists. Non-detects with retention times in the region of coelution may not be valid, depending on the extent of the problem. Professional judgement should be used to			
5.3	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning (following the RCM) and the end of every initial calibration sequence, on each GC column and intrument used for analysis? The PEM must also analyzed at the beginning of every other 12-hour analytical period.			
5.4	Is the resulution between all adjacent peaks in the PEM equal to 100% in each calibration (initial and continuing) for both column?			
5.4	Do all standard retention times of each of the single component pesticides and surrogate in all PEM fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.			
5.5	Are all PEM %Ds less than or equal to 25%? If No, J(+)/UJ(-).			
5.6	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).			
5.7	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).			
5.8	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).			

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
6.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?		✓	
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)	✓		

	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
	1 out	high/low	No action	No action
	2 out	2 high same column	K	No action
		2 low same column	L, UL	No action
		mixed same column	J, UJ	No action
		2 high diff columns	J	Not applicable
		2 low diff columns	J, UJ	Not applicable
		mixed diff columns	Professional judgement	Not applicable
	3 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		2 high, 1 low	K (2 high)	J (1 low 2nd column)
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
		other mixed	J, UJ	Not applicable
	4 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		Mixed	J, UJ	Not applicable
	If any recovery is >0% and <10% then L(+)/R(-).			
	If any recovery is 0% then R(+/-).			

Notes: TESTPIT1F TCX diluted DF=20 OKV

TESTPIT1F2 DCB (40/33), TCX (40) <QC LULs unless prev. flagged

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?			
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?	✓		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes: 4,4-DDT 130, 140 >QC all ND, no Flag

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).	✓		
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes:

11.0 Pesticide Cleanup Checks (Required when any positive result is reported > 38 ug/Kg for soils)		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples: 3			
12.1.2	Number of target compounds in each analysis: 28			
12.1.3	Number of results rejected and not reported: 0			
12.1.4	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100

Laboratory: Compuchem
SDG No.: U27888
Test Name: PCB
Method No.: 8082

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
1.5	Do any soil samples contain more than 50% water?		✓	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes: collect 11/19/02 extract 11/20/02 analyzed 11/27/02 11/22/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	✓		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	✓		

Notes: EBs in R2766 are ND

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? 1016 & 1260 require a minimum of three peaks and five concentrations. The remaining arochlors are required to run one standard during calibration.	✓		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	✓		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%	✓		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			✓
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			

Notes:

5.0 Surrogate Recovery					Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				✓		
5.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				✓		
5.3	Are surrogate recoveries within acceptance criteria for all samples and method blanks?				✓		
5.4	If No in Section 5.3, are these sample(s) or method blank(s) reanalyzed?						✓
5.5	If No in Section 5.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						✓
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance			
	1 out	high/low	No action	No action			
	2 out	2 high same column	K	No action			
		2 low same column	L, UL	No action			
		mixed same column	J, UJ	No action			
		2 high diff columns	J	Not applicable			
		2 low diff columns	J, UJ	Not applicable			
		mixed diff columns	Professional judgement	Not applicable			
	3 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		2 high, 1 low	K (2 high)	J (1 low 2nd column)			
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)			
		other mixed	J, UJ	Not applicable			
	4 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		Mixed	J, UJ	Not applicable			
	If any recovery is >0% and <10% then L(+)/R(-).						
	If any recovery is 0% then R(+/-).						

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)? Generally, no action is taken on the basis of field duplicate results. Only discussed in the DV report.	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 405B13C D-6
all ND all ND

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).	✓		
9.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Nunber of samples:_____			
10.1.2	Number of target compounds in each analysis:_____			
10.1.3	Number of results rejected and not reported:_____			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			

Notes:

DATA VALIDATION WORKSHEET

Polyaromatic Hydrocarbons

Reviewer: RA
Date: 2/5/03
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Compuchem
SDG No.: U2788
Test Name: PAH
Method No.: 8310-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	✓		
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			✓
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		✓	

Notes:

collected	extracted	analyzed
11/19/02	11/20/02	12/15/02, 12/12/02, 12/8/02
4	11/25/02	12/12/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	✓		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	✓		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	✓		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	✓		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			✓
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			✓
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	✓		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?		✓	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?		✓	
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.	✓		
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.

TESTPIT1F2 DF=20 " " 1607 "

DF 710 no flags

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			✓
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		✓	

Notes: 40SB13C D-6 See attached comment only.

acenaphthene	380
Pyrene	380
Phenanthrene	390
anthracene	130

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	✓		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes: several 740Y. → J/g
Note ⇒ acenaphthylene changed to ND in 405B13B since it was not confirmed.

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	✓		
10.1.1	Number of samples:_____			
10.1.3	Number of results rejected and not reported:_____			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = _____			
	% Completeness = _____

DATA VALIDATION WORKSHEET

~~Nitroglycerin~~ Explosives

Reviewer: AJ
Date: 01/27/03
DV Level: II III IV
Review Document:
_X_ Region III Modified for National Functional Guidelines
___ NFG for organic Data review (February 1994)
___ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: U2788
Test Name: ~~Nitroglycerin~~ EXP.
Method No.: ~~8332-HPLC~~ 8330 HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes: COC ID'S: 1097, 1098

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: Cooler temps: 2.0°C, 2.7°C

sampled: 11/19/02, 11/20/02
extracted: 11/21/02, 11/26/02
analysis: 12/03/02, 12/04/02

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.			X

Notes: NO equipment/field blanks submitted.

4.0 Initial and Continuing Calibration

		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		X	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes: ICAL: ROX %RSD 51.7% - All ND's - SO will flag ROX UJ, r
CCAL: 020HFULL4GD: HMX %D 27.02%, 2,4,6-TNT %D 20.87 - No action taken, all ND.
ROX %D -26.87% - UJ, C

5.0 Surrogate Recovery

		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?		X	
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?		X	
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: NO MS/MSD set submitted in this batch.

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits? 50-150% - in house used		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommendedabove should be noted during data validation and discussed in the DV report.	X		

Notes: Field Dup D-6 of 405B13C - All ND's.

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness

		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 6			
10.1.3	Number of results rejected and not reported: ∅			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			
	% Completeness = 100%

DATA VALIDATION WORKSHEET

Nitroglycerin

Reviewer: AJ
Date: 01/29/03
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Project Name: Radford SWMU 54
Project Number: 15291524.00000
Laboratory: Compuchem
SDG No.: U2788
Test Name: Nitroglycerin
Method No.: 8332-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	X		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes: Cooler temps: 2.0°C, 2.7°C

sampled 11/19/02, 11/20/02
extracted 11/21/02, 11/26/02
analysis 11/26/02, 12/02/02, 12/08/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.		X	

Notes: ~~No field/equipment blanks submitted in this package.~~ in SDG R27888 all ND EAV

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			X
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			X
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? 50-150%	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?		X	
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?		X	
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: NO MS/MSD set in this batch

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?			X
	Action: If Yes, J(+) only.			

Notes: NO LCSD

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes: D-6 is a dup of 405B13C - both non-detect

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.	X		
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes: Test Pit IF had a positive hit - confirmed on column "Pinnacle Cyano" on 12

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 6			
10.1.3	Number of results rejected and not reported: Ø			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100			
	% Completeness = 100

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: U2788
Project No.: 15295137.10000

Project Name: Radford SWMU 40/71
Reviewer: RA
Date: 2/10/03

1.0 Chain of Custody/Sample Condition/Raw Data

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{o}C \pm 2\ ^{o}C$)	✓			✓		
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓		

Note:

2.0 Holding Time

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, other metals: 6 months) Action: L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓	

Note: collected 11/19/02 " analyzed 12/4/02 Hg 12/5/02 ICP

3.0 Instrument Calibration

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve with a low point at RL? (ICP: blank + one standard; CVAA: blank + five standards). If not, qualify with "R".				✓		
3.2	Are the correlation coefficients > 0.995? (for CVAA) Action: J(+)/UJ(-).				✓		
3.3	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓		
3.4	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓		
3.5	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR Hg ICV 90%-110% and CCV 80-120%; FOR ICP ICV &CCV 90%-110%.	✓			✓		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury ICV < 65% 65% - 90% > 110% Mercury CCV < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%						
3.6	For ICP, did the CRDL standard recover between 90-110%? <50% 50%-89% >110% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K		✓				

Note:
aluminum 299.5% det 2xCRDL
antimony 77.1 ~~Ht~~ L,W R,M
arsenic 72.8 det 2xCRDL
cadmium 113.8 K,W
calcium 123.5
copper 78.2
iron 69.7
lead 75.3
mg 117.3
se 137.4 K,W
Sodium 79.3 ~~L,W~~ B,C
Thallium 85.8 ~~Ht~~ R,M

4.0 Blanks

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓		
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						
4.4	Are there negative blank results with the absolute value > MDL?	✓				✓	
	Sample Results Non-detects > MDL						
	< 5X absolute Blank Contamination UL L						
4.5	Are there reported field blankor trip blank values > ± MDL?	✓				✓	
	Sample Results > MDL						
	< 5X Blank Contamination B						

Note: EQB in RZ788 Pos → Ba, Cu, Fe, Ca, Na Pos Sodium < 5x → B, Zx all others > 5x
MB → Pos Ba, Mg, zinc all 75x in samples no flag
ICB, CCB neg As → Lio in all samples
Pos. ba, Mg, beryllium, calcium all 75x, no flags

5.0 ICP Interference Check Sample (ICS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning and end of each ICP run (or at least twice every 8 hours)?	✓					
5.2	Are the ICS AB recoveries within 80% - 120%?	✓					
5.3	Are the results for unspiked analytes (in ICS A) < ± IDL?	✓					
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			
	If not...						
	Action: Not Spiked Analytes < -IDL L(+)/UL(-) > IDL K(+) Spiked analytes (ICS AB analytes) < 50% L(+)/R(-) 50% - 79% L(+)/UL(-) >120% K(+)						

Note:

6.0 Laboratory Control Sample (LCS)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)						

Note:

7.0 Laboratory Duplicates

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
7.3	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ( ) for the analyte with results that fall outside criteria.		✓		✓		

Note: Copper 47.5%. Zinc 40.2%. all pos → J, K

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		✓		✓		
	%R > 125% / 30%< %R < 74% / < 30%						
	Positive: K / L / L						
	Non-detect: None / UL / R						
8.4	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required	✓					✓

Note: antimony 25.7 / 29.4 R,M / Thallium 6.7 / 8.5 (R,M) in all
arsenic 56.6 prev. LTO
Se 63.6 L,M unless prev. V 127.1 K,M in all

9.0 Instrument Detection Limits (IDL)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?						

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓					
10.2	Was a five-fold dilution performed?	✓					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 50 X the IDL in the original sample? If no, J(+).		✓				

Note: zinc 19.4%. all prev flagged for lab dup.

11.0 Field Duplicate Samples

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓			✓		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.						
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report		✓			✓	

Note: See attached
RPD > QC for Al, Ca, Cobalt, Mg, Mn, Nickel, Potassium

12.0 Result Verification

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓		
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓		

Note:

13.0 Completeness Calculation

		ICP			CVAA-Hg		
		Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓		
13.1.1	Number of samples: 6						
13.1.2	Number of target compounds in each analysis: 23						
13.1.3	Number of results rejected and not reported: 11						
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 92%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 58885_(Revision 1) **Fraction:** Dioxin/Furan

Lab: Triangle **Project Name:** Radford SWMU 40/71_

Reviewer: Andrea_Sansom **Date:** April 17, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The laboratory flag "X" indicates that the associated PCDF peak/s has the same retention time as the associated diphenyl ether and that the diphenyl ether contribution to the total PCDF value is greater than ten percent. All PCDF results that were influenced by this co-elution have been reported as estimate maximum possible concentrations and were flagged "J,w".

Correctable Anomalies: The laboratory misinterpreted the field sample identifications as "55" or "5B" instead of "SS" or "SB"; the data validator manually correctly the identifications on the result forms.

Comments: The positive detection for sample 71SB11 for 2,3,7,8-TCDF on the DB-5 column was re-analyzed on a DB-225 column that is more suitable for determination of this congener. The DB-225 result for this congener should be used for data interpretation. This concentration has been appropriately used to determine the toxicity equivalent factor.

The laboratory flag "J" represents a reported concentration that was less than the linear range of the initial calibration and an estimate sample result.

