Data Validation

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Explosives
Microbac Laboratories, Inc., SDG L10040503

DATE: June 10, 2010; Revised June 17, 2010

The purpose of this memorandum is to present the data validation report for the samples collected for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on April 20, 2010. The report was revised for the inclusion of compound 2,4,6-trinitrotoluene into the target list and for the addition of confirmation sample for fraction -01CF. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of eight solid samples (three confirmation and one diluted samples included) were validated. The sample IDs are:

Field Sample ID	Lab Sample ID	Field Sample ID	Lab Sample ID
54ASC01 6'	L10040503-01	54ASC03 4'	L10040503-03CF1
54ASC01 6'	L10040503-01CF1	54ASC03 4'	L10040503-03CFDL1
54ASC02 6'	L10040503-02	54ASC03 4'	L10040503-03DL01
54ASC03 4'	L10040503-03	54ASC04 3'	L10040503-04

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Blank Analysis
	X	Initial Calibration
	X	Continuing Calibration
X		System Monitoring Compounds
X		Laboratory Control Sample and Laboratory Control Sample Duplicate
	X	Matrix Spike/Spike Duplicate
	X	Field Duplicate
X		Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. Target compound 2,4,6-trinitrotoluene exceeded calibration range and was qualified estimated "J" for samples 54ASC01 6' (L10040503-01), 54ASC01 6' (L10040503-01CF1), 54ASC03 4' (L10040503-03CFDL1), and 54ASC03 4' (L10040503-03DL01); and rejected "R" for samples 54ASC03 4' (L10040503-03) and 54ASC03 4' (L10040503-03CF1) based on these outliers. For samples 54ASC03 4' (L10040503-03), 54ASC03 4' (L10040503-03CF1), 54ASC03 4' (L10040503-03CFDL1), and 54ASC03 4' (L10040503-03DL01), the surrogate 1,2-dinitrobenzene was outside criteria. Sample 54ASC03 4' (L10040503-03) should be used as best fit data with the other dilutions and confirmation samples provided as extra QC (See Section V for further details). There were no impacts to the data completeness.

 Date

**RFAAP VALIDATION REPORT
EXPLOSIVES REVIEW
SDG L10040503**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled ($@4^{\circ}\text{C} \pm 2^{\circ}\text{C}$) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 04/20/10, the coolers were received by the primary laboratory (Microbac) on 04/21/10 at 0.0°C and 0.0°C . Even though the cooler temperatures were below criteria; there were no impacts for the sample analysis and no qualifiers were applied based upon these outliers.
- Holding Time Review: The solid samples were collected on 04/20/10. For the solid samples, the samples for explosive were extracted on 04/26/10. The samples were analyzed on 04/27/10 (04/30/10 and 05/06/10 for confirmation and re-analysis samples). Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤ 5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	QC Blank ID	Compound	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
04/27/10	WG329263-01	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None
04/30/10	WG329263-01	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None

MRL = Method Reporting Limit
NA = Not Applicable

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥ 0.995 and/or the percent relative standard deviation (%RSD) must be $\leq 20\%$.

- For the explosives initial calibration performed on 01/29/10 on instrument HPLC4, all criteria were met for target explosives compounds. All target compounds were determined using linear regression with correlation coefficients ≥ 0.995 . No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC01 6' (L10040503-01CF1), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), 54ASC03 4' (L10040503-03DL01), 54ASC03 4' (L10040503-03CF1), 54ASC03 4' (L10040503-03CFDL1), and 54ASC04 3' (L10040503-04) apply to this initial calibration.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than $\pm 20\%$.

- For explosives initial calibration verification performed on 01/29/10 @19:02 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.
- For explosives continuing calibration performed on 04/27/10 @14:36 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) apply to this continuing calibration.
- For explosives continuing calibration performed on 04/27/10 @23:23 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives confirmation continuing calibration performed on 04/29/10 @23:39 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01CF1) and 54ASC03 4' (L10040503-03CF1) apply to this confirmation continuing calibration.
- For explosives confirmation continuing calibration performed on 04/30/10 @11:10 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. Sample 54ASC03 4' (L10040503-03CFDL1) applies to this confirmation continuing calibration.
- For explosives confirmation continuing calibration performed on 05/01/10 @00:04 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 05/06/10 @15:22 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. Sample 54ASC03 4' (L10040503-03DL01) applies to this continuing calibration.
- For explosives continuing calibration performed on 05/06/10 @19:12 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

V-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 1,2-dinitrobenzene (50-150%)

- For sample 54ASC03 4' (L10040503-03), the surrogate 1,2-dinitrobenzene did not recover and was outside criteria. The sample was re-analyzed at a dilution as 54ASC03 4' (L10040503-03DL01) with the surrogate also not recovering. The sample confirmations L10040503-03CF1 (155%) and L10040503-03CFDL1 (175%) recovered above criteria limits. All original and conformational runs were in agreement in regards to the detections found. The original sample should be used with all detects qualified estimated "J" and non-detects "UJ" based upon these outliers (matrix interference). The dilution and confirmation samples were also qualified estimated "J" and non-detects "UJ" based upon these outliers (matrix interference). There were no impacts to the data completeness.
- For sample 54ASC01 6' (L10040503-01CF1), the surrogate 1,2-dinitrobenzene (165%) was outside criteria. The original sample was within criteria. The confirmation sample was qualified estimated bias high "K" for detects and no qualifier for non-detects based upon this outlier (matrix interference).
- For all other samples, all criteria were met.

VI-Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) and LCS duplicate (LCSD) are used to monitor long-term precision and accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- Samples WG329263-02 were WG329263-03 were used as solid LCS/LCSD for explosives analyzed on 04/27/10. 2-Amino-4,6-dinitrotoluene (77.6%; 77.4%) was outside criteria. For all other target explosives, all criteria were met. 2-Amino-4,6-dinitrotoluene was qualified estimated "L" for detects and "UL" for non-detects based upon the low recoveries. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), 54ASC03 4' (L10040503-03DL01), and 54ASC04 3' (L10040503-04) apply to this LCS/LCSD.
- Samples WG329263-02 were WG329263-03 were used as solid LCS/LCSD for explosives analyzed on 04/30/10. All criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01CF1), 54ASC03 4' (L10040503-03CF1) and 54ASC03 4' (L10040503-03CFDL1) apply to this LCS/LCSD.

VII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009).

If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- No project specific MS/MSD was performed with this SDG; therefore MS/MSD was not evaluated. Samples 54ASC01 6' (L10040503-01), 54ASC01 6' (L10040503-01CF1), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), 54ASC03 4' (L10040503-03DL01), 54ASC03 4' (L10040503-03CF1), 54ASC03 4' (L10040503-03CFDL1), and 54ASC04 3' (L10040503-04) apply to this MS/MSD.

VIII-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- No project specific solid field duplicate was analyzed with this SDG; therefore, field duplicate was not evaluated.

IX-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".
- Target compound 2,4,6-trinitrotoluene exceeded calibration range and was qualified estimated "J" for samples 54ASC01 6' (L10040503-01), 54ASC01 6' (L10040503-01CF1), 54ASC03 4' (L10040503-03CFDL1), and 54ASC03 4' (L10040503-03DL01); and rejected "R" for samples 54ASC03 4' (L10040503-03) and 54ASC03 4' (L10040503-03CF1) based on these outliers.
- For samples 54ASC01 6' (L10040503-01), 54ASC03 4' (L10040503-03), and 54ASC03 4' (L10040503-03DL01), nitroglycerin was detected; however, not confirmed on dissimilar column. Nitroglycerin was qualified estimated "J" based upon these outliers for these samples
- For samples 54ASC03 4' (L10040503-03; 555%) and 54ASC03 4' (L10040503-03DL01; 764%), 4-amino-2,6-dinitrotoluene exceeded confirmation criteria. 4-Amino-2,6-dinitrotoluene was qualified estimated "J" based upon these outliers for these samples.
- For all other samples and detected target compounds, all confirmation criteria were met.

Sample: 54ASC03 4' (L10040503-03), 2,6-dinitrotoluene

$$Y = mX + b$$

Y = Area of target compound for sample

m = slope of curve = 0.27334443

X = Amount on column

b = Y-intercept = -0.2298343

Given:

m = 0.27334443

b = -0.2298343

Y = Area = 1674.95435

X = 6128.47

$$\text{Conc. } \mu\text{g/kg} = (A_x * V_t * DF) / (W_s * D)$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$

A_x = Amount of compound being measured (ng/mL).

V_t = Volume of total extract (mL).

$W(s)$ = Weight of sample (g).

D = Percent dry weight (100 - % moisture in sample)/100 (Air dried = 1.000)

DF = Dilution factor

$$\text{Conc. } \mu\text{g/kg} = (6128.47 * 40 * 1) / (10.35 * 1.000) = 23700 \mu\text{g/kg} = 23.7 \text{ mg/kg}$$

Reported Value = 23.7 mg/kg

% Difference = 0.0%

Values were within 10% difference

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% D for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Lead
Microbac Laboratories, Inc., SDG L10040503

DATE: June 10, 2010

The purpose of this memorandum is to present the data validation report for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on April 20, 2010. Solid samples were analyzed for lead using USEPA SW-846 3051A/6010B for ICP metals. A total of four solid samples were validated. The sample IDs are:

Field Sample ID	Lab Sample ID	Field Sample ID	Lab Sample ID
54ASC01 6'	L10040503-01	54ASC03 4'	L10040503-03
54ASC02 6'	L10040503-02	54ASC04 3'	L10040503-04

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Initial and Continuing Calibration
	X	Blank Analysis
	X	ICP Interference Check Sample (ICS)
	X	Laboratory Control Sample (LCS)
	X	Laboratory Sample Duplicate
	X	Matrix Spike and Spike Duplicate
	X	ICP Serial Dilution
	X	Field Sample Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable.

Eric Malarek, Chemist

6/10/10
Date

**RFAAP VALIDATION REPORT
METALS REVIEW
SDG L10040503**

I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped at ambient temperature for ICP metals (cool @4°C±2°C if with other tests) with a maximum holding time is 180 days (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 04/20/10, the coolers were received by the primary laboratory (Microbac) on 04/21/10 at 0.0°C and 0.0°C. Even though the cooler temperatures were below criteria; there were no impacts for the sample analysis and no qualifiers were applied based upon these outliers.
- Holding Time Review: Samples were collected 04/20/10 for lead analysis. For solid samples, the soil samples were digested on 04/23/10 and analyzed on 04/26/10 for ICP metals. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

ICP: 1- blank (DoD QSM <½ MRL)
3 – standards (r≥0.995)
ICV/CCV (90-110%) (DoD QSM 90-110%)
MRL (70-130%) (DoD QSM 80-120%)
High Std. (95-105%)

- The solid samples were analyzed for ICP metals on 04/26/10. Lead was determined using linear regression with correlation coefficients ≥0.995. All ICV/CCV/High Standard/MRL criteria were met for lead for all runs. No qualifiers were applied.

III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	Analysis	QC Blank ID	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
04/26/10	ICP Pb	ICB/CCBs	<2*MDL	NA	None
04/26/10	ICP Pb	WG329161-02	<1/2*MRL	NA	None

NA = Not Applicable

MDL = Method Detection Limit.

MRL = Method Reporting Limit.