DATA VALIDATION WORKSHEET

Dioxins and Furans Analysis

Reviewer: AS
Date: 1/24/2003
DV Level: II III IV
Review Document:
__X__ SW-846 __X__ Project QAPP/SAP __X__ NFG EPA 540-R-02-003 (August 2002)

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Triangle
SDG No.: 58885
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		✓
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes: 40/SSY 340-77-1
Labas "SS" 40/SSS 340-77-2
changed to "SS" 71 SB11 340-77-3

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes: 2°C Stored at 4°C extracted on 11/14/02 and analyzed on 11/19/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? Action: If yes, an action level of 5 times the blank value is used to qualify sample results "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			✓

Notes:

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥2.5:1 ; CCC ≥10:1) If no, apply "R" to estimated detection limits.	✓		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	✓		
4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51
7	M+2/M+4	1.04	0.88- 1.2
8	M+2	0.89	0.76- 1.02

Notes: ICAL SF56072 % RSDs <12 ICAL PF56152
DB5 6 points ✓ met isotopic ratios DB-225 6 points ✓ met ratios

6/7/02 6/15/02

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If not, apply	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824 compared to m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed defining descriptor switching times of scan ranges? If not, flag total homologue results "J+/UJ-".	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≥ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			✓
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits of ±20% for targets and ±30% for reference compounds?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes: %Rec RPD
LCS/D 90-110 and ≤10% for soil

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ.	✓		
8.2	Are standard recoveries for all samples within ~~40-135%~~ for all samples? If no, apply J/UJ.	✓		

Notes: BLK ✓ 40554 ✓ 40555 ✓ 71 SB11 ✓
✓ ✓ ✓ ✓

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			✓
9.2	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range, if not apply J.	✓		
10.2	Is the signal to noise ion ratios ≥ 2.5:1 for positive results? If not, flag "J".			
10.3	Is the ion abundance ratio within 10% of the ratio in the most current CCC for positive results? If no, this result should be reported as an EMPC.			
10.4	Are the two identification peak apexs within 2 seconds for positive identifications? If not, flag "R".		✓	
10.5	Was a second column confirmation used for positive 2,3,7,8-TCDF? If no, apply "R" to the 2,3,7,8-TCDF results. 71 SB 11 2.1 / 0.69	✓		
10.6	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?			

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is the percent completeness within the control limits? (Control limit 90%)			
11.1.1	Number of samples:			
11.1.2	Number of target compounds in each analysis:			
11.1.3	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness =

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 58950_(Revision 1) **Fraction:** Dioxin/Furan

Lab: Triangle **Project Name:** Radford SWMU 40/71_

Reviewer: Andrea_Sansom **Date:** April 17, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The laboratory control spike pair displayed recoveries greater than the upper control limit (i.e., 130%) for 2,3,4,7,8-PeCDF at 134% and 136%. Both associated field sample results were positive and were flagged "J,l".

The method blank displayed an estimate positive detection for 1,2,3,7,8-PeCDF at 0.18 pg/g. This method blank also displayed estimated maximum possible contamination for 2,3,7,8-TCDD at 0.12 pg/g, OCDD at 0.55 pg/g, and OCDF at 0.54 pg/g. Associated positive field sample results less than five times the blank concentration were flagged "B,z".

The laboratory flag "X" indicates that the associated PCDF peak/s has the same retention time as the associated diphenyl ether and that the diphenyl ether contribution to the total PCDF value is greater than ten percent. All PCDF results that were influenced by this co-elution have been reported as estimate maximum possible concentrations and were flagged "J,w".

Correctable Anomalies: None.

Comments: Positive detections for 2,3,7,8-TCDF on the DB-5 column were re-analyzed on a DB-225 column that is more suitable for determination of this congener. The DB-225 results for this congener should be used for data interpretation. This concentration has been appropriately used to determine the toxicity equivalent factor.

The laboratory flag "J" represents a reported concentration that was less than the linear range of the initial calibration and an estimate sample result.

DATA VALIDATION WORKSHEET

Dioxins and Furans Analysis

Reviewer: AS
Date: 1/24/2003
DV Level: II III IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002)

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Triangle
SDG No.: 58950
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes: 71SS13 341-43-1 85.3% solid
71SB11B 341-43-2 97.6% solid

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes: Cooler at 4°C, stored at 4°C extracted 11/20/02
collected 11/18/02 analyzed 11/23/02

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? Action: If yes, an action level of 5 times the blank value is used to qualify sample results "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			✓

Notes: 2378 TCDD 0.12 EMPC J
OCDD 0.55 EMPC J
12378 PeCDF 0.18 J
OCDF 0.54 EMPC J

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥2.5:1 ; CCC ≥10:1) If no, apply "R" to estimated detection limits.	✓		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	✓		
4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51
7	M+2/M+4	1.04	0.88- 1.2
8	M+2	0.89	0.76- 1.02

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed defining descriptor switching times of scan ranges? If not, flag total homologue results "J+/UJ-".	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≥ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			✓
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits of ±20% for targets and ±30% for reference compounds?	✓		
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes: 23478- PeCDF 134/136%
2378 TCDD 120/122% OKAY

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			✓
9.2	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Were all sample results within the calibrated range, if not apply J. Lab flagged J, not standard for Region III			✓
10.2	Is the signal to noise ion ratios ≥ 2.5:1 for positive results? If not, flag "J".	✓		
10.3	Is the ion abundance ratio within 10% of the ratio in the most current CCC for positive results? If no, this result should be reported as an EMPC.	✓		
10.4	Are the two identification peak apexs within 2 seconds for positive identifications? If not, flag "R".	✓		
10.5	Was a second column confirmation used for positive 2,3,7,8-TCDF? If no, apply "R" to the 2,3,7,8-TCDF results.	✓		
10.6	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
11.1.1	Number of samples:			
11.1.2	Number of target compounds in each analysis:			
11.1.3	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 58987_(Revision 1) **Fraction:** Dioxin/Furan

Lab: Triangle **Project Name:** Radford SWMU 40/71_

Reviewer: Andrea_Sansom **Date:** April 17, 2003

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The method blank displayed estimate positive detections for 1,2,3,4,7,8-HxCDF at 0.15 pg/g and OCDF at 0.49 pg/g. This method blank also displayed estimated maximum possible contamination for OCDD at 0.34 pg/g, and 1,2,3,7,8-PeCDF at 0.10 pg/g. The associated field sample results were either greater than five times the blank concentration or non-detect, thus, no data qualifying action was required.

The laboratory flag "X" indicates that the associated PCDF peak/s has the same retention time as the associated diphenyl ether and that the diphenyl ether contribution to the total PCDF value is greater than ten percent. All PCDF results that were influenced by this co-elution have been reported as estimate maximum possible concentrations and were flagged "J,w".

The laboratory flag "E" denotes a reported concentration that exceeds the upper linear range of the initial calibration. The data validator applied "J,q" to these results.

Correctable Anomalies: None.

Comments: The positive detection for 2,3,7,8-TCDF on the DB-5 column was re-analyzed on a DB-225 column that is more suitable for determination of this congener. The DB-225 result for this congener should be used for data interpretation. This concentration has been appropriately used to determine the toxicity equivalent factor.

The laboratory flag "J" represents a reported concentration that was less than the linear range of the initial calibration and an estimate sample result.

DATA VALIDATION WORKSHEET

Dioxins and Furans Analysis

Reviewer: AS
Date: 3/1/2003
DV Level: II III IV
Review Document:
X SW-846 X Project QAPP/SAP X NFG EPA 540-R-02-003 (August 2002)

Project Name: Radford SWMU 40/71
Project Number: 15295137.10000
Laboratory: Triangle
SDG No.: 58987
Method No.: 8290

1.0 General: Chain-of-Custody

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes: Test Pit 2F 341-80-1 or 58987-002 24.9/75.1% Moisture Solid

2.0 Preservation/ Holding Times

		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	✓		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		✓	

Notes: Cooler 2°C, samples stored at 4.0°C
Soil sampled 11/21/02 10AM, unpresserved
extracted 11/25/02
analyzed 11/27/02

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? Action: If yes, an action level of 5 times the blank value is used to qualify sample results "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.			✓

Notes:

1,2,3,4,6,7,8,9-OCDD	0.34	EMPC	(J)	Total TCDD	0.15	EMPC	Sample <5x these [J].
1,2,3,7,8-PeCDF	0.10	EMPC	J	total HxCDD	0.62	EMPC	
1,2,3,4,7,8-HxCDF	0.15		J	total PeCDF	0.10	EMPC	
1,2,3,4,6,7,8,9-OCDF	0.49		J	total HxCDF	0.15		

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-".	✓		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1) If no, apply "R" to estimated detection limits.	✓		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51
7	M+2/M+4	1.04	0.88- 1.2
8	M+2	0.89	0.76- 1.02

4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	✓			

Notes: UF57092 7/9/02 PeCDD 2837 3055 PF56152
✓ 6 pts PeCDF 2720 3104 ✓ 6pts 10,000 resolution
✓ < 20% RSD targets TCDD 2326 2706 ✓ < 20, < 30
✓ < 30% Stand RTW standard ✓ TCDF 2203 2707 ✓ ratio 25% valley 1.09
✓ ratios 18% valley 2,3,78/1238 TCDD RF of 2378 TCDF 1.12.
1 pg STD 26000/1700 S/N = 15.3 ✓ 85600/61 ✓

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Was a window defining mix analyzed defining descriptor switching times of scan ranges? If not, flag total homologue results "J+/UJ-".	✓		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≤ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	✓		

Notes:
DB225 column isomer specificity check not run - J 2378 TCDF from this column
need to ask for it - actually run #'s P024381 & P024386
30%

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch? Lab Limits	✓		
7.3	Are there any percent recoveries outside the QC limits ~~of ±20% for targets and ±30% for reference compounds~~?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

1,2,3,4,6,7,8 - H_pCDF 125% 123% OKAY

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards

		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	✓		
8.2	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	✓		

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
9.2	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range, if not apply J. Lab has flagged those J.			✓
10.2	Is the signal to noise ion ratios ≥ 2.5:1 for positive results? If not, flag "J".	✓		
10.3	Is the ion abundance ratio within 10% of the ratio in the most current CCC for positive results? If no, this result should be reported as an EMPC.	✓		
10.4	Are the two identification peak apexs within 2 seconds for positive identifications? If not, flag "R".	✓		
10.5	Was a second column confirmation used for positive 2,3,7,8-TCDF? If no, apply "R" to the 2,3,7,8-TCDF results.	✓		
10.6	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		

Notes: Blk · all S/N <2.5:1 were not included.
of 17 targets Ratio out called EMPC.
no 2378 TCDF

11.0 Data Completeness

		Yes	No	NA
11.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
11.1.1	Number of samples:_____			
11.1.2	Number of target compounds in each analysis:			
11.1.3	Number of results rejected and not reported:_____			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = _____ 100%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by Dames & Moore is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-28 **Fraction:** PCBs, DRO, GRO, & Metals

Lab: TriMatrix **Project Name:** Radford SWMU 40/71

Reviewer: RA **Date:** May 31, 2006

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: For the PCB analyses, surrogates were diluted out for sample 71SB14B. No data qualifying action was necessary since this sample was analyzed at dilution factor 20.

The field duplicate pair 71SB15A/Dup-3 displayed results outside the control limits for PCB-1254. These results were flagged "J,f" in these samples.

The relative percent differences between the two analytical column concentrations were greater than the control limit (i.e., 40%) for several compounds in several samples. These compounds were flagged "J,g" in the associated field samples.

Sample 71SB14B displayed a concentration for PCB-1254 that exceeded the calibration range of the instrument and was flagged "E" by the laboratory. This result was flagged "J,q." This sample was re-analyzed at a dilution factor of 20 with an acceptable result that should be used for data interpretation.

For the metals analyses by 6020, the method blanks displayed positive detections for antimony, arsenic, copper, nickel, and vanadium. The associated field sample results less than five times the blank concentrations were flagged "B,p". One continuing calibration blank also displayed a positive detection for arsenic. The associated field sample results were greater than five times the associated calibration blank concentration and no data qualifying action was required.

The matrix spike pair performed on sample 71SS12B displayed recoveries less than the lower control limit (i.e., 75%) for arsenic (72%/72%), copper (74%), and selenium (73%/71%). All associated field sample results were positive and were flagged "L,m", unless previously flagged for method blank contamination. The post digestion spike performed on this parent sample displayed a recovery less than the lower control limit (i.e., 75%) for selenium at 74%. No data qualifying action is taken based solely on a post digestion spike anomaly.