IV-ICP Interference Check Sample (ICS)

The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

V-Laboratory Control Samples (LCS)

The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table G-19 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used.

- Sample WG329161-03 was used as solid LCS for ICP metals analysis on 04/26/10. All criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) apply to this LCS.

VI-Laboratory Duplicate Sample Analysis

Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

VII-Matrix Spike/Spike Duplicate

MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-19 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals.

- Sample L10040541-01 was used as solid laboratory MS/MSD for ICP metals analysis on 04/26/10. The spiked sample was not a RFAAP site specific sample; therefore, was not evaluated. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) apply to this MS/MSD.

VIII-ICP Serial Dilution

An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 04/26/10 using solid sample L10040541-04. The serial dilution sample was not a RFAAP site specific sample; therefore, was not evaluated. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) apply to this serial dilution.

IX-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

X-Quantitation Verification

The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

Sample: 54ASC01 6' (L10040503-01), Lead

$$\text{Conc. (mg/kg)} = \{(\text{conc. } \mu\text{g/L}) * (\text{Final Volume L}) * (\text{DF})\} / \{(\text{Weight Sample g}) * (\text{Fraction Solids})\}$$

$$\text{Conc. (mg/kg)} = \{(730.04 \mu\text{g/L}) * (0.050 \text{ L}) * (1)\} / \{(1.347 \text{ g}) * (0.8550)\} = 31.7 \mu\text{g/g} = 31.7 \text{ mg/kg}$$

Reported concentration = 31.7 mg/kg

%D = 0.0%

Values were within 10% difference.

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% D for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Dieldrin, Heptachlor Epoxide, and PCB 1254
Microbac Laboratories, Inc., SDG L10040503

DATE: June 10, 2010

The purpose of this memorandum is to present the data validation report for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on April 20, 2010. Solid samples were analyzed for select pesticides dieldrin and heptachlor epoxide using USEPA Method 3550B/8081A and for PCB 1254 using 3550B/8082. A total of seven solid samples (includes three re-analysis samples) were validated. The sample IDs are:

Field Sample ID	Lab Sample ID	Field Sample ID	Lab Sample ID
54ASC01 6'	L10040503-01	54ASC03 4'	L10040503-03RE
54ASC01 6'	L10040503-01RE	54ASC04 3'	L10040503-04
54ASC02 6'	L10040503-02	54ASC04 3'	L10040503-04RE
54ASC03 4'	L10040503-03		

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

	X	Matrix Spike/Spike Duplicate
	X	Field Duplicate
X		Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications. For samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04), one or more of the pesticide surrogate(s) were outside criteria. Samples 54ASC03 4' (L10040503-03RE) and 54ASC04 3' (L10040503-04RE) were re-analyzed "-RE" as part of QC procedures for pesticides. Samples 54ASC01 6' (L10040503-01RE) and 54ASC03 4' (L10040503-03RE) were also re-analyzed "-RE" as part of QC procedures for PCBs. The original parent samples should be used as best fit data with the other re-analysis samples provided as extra QC (See Section VI for further details). There were no impacts to the data completeness.

**RFAAP VALIDATION REPORT
SELECT PESTICIDE/PCB REVIEW
SDG L10040503**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, pesticide and PCB compounds are shipped cooled ($@4^{\circ}\text{C} \pm 2^{\circ}\text{C}$) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 04/20/10, the coolers were received by the primary laboratory (Microbac) on 04/21/10 at 0.0°C and 0.0°C . Even though the cooler temperatures were below criteria; there were no impacts for the sample analysis and no qualifiers were applied based upon these outliers.
- Holding Time Review: The solid samples were collected on 04/20/09. The samples analyzed for select pesticides were extracted on 04/23/10 and analyzed on 04/27/10 and 04/29/10 (for re-analyzed "RE" samples). The samples analyzed for PCB 1254 were extracted on 04/28/10 and analyzed on 04/28/10 and 05/02/10 (for re-analyzed samples). Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Instrument Performance Check (Degradation Standard)

Performance checks on the gas chromatograph with electron capture detector (GC/ECD) system are performed to ensure adequate resolution and instrument sensitivity. The performance evaluation mixture (PEM) must be analyzed at the beginning of the analytical sequence. The breakdown of Endrin and 4,4'-DDT must be $\leq 15\%$ on both signals.

- For analysis performed on 04/26/10 @10:10, endrin and 4,4'-DDT percent breakdowns were 6.95% and 7.82%. All criteria were met. No qualifiers were applied.
- For analysis performed on 04/27/10 @05:22, endrin and 4,4'-DDT percent breakdowns were 8.21% and 9.20%. All criteria were met. No qualifiers were applied.
- For analysis performed on 04/29/10 @12:12, endrin and 4,4'-DDT percent breakdowns were 2.52% and 4.94%. All criteria were met. No qualifiers were applied.
- For analysis performed on 04/29/10 @08:58, endrin and 4,4'-DDT percent breakdowns were 2.41% and 3.09%. All criteria were met. No qualifiers were applied.

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5 point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. Calibration factors are generated for each compound. The DoD QSM specifies that the percent relative standard deviation (%RSD) for all single peak target analytes, and aroclors 1016, 1242, 1254, and 1260 must be <20% or the mean %RSD for all analytes in the standard must be $\leq 20\%$. If linear regression is used, the correlation coefficient must be ≥ 0.995 .

- For the pesticide initial calibration performed on 04/26/10 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), 54ASC03 4' (L10040503-03RE), 54ASC04 3' (L10040503-04) and 54ASC04 3' (L10040503-04RE) were analyzed using this initial calibration. Sample 54ASC01 6' (L10040503-01RE) was only analyzed for PCB1254.
- For the PCB initial calibration performed on 04/07/10 on instrument HP9, all criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) were analyzed using this initial calibration.
- For the PCB 1254 initial calibration performed on 05/02/10 on instrument HP9, all criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01RE) and 54ASC03 4' (L10040503-03RE) were analyzed using this initial calibration. Sample 54ASC04 3' (L10040503-04RE) was only analyzed for pesticides.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for pesticide/PCB target compounds. Continuing calibration standards containing both target compounds and surrogates are analyzed at the beginning of each 12-hour analytical shift and after every 20 samples. The DoD QSM specifies that the percent difference (%D) or the average %Ds for all analytes in the standard from the initial calibration should be no greater than $\pm 20\%$.

- For pesticide initial calibration verification performed on 04/26/10 @18:01 on instrument HP15, all criteria were met for all target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide initial calibration verification performed on 04/26/10 @18:29 on instrument HP15, all criteria were met for all target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide continuing calibration performed on 04/27/10 @00:10 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 04/27/10 @05:50 on instrument HP15, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 04/29/10 @12:40 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54ASC03 4' (L10040503-03RE) and 54ASC04 3' (L10040503-04RE) were analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 04/29/10 @09:44 on instrument HP15, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For PCB 1254 initial calibration verification performed on 04/07/10 @18:02 on instrument HP9, PCB1254-2 (20.4%) and PCB1254-3 (20.7%) were outside criteria. The average %D for PCB1254 was 15.5%; therefore, no qualifiers were applied based upon these outliers. No samples reported were analyzed using this initial calibration verification.
- For PCB 1254 continuing calibration performed on 04/28/10 @16:06 on instrument HP9, all criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) were analyzed using this continuing calibration.
- For PCB 1254 initial calibration verification performed on 05/02/10 @15:39 on instrument HP9, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For PCB 1254 continuing calibration performed on 05/02/10 @22:15 on instrument HP9, all criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01RE) and 54ASC03 4' (L10040503-03RE) were analyzed using this continuing calibration.
- For PCB 1254 continuing calibration performed on 05/03/10 @02:08 on instrument HP9, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For PCB 1254 continuing calibration performed on 05/03/10 @06:02 on instrument HP9, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For PCB 1254 continuing calibration performed on 05/03/10 @10:32 on instrument HP9, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

V-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤ 5 times (5X) the maximum amount for pesticide and PCB target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

Table 2 Blank Contamination Analysis Summary

Parameter	Analysis Date	QC Blank ID	Compound	Max Conc. µg/kg	Action Level µg/kg	B qualified samples (for this SDG)
Pesticides	04/26/10	WG329155-01	All target <½MRL	NA	NA	None
Pesticides	04/29/10	WG329687-01	All target <½MRL	NA	NA	None
PCB 1254	04/28/10	WG329536-01	All target <½MRL	NA	NA	None
PCB 1254	05/02/10	WG329536-01	All target <½MRL	NA	NA	None

NA = Not Applicable

MRL = Method Reporting Limit

VI-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Pesticides Solid Criteria: Tetrachloro-m-xylene: 70-125% (DoD QSM 70-125%)

Decachlorobiphenyl: 55-130% (DoD QSM 55-130%)

PCBs Solid Criteria:

Tetrachloro-m-xylene: 29-133% (DoD QSM None Listed)

Decachlorobiphenyl: 60-125% (DoD QSM 60-125%)

- For pesticide run for sample 54ASC01 6' (L10040503-01), surrogate tetrachloro-m-xylene (55.1%) was below criteria. All criteria were met for surrogate decachlorobiphenyl. Since only one surrogate was outside criteria; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC02 6' (L10040503-02), surrogate tetrachloro-m-xylene (52.3%) was below criteria. All criteria were met for surrogate decachlorobiphenyl. Since only one surrogate was outside criteria; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC03 4' (L10040503-03), surrogate tetrachloro-m-xylene (511%) and decachlorobiphenyl (47.8%) were outside criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers. The sample was re-analyzed with similar recoveries.
- For pesticide run for sample 54ASC03 4' (L10040503-03RE), surrogate tetrachloro-m-xylene (138%) and decachlorobiphenyl (36.7%) were outside criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers. The sample was re-analyzed.
- For pesticide run for sample 54ASC04 3' (L10040503-04), surrogate tetrachloro-m-xylene (50.5%) and decachlorobiphenyl (54.8%) were below criteria. All target pesticides were non-detect and were qualified estimated "UL" based upon the low recoveries. The sample was re-analyzed with only a single outlier.
- For pesticide run for sample 54ASC04 3' (L10040503-04RE), surrogate tetrachloro-m-xylene (55.1%) was below criteria. All criteria were met for surrogate decachlorobiphenyl. Since only one surrogate was outside criteria; no qualifiers were applied based upon this outlier.
- For all PCB runs, all criteria were met. No qualifiers were applied.

VII-Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD QSM solid LCS recovery limits are specified in Table G-15 and Table G-17 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for pesticides and PCBs is $\leq 30\%$ RPD.

- Samples WG329155-02 and WG329155-03 were used as the solid LCS/LCSD for the pesticide analysis on 04/26-27/10. All criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) apply to this LCS/LCSD.

- Samples WG329687-02 and WG329687-03 were used as the solid LCS/LCSD for the pesticide re-analysis on 04/29/10. All criteria were met. No qualifiers were applied. Samples 54ASC03 4' (L10040503-03RE) and 54ASC04 3' (L10040503-04RE) apply to this LCS/LCSD.
- Samples WG329536-02 and WG329536-03 were used as the solid LCS/LCSD for the PCB 1254 analysis on 04/28/10. All criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), and 54ASC04 3' (L10040503-04) apply to this LCS/LCSD.
- Samples WG329536-02 and WG329536-03 were used as the solid LCS/LCSD for the PCB 1254 confirmation analysis on 05/02/10. All criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01RE) and 54ASC03 4' (L10040503-03RE) apply to this LCS/LCSD.