The serial dilution performed on sample 71SS12B displayed percent differences greater than the control limit (i.e., 10%) for copper at 19.6%, nickel at 17.0%, and vanadium at

12.90%. All associated field sample results were positive and were flagged "J,s", unless previously flagged for matrix spike failure.

The field duplicate pair (71SB15A and DUP-3) displayed relative percent differences greater than the control limit (i.e., 50%) for arsenic at 198.2%, copper at 94.5%, lead at 117.9%, and vanadium at 189.5%. These results were flagged "J,f" in these two samples, unless previously flagged for other anomalies.

For the metals analyses by 6010, the method blanks displayed positive detections for barium, calcium, iron, potassium, and zinc. The associated field sample results less than five times the blank concentrations were flagged "B,p". The calibration blanks displayed low level detections for several analytes. The associated field sample results were greater than five times the associated calibration blank concentrations and no data qualifying action was required.

The associated equipment blank EQBK71 displayed positive detections for iron at 41 ug/L and potassium at 44 ug/L. The associated field sample results were positive and greater than five times the equipment blank concentration. No data qualifying action was required.

The matrix spike pair performed on sample 71SS12B displayed recoveries less than the lower control limit (i.e., 75%) for calcium (18%/18%), chromium (22%/38%), cobalt (47%), and zinc (62%). All associated field sample results were positive and were flagged "L,m", unless previously flagged for method blank contamination. The matrix spike pair also displayed recoveries less than the lower control limit for sodium (74%/74%). Positive associated field sample results were flagged "L,m" and non-detects were flagged "UL,m". The post digestion spike performed on this parent sample displayed a recovery less than the lower control limit (i.e., 75%) for manganese at 65%. No data qualifying action is taken based solely on a post digestion spike anomaly.

The serial dilution performed on sample 71SS12B displayed a percent difference greater than the control limit (i.e., 10%) for zinc at 14.3%. All associated field sample results were previously flagged for a matrix spike anomaly and no further data qualifying action was required.

The field duplicate pair (71SB15A and DUP-3) displayed relative percent differences greater than the control limit (i.e., 50%) for calcium at 50.7% and potassium at 53%. These results were flagged "J,f" in these two samples, unless previously flagged for other anomalies.

The method blank displayed a positive detection for mercury at 0.0068 mg/kg. Positive results less than five times the blank concentration were flagged "B,p" in the associated field samples. The associated equipment blank EQBK71 displayed a positive detection for mercury at 0.071 ug/L. The associated positive field sample results less than five times the equipment blank concentration were flagged "B,x".

For the GRO analyses, sample EQBK71 was extracted five days after the holding time had expired. The associated field sample result was non-detect and was flagged "UL,h."

The continuing calibration analyzed on 05/04/06 at 1036 displayed a percent difference greater than the control limit (i.e., 15%) with a negative bias for GRO at 15.8%. The associated field sample results were non-detect and were flagged "UJ,c".

Correctable Anomalies: None.

Comments: It should be noted that the sample with field sample ID Dup-4 was identified as Dup-1 on the chain of custody forms. The laboratory reported the results as Dup-1 as recorded on the chain of custody forms.

No anomalies were encountered if a given fraction was not mentioned. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: Rayan

DATA VALIDATION WORKSHEET

Pesticides/PCBs

PCBs only

Reviewer: RA
Date: 5/23/06
DV Level: II (III) IV
Review Document:
X SW-846 - 8081/8082
X NFG - Region III Modifications
X project QAPP

Project Name: Rad Ford
Project Number:
Laboratory: TN Matrix
SDG No.: 36490-256
Test Name: ~~PEST~~/PCB
Method No.: ~~8081A~~/8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, or special circumstances affecting the quality of the data?	✓		
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 °C, then flag L(+)/UL(-).			
1.5	Do any soil samples contain more than 50% water? If yes, no dry weight correction is made and make notes in the DV Report.		✓	

Notes: COC DUP-1 Field sample ID DUP-4 Incorrect COC ✓

2.0 Holding Times		Yes	No	NA
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency (one per 20 samples or batch and matrix)?	✓		
3.2	Do any blanks have positive results? If yes, positive sample results should be reported and qualified "B", if the [sample≤5X[blank].		✓	
3.3	Do any field equipment blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve for 1016, 1260, toxaphene, and technical chlordane; and at least one point for the other arochlors reported? If no, flag "R".	Y		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	Y		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	Y		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within the control limits?	Y		
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning, every 12 hours, and at the end of every sequence.	Y		
5.2	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non detect DDT results, DDD/DDE - R(+).	Y		
5.3	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	Y		
5.4	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).	Y		

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? Advisory limit: 60-150%.	✓		
6.3	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?		✓	
6.4	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)	✓		

# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
1 out	high/low	No action	No action
2 out	2 high same column	K	No action
	2 low same column	L, UL	No action
	mixed same column	J, UJ	No action
	2 high diff columns	J	Not applicable
	2 low diff columns	J, UJ	Not applicable
	mixed diff columns	Professional judgement	Not applicable
3 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	2 high, 1 low	K (2 high)	J (1 low 2nd column)
	2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
	other mixed	J, UJ	Not applicable
4 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	Mixed	J, UJ	Not applicable

If any recovery is >0% and <10% then L(+)/R(-).
If any recovery is 0% then R(+/-).

Notes:

Sur. diluted out for 715B14B Df=20 No action

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.2	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		✓	

Notes: 715B15A & DUP-3 RL

PCB-1254	.90	0.21	.16	Δ>2 XRL → J,F
PCB-1248	ND	.037J	OK✓	

40559 & DUP-1 RL

PCB-1254	.026J	.054	.049 OK✓
PCB-1260	.022J	ND	OK✓

40559 & DUP-5 RL

PCB-1254	.047J	.26	.051	OK✓

.255

10.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns <40%? If No, J(+).		✓	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes: Several >40% → J,q

PCB-1254 "E" in 715B14B → J,q use DF=20

11.0 Data Completeness

		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit 95%$_{aq}$ and 90%$_{so}$)	✓		
11.1.1	Number of samples: Pest PCB			
11.1.2	Number of target compounds in each analysis: PEST PCB			
11.1.3	Number of results rejected and not reported: Pest PCB			
11.1.4	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = Pest PCB 100%

DATA VALIDATION WORKSHEET

Gasoline Range Organics

Reviewer: RA
Date: 3/24/06
DV Level: II (III) IV
Review Document:
Ψ NFG/SW-846 Ψ Project QAPP/SAP
___ NJDEP/SW-846 Ψ Region III Modified
___ NFG/CLP ___ other

Project Name: Radford
Project Number:
Laboratory: Trimatrix
SDG No.: 36440-28
Test Name: GRO
Method No.: 8015

1.0 General: Chain-of-Custody/Data Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Does sample preservation, collection and storage meet method requirement?	✓		
1.5	Are the sample preparation benchsheets present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓		
1.6	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, L(+)/UL(-).	✓		
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes: EQBK 71 extracted 5days past ht ⇒ ND, UL+k

3.0 Instrument Calibration		Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
3.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
2.3	Was continuing calibration verification (CCV) analyzed every 10 field samples or every 2 hours, whichever is more frequent? If no, J(+)/UJ(-) all samples analzed after the last passing CCV.	✓		
2.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits?		✓	
2.5	Were any transcription/calculation errors noted in the calibration verification data? Action: For any transcription or calculation errors, contact the laboratory for explanation/resubmittal.			✓

Notes: CCV 05/04/06 at 1036
%D 7.15% at 15.8%.
and results ND → UJ, C

4.0 Blanks (Laboratory and Field)		Yes	No	NA
4.1	Were preparation blank (PB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
4.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, action level of 5 times (3 times and 10 times rule for NJDEP) the blank value are determined for positive and negative blank values. "B" Flags		✓	
4.3	Were there any transcription/calculation errors in blank data?			✓
4.4	Do any field equipment blanks/trip blanks have positive results?			
4.5	Are there field equipment blank/trip blanks associated with every sample?	✓		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 7.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 7.3, is any sample dilution factor greater than 10? (Surrogate recoveries may be diluted out.)			✓

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Was a field blank used for MS/MSD analyses?		✓	
6.4	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the laboratory QC limits? If Yes, for %R > UCL, K(+) only; for %R < LCL, L(+)/UL(-), for %R < 30%, L(+)/R(-).		✓	
6.5	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the laboratory QC limits?		✓	
6.6	Were there any transcription /calculation errors?			✓

Notes:

7.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the laboratory QC limits? If Yes, J(+)/UJ(-).		✓	
7.4	Are there any RPD for LCS/LCSD recoveries outside the laboratory QC limits? If Yes, J(+).		✓	
7.5	Were there any transcription /calculation errors?			✓

Notes:

8.0 Laboratory Duplicate		Yes	No	NA
8.1	Were laboratory duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
8.2	Was a field blank used for duplicate analysis? If yes, use professional judgement to determine the effect on the data and note in reviewer narrative.		✓	
8.3	Are all analyte duplicate results within control limits? If No, J(+).	✓		
8.4	Were there any transcription /calculation errors?		✓	

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
9.2	Are all analyte duplicate results within control limits? If no, contact your PM for guidance.	✓		
9.3	Were there any transcription /calculation errors noted in the duplicate data?		✓	

Notes:

All NDs ✓

10.0 Sample Results/Detection Limit Verification		Yes	No	NA
10.1	Are all sample results within the calibrated range?	✓		
10.2	If samples are not within the calibrated range, were they diluted and reanalyzed or was a high-level check standard analyzed? If not, contact laboratory. Request reanalysis if holding times have not been exceeded. If exceeded, qualify specific sample(s) J.			✓
10.3	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		
10.4	Were there any transcription /calculation errors?		✓	

Notes:

11.0 Data Completeness		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit 95%)	✓		
11.1.1	Number of samples:			
11.1.2	Number of target compounds in each analysis:			
11.1.3	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100 %.

SDG No.: 36440-28
Test Name: DRO
Method No.: 8015

No anomalies

1.0 General: Chain-of-Custody/Data Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Does sample preservation, collection and storage meet method requirement?	✓		
1.5	Are the sample preparation benchsheets present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓		
1.6	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method?	✓		
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, L(+)/UL(-).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

3.0 Instrument Calibration		Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
3.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	✓		
2.3	Was continuing calibration verification (CCV) analyzed every 10 field samples or every 2 hours, whichever is more frequent? If no, J(+)/UJ(-) all samples analzed after the last passing CCV.	✓		
2.4	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits?	✓		
2.5	Were any transcription/calculation errors noted in the calibration verification data? Action: For any transcription or calculation errors, contact the laboratory for explanation/resubmittal.			✓

Notes:

4.0 Blanks (Laboratory and Field)		Yes	No	NA
4.1	Were preparation blank (PB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓		
4.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, action level of 5 times (3 times and 10 times rule for NJDEP) the blank value are determined for positive and negative blank values. "B" Flags		✓	
4.3	Were there any transcription/calculation errors in blank data?			✓
4.4	Do any field equipment blanks/trip blanks have positive results?		✓	
4.5	Are there field equipment blank/trip blanks associated with every sample?	✓		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	✓		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
5.3	If No in Section 7.2, are these sample(s) or method blank(s) reanalyzed?			✓
5.4	If No in Section 7.3, is any sample dilution factor greater than 10? (Surrogate recoveries may be diluted out.)			✓

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Was a field blank used for MS/MSD analyses?		✓	
6.4	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the laboratory QC limits? If Yes, for %R > UCL, K(+) only; for %R < LCL, L(+)/UL(-), for %R < 30%, L(+)/R(-).		✓	
6.5	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the laboratory QC limits?		✓	
6.6	Were there any transcription /calculation errors?			✓

Notes:

7.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	✓		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for LCS/LCSD recoveries outside the laboratory QC limits? If Yes, J(+)/UJ(-).		✓	
7.4	Are there any RPD for LCS/LCSD recoveries outside the laboratory QC limits? If Yes, J(+).		✓	✓
7.5	Were there any transcription /calculation errors?			✓

Notes:

8.0 Laboratory Duplicate		Yes	No	NA
8.1	Were laboratory duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
8.2	Was a field blank used for duplicate analysis? If yes, use professional judgement to determine the effect on the data and note in reviewer narrative.		✓	
8.3	Are all analyte duplicate results within control limits? If No, J(+).	✓		✓
8.4	Were there any transcription /calculation errors?			✓

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	✓		
9.2	Are all analyte duplicate results within control limits? If no, contact your PM for guidance.	✓		✓
9.3	Were there any transcription /calculation errors noted in the duplicate data?		✓	