VIII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-15 and Table G-17 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for pesticides and PCBs is $\leq 30\%$ RPD.

- No pesticide project specific MS/MSD was analyzed with this SDG; therefore, it was not evaluated. Samples 54ASC01 6' (L10040503-01), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), 54ASC03 4' (L10040503-03RE), 54ASC04 3' (L10040503-04) and 54ASC04 3' (L10040503-04RE) apply to this MS/MSD.
- No PCB project specific MS/MSD was analyzed with this SDG; therefore, it was not evaluated. All criteria were met. No qualifiers were applied. Samples 54ASC01 6' (L10040503-01), 54ASC01 6' (L10040503-01RE), 54ASC02 6' (L10040503-02), 54ASC03 4' (L10040503-03), 54ASC03 4' (L10040503-03RE), and 54ASC04 3' (L10040503-04) apply to this MS/MSD.

IX-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

X-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The difference between the calculated value and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %RPD between the primary and secondary columns. Any sample value $> \text{MDL}$ and $< \text{MRL}$ or $< 3 * \text{MDL}$ (whichever is greater) was qualified as estimated, "J."

- For all samples with detected chlorinated PCB 1254, the %RPD (average %RPD for multi-peak compounds) between the primary and secondary columns was within criteria.
- All chlorinated pesticides were non-detect. No confirmations were required.

Sample: WG329155-02-LCS, Dieldrin

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{CF} * \text{Vi} * \text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$
Ax = Area/response for compound being measured.
Vt = Volume of total extract in (μL)
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (mL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

$$\begin{aligned}\text{Conc. } \mu\text{g/kg} &= (4822400000\text{Area} * 10000\mu\text{L} * 1) / (117400000\text{Area/pg} * (1000\text{pg/ng}) * 1\mu\text{L} * 30.0\text{g} * 1.00) \\ &= 13.7 \mu\text{g/kg} \text{ (Signal \#1)}\end{aligned}$$

$$\begin{aligned}\text{Conc. } \mu\text{g/kg} &= (4228600000\text{Area} * 10000\mu\text{L} * 1) / (108000000\text{Area/pg} * (1000\text{pg/ng}) * 1\mu\text{L} * 30.0\text{g} * 1.00) \\ &= 13.1 \mu\text{g/kg} \text{ (Signal \#2)}\end{aligned}$$

Reported Value = 13.1 $\mu\text{g/kg}$ (Signal #2)

% Difference = 0.0%

Values were within 10% difference

Sample: 54ASC03 4' (L10040503-03 & L10040503-03RE), Aroclor 1254

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{CF} * \text{Vi} * \text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$
Ax = Area/response for compound being measured.
Vt = Volume of total extract (μL).
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (μL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

Original (L10040503-03):

$$\text{Conc1 } \mu\text{g/kg} = (0 * 10000 * 1) / (178500 * (1000) * 1 * 30.74 * 0.9150) = 0.00 \mu\text{g/kg}$$

$$\text{Conc2 } \mu\text{g/kg} = (310597711 * 10000 * 1) / (422500 * (1000) * 1 * 30.74 * 0.9150) = 261.36 \mu\text{g/kg}$$

$$\text{Conc3 } \mu\text{g/kg} = (269028197 * 10000 * 1) / (368600 * (1000) * 1 * 30.74 * 0.9150) = 259.49 \mu\text{g/kg}$$

$$\text{Conc4 } \mu\text{g/kg} = (192725071 * 10000 * 1) / (250100 * (1000) * 1 * 30.74 * 0.9150) = 273.97 \mu\text{g/kg}$$

$$\text{Conc5 } \mu\text{g/kg} = (216031523 * 10000 * 1) / (274300 * (1000) * 1 * 30.74 * 0.9150) = 280.01 \mu\text{g/kg}$$

Average concentration = 269 $\mu\text{g/kg}$ (Peaks 2 $\rightarrow$ 5)

Reported Value = 269 $\mu\text{g/kg}$ (Original)

% Difference = 0.0%

Values were within 10% difference.

Confirmation (L10040503-03RE):

Conc1 $\mu\text{g/kg}$ = $(93213522 \cdot 10000 \cdot 1) / (168800 \cdot (1000) \cdot 1 \cdot 30.74 \cdot 0.9150) = 196.33 \mu\text{g/kg}$

Conc2 $\mu\text{g/kg}$ = $(255051484 \cdot 10000 \cdot 1) / (330100 \cdot (1000) \cdot 1 \cdot 30.74 \cdot 0.9150) = 274.70 \mu\text{g/kg}$

Conc3 $\mu\text{g/kg}$ = $(355520817 \cdot 10000 \cdot 1) / (481600 \cdot (1000) \cdot 1 \cdot 30.74 \cdot 0.9150) = 262.45 \mu\text{g/kg}$

Conc4 $\mu\text{g/kg}$ = $(188451293 \cdot 10000 \cdot 1) / (225900 \cdot (1000) \cdot 1 \cdot 30.74 \cdot 0.9150) = 296.59 \mu\text{g/kg}$

Conc5 $\mu\text{g/kg}$ = $(384705667 \cdot 10000 \cdot 1) / (424900 \cdot (1000) \cdot 1 \cdot 30.74 \cdot 0.9150) = 321.90 \mu\text{g/kg}$

Average concentration = $270 \mu\text{g/kg}$

Reported Value = $271 \mu\text{g/kg}$ (Confirmation)

% Difference = 0.4%

Values were within 10% difference.

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	The reported result is an estimated value (e.g., matrix interference was observed or the analyte was detected at a concentration outside the quantitation range).
B	Blank contamination. The recorded result is associated with a contaminated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Explosives
Microbac Laboratories, Inc., SDG L10050203

DATE: August 24, 2010

The purpose of this memorandum is to present the data validation report for the samples collected for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on April 6, 2010. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of one solid sample was validated. The sample Id is:

Field Sample ID	Lab Sample ID
54BSC05 10'	L10050203-01

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Blank Analysis
	X	Initial Calibration
	X	Continuing Calibration
	X	System Monitoring Compounds
	X	Laboratory Control Sample
	X	Matrix Spike/Spike Duplicate
	X	Field Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable.

Eric Malarek, Chemist

8/24/12
Date

**RFAAP VALIDATION REPORT
EXPLOSIVES REVIEW
SDG L10050203**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled ($@4^{\circ}\text{C} \pm 2^{\circ}\text{C}$) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- **Temperature Review:** The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 05/06/10, the cooler were received by the primary laboratory (Microbac) on 05/07/10 at 3.0°C and 2.0°C . All criteria were met. No qualifiers were applied.
- **Holding Time Review:** The solid sample was collected on 05/06/10. The sample was extracted on 05/12/10 and analyzed on 05/17/10 for PETN and 05/14/10 for other explosives. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤ 5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	QC Blank ID	Compound	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
05/14/10	WG331164-02	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None
05/15/10	WG331164-02	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None
05/17/10	WG331164-02	PETN $< \frac{1}{2}$ MRL	NA	NA	None

MRL = Method Reporting Limit
NA = Not Applicable

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥ 0.995 and/or the percent relative standard deviation (%RSD) must be $\leq 20\%$.

- For the explosives initial calibration performed on 05/13/10 on instrument HPLC4, all criteria were met for target explosives compounds. All target compounds were determined using linear regression with correlation coefficients ≥ 0.995 . No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this initial calibration.
- For the explosives initial calibration performed on 05/15/10 on instrument HPLC4, all criteria were met for target explosives compounds. All target compounds were determined using linear regression with correlation coefficients ≥ 0.995 . No qualifiers were applied. No soil samples reported apply to this initial calibration.
- For the PETN initial calibration performed on 08/27/09 on instrument HPLC4, all criteria were met. All target compounds were determined using linear regression with correlation coefficients ≥ 0.995 . No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this initial calibration.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than $\pm 20\%$.

- For explosives initial calibration verification performed on 05/13/10 @23:01 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this initial verification calibration.
- For explosives continuing calibration performed on 05/14/10 @08:10 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 05/14/10 @15:30 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives initial calibration verification performed on 05/15/10 @18:15 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.
- For explosives continuing calibration performed on 05/16/10 @04:53 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For PETN initial calibration verification performed on 08/27/09 @11:35 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.

- For PETN continuing calibration performed on 05/17/10 @19:15 on instrument HPLC4, all criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this continuing calibration.
- For PETN continuing calibration performed on 05/17/10 @22:44 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For PETN continuing calibration performed on 05/17/10 @23:49 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

V-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 1,2-dinitrobenzene (50-150%)

- All criteria were met. No qualifiers were applied.

VI-Laboratory Control Sample

Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used.

- Sample WG331164-03 was used as solid LCS for explosives analyzed on 05/14/10. All criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this LCS.
- Sample WG331164-03 was used as solid LCS for explosives analyzed on 05/15/10. All criteria were met. No qualifiers were applied. No samples reported apply to this LCS.
- Sample WG331164-06 was used as solid LCS for PETN analyzed on 05/17/10. All criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this LCS.

VII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- Sample 54BDW37 10' (L10050203-14) was used as the solid MS/MSD for the explosives analysis on 05/14/10. Tetryl (RPD=54.8%) was outside criteria. For all other target compounds, all criteria were met. All associated samples were non-detect; therefore, no qualifiers were applied based upon this outlier. Sample 54BSC05 10' (L10050203-01) applies to this MS/MSD.

VIII-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- No project specific solid field duplicate was analyzed with this SDG; therefore, field duplicate was not evaluated.

IX-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based: calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".
- All explosives were non-detect. No confirmations were required.

Sample: WG331164-03 LCS, 2,6-dinitrotoluene

$$Y = mX + b$$

Y = Area of target compound for sample

m = slope of curve = 0.2881566

X = Amount on column

b = Y-intercept = -0.4718702

Given:

m = 0.2881566

b = -0.4718702

Y = Area = 36.73383

$$X = 129.12$$

$$\text{Conc. } \mu\text{g/kg} = (A_x * V_t * DF) / (W_s * D)$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$

A_x = Amount of compound being measured (ng/mL).

V_t = Volume of total extract (mL).

$W(s)$ = Weight of sample (g).

D = Percent dry weight (100 - % moisture in sample)/100 (Air dried = 1.000)

DF = Dilution factor

$$\text{Conc. } \mu\text{g/kg} = (129.12 * 40 * 1) / (10.00 * 1.000) = 516.47 \mu\text{g/kg} = 0.516 \text{ mg/kg}$$

Reported Value = 0.516 mg/kg

% Difference = 0.0%

Values were within 10% difference

Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% D for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Lead
Microbac Laboratories, Inc., SDG L10050203

DATE: August 25, 2010

The purpose of this memorandum is to present the data validation report for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on May 6, 2010. Solid samples were analyzed for lead using USEPA SW-846 3051A/6010B for ICP metals. A total of one solid sample was validated. The sample Id is:

Field Sample ID	Lab Sample ID
54BSC05 10'	L10050203-01

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Initial and Continuing Calibration
	X	Blank Analysis
	X	ICP Interference Check Sample (ICS)
	X	Laboratory Control Sample (LCS)
	X	Laboratory Sample Duplicate
	X	Matrix Spike and Spike Duplicate
	X	ICP Serial Dilution
	X	Field Sample Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable.

Eric Malarek, Chemist

Date

**RFAAP VALIDATION REPORT
METALS REVIEW
SDG L10050203**

I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped at ambient temperature for ICP metals (cool @4°C±2°C if with other tests) with a maximum holding time is 180 days (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 05/06/10, the cooler were received by the primary laboratory (Microbac) on 05/07/10 at 3.0°C and 2.0°C. All criteria were met. No qualifiers were applied.
- Holding Time Review: Samples were collected 05/06/10 for lead analysis. For solid samples, the soil samples were digested on 05/10/10 and analyzed on 05/13/10 for ICP metals. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

ICP: 1- blank (DoD QSM <½ MRL)
3 – standards (r≥0.995)
ICV/CCV (90-110%) (DoD QSM 90-110%)
MRL (70-130%) (DoD QSM 80-120%)
High Std. (95-105%)

- The solid samples were analyzed for ICP metals on 05/13/10. Lead was determined using linear regression with a correlation coefficient ≥0.995. All ICV/CCV/High Standard/MRL criteria were met for lead for all runs. No qualifiers were applied.

III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	Analysis	QC Blank ID	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
05/13/10	ICP Pb	ICB/CCBs	<2*MDL	NA	None
05/13/10	ICP Pb	WG330951-02	<1/2*MRL	NA	None

NA = Not Applicable

MDL = Method Detection Limit.

MRL = Method Reporting Limit.

IV-ICP Interference Check Sample (ICS)

The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

V-Laboratory Control Samples (LCS)

The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table G-19 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used.

- Sample WG330951-03 was used as solid LCS for ICP metals analysis on 05/13/10. All criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this LCS.

VI-Laboratory Duplicate Sample Analysis

Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

VII-Matrix Spike/Spike Duplicate

MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-19 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals.

- Sample L10050151-20 was used as solid laboratory MS/MSD for ICP metals analysis on 05/13/10. The spiked sample was not a RFAAP site specific sample; therefore, was not evaluated. Sample 54BSC05 10' (L10050203-01) applies to this MS/MSD.

VIII-ICP Serial Dilution

An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 05/13/10 using solid sample L10050151-03. The serial dilution sample was not a RFAAP site specific sample; therefore, was not evaluated. Sample 54BSC05 10' (L10050203-01) applies to this serial dilution.

IX-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

X-Quantitation Verification

The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

Sample: 54BSC05 10' (L10050203-01), Lead

$$\text{Conc. (mg/kg)} = \{(\text{conc. } \mu\text{g/L}) * (\text{Final Volume L}) * (\text{DF})\} / \{(\text{Weight Sample g}) * (\text{Fraction Solids})\}$$

$$\text{Conc. (mg/kg)} = \{(160.19 \mu\text{g/L}) * (0.050 \text{ L}) * (1)\} / \{(1.482 \text{ g}) * (0.8180)\} = 6.61 \mu\text{g/g} = 6.61 \text{ mg/kg}$$

Reported concentration = 6.61 mg/kg

%D = 0.0%

Values were within 10% difference.

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% D for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Dieldrin, Heptachlor Epoxide, and PCB 1254
Microbac Laboratories, Inc., SDG L10050203

DATE: August 24, 2010

The purpose of this memorandum is to present the data validation report for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on May 6, 2010. Solid samples were analyzed for select pesticides dieldrin and heptachlor epoxide using USEPA Method 3550B/8081A and for PCB 1254 using 3550B/8082. A total of two solid samples (one re-analysis for pesticides) were validated. The sample IDs are:

Field Sample ID	Lab Sample ID	Field Sample ID	Lab Sample ID
54BSC05 10'	L10050203-01	54ASC05 10'	L10050203-01RE

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Instrument Performance Check
	X	Initial Calibration
	X	Continuing Calibration
	X	Blank Analysis
X		System Monitoring Compounds
	X	Laboratory Control Sample and Laboratory Control Sample Duplicate
	X	Matrix Spike/Spike Duplicate
	X	Field Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications. For sample 54BSC05 10' (L10050203-01), one or more of the pesticide surrogate(s) were outside criteria. Sample 54BSC05 10' (L10050203-01RE) was re-analyzed "-RE" as part of QC procedures for pesticides. The original parent samples should be used as best fit data with the other re-analysis samples provided as extra QC (See Section VI for further details). There were no impacts to the data completeness.

 Eric Malarek, Chemist

8/24/10
 Date

**RFAAP VALIDATION REPORT
SELECT PESTICIDE/PCB REVIEW
SDG L10050203**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, pesticide and PCB compounds are shipped cooled ($@4^{\circ}\text{C} \pm 2^{\circ}\text{C}$) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 05/06/10, the cooler were received by the primary laboratory (Microbac) on 05/07/10 at 3.0°C and 2.0°C . All criteria were met. No qualifiers were applied.
- Holding Time Review: The solid sample was collected on 05/06/10. The sample analyzed for select pesticides was extracted on 05/11/10 (05/14/10 for the re-analyzed "RE" sample) and analyzed on 05/13/10 (05/17/10 for the re-analyzed "RE" sample). The sample analyzed for PCB 1254 was extracted on 05/17/10 and analyzed on 05/17/10. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Instrument Performance Check (Degradation Standard)

Performance checks on the gas chromatograph with electron capture detector (GC/ECD) system are performed to ensure adequate resolution and instrument sensitivity. The performance evaluation mixture (PEM) must be analyzed at the beginning of the analytical sequence. The breakdown of Endrin and 4,4'-DDT must be $\leq 15\%$ on both signals.

- For analysis performed on 05/12/10 @15:00, endrin and 4,4'-DDT percent breakdowns were 2.96% and 2.04%. All criteria were met. No qualifiers were applied.
- For analysis performed on 05/12/10 @15:28, endrin and 4,4'-DDT percent breakdowns were 7.32% and 3.40%. All criteria were met. No qualifiers were applied.
- For analysis performed on 05/13/10 @06:17, endrin and 4,4'-DDT percent breakdowns were 3.07% and 3.10%. All criteria were met. No qualifiers were applied.
- For analysis performed on 05/13/10 @06:45, endrin and 4,4'-DDT percent breakdowns were 8.63% and 3.35%. All criteria were met. No qualifiers were applied.
- For analysis performed on 05/17/10 @11:55, endrin and 4,4'-DDT percent breakdowns were 3.97% and 2.73%. All criteria were met. No qualifiers were applied.
- For analysis performed on 05/17/10 @12:24, endrin and 4,4'-DDT percent breakdowns were 8.78% and 3.96%. All criteria were met. No qualifiers were applied.
- For analysis performed on 05/18/10 @09:39, endrin and 4,4'-DDT percent breakdowns were 2.27% and 3.90%. All criteria were met. No qualifiers were applied.
- For analysis performed on 05/18/10 @10:07, endrin and 4,4'-DDT percent breakdowns were 9.35% and 3.56%. All criteria were met. No qualifiers were applied.

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5 point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. Calibration factors are generated for each compound. The DoD QSM specifies that the percent relative standard deviation (%RSD) for all single peak target analytes, and aroclors 1016, 1242, 1254, and 1260 must be $<20\%$ or the mean %RSD for all analytes in the standard must be $\leq 20\%$. If linear regression is used, the correlation coefficient must be ≥ 0.995 .

- For the pesticide initial calibration performed on 05/05/10 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54BSC05 10' (L10050203-01) and 54BSC05 10' (L10050203-01RE) were analyzed using this initial calibration.
- For the PCB 1254 initial calibration performed on 05/12/10 on instrument HP9, all criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) was analyzed using this initial calibration. Sample 54BSC05 10' (L10050203-01RE) was analyzed only for pesticides.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for pesticide/PCB target compounds. Continuing calibration standards containing both target compounds and surrogates are analyzed at the beginning of each 12-hour analytical shift and after every 20 samples. The DoD QSM specifies that the percent difference (%D) or the average %Ds for all analytes in the standard from the initial calibration should be no greater than $\pm 20\%$.

- For pesticide initial calibration verification performed on 05/05/10 @22:33 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide initial calibration verification performed on 05/05/10 @23:02 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide continuing calibration performed on 05/12/10 @21:48 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) was analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 05/12/10 @22:16 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) was analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 05/13/10 @03:28 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 05/13/10 @03:56 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 05/17/10 @12:24 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01RE) was analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 05/17/10 @12:52 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01RE) was analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 05/17/10 @20:53 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 05/17/10 @21:21 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 05/18/10 @03:02 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For PCB 1254 initial calibration verification performed on 05/12/10 @13:49 on instrument HP9, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For PCB 1016/1260 continuing calibration performed on 05/17/10 @19:31 on instrument HP9, all criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) was analyzed using this continuing calibration.
- For PCB 1016/1260 continuing calibration performed on 05/17/10 @22:27 on instrument HP9, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

V-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤ 5 times (5X) the maximum amount for pesticide and PCB target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

Table 2 Blank Contamination Analysis Summary

Parameter	Analysis Date	QC Blank ID	Compound	Max Conc. $\mu\text{g/kg}$	Action Level $\mu\text{g/kg}$	B qualified samples (for this SDG)
Pesticides	05/12/10	WG331043-02	All target $< \frac{1}{2}$ MRL	NA	NA	None
Pesticides	05/17/10	WG331467-01	All target $< \frac{1}{2}$ MRL	NA	NA	None
PCB 1254	05/17/10	WG331544-01	All target $< \frac{1}{2}$ MRL	NA	NA	None

NA = Not Applicable

MRL = Method Reporting Limit

VI-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Pesticides Solid Criteria: Tetrachloro-m-xylene: 70-125% (DoD QSM 70-125%)
Decachlorobiphenyl: 55-130% (DoD QSM 55-130%)

PCBs Solid Criteria: Tetrachloro-m-xylene: 29-133% (DoD QSM None Listed)
Decachlorobiphenyl: 60-125% (DoD QSM 60-125%)

- For pesticide run for sample 54BSC05 10' (L10050203-01), surrogate tetrachloro-m-xylene (64.2%) was below criteria. All criteria were met for surrogate decachlorobiphenyl. Since only one surrogate was outside criteria; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54BSC05 10' (L10050203-01RE), surrogate tetrachloro-m-xylene (41.4%) and decachlorobiphenyl (47.0%) were outside criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers.
- For all PCB runs, all criteria were met.

VII-Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD QSM solid LCS recovery limits are specified in Table G-15 and Table G-17 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for pesticides and PCBs is $\leq 30\%$ RPD.

- Sample WG331043-03 was used as the solid LCS for the pesticide analysis on 05/12/10. All criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this LCS.
- Samples WG331467-02 and WG331467-03 were used as the solid LCS/LCSD for the pesticide re-analysis on 05/17/10. All criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01RE) applies to this LCS/LCSD.
- Sample WG331544-02 and WG331544-03 were used as the solid LCS/LCSD for the PCB 1254 analysis on 05/17/10. All criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this LCS/LCSD.

VIII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-15 and Table G-17 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for pesticides and PCBs is $\leq 30\%$ RPD.