Notes: DUP-2 and 715S11B 715B15A and DUP-3
DRO 3.4J 3.4J OK✓ 21 20 OK✓

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Are all sample results within the calibrated range?	✓		
10.2	If samples are not within the calibrated range, were they diluted and reanalyzed or was a high-level check standard analyzed? If not, contact laboratory. Request reanalysis if holding times have not been exceeded. If exceeded, qualify specific sample(s) J.	✓		✓
10.3	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		
10.4	Were there any transcription /calculation errors?		✓	✓

Notes:

11.0 Data Completeness

		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit 95%)	✓		
11.1.1	Number of samples:			
11.1.2	Number of target compounds in each analysis:			
11.1.3	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100%

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓			✓			✓					
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓			✓			✓					
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓			✓			✓				
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{o}C \pm 2\ ^{o}C$)	✓			✓			✓					
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes, % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	✓			✓			✓					

Note: _____

2.0 Holding Time		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		✓			✓			✓				

Note: _____

3.0 Instrument Calibration		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".	✓			✓			✓					
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	✓			✓			✓					
3.3	Once per calibration, did a high and low distilled standard recovery within 85-115%? If no, follow 3.6.												
3.4	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	✓			✓			✓					
3.5	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	✓			✓			✓					
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP 90%-110%, FOR Hg 80-120%, FOR CN 85-115%.	✓			✓			✓					
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%												
3.7	For ICP & ICPMS, did the CRDL standard recover between 80-120%?		✓		✓								
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K												

Note: _____

4.0 Blanks

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	✓			✓			✓					
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	✓			✓			✓					
4.3	Are there reported MB or ICB/CCBs values > MDL?	✓			✓			✓					
	Sample Results > MDL												
	< 5X Blank Contamination B												
4.4	Are there negative blank results with the absolute value > MDL?		✓		✓				✓				
	Sample Results Non-detects > MDL												
	< 5X absolute Blank Contamination UL L												
4.5	Are there reported field blank > ± MDL?		✓		✓			✓					
	Sample Results > MDL												
	< 5X Blank Contamination B												

Note: CCB, ICB, low levels all <5x, no action 6020 → MB several pos hits → <5x, B, P and CCB pos for As, all <5x, no action Sample 6010
6010 MBs → Ba, Ca, Fe, K, Zn. Pos <5x B, P in eq. blank.
EB → Fe 41, K 44 ug/L all <5x, no action
Mercury MB → 0.0048 <5x → B, P → <5x → B, J
FB → EQBK71 at 0.071 ug/L

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	✓			✓								
5.2	Are the ICS AB recoveries within 80% - 120%?	✓			✓								
5.3	Are the results for unspiked analytes (in ICS A) < ± RL?	✓			✓								
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			✓						
	If not...												
	Action: Not Spiked Analytes: < -MDL L(+)/UL(-); > MDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)												

Note:

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓			✓					
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓			✓				
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)												

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓			✓					
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.												
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	✓			✓			✓					

Note:

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.				✓			✓					
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125% for aqueous matrices or lab limits for soil matrices?					✓		✓					
	%R > 125% 30%< %R < 74% < 30% Positive K L L Non-detect None UL R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.				✓					✓			

Note: 6010 Soil Ca 18/18%, Cr 22/38, Co 47%, ~~Ni~~ Zinc 60%. PDS Mn 65% no action for MS Sodium 74%, 74%. LUL+M

6020 As 72%/72%, Copper 74%, Se 73%, 71% → UM unless prev. B,P

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?				✓			✓					

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓			✓								
10.2	Was a five-fold dilution performed?	✓			✓								
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).		✓			✓							

Note:

6010 Zinc 14.3%. 7 QC all prev. flagged for MS failure no more action

6020 → Copper 19.6%, Nickel 17%, V 12.9%. J/S unless prev. for MS failure.

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓			✓			✓					
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report		✓ (Prev Lim)			✓			✓				

Note: Method 6010 7158154, Dup-3 total Ca 50.7%) total K 53% → J,F
Method 6020 7158154, Dup-3 arsenic 96.2%) copper 94.5%) lead 117.9%) Vanadium 189.5%
J,F unless prev. flagged.

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	✓			✓			✓					
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓			✓					
12.3	Were the Internal Standard recoveries within 30-120%	✓			✓								
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	✓											
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	✓											
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	✓											

Note: _____

13.0 Completeness Calculation		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓			✓					
13.1.1	Number of samples: _____												
13.1.2	Number of target compounds in each analysis: _____												
13.1.3	Number of results rejected and not reported: _____												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

SDG CASE NARRATIVE

URS Group, Inc.
Radford Army Ammunition Plant
SWMUs 40 & 71

SDG – 36440-28
MAY 19, 2006

This case narrative is applicable to samples collected from Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Group, Inc. (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on April 24, 2006. The samples were assigned to TriMatrix project sample delivery group (SDG) 36440-28 for analytical services (the Project) to be performed according to:

a) Subcontract No. 129851.UB, Work Order 129877.US, between the Client and TriMatrix

b) Radford Army Ammunition Plant Final Master Work Plan, August, 2003 and SWMUs 40 & 71 Request for Cost Proposal Work Instructions, and

c) verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to laboratory sample ID cross-reference table follows below and on the next page.

Field Sample Name	Laboratory Sample ID	Date Sampled	Date Received
71SB14A	0604436-01	04/20/06	04/24/06

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Sample Receipt and Log-in

On April 24, 2006 at 08:50 hrs, five sample coolers containing multiple soil samples and one equipment blank were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on April 22. One additional cooler (TM1373) with samples was received but those samples were for a separate location at the Site and they were assigned to SDG 36440-27.

The external custody seal affixed to each cooler was intact. The samples were received on ice and in good condition with the exception that cooler TM0973 contained mostly melt water. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped with the cooler; the measured temperatures, in °C, were 4.9, 4.3, 6.9, 2.1, and 12.8.

Shipping documents included six field chain-of-custody forms (COC) and associated carrier air bills.

Samples '71SS12B' and '40SS9' were designated by the Client for MS/MSD analysis for one or more target parameters.

Samples were assigned to SDG 36440-28 and Work Order 0604436.

Sample receipt activities and observations were recorded on TriMatrix Sample Receiving and Log-in Checklists. Copies of the field chain of custody and a LIMS-generated work order have been included at the end of the report. Correspondence regarding sample receipt and project-related matters as analysis progressed is included in Narrative Attachment 1.

Analytical Methods

Sample preparation and analytical methods that were employed are per the quotation and additional correspondence/discussion with the Client.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as requested on the COC, but did provide clarification.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

Analytical Methods

Sample preparation and analytical methods that were employed are per the Work Instructions and any subsequent discussion with the Client.

Target Analyte List and Reporting Limits

The target analyte list (by parameter) and reporting limit (goals) employed for the sample are summarized in the Work Instructions and/or as agreed upon with the Client. Each reporting limit employed is at least three times the MDL per the USACE Shell for Analytical Chemistry Requirements (EM200-1-3 Feb 1, 2001) and project Data Quality Objectives (DQO).

Quality Control Limits

Per discussion with the Client, internal quality control limits not to exceed the Work Plan limits were employed except where no Work Plan limits were provided. If an internal lower control limit and/or an internal upper control limit was/were outside the Work Plan limits, one or both internal limits was/were revised to be applicable Work Plan limit(s).

Hold Times

All samples were analyzed within hold time with the exception of sample 'EQBK71' for DRO. However, analysis was conducted within twice the hold time.

Technical Issues

There were no technical issues.

Sample Result Reporting Convention

Sample results are reported as RL "U" (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter (e.g., PCBs) is reanalyzed and also reported, the second analysis includes the suffix "REn" where n = the first, second, etc. reanalysis.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Qualifier Designation

If applicable, sample results are qualified with:

- a "J" flag if the analyte was detected but the concentration is greater than the MDL but less than the RL,
- a "B" flag if the analyte was also detected at or above the RL in the associated method blank and the sample concentration was less than five times the method blank result,
- an "E" flag if the analyte exceeded the instrument calibration range and reanalysis was needed,
- an asterisk (*) if a LIMS-generated statement of qualification applies. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.). An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Polychlorinated Biphenyls

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications were method-compliant.

Method Blanks

No target analytes were detected at or above the RL on either the primary for confirmation [2C] column. In addition, there were no J-flagged detections.

Surrogates

All surrogate recoveries were in control. Surrogate recoveries were not obtainable for sample '71SB14B' reanalyzed at dilution, however, recoveries from the initial analysis were in control.

Laboratory Control Samples

The Laboratory Control Samples were fortified with Aroclors 1016 and 1260. All recoveries on both columns were in control.

Matrix Spikes

Samples '71SS12B' and '40SS9' were fortified with Aroclors 1016 and 1260. All recoveries and RPDs on both columns were in control.

Sample Results

See Section B. If an analyte is confirmed as present, the higher of the two concentrations has been reported, per the Work Plan. Dual Column Confirmation Check Summaries will be found at the beginning of the Raw Quality Control Data section.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Gasoline Range Organics

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications were method-compliant with the exception that CCV2 for the sequence 6051077 had a %D that exceeded criterion; response was decreasing.

Method Blanks

No target analytes were detected at or above the RL. In addition, there were no J-flagged detections.

Surrogates

All surrogate recoveries were in control.

Laboratory Control Samples

The Laboratory Control Samples were fortified with GRO. All recoveries were in control.

Matrix Spikes

Sample '71SS12B' was fortified with GRO. Both recoveries and the RPD were in control.

Sample Results

See Section C. Due to laboratory oversight, sample 'EQBK1' was analyzed past the 14-day hold time but within twice the hold time. Discovery was at final report generation.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

RA 51 2410b

Quality Control Results – Diesel Range Organics

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications were method-compliant with the exception that CCV2 for the sequence 6051077 had a %D that exceeded criterion; response was decreasing.

Method Blanks

No target analytes were detected at or above the RL. In addition, there were no J-flagged detections.

Surrogates

All surrogate recoveries were in control.

Laboratory Control Samples

The Laboratory Control Samples were fortified with DRO. All recoveries were in control.

Matrix Spikes

Sample '71SS12B' was fortified with DRO. Both recoveries and the RPD were in control.

Sample Results

See Section D.

Statements of Data Qualification

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – ICP Metals

Calibration

All instrument calibrations and continuing calibrations were method-compliant. Note: instrument reports for ICP include the listing of initial calibration correlation coefficients and internal standard recoveries; those values may either be imbedded with raw data from each run or included as a summary (also within the instrument printout).

Method Blanks

No target elements were detected at or above the RL. Depending upon the method blank, there were J-flagged detections for Barium, Calcium, Iron, Potassium, and/or Zinc. Since the project does not allow the use of an instrument's linear range for quantitation, extended calibration curves were employed for Aluminum, Barium, Calcium, Iron, Magnesium, Manganese, and Sodium in order to reduce the number of samples requiring reanalysis at dilution. Since the MDLs for these elements were not determined using an extended curve, the occurrence of J-flagged results for some of these analytes in the method blank may be a consequence.

Internal Standard Response

Internal standard responses for all standards, samples, and quality control samples were method-compliant.

Laboratory Control Sample

All Laboratory Control Sample recoveries were in control.

Matrix Spike

Sample '71SS12B' was fortified with all target analytes. The majority of recoveries and RPDs were in control (including those not-qualified because the unspiked sample concentration was greater than or equal to four times the amount spiked). The exceptions were one or both recoveries for Calcium and Chromium; those recoveries were less than the lower control limit. See the MS/MSD summaries and Statements of Data Qualification for details.

Serial Dilutions and Post-Digestion Spikes

Serial dilution and post-digestion spike (PDS) analysis was performed on the sample employed for MS/MSD analysis; all values were in control with the exception of Manganese.

Sample Results

See Section E.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – ICP/MS Metals

Calibration

All instrument calibrations and continuing calibrations were method-compliant. Note: instrument reports for ICPMS include the listing of initial calibration correlation coefficients and internal standard recoveries; those values may either be imbedded with raw data from each run or included as a summary (also within the instrument printout).

Method Blanks

No target elements were detected at or above the RL. Depending upon the method blank, there were J-flagged detections for Copper, Nickel, Vanadium and/or Antimony.

Internal Standard Response

Internal standard responses for all standards, samples, and quality control samples were method-compliant.

Laboratory Control Sample

All Laboratory Control Sample recoveries were in control.

Matrix Spike

Sample '71SS12B' was fortified with all target analytes. All recoveries and RPDs were in control with the exception of one or both recoveries for Cobalt. See the MS/MSD summaries and Statements of Data Qualification for details.

Serial Dilutions and Post-Digestion Spikes

Serial dilution and post-digestion spike (PDS) analysis was performed on the sample employed for MS/MSD analysis; all values were in control with the exception of Selenium.

Sample Results

See Section F.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Mercury (CVAA)

Calibration

Instrument calibration and continuing calibrations were method-compliant.

Method Blanks

Mercury was not detected at or above the Reporting Limit (RL), however, it was detected at a J-flagged level in the soil method blank.

Laboratory Control Samples

The Laboratory Control Sample recoveries were in control.

Matrix Spikes

Sample '71SS12B' was fortified. Both recoveries and RPD were in control.

Serial Dilutions and Post-Digestion Spikes

Not applicable.

Sample Results

See Section G.

Statements of Data Qualification

There were no statements generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Wet Chemistry (Percent Solids)

Calibration

Instrument (balance) calibrations were in control.

Method Blanks

The method blank was in control.

Laboratory Control Samples

Not applicable.

Matrix Spikes

No applicable.

Duplicate Analysis

Samples '71SS12B' and '40SS9' were analyzed in duplicate; both RPDs were in control.

Sample Results

Please see Section H of the data package.

Statements of Data Qualification

There were no statements generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was peer-reviewed by a second analyst and then by appropriate data management staff against laboratory quality control requirements and project specifications; it was then reviewed and approved by the group supervisor/manager prior to further review by the project chemist. All reviews were documented.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

5/22/06

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-275 **Fraction:** PCB Congeners

Lab: Paradigm Analytical Laboratories **Project Name:** Radford_SWMU 40/71

Reviewer: RA **Date:** July 14, 2006

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Interim Guidance for the Validation of Data generated Using Method 1668 Toxic, Dioxin-like PCB Data.

Major Anomalies: None.

Minor Anomalies: Samples arrived at 12.8 °C at the laboratory. No data qualifying action was taken based on professional judgment since these were soil samples and the temperature was not above the ambient temperature.

The method blank displayed positive detections for several congeners. Positive associated field sample results less than five times the method blank concentrations were flagged "B,z".

Sample 40SS9 displayed detections for several congeners that exceeded the calibration range of the instrument and were flagged "E" by the laboratory. These results were flagged "J,q."

Both samples displayed detections for several congeners that were flagged "K" by the laboratory. It was confirmed by the laboratory that these were estimated maximum possible concentrations (EMPCs). These results were changed to non-detects unless previously flagged for method blank contamination.

Correctable Anomalies: None.

Comments: It should be noted that no field blanks were collected for this set of samples. It should also be noted that samples 71SS12B and 40SS9 were incorrectly identified as 715512B and 41559, respectively, by the laboratory. Correction was made on the result forms.

All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: Rayan

SGS

Data Qualifiers

B	Analyte was detected in the Lab Method Blank (LMB) at a concentration greater than 20pg/L or 5 pg/g, and the concentration in the associated sample is less than 10 times the LMB concentration.
U	Identifies a compound as not being detected.
C	Data refers to the first of the co-eluting congeners.
Cx	Data is listed under the lowest numerical congener number in the group where 'x' references the lowest congener.
EDL	Estimated Detection Limit
T	Retention time shift.
ppt	Parts-per-trillion (pg/g; ng/L)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit.

An average uncertainty of 30% can be routinely achieved as concluded from the evaluation of HRGC-HRMS standard operating procedures. The following flags warn the data user of situations where the uncertainty may be greater than stated.

A	Amount detected is less than the Lower Calibration Limit.
J	Amount detected is less than the Lower Calibration Limit.
K	Data is being reported with a failing ratio and should be considered as an estimated value.
E	Amount detected is greater than the Upper Calibration Limit.
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s).
Q	Indicates the presence of a quantitative interference. This situation generally results in an underestimation of the affected analyte(s).
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s).
#	Outside quality control limits
*	See case narrative

DATA VALIDATION WORKSHEET

PCB Congeners

Reviewer: RA
Date: 7/14/06
DV Level: II (III) IV
Review Document:
X SW-846 X Project QAPP/SAP
X NFG Region III Draft Guidance (April 2004)

Project Name: SWMU 40/71
Project Number:
Laboratory: Paradigm
SDG No.: G2946-275
Method No.: 1668A

1.0 General: Chain-of-Custody

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	✓		

Notes: Samples arrived at 12.8°C. No action since these were soil samples. and temp was not above ambient temp.

2.0 Preservation/ Holding Times

		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 2-3 with sulfuric acid. If not, J(+)/UJ(-)		✓	
2.2	Have any technical holding times been exceeded? Recommended holding time in the Method is one year. If yes, J(+)/UJ(-). No holding time or preservation requirements are promulgated by EPA for non-water matrices), use professional judgement.		✓	

Notes: see above

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	✓		
3.2	Do any blanks have positive results? If yes, an action level of 5 times the blank value is used to qualify sample results "B".	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.		✓	

Notes: *If there are no field blanks, the narrative should include acaution to the user that field blanks were not available for review and any contamination due to field conditions or cross contamination could not be assessed.*
MB → several pos. hits. <5X B/T

4.0 Instrument Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	✓		
4.2	Are RSD/ ± 20% for analytes analyzed by isotope dilution or +/- 35% for analytes analyzed by internal std method? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a	✓		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL ≥ 2.5:1 ; CCC ≥10:1 ; Internal (IS) and Recovery Standards (RS) in any >10:1) If no: for target analytes, R(-); for ISs or RSs, qualify using professional judgement.			
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	✓		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
~~7~~	~~M+2/M+4~~	1.05	0.89 1.21
~~8~~	~~M+2/M+4~~	0.89	0.76 1.02
~~9~~	~~M+2/M+4~~	~~0.77~~	~~0.65 0.89~~
~~10~~	~~M+2/M+4~~	~~0.69~~	~~0.59 0.79~~

Notes:

5.0 GC/MS Performance Check		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start ~~of a 12 hour~~ and end of each analytical sequence? If no, apply "R".	✓		
5.1a	Is the resolving power ≥ 10,000 with m/z 330.9792? If not, apply "R".	✓		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	✓		
5.2	Are all IPR, OPR and VER standards within the method QC limits? Results for analytes that do not meet either IPR or OPR requirements should be flagged "J"/"UJ". If analyte is not recovered for an OPR sample, results must be flagged "R" for that analyte.	✓		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?			
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (in-house generated)?			
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS/MSD results in conjunction with other QC to determine sample data usability.			

Notes:

Not in this SDG

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	✓		
7.2	Was an LCS analyzed for each batch?	✓		
7.3	Are there any percent recoveries outside the QC limits (in-house generated limits)?		✓	
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within the method QC limits?If no, apply J/UJ to associated targets.	✓		
8.2	Is the signal to noise ≥ 10 for each internal standard? If no, J(+)/UJ(-) all associated results.	✓		

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?			
9.2	Are all analyte duplicate results within control limits? For sample results > 5 x RL, a control limit of 50% RPD will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.			

Notes:

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range? If no, apply J to these results.		✓	
10.2	Are absolute RTs within -1 to +3 seconds of the RT of the corresponding labelled standard? If no, R(+).	✓		
10.3	Are RRT units less than 0.005 from the CCV when labelled standards are not present? If no, report concentration with totals.			✓
10.4	Is the signal to noise ≥ 3 for the quantitation ion of any positive result? If no, UJ(+).	✓		
10.5	Is the signal to noise ≥3 for the qualitative ion of any positive result? If no, flag J(+).	✓		
10.6	Do results reflect corrections made for initial volume, dilution factor, and percent solids? If no, correct concentrations.	✓		
10.7	Were any results reported from a dilution? If yes, verify or suggest the best result for use and make note in DV Report.		✓	

Notes:

11.0 Ion abundance criteria and EMPC

		Yes	No	NA
	For positive results with ion abundance ratios greater than RIII expanded limits, confirm the value is reported as EMPC by the laboratory. This type of detection is verified and the presence is noted in the DV report. EMPC's with ion ratios greater than 25% from the theoretical ratio are not to be reported by RIII. Values reported as EMPC are not to be included in the total TEQ determination. The validator shall line out or subtract an EMPC with these characteristics.			
	For internal standard with ion abundance ratios outside the method control limits, apply N(+)/R(-).			

Notes:

12.0 Data Completeness

		Yes	No	NA
12.1	Is the percent completeness within the control limits? (Control limit 90%)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported: 0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%			

SGS

Case Narrative
Paradigm Project: **G296-275**

For Method: 1668A

- The submitted samples were received at a temperature of 12.8°C, which is outside of the method's acceptable temperature range of 0-6°C.
- Data meet all other QA/QC requirements.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination	n	Failed Signal to noise ratio

DATA VALIDATION REPORT - Level III Review

SDG No.:_____36440-39_____ **Fraction:_VOCs, SVOCs, Pesticides, PCBs, Explosives, Total & Dissolved Metals__**

Lab:_____TriMatrix_____ **Project Name _____Radford SWMU 40_____**

Reviewer:_____RA_____ **Date:_____September 24, 2007_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: For the VOCs analyses, the method blank displayed a positive detection for acetone at 1.53 ug/L. Positive associated field sample results less than ten times the method blank concentration were flagged "B,z". The trip blanks also displayed positive detections for acetone which was previously flagged for method blank contamination; and a positive detection for toluene at 0.14 ug/L. Positive associated field sample results less than five times the trip blank concentration for toluene were flagged "B,y".

For the SVOCs analyses, sample 40MW5 was re-extracted one day outside the holding time since the matrix spike/matrix spike duplicate (MS/MSD) analyzed for this sample was not fortified with 1,2,4,5-tetrachlorobenzene. Only 1,2,4,5-tetrachlorobenzene was reported for the re-extracted sample. This result was flagged "UJ,h". The original sample result for this compound should be used for data interpretation purposes.

The method blank displayed a positive detection for butyl benzyl phthalate at 0.05 ug/L. Positive associated field sample results less than ten times the method blank concentration were flagged "B,z". Equipment blank, EQBK-1 displayed positive detections for acetophenone at 0.048 ug/L and diethyl phthalate at 0.048 ug/L. The associated field sample results for acetophenone were non-detects and no data qualifying action was necessary. Positive associated field sample results less than ten times the equipment blank concentration for diethyl phthalate were flagged "B,x".

The matrix spike pair analyzed for sample 40MW5 displayed percent recoveries (%Rs) less than the lower control limit of 64% for caprolactam at 11% and 10%, respectively. The associated parent sample result was non-detect and was flagged "UJ,m".

The laboratory control sample (LCS) displayed a %R less than the lower control limit of 64% for caprolactam at 26%. Since this is not a project specific compound of concern, using professional judgment, all associated field sample results that were non-detects were flagged "UJ,l". The LCS also displayed a %R greater than the upper control limit of 105% for 2-chlorophenol at 108%. The associated field sample results were non-detects and no data qualifying action was necessary.

For the pesticides analyses, the matrix spike pair analyzed for sample 40MW5 displayed %Rs greater than the upper control limit of 140% for aldrin on the confirmation column at 167% and 186%, respectively. The associated parent sample result was a non-detect and no data qualifying action was required.

Gamma-BHC displayed percent differences greater than the control limit of 40% between the two analytical columns for sample 17MW3 at 91.7% and sample 40MW6 at 102.5%. These results were flagged "J,g" in these samples.

For the metals analyses, for method 6010, the method blanks displayed positive detections for total iron, magnesium, and sodium; and for dissolved calcium, magnesium, and sodium. Positive associated field sample results less than five times the method blank concentrations were flagged "B,p". Equipment blank, EQBK-1 displayed positive detections for total calcium and potassium. The initial and continuing calibration blanks displayed low level detections for magnesium, sodium, and iron. The associated field sample results were greater than five times the blank concentrations and no further data qualifying action was taken.

For method 6020, the method blanks displayed positive detections for dissolved chromium and zinc. Positive associated field sample results less than five times the method blank concentrations were flagged "B,p". Equipment blank, EQBK-1 displayed positive detections for total chromium, lead, manganese, and zinc. Positive associated field sample results less than five times the equipment blank concentration were flagged "B,x". The initial and continuing calibration blanks displayed positive detections for antimony, chromium, and selenium. Positive associated field sample results less than five times the calibration blank concentrations were flagged "B,o".