- Sample 54BDW37 10' (L10050203-14) was used as the solid MS/MSD for the pesticide analysis on 05/12/10. All criteria were met. No qualifiers were applied. Samples 54BSC05 10' (L10050203-01) and 54BSC05 10' (L10050203-01RE) apply to this MS/MSD.

- No PCB project specific MS/MSD was analyzed with this SDG; therefore, it was not evaluated. All criteria were met. No qualifiers were applied. Sample 54BSC05 10' (L10050203-01) applies to this MS/MSD.

IX-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

X-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The difference between the calculated value and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %RPD between the primary and secondary columns. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

- For sample 54BSC05 10' (L10050203-01), one or more of the pesticide surrogate(s) were outside criteria. Sample 54BSC05 10' (L10050203-01RE) was re-analyzed "-RE" as part of QC procedures for pesticides. The original parent samples should be used as best fit data with the other re-analysis samples provided as extra QC (See Section VI for further details). There were no impacts to the data completeness.
- All chlorinated pesticides and PCBs were non-detect. No confirmations were required.

Sample: WG331043-03-LCS, Dieldrin

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{CF} * \text{Vi} * \text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$
 Ax = Area/response for compound being measured.
 Vt = Volume of total extract in (μL)
 CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
 Vi = Volume of extract injected (mL).
 W(s) = Weight of sample extracted or diluted in grams.
 D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
 DF = Dilution factor

$$\begin{aligned} \text{Conc. } \mu\text{g/kg} &= (5591200000\text{Area} * 10000\mu\text{L} * 1) / (114100000\text{Area/pg} * (1000\text{pg/ng}) * 1\mu\text{L} * 30.0\text{g} * 1.00) \\ &= 16.3 \mu\text{g/kg} \text{ (Signal \#1)} \end{aligned}$$

$$\begin{aligned} \text{Conc. } \mu\text{g/kg} &= (4808900000\text{Area} * 10000\mu\text{L} * 1) / (102400000\text{Area/pg} * (1000\text{pg/ng}) * 1\mu\text{L} * 30.0\text{g} * 1.00) \\ &= 15.7 \mu\text{g/kg} \text{ (Signal \#2)} \end{aligned}$$

Reported Value = 16.3 $\mu\text{g/kg}$ (Signal #1)

% Difference = 0.0%

Values were within 10% difference

Sample: WG331544-02 LCS, Aroclor 1254

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{CF} * \text{Vi} * \text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$
Ax = Area/response for compound being measured.
Vt = Volume of total extract (μL).
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (μL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight $(100 - \% \text{ moisture in sample})/100 = 1.0$ for Wet Weight
DF = Dilution factor

$$\text{Conc1 } \mu\text{g/kg} = (51229063 * 10000 * 1) / (221700 * (1000) * 1 * 30.0 * 1.00) = 77.02 \mu\text{g/kg}$$

$$\text{Conc2 } \mu\text{g/kg} = (98712274 * 10000 * 1) / (428900 * (1000) * 1 * 30.0 * 1.00) = 76.72 \mu\text{g/kg}$$

$$\text{Conc3 } \mu\text{g/kg} = (86063929 * 10000 * 1) / (374700 * (1000) * 1 * 30.0 * 1.00) = 76.56 \mu\text{g/kg}$$

$$\text{Conc4 } \mu\text{g/kg} = (71320030 * 10000 * 1) / (297000 * (1000) * 1 * 30.0 * 1.00) = 80.04 \mu\text{g/kg}$$

$$\text{Conc5 } \mu\text{g/kg} = (91750955 * 10000 * 1) / (385800 * (1000) * 1 * 30.0 * 1.00) = 79.27 \mu\text{g/kg}$$

$$\text{Average concentration} = 77.9 \mu\text{g/kg} \text{ (Peaks 1 } \rightarrow \text{ 5)}$$

Reported Value = 77.9 $\mu\text{g/kg}$

% Difference = 0.0%

Values were within 10% difference.

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	The reported result is an estimated value (e.g., matrix interference was observed or the analyte was detected at a concentration outside the quantitation range).
B	Blank contamination. The recorded result is associated with a contaminated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Explosives
Microbac Laboratories, Inc., SDG L10060021

DATE: August 31, 2010; Revised October 11, 2010

The purpose of this memorandum is to present the data validation report for the samples collected for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on May 25, 2010 and May 26, 2010. This report was revised to account for the duplicate pairs analyzed in SDG L10060021. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of eighty-three solid samples (includes twenty-two re-analysis samples and nineteen dilutions for explosives) were validated. The sample IDs are:

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Blank Analysis
	X	Initial Calibration
	X	Continuing Calibration
X		System Monitoring Compounds
X		Laboratory Control Sample and Laboratory Control Sample Duplicate
X		Matrix Spike/Spike Duplicate
X		Field Duplicate
X		Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For samples 54ASC37 (L10060021-32), 54ASC39 (L10060021-34), 54ASC41 (L10060021-36), 54ASC41 (L10060021-36CF), and 54ASC48 (L10060021-44), the surrogate did not recover and the samples were qualified rejected "R". The confirmation re-analysis or diluted sample should be used for data usability. See Section V System Monitoring Compounds for further details regarding which should be used as best fit data with the other samples provided as extra QC. Target compound 2,4,6-trinitrotoluene exceeded calibration range and was qualified rejected "R" for samples 54ASC26 3' (L10060021-19), 54ASC27 (L10060021-23), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC41 (L10060021-36), 54ASC48 (L10060021-44), 54ASC49 (L10060021-45), and 54ASC52 (L10060021-48) based on this outlier. The associated "DL", "DL2", or "DL3" sample should be used for data usability, as applicable. Target compound 2,4-dinitrotoluene exceeded calibration range and was qualified rejected "R" for samples 54ASC39 (L10060021-34), 54ASC48 (L10060021-44), and 54ASC49 (L10060021-45) based on this outlier. The associated "DL", "DL2", or "DL3" sample should be used for data usability. Target compound 2,6-dinitrotoluene exceeded calibration range and was qualified rejected "R" for samples 54ASC39 (L10060021-34), 54ASC48 (L10060021-44), and 54ASC49 (L10060021-45) based on this outlier. The associated "DL", "DL2", or "DL3" sample should be used for data usability. There were no impacts to the data completeness.

**RFAAP VALIDATION REPORT
EXPLOSIVES REVIEW
SDG L10060021**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled ($@4^{\circ}\text{C} \pm 2^{\circ}\text{C}$) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- **Temperature Review:** The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 05/25/10 and 05/26/10, the coolers were received by the primary laboratory (Microbac) on 05/27/10 at 3.0°C , 1.0°C , 2.0°C , and 3.0°C . Even though the cooler temperature was below criteria for one of the coolers; there were no impacts for the sample analysis and no qualifiers were applied based upon this outlier.
- **Holding Time Review:** The solid samples were collected on 05/25/10 and 05/26/10. The samples were extracted on 06/03/10, 06/04/10, and 06/07/10 and were analyzed on 06/04/10, 06/05/10, 06/06/10, 06/08/10, 06/09/10, 06/10/10, 06/11/10, 06/15/10, 06/16/10, 06/19/10, 06/20/10, and 06/23/10 for explosives. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤ 5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	QC Blank ID	Compound	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
06/04/10	WG333294-02	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None
06/05/10	WG333294-02	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None
06/08/10	WG333404-02	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None
06/10/10	WG333404-02	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None
06/15/10	WG333544-01	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None
06/19/10	WG333544-01	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None

MRL = Method Reporting Limit

NA = Not Applicable

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥ 0.995 and/or the percent relative standard deviation (%RSD) must be $\leq 20\%$.

- For the explosives initial calibration performed on 05/15/10 on instrument HPLC4, all criteria were met for target explosives compounds. All target compounds were determined using linear regression with correlation coefficients ≥ 0.995 . No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), 54ASC26 3' (L10060021-19DL), 54ATM26 3' (L10060021-20), 54ASC06 3' (L10060021-01CF), 54ASC16 3' (L10060021-11CF), 54ASC21 3' (L10060021-14CF), 54ASC22 3' (L10060021-15CF), 54ASC26 3' (L10060021-19CF), 54ASC26 3' (L10060021-19DLCF), 54ATM26 3' (L10060021-20CF), 54ASC27 (L10060021-23), 54ASC27 (L10060021-23DL), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC37 (L10060021-32DL), 54ASC38 (L10060021-33), 54ASC38 (L10060021-33DL), 54ASC39 (L10060021-34), 54ASC39 (L10060021-34DL), 54ASC39 (L10060021-34DL2), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC41 (L10060021-36DL), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), 54ASC48 (L10060021-44), 54ASC48 (L10060021-44DL), 54ASC48 (L10060021-44DL2), 54ASC48 (L10060021-44DL3), 54ASC27 (L10060021-23CF), 54ASC28 (L10060021-24CF), 54ASC35 (L10060021-29CF), 54ASC37 (L10060021-32CF), 54ASC38 (L10060021-33CF), 54ASC39 (L10060021-34CF), 54ASC40 (L10060021-35CF), 54ASC41 (L10060021-36CF), 54ASC45 (L10060021-39CF), 54ASC46 (L10060021-40CF), 54ASC47 (L10060021-43CF), 54ASC48 (L10060021-44CF), 54ASC48 (L10060021-44DLCF), 54ASC49 (L10060021-45), 54ASC49 (L10060021-45DL), 54ASC49 (L10060021-45DL2), 54ASC50 (L10060021-46), 54ASC50 (L10060021-46DL), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), 54ASC52 (L10060021-48DL), 54ASC53 (L10060021-49), 54ASC49 (L10060021-45CF2DL), 54ASC50 (L10060021-46CF), 54ASC51 (L10060021-47CF), 54ASC52 (L10060021-48CF), and 54ASC49 (L10060021-45CF) apply to this initial calibration.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than $\pm 20\%$.

- For explosives initial calibration verification performed on 05/15/10 @18:15 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.
- For explosives continuing calibration performed on 06/04/10 @12:23 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), and 54ASC13 3' (L10060021-08) apply to this continuing calibration.

- For explosives continuing calibration performed on 06/04/10 @20:53 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), and 54ASC25 3' (L10060021-18) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/05/10 @05:22 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC26 3' (L10060021-19), 54ASC26 3' (L10060021-19DL), and 54ATM26 3' (L10060021-20) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/05/10 @09:56 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/05/10 @13:17 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/05/10 @16:07 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01CF), 54ASC16 3' (L10060021-11CF), 54ASC21 3' (L10060021-14CF), 54ASC22 3' (L10060021-15CF), 54ASC26 3' (L10060021-19CF), 54ASC26 3' (L10060021-19DLCF), and 54ATM26 3' (L10060021-20CF) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/06/10 @04:40 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/08/10 @14:23 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), and 54ASC36 (L10060021-30) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/08/10 @23:20 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), and 54ASC45 (L10060021-39) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/09/10 @07:09 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23DL), 54ASC37 (L10060021-32DL), 54ASC38 (L10060021-33DL), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), and 54ASC48 (L10060021-44) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/09/10 @16:55 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC39 (L10060021-34DL), 54ASC39 (L10060021-34DL2), 54ASC41 (L10060021-36DL), 54ASC48 (L10060021-44DL), 54ASC48 (L10060021-44DL2), and 54ASC48 (L10060021-44DL3) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/10/10 @01:24 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 06/10/10 @13:36 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23CF), 54ASC28 (L10060021-24CF), 54ASC35 (L10060021-29CF), 54ASC37 (L10060021-32CF), 54ASC38 (L10060021-33CF), 54ASC39 (L10060021-34CF), 54ASC40 (L10060021-35CF), 54ASC41 (L10060021-36CF), and 54ASC45 (L10060021-39CF) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/11/10 @01:20 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC46 (L10060021-40CF), 54ASC47 (L10060021-43CF), 54ASC48 (L10060021-44CF), and 54ASC48 (L10060021-44DL) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/11/10 @11:04 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/15/10 @15:10 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC49 (L10060021-45), 54ASC50 (L10060021-46), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), and 54ASC53 (L10060021-49) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/15/10 @23:26 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/16/10 @11:51 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC49 (L10060021-45DL), 54ASC49 (L10060021-45DL2), and 54ASC50 (L10060021-46DL) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/16/10 @20:04 on instrument HPLC4, all criteria were met. No qualifiers were applied. Sample 54ASC52 (L10060021-48DL) applies to this continuing calibration.
- For explosives continuing calibration performed on 06/17/10 @03:35 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/19/10 @14:34 on instrument HPLC4, all criteria were met. No qualifiers were applied. Sample 54ASC49 (L10060021-45CF2DL) applies to this continuing calibration.
- For explosives continuing calibration performed on 06/20/10 @01:30 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC50 (L10060021-46CF), 54ASC51 (L10060021-47CF), and 54ASC52 (L10060021-48CF) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/20/10 @12:27 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/23/10 @10:20 on instrument HPLC4, all criteria were met. No qualifiers were applied. Sample 54ASC49 (L10060021-45CF) applies to this continuing calibration.
- For explosives continuing calibration performed on 06/23/10 @17:15 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

V-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 1,2-dinitrobenzene (50-150%)

- For explosive run for sample 54ASC37 (L10060021-32), surrogate 1,2-dinitrobenzene did not recover at 1x dilution. For the confirmation re-analysis explosive run, surrogate 1,2-dinitrobenzene was within criteria. All target explosives were rejected "R" for sample 54ASC37 (L10060021-32) based upon this outlier. The confirmation re-analysis sample 54ASC37 (L10060021-32CF) should be used for data usability reasons. For sample 54ASC37 (L10060021-32DL), the surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.
- For explosive run for sample 54ASC39 (L10060021-34), surrogate 1,2-dinitrobenzene did not recover at 1x dilution. For the confirmation re-analysis explosive run, surrogate 1,2-dinitrobenzene was within criteria. All target explosives were rejected "R" for sample 54ASC39 (L10060021-34) based upon this outlier. The confirmation re-analysis sample 54ASC39 (L10060021-34CF) should be used for data usability reasons. For samples 54ASC39 (L10060021-34DL1) and 54ASC39 (L10060021-34DL2), the surrogates were diluted out; therefore, no qualifiers were applied based upon these outliers.
- For confirmation explosive run for sample 54ASC40 (L10060021-35CF), surrogate 1,2-dinitrobenzene (498%) was outside criteria. The sample 54ASC40 (L10060021-35) was originally run with surrogate 1,2-dinitrobenzene (111%) within criteria limits. All target pesticides were qualified estimated "J" for detects and "UJ" for non-detects based upon these outliers for the re-analysis confirmation analysis. All criteria were met for the original sample; therefore, no qualifiers were applied for the original sample. The original sample should be used for data usability reasons.
- For explosive for sample 54ASC41 (L10060021-36) and the re-analysis confirmation for sample 54ASC41 (L10060021-36CF), surrogate 1,2-dinitrobenzene did not recover at 1x dilutions. All target explosives were rejected "R" for samples 54ASC41 (L10060021-36) and 54ASC41 (L10060021-36CF) based upon these outliers. For samples 54ASC41 (L10060021-36DL), the surrogate was diluted out; therefore, no qualifiers was applied based upon this outlier. The diluted sample 54ASC41 (L10060021-36DL) should be used for data usability reasons.
- For explosive run for sample 54ASC48 (L10060021-44), surrogate 1,2-dinitrobenzene did not recover at 1x dilution. For the confirmation re-analysis explosive run, surrogate 1,2-dinitrobenzene (234%) was outside criteria. All target pesticides were qualified estimated "J" for detects and "UJ" for non-detects for the re-analysis confirmation analysis on sample 54ASC48 (L10060021-44CF) and were rejected "R" for sample 54ASC48 (L10060021-44) based upon these outliers. The re-analysis sample should be used for data usability reasons. For samples 54ASC48 (L10060021-44DL), 54ASC48 (L10060021-44DL2), and 54ASC48 (L10060021-44DL3), the surrogates were diluted out; therefore, no qualifiers were applied based upon these outliers.
- For samples 54ASC49 (L10060021-45DL), 54ASC49 (L10060021-45CF2DL), 54ASC49 (L10060021-45DL2), the surrogates were diluted out; therefore, no qualifiers were applied based upon these outliers.
- For sample 54ASC50 (L10060021-46DL), the surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.
- For all other samples and runs, all criteria were met.

VI-Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) and LCS duplicate (LCSD) are used to monitor long-term precision and accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- Sample WG333294-03 was used as solid LCS for explosives analyzed on 06/04/10. All criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), 54ASC26 3' (L10060021-19DL), and 54ATM26 3' (L10060021-20) apply to this LCS.
- Sample WG333294-03 was used as solid LCS for explosives analyzed on 06/05/10. All criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01CF), 54ASC16 3' (L10060021-11CF), 54ASC21 3' (L10060021-14CF), 54ASC22 3' (L10060021-15CF), 54ASC26 3' (L10060021-19CF), 54ASC26 3' (L10060021-19DLCF), and 54ATM26 3' (L10060021-20CF) apply to this LCS.
- Sample WG333404-03 was used as solid LCS for explosives analyzed on 06/08/10. All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23), 54ASC27 (L10060021-23DL), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC37 (L10060021-32DL), 54ASC38 (L10060021-33), 54ASC38 (L10060021-33DL), 54ASC39 (L10060021-34), 54ASC39 (L10060021-34DL), 54ASC39 (L10060021-34DL2), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC41 (L10060021-36DL), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), 54ASC48 (L10060021-44), 54ASC48 (L10060021-44DL), 54ASC48 (L10060021-44DL2), and 54ASC48 (L10060021-44DL3) apply to this LCS.
- Sample WG333404-03 was used as solid LCS for explosives analyzed on 06/10/10. All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23CF), 54ASC28 (L10060021-24CF), 54ASC35 (L10060021-29CF), 54ASC37 (L10060021-32CF), 54ASC38 (L10060021-33CF), 54ASC39 (L10060021-34CF), 54ASC40 (L10060021-35CF), 54ASC41 (L10060021-36CF), 54ASC45 (L10060021-39CF), 54ASC46 (L10060021-40CF), 54ASC47 (L10060021-43CF), 54ASC48 (L10060021-44CF), and 54ASC48 (L10060021-44DLCF) apply to this LCS.
- Samples WG333544-02 and WG333544-02 were used as solid LCS/LCSD for explosives analyzed on 06/15/10. Nitroglycerin (RPD=27.5%) was outside criteria. For all other target compounds, all criteria were met. Nitroglycerin was qualified estimated "J" for detects and no qualification for non-detects based upon the high RPD. All recoveries were within criteria limits. Samples 54ASC49 (L10060021-45), 54ASC49 (L10060021-45DL), 54ASC49 (L10060021-45DL2), 54ASC50 (L10060021-46), 54ASC50 (L10060021-46DL), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), 54ASC52 (L10060021-48DL), and 54ASC53 (L10060021-49) apply to this LCS/LCSD.

- Samples WG333544-02 and WG333544-02 were used as solid LCS/LCSD for explosives analyzed on 06/19/10. 4-Nitrotoluene (136%, 132%) was outside criteria. For all other target compounds, all criteria were met. 4-Nitrotoluene was non-detect for all associated samples; therefore, no qualifiers were applied based upon the high recoveries. Samples 54ASC49 (L10060021-45CF2DL), 54ASC50 (L10060021-46CF), 54ASC51 (L10060021-47CF), and 54ASC52 (L10060021-48CF) apply to this LCS/LCSD.

VII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009).

If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- Sample 54ASC26 3' (L10060021-19) was used as the solid MS/MSD for the explosives analysis on 06/05/10. 2,4-Dinitrotoluene (173%, 298%; RPD=35.5%), 2,6-dinitrotoluene (128%, 248%; RPD=29.6%), 2,4,6-trinitrotoluene (158%, 325%), 2-amino-4,6-dinitrotoluene (72.7%, 66.2%), 2-nitrotoluene (129%, 135%), and nitroglycerin (129%, 207%; RPD=46.4%) were outside criteria. For all other target compounds, all criteria were met. See Section VI for associated LCS recoveries. The spiked sample was qualified estimated "J" for detections of 2,4-dinitrotoluene and 2,6-dinitrotoluene based upon the high RPDs. The spiked sample was qualified estimated bias high "K" for detection of 2,4,6-trinitrotoluene based upon the high %Rs. The spiked sample was qualified estimated bias low "L" for detection of 2-amino-4,6-dinitrotoluene based upon the low %Rs. The spiked sample was non-detect for nitroglycerin and 2-nitrotoluene; therefore, no qualification was required based upon the high %Rs/RPDs. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), 54ASC26 3' (L10060021-19DL), 54ATM26 3' (L10060021-20), 54ASC06 3' (L10060021-01CF), 54ASC16 3' (L10060021-11CF), 54ASC21 3' (L10060021-14CF), 54ASC22 3' (L10060021-15CF), 54ASC26 3' (L10060021-19CF), 54ASC26 3' (L10060021-19DLCF), and 54ATM26 3' (L10060021-20CF) apply to this MS/MSD.

- Sample 54ASC46 (L10060021-40) was used as the solid MS/MSD for the explosives analysis on 06/09/10. 2,4,6-Trinitrotoluene (19.4%, 10.8%) was outside criteria. For all other target compounds, all criteria were met. See Section VI for associated LCS recoveries. The spiked sample was qualified estimated bias low "L" for detection of 2,4,6-trinitrotoluene based upon the low %Rs. Samples 54ASC27 (L10060021-23), 54ASC27 (L10060021-23DL), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC37 (L10060021-32DL), 54ASC38 (L10060021-33), 54ASC38 (L10060021-33DL), 54ASC39 (L10060021-34), 54ASC39 (L10060021-34DL), 54ASC39 (L10060021-34DL2), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC41 (L10060021-36DL), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), 54ASC48 (L10060021-44), 54ASC48 (L10060021-44DL), 54ASC48 (L10060021-44DL2), 54ASC48 (L10060021-44DL3), 54ASC27 (L10060021-23CF), 54ASC28 (L10060021-24CF), 54ASC35 (L10060021-29CF), 54ASC37 (L10060021-32CF), 54ASC38 (L10060021-33CF), 54ASC39 (L10060021-34CF), 54ASC40 (L10060021-35CF), 54ASC41 (L10060021-36CF), 54ASC45 (L10060021-39CF), 54ASC46 (L10060021-40CF), 54ASC47 (L10060021-43CF), 54ASC48 (L10060021-44CF), 54ASC48 (L10060021-44DLCF), 54ASC49 (L10060021-45), 54ASC49 (L10060021-45DL), 54ASC49 (L10060021-45DL2), 54ASC50 (L10060021-46), 54ASC50 (L10060021-46DL), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), 54ASC52 (L10060021-48DL), 54ASC53 (L10060021-49), 54ASC49 (L10060021-45CF2DL), 54ASC50 (L10060021-46CF), 54ASC51 (L10060021-47CF), and 54ASC52 (L10060021-48CF) apply to this MS/MSD.