The matrix spike analyzed for sample 40MW5 displayed a %R greater than the upper control limit of 125% for dissolved calcium at 151%. No data qualifying action was required since the original sample result was greater than 4 times the spike amount.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed. It should be noted that detection limits were raised in several samples due to dilutions.

SDG CASE NARRATIVE

URS Corporation
Radford Army Ammunition Plant
Groundwater Investigation
SWMU 40

SDG – 36440-39
SEPTEMBER 19, 2007

This case narrative is applicable to aqueous samples collected from SWMU 40 at Radford Army Ammunition Plant (the Site), Radford, Virginia by URS Corporation (the Client) and received by TriMatrix Laboratories, Inc. (TriMatrix) on August 15 and 16, 2007. The samples were assigned to TriMatrix project sample delivery group (SDG) 36440-39 for analytical services (the Project) to be performed according to:

a) URS Project #21354880.10001, BOA # 129851.UB, and URS Work Order 129877.US

b) the Scope of Work (SOW) for the above,

c) Department of Defense Quality Systems Manual for Environmental Laboratories, Final Version 3, January 2006 (by reference)

d) any verbal and written correspondence between the Client and TriMatrix as the Project progressed.

No part of this Project was subcontracted.

Field Sample and Assigned Laboratory Sample ID Summary

For the samples received, a field sample to laboratory sample ID cross-reference table follows below and on the next page.

Field Sample Name	Sample Matrix	Laboratory Sample ID	Date Sampled	Date Received
17MW3	Water	0708362-01	08/13/07	08/15/07
Trip Blank 1	Water	0708362-02	08/13/07	08/15/07
40MW3	Water	0708362-03	08/14/07	08/15/07
Trip Blank 2	Water	0708362-04	08/14/07	08/15/07
EQBK-1	Water	0708362-05	08/14/07	08/15/07
Trip Blank 3	Water	0708362-06	08/14/07	08/15/07
40MW6	Water	0708363-01	08/14/07	08/16/07
Trip Blank 4	Water	0708363-02	08/14/07	08/16/07
40MW5	Water	0708363-03	08/15/07	08/16/07
Trip Blank 5	Water	0708363-04	08/15/07	08/16/07
DUP-1	Water	0708363-05	08/15/07	08/16/07
Trip Blank 6	Water	0708363-06	08/15/07	08/16/07

DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer: RA
Date: 9/20/07
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: RFAAP SWMU40
Project Number: 23548 80
Laboratory: TriMatrix
SDG No.: 36440-39
Test Name: VOC
Method No.: 8260B

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If the temperature of the cooler was elevated (> 10 °C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water? If yes, no dry weight correction is made and make notes in the DV Report.			✓

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were samples preserved on ice for soils and on ice with HCL for aqueous samples?	✓		
2.2	Have any technical holding times (14 days), determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency (every 12 hour period per GCMS, matrix, and level)?	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the [sample]≤ 5X[associated blank]. (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone)	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.	✓		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.	✓		

Notes: MB → acetone 1.53 ug/L Pos<10x B/c in all samples
Trip blank ~~acetone 3.1~~ also pos for acetone B/c
Trip blank 8/14/07 toluene 0.14 ug/L
Pos <5x → B/y all samples

URS

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve?Are at least five standards included in the calibration curve?	Y		
4.2	Was an initial calibration analyzed at the beginning of each analysis?	Y		
4.3	Was a second source calibration verification analyzed for each calibration curve?	Y		
4.4	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	Y		
4.5	Are all calibration standard %RSDs, correlation coefficient, or % drift within the control limits (%RSD <15%, r>0.995 or r^2>0.99; for 2° source: %D<+20%; and for CCC, %D < 20%)?	Y		
For initial calibration: %RSD > 15%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>20% J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 20%, J(+), only. Negative Bias - %D>-20% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				
4.6	Are any CCCs (chloroform, 1,1-DCE, 1,2-DCPA, ethylbenzene, toluene, and vinyl chloride) displaying an RSD greater than 30%? If yes, L(+)/R(-) all associated results.		N	
4.7	Do any SPCC have an RRF low? (<0.10 for chloromethane, 1,1-dichloroethane, and bromoform or <0.30 for chlorobenzene and 1,1,2,2-tetrachloroethane) If yes, L(+)/R(-) all associated results.		N	

Notes:

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	Y		
5.2	Have all samples been analyzed within twelve hours of the BFB tune? If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".	Y		
5.3	Have ion abundance criteria for BFB been met for each instrument used? If no, flag "R".	Y		

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.2	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that			
6.3	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method			✓
	1 or more <10% / 1 high/low / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / J / L / K Non-detects: R / UJ / UJ / UJ / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are %R for LCS/LCSD recoveries outside the QC limits? If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).		✓	
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.		✓	

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within +100% or -50% of the mid point calibration standard? If not, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	✓		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
	For sample results > 5 x RL, use 50% RPD. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 x RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV	✓		

Notes: 40MW5 and DUP-1 RL %RPD
Chloroform 23 23 1 0% OK

11.0 Detection Limit Verification		Yes	No	NA
11.1	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
11.2	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results			✓

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100%

Quality Control Results – Volatile Organics by GC/MS

Calibration

All initial instrument calibrations, second source calibration verifications (SCV), and continuing calibration verifications (CCV) were method-compliant for the target analytes.

Method Blank

No target analytes were detected above one-half the RL. In addition, there were no J-level detections with the exception of Acetone (a common laboratory contaminant) in the one method blank.

Surrogates

All surrogate recoveries were in control.

Laboratory Control Samples

Each Laboratory Control Sample was fortified with all target analytes. All recoveries were in control.

Matrix Spikes

Sample 40MW5 was fortified with all target analytes. All recoveries and RPDs were in control.

Sample Results

Please see Section B. All samples were analyzed without the need for dilution.

Corrective Action

No corrective actions were deemed necessary.

Statements of Data Qualification

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water? If yes, no dry weight correction is made and make notes in the DV Report.			✓

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days	✓		
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes: Sample 40MW5 was re-extracted one day outside hT, because the MS for this sample was not fortified with 1,2,4,5-tetrachlorobenzene. UJ/h → original should be used.

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per batch)?	✓		
3.2	Do any blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the [sample≤5X[blank] (or 10 times for the common phthalate contaminants).	✓		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	✓		

Notes: MB → butyl benzyl phthalate 0.05 ug/L pos<10x → B/Z and samples

EQBK-1 acetophenone 0.048 ug/L all NDs ✓
diethyl phthalate 0.048 ug/L <10x → B/X and samples

URS

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve?	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve?	✓		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis?	✓		
4.4	Are all calibration standard %RSD $\leq$15%, r>0.995, or r^2<0.99), second source $\pm$30% or %D($\leq$20%) within the control limits?	✓		
For initial calibration: %RSD > 15% but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>30% J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 20%, J(+), only. Negative Bias - %D>-20% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				
4.5	Are any SPCCs RF < 0.05 and/or CCC >30%? If yes reject all associated data.		✓	

Notes:

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	✓		
5.2	Are DFTPP monitored ions within specification? If no, flag R.	✓		
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune? If no, flag R.	✓		
5.4	Have ion abundance criteria for DFTPP been met for each instrument used? If no, flag R.	✓		

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	✓		
6.2	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			✓
6.3	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			✓
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓
	If No, for 2 or 3 %Rs > UCL, K(+) only; for 2 or 3 %Rs < LCL, but > 10%, L(+)/UL (-); for 2 or 3 %Rs mixed high/low, J(+)/UJ(-); for %R < 10%, L(+)/R(-).			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS/MSD results in conjunction with other QC criteria to determine the need for qualification of the data.			

Notes: The MS/MSD for 40MW5 %Rs < 64% for caprolactam 11%/10%. parent ND → UJ/M

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS outside the QC limits? If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).	✓		
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.			✓

Notes: caprolactam 26% < 64%. ~~[illegible]~~ UJ/R based on professional judgement.
2-Chlorophenol 108%/105% all NDs, No action.

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard areas within +100% and -50% of the mid point initail calibration? If No, J(+)/UJ(-).	✓		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration?		✓	
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.	✓		

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Are all analyte duplicate results within control limits (use RPD limits of matrix spikes)? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes:

	40MW5	RL	DUP-1	
1,1-Biphenyl	0.028 J	5	0.038 J	OKV
2-methylnaphthalene	0.094 J	5	0.11 J	OKV
naphthalene	0.094 J		0.1 J	OKV

11.0 Detection Limit Verification		Yes	No	NA
11.1	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	✓		

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
12.1.1	Number of samples:			
12.1.2	Number of target compounds in each analysis:			
12.1.3	Number of results rejected and not reported:			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100 %

STATEMENT OF DATA QUALIFICATIONS

Semivolatile Organic Compounds by EPA Method 8270C

Qualification:	The LCS recovery exceeded the control limit but it was within the marginal exceedance for a compound that is not a project-specific analyte of concern. The result for this analyte in any sample from the associated QC batch is not considered qualified.	
Analysis:	USEPA-8270C	
	0709526-BS1	2-Chlorophenol
Qualification:	The LCS recovery exceeded both the control limit and the marginal exceedance for a compound that is not a project-specific analyte of concern. The result for this analyte in any sample from the associated QC batch is considered qualified.	
Analysis:	USEPA-8270C	
	0709526-BS1	Caprolactam
Qualification:	The EPA hold time for sample pretreatment was exceeded and the sample result(s) are considered estimated.	
Analysis:	USEPA-8270C	
Sample/Analyte:	0708363-03RE1 40MW5	1,2,4,5-Tetrachlorobenzene
	0709526-MS2	1,2,4,5-Tetrachlorobenzene
	0709526-MSD2	1,2,4,5-Tetrachlorobenzene
Qualification:	The MS and/or MSD recovery was outside the control limit. The non-spiked sample result is considered estimated.	
Analysis:	USEPA-8270C	
Sample/Analyte:	0708363-03 40MW5	Caprolactam

Quality Control Results – Semivolatile Organics by GC/MS

Calibration

All initial instrument calibrations, second source calibration verifications (SCV), and continuing calibration verifications (CCV) were method-compliant for the target analytes.

Note: the initial calibration, second source, and continuing summaries list all compounds present in the calibration standards and not just target analytes.

Method Blanks

No target analyte was detected above one-half the RL. Butyl Benzyl Phthalate was detected below one-half the RL.

Surrogates

All surrogate recoveries were in control.

Laboratory Control Samples

The first Laboratory Control Sample were fortified with all target analytes except 1,2,4,5-Tetrachlorobenzene and the second LCS was fortified with 1,2,4,5-Tetrachlorobenzene. All recoveries were in control with the exception of Caprolactam (26%) and 2-Chlorophenol (108%). The recovery for 2-Chlorophenol was within the marginal exceedance allowed for that compound.

Matrix Spikes

Sample 40MW5 was initially fortified with all target analytes except 1,2,4,5-Tetrachlorobenzene. Upon discovery, a second MS/MSD pair was fortified with 1,2,4,5-Tetrachlorobenzene and extracted within twice the hold time. All recoveries and RPDs were in control with the exception of both recoveries (11%, 10%) for Caprolactam. See Narrative Attachment 2 and matrix spike summary forms for details.

Sample Results

Please see Section C. All samples were analyzed without the need for dilution. Sample 40MW5 was re-extracted due to the absence of 1,2,4,5-Tetrachlorobenzene in the initial MS/MSD. Re-extraction of the sample (and MS/MSD) for 1,2,4,5-Tetrachlorobenzene (only) were within twice the extraction hold time. The Client was advised. Given the need for a second MS/MSD, it was necessary to also re-extract (and report results for) the re-extracted sample. Only 1,2,4,5-Tetrachlorobenzene has been reported for the re-extracted sample.