VIII-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- Field soil sample duplicate pair 54ASC26 3' (L10060021-19) and 54ATM26 3' (L10060021-20) was collected for select explosives. All detected analytes found in the sample and its duplicate pair and associated RPD are noted in **Table 3**. 2,4,6-Trinitrotoluene 4x diluted concentration [54ASC26 3' (L10060021-19DL)] was used for the original sample due to 1x extract had exceeded linear range. All other target compounds were non-detect for the duplicate pair. 2,4,6-Trinitrotoluene (178%) was outside criteria and was qualified estimated "J" for the duplicate pair based upon this outlier. 2,4-Dinitrotoluene, 2,6-dinitrotoluene, 2-amino-4,6-dinitrotoluene, 4-amino-2,6-dinitrotoluene, and RDX were detected above the MRL for the parent and non-detect for the duplicate pair; therefore, were qualified as estimated "J" for detects and "UJ" for non-detects based upon these outliers. For all other target compounds, all criteria were met.

Table 3 Field Precision Hits Analysis Summary for Explosives for Duplicate Pair 54ASC26 3' (L10060021-19) and 54ATM26 3' (L10060021-20)

Compound	Original Sample (mg/kg)	Duplicate Pair (mg/kg)	RPD
2,4-Dinitrotoluene	0.584M	0.250U	NA
2,6-Dinitrotoluene	1.07M	0.250U	NA
2,4,6-Trinitrotoluene	13.4J	0.780	178
2-Amino-4,6-dinitrotoluene	0.253M	0.250U	NA
4-Amino-2,6-dinitrotoluene	0.470	0.250U	NA
RDX	0.255	0.250U	NA

U = Target compound was non-detect as <MRL.

J = Estimated value <MRL and >MDL.

M = Matrix effect; the concentration is an estimation due to matrix effect.

MDL = Method Detection Limit

MRL = Method Reporting Limit

NA = Not Applicable

- Field soil sample duplicate pair 54ASC36 (L10060021-30) and 54ATM36 (L10060021-31) was collected for select explosives. All target explosives were non-detect for the duplicate pair. All criteria were met. No qualifiers were applied.
- Field soil sample duplicate pair 54ASC16 3' (L10060021-11) and 54ATM16 (L10060090-01) was collected for select explosives. All detected analytes found in the sample and its duplicate pair and associated RPD are noted in **Table 4**. Target compounds 2,4-dinitrotoluene (50.3%) and 2,4,6-trinitrotoluene (129%) were outside criteria and were qualified estimated "J" for the duplicate pair based upon the high RPDs. For all other target compounds, all criteria were met. The duplicate pair was collected approximately a week apart; which may of lead to the high RPD.

Table 4 Field Precision Hits Analysis Summary for Explosives for Duplicate Pair 54ASC16 3' (L10060021-11) and 54ATM16 (L10060090-01)

Compound	Original Sample (mg/kg)	Duplicate Pair (mg/kg)	RPD
2,4-Dinitrotoluene	0.184J	0.110J	50.3
2,4,6-Trinitrotoluene	0.891	0.191J	129
4-Amino-2,6-dinitrotoluene	0.161J	0.246U	NA

U = Target compound was non-detect as <MRL.

J = Estimated value <MRL and >MDL.

MDL = Method Detection Limit

MRL = Method Reporting Limit

NA = Not Applicable

- Field soil sample duplicate pair 54ASC46 (L10060021-40) and 54ATM46 (L10060090-07) was collected for select explosives. Target compound 2,4,6-trinitrotoluene was detected above the MRL for the parent and non-detect for the duplicate pair; therefore, were qualified as estimated "J" for detects and "UJ" for non-detects based upon this outlier. All other target explosives were non-detect for the duplicate pair. The duplicate was collected approximately a week apart; which may of lead to the high RPD.

IX-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".
- For samples 54ASC37 (L10060021-32), 54ASC39 (L10060021-34), 54ASC41 (L10060021-36), 54ASC41 (L10060021-36CF), and 54ASC48 (L10060021-44), the surrogate did not recover and the samples were qualified rejected "R". The confirmation re-analysis or diluted sample should be used for data usability. See Section V System Monitoring Compounds for further details regarding which should be used as best fit data with the other samples provided as extra QC. There were no impacts to the data completeness.
- Target compound 2,4,6-trinitrotoluene exceeded calibration range and was qualified rejected "R" for samples 54ASC26 3' (L10060021-19), 54ASC27 (L10060021-23), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC41 (L10060021-36), 54ASC48 (L10060021-44), 54ASC49 (L10060021-45), and 54ASC52 (L10060021-48) based on this outlier. The associated "DL", "DL2", or "DL3" sample should be used for data usability.
- Target compound 2,4-dinitrotoluene exceeded calibration range and was qualified rejected "R" for samples 54ASC39 (L10060021-34), 54ASC48 (L10060021-44), and 54ASC49 (L10060021-45) based on this outlier. The associated "DL", "DL2", or "DL3" sample should be used for data usability.

- Target compound 2,6-dinitrotoluene exceeded calibration range and was qualified rejected "R" for samples 54ASC39 (L10060021-34), 54ASC48 (L10060021-44), and 54ASC49 (L10060021-45) based on this outlier. The associated "DL", "DL2", or "DL3" sample should be used for data usability.
- For samples 54ASC27 (L10060021-23), 54ASC27 (L10060021-23DL), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC38 (L10060021-33DL), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC41 (L10060021-36DL), 54ASC48 (L10060021-44), 54ASC49 (L10060021-45), and 54ASC50 (L10060021-46), nitroglycerin was detected; however, not confirmed on dissimilar column. Nitroglycerin was qualified estimated "J" based upon this outlier for these samples
- For sample 54ASC48 (L10060021-44), 1,3-dinitrobenzene, 4-amino-2,6-dinitrotoluene, and RDX, did not meet confirmation criteria (diluted out). 1,3-Dinitrobenzene, 4-amino-2,6-dinitrotoluene, and RDX were qualified estimated "J/UJ" based upon these outliers for sample 54ASC48 (L10060021-44).
- For samples 54ASC49 (L10060021-45; 117%), 1,3-dinitrobenzene exceeded confirmation criteria. 1,3-dinitrobenzene was qualified estimated "J" based upon this outlier for this sample.
- For samples 54ASC38 (L10060021-33; 44.4%), 2,4-dinitrotoluene exceeded confirmation criteria. 2,4-Dinitrotoluene was qualified estimated "J" based upon this outlier for this sample.
- For samples 54ASC26 3' (L10060021-19; 74.1%), 54ASC27 (L10060021-23; 83.6%), 54ASC37 (L10060021-32; 292%), 54ASC39 (L10060021-34; 612%), 54ASC41 (L10060021-36; 170%), 54ASC48 (L10060021-44; 825%), 54ASC50 (L10060021-46; 48.3%), 54ASC51 (L10060021-47; 161%), and 54ASC52 (L10060021-48; 101%), 4-amino-2,6-dinitrotoluene exceeded confirmation criteria. 4-Amino-2,6-dinitrotoluene was qualified estimated "J/UJ" based upon this outlier for these samples.
- For sample 54ASC51 (L10060021-47; 91.2%), 2-amino-4,6-dinitrotoluene exceeded confirmation criteria. 2-Amino-4,6-dinitrotoluene was qualified estimated "J" based upon this outlier for this sample.
- For samples 54ASC41 (L10060021-36; 48.0%) and 54ASC49 (L10060021-45; 41.1%), RDX exceeded confirmation criteria. RDX was qualified estimated "J" based upon these outliers for these samples.
- For all other samples and detected target compounds, all confirmation criteria were met.

Sample: 54ASC06 3' (L10060021-01CF), 2,4,6-trinitrotoluene

$$Y = mX + b$$

Y = Area of target compound for sample

m = slope of curve

X = Amount on column

b = Y-intercept

Given:

$$m = 0.37032576$$

$$b = 0.2147599$$

$$Y = \text{Area} = 13.93509$$

$$X = 37.04935$$

$$\text{Conc. } \mu\text{g/kg} = (A_x * V_t * DF) / (W_s * D)$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$

A_x = Amount of compound being measured (ng/mL).

V_t = Volume of total extract (mL).

$W(s)$ = Weight of sample (g).

D = Percent dry weight $(100 - \% \text{ moisture in sample})/100$ (Air dried = 1.000)

DF = Dilution factor

$$\text{Conc. } \mu\text{g/kg} = (37.04935 * 40 * 1) / (10.00 * 1.000) = 148.20 \mu\text{g/kg} = 0.148 \text{ mg/kg}$$

Reported Value = 0.148 mg/kg

% Difference = 0.0%

Values were within 10% difference

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% D for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

Report Number: L10060021

Report Date : June 25, 2010

Form 1 Copy

Sample Number: L10060021-01
 Client ID: 54ASC06 3'
 Matrix: Soil
 Workgroup Number: WG333441
 Collect Date: 05/25/2010 13:00
 Sample Tag: 01

PrePrep Method: NONE
 Prep Method: METHOD
 Analytical Method: 8330B
 Analyst: JWR
 Dilution: 1
 Units: mg/kg

Instrument: HPLC4
 Prep Date: 06/03/2010 08:30
 Cal Date: 05/15/2010 17:22
 Run Date: 06/04/2010 14:21
 File ID: 4L018136.F

Analyte	CAS. Number	Result	Qual	LOQ	LOD
1,3-Dinitrobenzene	99-65-0		U	0.250	0.100
2,4-Dinitrotoluene	121-14-2	0.106	J	0.250	0.100
2,6-Dinitrotoluene	606-20-2		U	0.250	0.100
2,4,6-Trinitrotoluene	118-96-7	0.143	J	0.250	0.100
2-Amino-4,6-dinitrotoluene	35572-78-2		U	0.250	0.100
2-Nitrotoluene	88-72-2		U	0.250	0.100
4-Nitrotoluene	99-99-0		U	0.250	0.100
4-Amino-2,6-dinitrotoluene	19406-51-0		U	0.250	0.100
RDX	121-82-4		U	0.250	0.100
Nitroglycerin	55-63-0		U	0.250	0.100
Surrogate	% Recovery	Lower	Upper	Qual	
1,2-Dinitrobenzene	101	50	150		

U Not detected at or above the LOQ.