Corrective Action

Aside from the re-extraction of sample 40MW5 and its MS/MSD, as discussed above, no corrective actions were deemed necessary.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 ^{o}C, then flag L(+)/UL(-).			
1.5	Do any soil samples contain more than 50% water? If yes, no dry weight correction is made and make notes in the DV Report.			✓

Notes:

2.0 Holding Times

		Yes	No	NA
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)

		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency (one per 20 samples or batch and matrix)?	✓		
3.2	Do any blanks have positive results? If yes, positive sample results should be reported and qualified "B", if the [sample≤5X[blank].		✓	
3.3	Do any field equipment blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve for 1016, 1260, toxaphene, and technical chlordane; and at least one point for the other arochlors reported? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	✓		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	✓		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within the control limits?	✓		
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

5.0 GC/ECD Instrument Performance Check		Yes	No	NA
5.1	Has a Performance Evaluation Mixture (PEM) been analyzed at the beginning, every 12 hours, and at the end of every sequence.	✓		
5.2	Is the 4,4'-DDT breakdown </= to 20%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	✓		
5.3	Is the endrin breakdown </= to 20%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	✓		
5.4	Is the combined breakdowns less than or equal to 30%? If No, for positive DDT/endrin results, DDT/endrin-L(+), DDD/DD/endrin aldehyde/endrin ketone - NJ(+). For non-detect DDT/endrin results, DDD/DDE/endrin aldehyde/endrin ketone - R(+).	✓		

Notes:

6.0 Surrogate Recovery

		Yes	No	NA
6.1	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	✓		
6.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks? Advisory limit: 60-150%.	✓		
6.3	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			✓
6.4	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			✓

# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
1 out	high/low	No action	No action
2 out	2 high same column	K	No action
	2 low same column	L, UL	No action
	mixed same column	J, UJ	No action
	2 high diff columns	J	Not applicable
	2 low diff columns	J, UJ	Not applicable
	mixed diff columns	Professional judgement	Not applicable
3 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	2 high, 1 low	K (2 high)	J (1 low 2nd column)
	2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
	other mixed	J, UJ	Not applicable
4 out	All high	K	Not applicable
	All low	L, UL	Not applicable
	Mixed	J, UJ	Not applicable
If any recovery is >0% and <10% then L(+)/R(-).			
If any recovery is 0% then R(+/-).			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	✓		
7.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes: Reg 1/ MS/MSD for 40 MWS
Aldrin on confirmation column 167%/184%/140%
Parent ND → No flags

URS

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)

		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	✓		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			

Notes:

9.0 Field Duplicate

		Yes	No	NA
9.2	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes: 40MW5 - DUP-1 Both NDs ✓

10.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns <40%? If No, J(+).		✓	
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	✓		

Notes: pest ⇒ 17MW3 gamma-BHC 91.7% } 40% J/g in these samples
40MW16 gamma-BHC 102.5% }

11.0 Data Completeness

		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
11.1.1	Number of samples: Pest _____ PCB _____			
11.1.2	Number of target compounds in each analysis: PEST _____ PCB _____			
11.1.3	Number of results rejected and not reported: Pest _____ PCB _____			
11.1.4	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = Pest 100% PCB 100%

STATEMENT OF DATA QUALIFICATIONS

Organochlorine Pesticides by EPA Method 8081A

Qualification:	The RPD between the detected values from the primary and confirmation analyses exceeded 40%. The higher concentration result has been reported.	
Analysis:	USEPA-8081A	
Sample/Analyte:	0708362-01 17MW3	gamma-BHC (Lindane)
	0708363-01 40MW6	gamma-BHC (Lindane)
Qualification:	Aldrin exceeded the upper control limit for the MS/MSD on the confirmation column. Original sample has a contamination (non-confirming) peak for Aldrin on the confirmation column causing high recovers in the MS/MSD. No qualification is necessary.	
Analysis:	USEPA-8081A	
	0709524-MS1	Aldrin [2C]
	0709524-MSD1	Aldrin [2C]

00021

Quality Control Results – Chlorinated Pesticides

Note: second column (confirmation) data is identified as "compound[2C]".

Calibration

Initial instrument calibrations, second source verification (SCV), and continuing calibration verifications (CCV) for both the primary and confirmation columns were method-compliant for all target analytes (including Toxaphene).

Method Blanks

No target analytes were detected.

Surrogates

All surrogate recoveries were in control for both the primary column and confirmation column runs.

Laboratory Control Samples

Laboratory Control Samples (LCS) were fortified with all target analytes. An LCS and an LCSD for the one multi-component analyte (i.e., Toxaphene) were separately extracted/analyzed. All recoveries (and RPD for Toxaphene) were in control for both the primary column and confirmation column runs.

Matrix Spikes

Sample 40MW5 was fortified with all single component target analytes. Due to sample volume considerations, a MS/MSD for the one multi-component analyte (i.e., Toxaphene) was not fortified (an LCS/LCSD was substituted). With the exception of Aldrin, all recoveries and RPDs for both the primary column and confirmation column runs were in control. See Narrative Attachment 2 and matrix spike summary forms for details.

Sample Results

Please see Section D. There were one and two J-level detections confirmed for samples 17MW3 and 40MW6, respectively.

Corrective Action

No corrective actions were deemed necessary.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – Polychlorinated Biphenyls

Note: second column (confirmation) data is identified as "compound[2C]".

Calibration

Initial instrument calibrations, second source verification (SCV), and continuing calibration verifications (CCV) for both the primary and confirmation columns were method-compliant.

Method Blank

No target analytes were detected.

Surrogates

All surrogate recoveries for samples were in control for both the primary column and confirmation column runs.

Laboratory Control Sample

The Laboratory Control Sample (LCS) was fortified with Aroclors 1016 and 1260. Both recoveries were in control.

Matrix Spikes

Sample 40MW5 was fortified with Aroclors 1016 and 1260. All recoveries and RPDs for both the primary column and confirmation column runs were in control.

Sample Results

Please see Section E. No analytes were detected.

Corrective Action

No corrective actions were deemed necessary.

Statements of Data Qualification

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Test Name: Explosives/PETN
Method No.: 8330/8332

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do sample preservation, collection and storage condition meet method requirement?	✓		
	If samples were received with the cooler temperature exceeding 20 °C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-). Extraction: (aqueous) 7 days and (soil) 14 days; and Analysis: 40 days.		✓	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	✓		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		✓	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		✓	

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are at least five standards included in the calibration curve? If no, flag "R".	✓		
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".	✓		
4.3	Were continuing calibration standards analyzed every 12 hours or twenty samples? If no, flag "R".	✓		
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±15%) or %D(≤15%) within the	✓		
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>15%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 15%, J(+), only. Negative Bias - %D>-15% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes:

5.0 Laboratory Control Sample (LCS)		Yes	No	NA
5.1	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.2	Are there any %R for LCS/LCSD recoveries outside the QC limits?		✓	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).		✓	
5.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.		✓	

Notes:

6.0 Surrogate Recovery					Yes	No	NA
6.1	Are surrogate recoveries within acceptance criteria for all samples and method blanks?				✓		
6.2	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?						✓
6.3	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						✓
		<10%	low	high			
	Positives	L	L	K			
	Non-detects	R	UL	No action			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
7.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
7.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		✓	
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	✓		

Notes:

Both NDs ✓

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		✓	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	✓		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit $95\%_{aq}$ and $90\%_{so}$)	✓		
10.1.1	Number of samples:			
10.1.2	Number of target compounds in each analysis: 14			
10.1.3	Number of results rejected or not reported:			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%			

Notes:

Quality Control Results – Nitroaromatic Explosives

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications for the primary column were method-compliant.

Note: no confirmations were needed for any sample.

Method Blanks

No target analytes were detected.

Surrogates

All surrogate recoveries were in control.

Laboratory Control Sample

The Laboratory Control Sample (LCS) was fortified with all target analytes. All recoveries were in control.

Matrix Spikes

Sample 40MW5 was fortified with all target analytes. All recoveries and RPDs were in control.

Sample Results

Please see Section F. There were no detections.

Corrective Actions

No corrective actions were deemed necessary.

Statements of Data Qualification

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – PETN and Nitroglycerin

Calibration

All initial instrument calibrations, second source verification, and continuing calibration verifications for the primary column were method-compliant.

Note: no confirmations were needed for any sample.

Method Blanks

No target analytes were detected.

Surrogates

All surrogate recoveries were in control.

Laboratory Control Sample

The Laboratory Control Sample (LCS) was fortified with all target analytes. All recoveries were in control.

Matrix Spikes

Sample 40MW5 was fortified with all target analytes. All recoveries and RPDs were in control.

Sample Results

Please see Section F. There were no detections.

Corrective Actions

No corrective actions were deemed necessary.

Statements of Data Qualification

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.

5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			✓			✓						
	If not...												
	Action: Not Spiked Analytes < -MDL L(+)/UL(-)												
	Not Spiked Analytes > MDL K(+)												
	Spiked analytes (ICS AB analytes) < 50% L(+)/R(-)												
	Spiked analytes (ICS AB analytes) 50% - 79% L(+)/UL(-)												
	Spiked analytes (ICS AB analytes) >120% K(+)												

Note:

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	✓			✓			✓					
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		✓			✓			✓				

Action:	Solid		Aqueous		
	< LCL	> UCL	< 50%	50% - 79%	> 120%
	L(+)/UL(-)	K(+)	L(+)/R(-)	L(+)/UL(-)	K(+)

Note: _____

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	✓			✓			✓					
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.	✓											
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	✓			✓			✓					

Note: _____

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	✓			✓			✓					
8.2	For all analytes with sample concentration < 4 x spike concentration, are spike recoveries within the control limit of 75-125% for aqueous matrices or lab limits for soil matrices?	✓				✓		✓					
	%R > 125% / 30%< %R < 74% / < 30%												
	Positive: K / L / L												
	Non-detect: None / UL / R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.			✓	✓					✓			

Note: MS for 40MW5 7125% for Diss Ca at 151 %. [redacted] Sample result 7 4X spike amt., No action

9.0 Instrument Detection Limits (IDL)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	✓			✓			✓					

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	✓			✓								
10.2	Was a five-fold dilution performed?	✓			✓								
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).	✓			✓								

Note:

11.0 Field Duplicate Samples

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	✓			✓			✓					
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	✓			✓			✓					

Note: see attached

12.0 Result Verification/ Internal Standards/ Tune

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?			✓			✓			✓			
12.2	Were all dilution reflected in the positive results and detection limits?	✓			✓			✓					
12.3	Were the Internal Standard recoveries within 30-120%	✓			✓								
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	✓											
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	✓											
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	✓											

Note:

13.0 Completeness Calculation

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	✓			✓			✓					
13.1.1	Number of samples:												
13.1.2	Number of target compounds in each analysis:												
13.1.3	Number of results rejected and not reported:												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2)												
	% Completeness = 100%

* Values outside of QC limits

Quality Control Results – ICP Metals

Calibration

All instrument calibrations and continuing calibrations were method-compliant. Note: instrument reports for ICP include the listing of initial calibration correlation coefficients and internal standard recoveries; those values may either be imbedded with raw data from each run or included as a summary (also within the instrument printout).

Note: TriMatrix interprets the QSM requirement for a "low-level calibration check standard" as one pertaining to a one-point initial calibration. Given that a multi-point initial calibration was performed, the specification for a low-level calibration check either does not apply or has been satisfied since the lowest calibration standard is equivalent in concentration to the reporting limit.

Method Blanks

No target analytes were detected at a concentration greater than one-half the RL.

Internal Standard Response

Internal standard responses for all standards, samples, and quality control samples were method-compliant.

Laboratory Control Samples

Laboratory Control Samples were fortified with all target analytes. All recoveries were in control.

Matrix Spikes

Sample 40MW5 was fortified with all target analytes. All recoveries and RPDs were in control. The recoveries for Total Calcium and Dissolved Calcium in the MS were less than the lower control limit but not qualified; see Narrative Attachment 2.

Serial Dilutions and Post-Digestion Spikes

Serial dilution (SD) and post-digestion spike (PDS) analysis was performed on the sample employed for MS/MSD analysis; all values were in control.

Sample Results

Please see Section H.

Corrective Action

No corrective actions were deemed necessary.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – ICP/MS Metals

Calibration

All instrument calibrations and continuing calibrations were method-compliant. Note: instrument reports for ICP/MS include the listing of initial calibration correlation coefficients and internal standard recoveries; those values may either be imbedded with raw data from each run or included as a summary (also within the instrument printout).

Method Blanks

No analytes were detected except for Zinc, at a concentration less than the RL, in the method blank associated with Dissolved Zinc. Samples for both Total and Dissolved Metals are digested, as sample types (i.e., total versus dissolved), separately from one another.

Note: Zinc is considered by TriMatrix to be a common laboratory contaminant.

Internal Standard Response

Internal standard responses for all standards, samples, and quality control samples were method-compliant.

Laboratory Control Samples

Laboratory Control Samples were spiked with all target analytes. All recoveries were in control.

Matrix Spikes

Sample 40MW5 for both Total and Dissolved Metals was fortified with all target analytes. All recoveries and RPDs were in control.

Serial Dilutions and Post-Digestion Spikes

Serial dilution (SD) and post-digestion spike (PDS) analysis for both Total and Dissolved Metals was performed on the sample employed for MS/MSD analysis; all values were in control.

Sample Results

Please see Section H.

Corrective Action

No corrective actions were deemed necessary.

Statements of Data Qualification

See Narrative Attachment 2.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Quality Control Results – CVAA Hg

Calibration

All instrument calibrations and continuing calibrations were method-compliant.

Method Blank

Mercury was not detected.

Laboratory Control Samples

The Laboratory Control Sample recoveries were in control.

Matrix Spikes

Sample 40MW5 was fortified with Mercury. Both recoveries and the RPD were in control.

Serial Dilution

Serial dilution analysis was not necessary.

Sample Results

Please see Section H.

Corrective Action

No corrective actions were deemed necessary.

Statements of Data Qualification

No statements were generated.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Data Review and Approval

All data was reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD has been issued separate from this hardcopy report.

Walt Roudebush, Project Chemist

9/19/07
Date

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Sample Receipt and Log-in

There were two receipt events.

Receipt Event One

On August 15, 2007 at 09:00 hrs, three sample coolers containing multiple water samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on August 14.

The external custody seal affixed to each cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperatures, in °C, were 2.1, 1.6, and 2.2.

Shipping documents included three field chains-of-custody form (COC) and associated carrier air bills. Three trip blanks for volatiles analysis were received but not listed on the COCs. The Client was contacted and TriMatrix added them to each COC and logged them in for analysis.

Samples were assigned to Work Order 0708362 and SDG 36440-39.

Receipt Event Two

On August 16, 2007 at 08:45 hrs, four sample coolers containing multiple water samples were received at TriMatrix via FedEx (the carrier). The coolers had been shipped from the Site on August 15.

The external custody seal affixed to each cooler was intact. The samples were received on ice and in good condition. The receipt temperature of the interior of each cooler was measured via a 'temperature blank' shipped in it; the measured temperatures, in °C, were 2.0, 1.4, 1.9, and 1.2.

Shipping documents included three field chains-of-custody form (COC) and associated carrier air bills. Three trip blanks for volatiles analysis were received and listed on the COCs but no collection dates and times were listed on the COCs. TriMatrix added dates and times corresponding to the associated sample collection dates to each COC.

Sample 40MW5 was designated by the Client for MS/MSD analysis.

Samples were assigned to Work Order 0708363 and SDG 36440-39.

Both Events

Copies of all referenced receipt and custody documents are provided in Section A of this data package. Correspondence regarding completed sample log-in activities will be found in Attachment 1 of this narrative.

Provision of Sample Receipt Information to Client

A copy of the COCs and receipt checklist were transmitted to the Client within one day of sample receipt. The Client did not request any modification(s) to the analyses, as listed on the COC.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Post-Receipt Sample Custody

Custody of the sample during sample preparation (if applicable) and analysis was assigned to individual analysts. Copies of completed 'internal chain of custody' forms are included in Section A.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Methods 6010B and 6020A

The acceptance criterion of < 2 x RL is substituted for < 2 x MDL for interference check solution ICS-A.

Analytical Methods

Sample preparation and analytical methods that were employed are per the SOW.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard. The target analyte list was specified by the Client. Proposed RLs were submitted by TriMatrix to the Client prior to the receipt of any samples.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Project-specific Analytes of Concern

No project-specific analytes of concern were identified in the SOW, however, it is assumed that Method 8330 and 8332 target analytes are of concern.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed. For cases in which the analyte is not listed in the QSM, internal laboratory control limits were used.

Hold Times

All samples were extracted/digested (where applicable) and analyzed within hold time with the exception of the MS and MSD for sample 40MW5 for one SVOC target analyte. A second MS/MSD fortified with that target analyte was extracted within twice the hold time. See the QC section for Semivolatiles for further detail. The Client was advised at the time of discovery.

Technical Issues

There were no general technical issues. Any issues unique to a particular parameter will be discussed in the QC section for it.

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample is reanalyzed for confirmation purposes, is confirmed, and also reported, the second analysis includes the suffix 'RE1'. If the confirmation was not performed simultaneously, the second set of sample results is reported on a second Form 1 since that confirmation analysis did not occur at the same time and/or date.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the preceding Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A QC Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation); it is limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.).

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

STATEMENT OF DATA QUALIFICATIONS

Total Metals by EPA 6000/7000 Series Methods

Qualification: The % difference between the values of the isotopes monitored for this analyte exceeded 25%; the lower of the two results has been reported.

Analysis: USEPA-6020A

Sample/Analyte:		
0708362-01	17MW3	Nickel
0708363-01	40MW6	Nickel
0708363-03	40MW5	Nickel
0708363-05	DUP-1	Chromium
0708363-05	DUP-1	Nickel

Qualification: This analyte was not present in this sample at a concentration greater than 50 times the MDL, therefore serial dilution is not required.

Analysis: USEPA-6010B

Sample/Analyte: 0708363-03 40MW5 Potassium

Qualification: This analyte was not present in this sample at a concentration greater than 100 times the MDL, therefore serial dilution is not required.

Analysis: USEPA-6020A

Sample/Analyte: 0708363-03 40MW5 Chromium

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was greater than or equal to 4 times the spiked amount; the non-spiked sample result is not qualified.

Analysis: USEPA-6010B

Sample/Analyte: 0708363-03 40MW5 Calcium

STATEMENT OF DATA QUALIFICATIONS

Dissolved Metals by EPA 6000/7000 Series Methods

Qualification: The analyte concentration in the MB for this common lab contaminant was greater than 1/2 the RL, but less than or equal to the RL. All associated samples had results less than the RL. No qualification is required.

Analysis: USEPA-6020A

0709686-BLK1 Zinc

Qualification: The % difference between the values of the isotopes monitored for this analyte exceeded 25%; the lower of the two results has been reported.

Analysis: USEPA-6020A

Sample/Analyte: 0708362-01 17MW3 Nickel

0708363-03 40MW5 Nickel

Qualification: This analyte was not present in this sample at a concentration greater than 50 times the MDL, therefore serial dilution is not required.

Analysis: USEPA-6010B

Sample/Analyte: 0708363-03 40MW5 Potassium

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was greater than or equal to 4 times the spiked amount; the non-spiked sample result is not qualified.

Analysis: USEPA-6010B

Sample/Analyte: 0708363-03 40MW5 Calcium

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination	n	Failed Signal to noise ratio		

DATA VALIDATION REPORT - Level III Review

SDG No.: R2739188 **Fraction:** Perchlorate

Lab: Columbia Analytical Services **Project Name** Radford SWMU 40

Reviewer: RA **Date:** September 14, 2007

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The perchlorate result in sample 17MW3 exceeded the calibration range of the instrument and was flagged "E" by the laboratory. This result was flagged "J,q" by the reviewer. This sample was re-analyzed at a dilution factor of two with an acceptable result that should be used for data interpretation purposes.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: Rayan

Perchlorate

Reviewer: RA
Date: 9/12/07
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: SWMU 40
Project Number:
Laboratory: Columbia Analytical
SDG No.: R2739188
Test Name: Perchlorate
Method No.: 6850

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	✓		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	✓		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		✓	
1.4	Do sample preservation, collection and storage condition meet method requirement?	✓		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC?	✓		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample collection, preservation, shipping, and storage condition meet the project controlling documents?	✓		
	Action: No chemical preservation required.			✓
2.2	Have any technical holding times (28 days), determined from date of sampling to date of analysis, (including dilution or reanalysis) been exceeded? If yes, J(+)/UJ(-).		✓	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		✓	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks prepared at the appropriate frequency? If not, note in DV report.	✓		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the [sample]≤ 5X[associated blank].		✓	
3.3	Do any field equipment blanks blanks have positive results? If Yes, use same rules above.		✓	

Notes:

URS

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve?If no apply R flags.	✓		
4.2	Are all initial calibration correlation coefficient within the control limits (r>0.99)?If no J(+), R (-)	✓		
4.3	Was an ICV analyzed and are %RSDs < 15%? If no J(+), UJ(-)	✓		
4.4	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Are %Ds < 25%. If no, R (-), J (+).	✓		

Notes:

5.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
5.1	Is the matrix spike/matrix spike duplicate recovery form present?	✓		
5.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
5.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?(75-125% for water and soil)		✓	
5.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits (i.e., 15%)?		✓	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data.			

Notes:

6.0 Laboratory Control Sample(LCS)		Yes	No	NA
6.1	Is the LCS recovery form present?	✓		
6.2	Was LCS analyzed at required frequency (one per 20 samples per batch) for each matrix?	✓		
6.3	Is the %R for LCS outside the QC limits(85-115% for water and soil)? If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).		✓	
6.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits(i.e., 15%)? If Yes, J(+) only.		✓	

Notes:

7.0 Field Duplicate		Yes	No	NA
7.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
	For sample results > 5 x RL, use 50% RPD. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 x RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV		✓	

Notes: 40MW5 and DUP-1 PQL

Perchlorate 0.64 ug/L 0.67 ug/L 0.2 ok ✓

8.0 Laboratory Duplicates		Yes	No	NA
8.1	Was a lab duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	✓		
8.2	Are all analyte duplicate results within control limits (i.e., RPD < 15%)? If no, J(+) only.	✓		

Notes:

9.0 Internal Standards		Yes	No	NA
9.1	Are internal standard areas of every sample and blank within +/-30% of the ICV or CCV? If no, J(+), UJ(-)	✓		
	If the IS area count criteria is not met, corrective action should be taken to resolve the problem and the entire batch should			
	be re-analyzed.	✓		

10.0 Detection Limit Verification		Yes	No	NA
10.1	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	✓		
10.2	Were sample concentrations above the highest standard run at a dilution? If not, note in DV report.	✓		

Notes: Perchlorate exceeded calib range in 17MW3 → E by lab → J/q use DF=2

11.0 Data Completeness		Yes	No	NA
11.1	Is % completeness within the control limits? (Control limit 90%)	✓		
11.2	Number of samples:			
11.3	Number of target compounds in each analysis:			
11.4	Number of results rejected and not reported:			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100%

PROJECT: SWMU 40
SUBMISSION #: R2739188

Samples were collected on 08/13/07 – 8/15/07 and received at CAS/Rochester on 08/16/07 in good condition at a cooler temperature of 2 °C. A Level 4 Data package has been delivered.

PERCHLORATE ANALYSIS

Six water samples were analyzed for Perchlorate by LC/MS method 6850 with DOD modifications from the DOD Perchlorate Handbook. Values detected between the MDL and PQL have been flagged with a "J" as estimated.

Sample 17MW3 was re-analyzed at a larger dilution to bring the target analyte within the calibration range of the method. Both dilutions were reported with the target analyte over range flagged with an "E".

All the initial and continuing calibration criteria were met for all analytes.

Site-specific QC was done on sample 40MW5. The recoveries were diluted out due to the level of Perchlorate detected in the sample and have been flagged with a "D". The RPD was within QC limits. The Blank Spike (LCS) and LODV spike recoveries were within QC limits.

The Laboratory Blank associated with these samples was free of contamination.

No other analytical or QC problems were encountered.

ACCREDITED IN ACCORDANCE WITH nelac

2005 SEAL OF EXCELLENCE PROGRAM

ORGANIC QUALIFIERS

U - Indicates compound was analyzed for but not detected. The sample quantitation limit must be corrected for dilution and for percent moisture.

J - Indicates an estimated value. The flag is used either when estimating a concentration for tentatively identified compounds, or when the data indicate the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit and greater than the MDL. This flag is also used for DoD instead of "P" as indicated below.

N - Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds, where the identification is based on a mass spectral library search.

P - This flag is used for a pesticide/Aroclor target analyte when there is a greater than 40% (25% for CLP) difference for detected concentrations between the two GC columns. The concentration is reported on the Form I and flagged with a "P" ("J" for DoD).

Q - for DoD only – indicates a pesticide/Aroclor target is not confirmed. This flag is used when there is ≥ 100% difference for the detected concentrations between the two GC columns.

C - This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B - This flag is used when the analyte is found in the associated blank as well as in the sample.

E - This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. If a sample or extract is re-analyzed at a higher dilution factor, as in the "E" flag above, the "DL" suffix is appended to the sample number on the Form I for the diluted sample, and ALL concentration values reported on that Form I are flagged with the "D" flag.

A - This flag indicates that a TIC is a suspected aldol-condensation product.

X - As specified in Case Narrative.

* - This flag identifies compounds associated with a quality control parameter which exceeds laboratory limits.

PC Secondary Review: _____

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data is necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCS/LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination	n	Failed Signal to noise ratio