J Estimated ; the analyte concentration was less than the low standard (LOQ)

Report Number: L10060021

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Lead
Microbac Laboratories, Inc., SDG L10060021

DATE: September 2, 2010; Revised October 11, 2010

The purpose of this memorandum is to present the data validation report for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on May 25, 2010 and May 26, 2010. This report was revised to account for the duplicate pairs analyzed in SDG L10060021. Solid samples were analyzed for lead using USEPA SW-846 3051A/6010B for ICP lead. A total of forty five solid samples were validated. The sample IDs are:

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Initial and Continuing Calibration
	X	Blank Analysis
	X	ICP Interference Check Sample (ICS)
	X	Laboratory Control Sample (LCS)
	X	Laboratory Sample Duplicate
X		Matrix Spike and Spike Duplicate
	X	ICP Serial Dilution
X		Field Sample Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

 Eric Malarek, Chemist

**RFAAP VALIDATION REPORT
METALS REVIEW
SDG L10060021**

I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped at ambient temperature for ICP metals (cool @4°C±2°C if with other tests) with a maximum holding time is 180 days (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 05/25/10 and 05/26/10, the coolers were received by the primary laboratory (Microbac) on 05/27/10 at 3.0°C, 1.0°C, 2.0°C, and 3.0°C. Even though the cooler temperature was below criteria for one of the coolers; there were no impacts for the sample analysis and no qualifiers were applied based upon this outlier.
- Holding Time Review: Samples were collected 05/25/10 and 05/26/10 for lead analysis. For solid samples, the soil samples were digested on 06/01/10 and 06/02/10 and analyzed on 06/02/10 and 06/03/10 for ICP lead. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

ICP: 1- blank (DoD QSM <½ MRL)
 3 – standards ($r \geq 0.995$)
 ICV/CCV (90-110%) (DoD QSM 90-110%)
 MRL (70-130%) (DoD QSM 80-120%)
 High Std. (95-105%)

- The solid samples were analyzed for ICP metals on 06/02/10 and 06/03/10. Lead was determined using linear regression with a correlation coefficient ≥ 0.995 for all runs. All ICV/CCV/High Standard/MRL criteria were met for lead for all runs. No qualifiers were applied.

III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	Analysis	QC Blank ID	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
06/02/10	ICP Pb	ICB/CCBs	<2*MDL	NA	None
06/03/10	ICP Pb	ICB/CCBs	<2*MDL	NA	None
06/03/10	ICP Pb	ICB/CCBs	<2*MDL	NA	None
06/02/10	ICP Pb	WG333152-02	<1/2*MRL	NA	None
06/03/10	ICP Pb	WG333111-02	<1/2*MRL	NA	None
06/03/10	ICP Pb	WG333145-02	<1/2*MRL	NA	None

NA = Not Applicable

MDL = Method Detection Limit.

MRL = Method Reporting Limit.

IV-ICP Interference Check Sample (ICS)

The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

V-Laboratory Control Samples (LCS)

The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table G-19 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used.

- Sample WG333152-03 was used as solid LCS for ICP metals analysis on 06/02/10. All criteria were met. No qualifiers were applied. Samples 54ASC49 (L10060021-45), 54ASC50 (L10060021-46), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), and 54ASC53 (L10060021-49) apply to this LCS.
- Sample WG333111-03 was used as solid LCS for ICP metals analysis on 06/03/10. All criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), and 54ATM26 3' (L10060021-20) apply to this LCS.
- Sample WG333145-03 was used as solid LCS for ICP metals analysis on 06/03/10. All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), and 54ASC48 (L10060021-44) apply to this LCS.

VI-Laboratory Duplicate Sample Analysis

Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

VII-Matrix Spike/Spike Duplicate

MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-19 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals.

- Sample WG333152-01 was used as solid laboratory MS/MSD for ICP lead analysis on 06/02/10. The spiked sample was not a RFAAP site specific sample; therefore, was not evaluated. Samples 54ASC49 (L10060021-45), 54ASC50 (L10060021-46), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), and 54ASC53 (L10060021-49) apply to this MS/MSD.
- Sample 54ASC26 3' (L10060021-19) was used as solid laboratory MS/MSD for ICP lead analysis on 06/03/10. Lead (1520%, 759%; RPD=63.1%) was outside criteria. Lead was qualified estimated "J" for detects and no qualification for non-detects based upon the high RPD and recoveries. The associated post digestion spike and LCS were both within criteria limits. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), and 54ATM26 3' (L10060021-20) apply to this MS/MSD.
- Sample 54ASC46 (L10060021-40) was used as solid laboratory MS/MSD for ICP lead analysis on 06/03/10. All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), and 54ASC48 (L10060021-44) apply to this MS/MSD.

VIII-ICP Serial Dilution

An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP lead was analyzed on 06/02/10 using solid sample L10050825-30. The serial dilution sample was not a RFAAP site specific sample; therefore, was not evaluated. Samples 54ASC49 (L10060021-45), 54ASC50 (L10060021-46), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), and 54ASC53 (L10060021-49) apply to this serial dilution.
- The serial dilution for ICP lead was analyzed on 06/03/10 using solid sample 54ASC06 3' (L10060021-01). All criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), and 54ATM26 3' (L10060021-20) apply to this serial dilution.
- The serial dilution for ICP lead was analyzed on 06/03/10 using solid sample 54ASC27 (L10060021-23). All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), and 54ASC48 (L10060021-44) apply to this serial dilution.

IX-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples.

- Field soil sample duplicate pair 54ASC26 3' (L10060021-19) and 54ATM26 3' (L10060021-20) was collected for lead. Lead was detected in the original sample at 6.33 mg/kg and in the duplicate pair at 7.42 mg/kg resulting in a RPD of 15.9%. All criteria were met. No qualifiers were applied.
- Field soil sample duplicate pair 54ASC36 (L10060021-30) and 54ATM36 (L10060021-31) was collected for lead. Lead was detected in the original sample at 10.4 mg/kg and in the duplicate pair at 10.5 mg/kg resulting in a RPD of 1.0%. All criteria were met. No qualifiers were applied.
- Field soil sample duplicate pair 54ASC16 3' (L10060021-11) and 54ATM16 (L10060090-01) was collected for lead. Lead was detected in the original sample at 56.1 mg/kg and in the duplicate pair at 112 mg/kg resulting in a RPD of 66.5%. Lead exceeded the criteria limit; therefore, was qualified estimated "J" for the duplicate pair based upon the high RPD. The duplicate pair was collected approximately a week apart; which may of lead to the high RPD.

- Field soil sample duplicate pair 54ASC46 (L10060021-40) and 54ATM46 (L10060090-07) was collected for lead. Lead was detected in the original sample at 15.0 mg/kg and in the duplicate pair at 22.2 mg/kg resulting in a RPD of 38.7%. Lead exceeded the criteria limit; therefore, was qualified estimated "J" for the duplicate pair based upon the high RPD. The duplicate pair was collected approximately a week apart; which may of lead to the high RPD.

X-Quantitation Verification

The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

Sample: 54ASC06 3' (L10060021-01), Lead

$$\text{Conc. (mg/kg)} = \{(\text{conc. } \mu\text{g/L}) * (\text{Final Volume L}) * (\text{DF})\} / \{(\text{Weight Sample g}) * (\text{Fraction Solids})\}$$

$$\text{Conc. (mg/kg)} = \{(317.12 \mu\text{g/L}) * (0.050 \text{ L}) * (1)\} / \{(1.314 \text{ g}) * (0.9580)\} = 12.6 \mu\text{g/g} = 12.6 \text{ mg/kg}$$

Reported concentration = 12.6 mg/kg

%D = 0.0%

Values were within 10% difference.

Sample: 54ASC27 (L10060021-23), Lead

$$\text{Conc. (mg/kg)} = \{(\text{conc. } \mu\text{g/L}) * (\text{Final Volume L}) * (\text{DF})\} / \{(\text{Weight Sample g}) * (\text{Fraction Solids})\}$$

$$\text{Conc. (mg/kg)} = \{(1286.5 \mu\text{g/L}) * (0.050 \text{ L}) * (1)\} / \{(1.362 \text{ g}) * (0.8430)\} = 56.0 \mu\text{g/g} = 56.0 \text{ mg/kg}$$

Reported concentration = 56.1 mg/kg

%D = 0.2%

Values were within 10% difference.

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% D for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Dieldrin and Heptachlor Epoxide
Microbac Laboratories, Inc., SDG L10060021

DATE: August 26, 2010; Revised October 11, 2010

The purpose of this memorandum is to present the data validation report for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on May 25, 2010 and May 26, 2010. This report was revised to account for the duplicate pairs analyzed in SDG L10060021. Solid samples were analyzed for select pesticides dieldrin and heptachlor epoxide using USEPA Method 3550B/8081A. A total of eighty-four solid samples (includes thirty-nine re-analysis samples for pesticides) were validated. The sample ids are:

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
X		Holding Times and Preservation
	X	Instrument Performance Check
	X	Initial Calibration
	X	Continuing Calibration
	X	Blank Analysis
X		System Monitoring Compounds
	X	Laboratory Control Sample and Laboratory Control Sample Duplicate
	X	Matrix Spike/Spike Duplicate
	X	Field Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications. For samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), 54ATM26 3' (L10060021-20), 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), 54ASC48 (L10060021-44), and 54ASC49 (L10060021-45), one or more of the pesticide surrogate(s) were outside criteria and the samples were re-analyzed "RE". See Section VI System Monitoring Compounds for further details regarding which should be used as best fit data with the other samples provided as extra QC. There were no impacts to the data completeness.

Eric Malarek, Chemist

Date

**RFAAP VALIDATION REPORT
SELECT PESTICIDE/PCB REVIEW
SDG L10060021**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, pesticide and PCB compounds are shipped cooled ($@4^{\circ}\text{C} \pm 2^{\circ}\text{C}$) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 05/25/10 and 05/26/10, the coolers were received by the primary laboratory (Microbac) on 05/27/10 at 3.0°C , 1.0°C , 2.0°C , and 3.0°C . Even though the cooler temperature was below criteria for one of the coolers; there were no impacts for the sample analysis and no qualifiers were applied based upon this outlier.
- Holding Time Review: The solid samples were collected on 05/25/10 and 05/26/10. The samples analyzed for select pesticides were extracted on 06/02/10 and analyzed on 06/02/10, 06/03/10, and 06/04/10. The re-analysis "RE" samples analyzed for select pesticides were extracted on 06/08/10 and 06/16/10 and analyzed on 06/17/10, 06/18/10, and 06/19/10. Sample collection dates may be found on the attached form 1s. Sample 54ASC49 (L10060021-45RE) was re-extracted seven days outside holding times and was qualified "UJ" for all target pesticides based upon this outlier. All target pesticides were non-detect for this sample. For all other samples, all criteria were met.

II-Instrument Performance Check (Degradation Standard)

Performance checks on the gas chromatograph with electron capture detector (GC/ECD) system are performed to ensure adequate resolution and instrument sensitivity. The performance evaluation mixture (PEM) must be analyzed at the beginning of the analytical sequence. The breakdown of Endrin and 4,4'-DDT must be $\leq 15\%$ on both signals.

- For analysis performed on 06/02/10 @11:33, endrin and 4,4'-DDT percent breakdowns were 4.44% and 1.23%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/03/10 @06:26, endrin and 4,4'-DDT percent breakdowns were 3.68% and 2.29%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/03/10 @14:52, endrin and 4,4'-DDT percent breakdowns were 3.73% and 1.09%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/16/10 @20:44, endrin and 4,4'-DDT percent breakdowns were 0.00% and 3.48%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/17/10 @08:32, endrin and 4,4'-DDT percent breakdowns were 0.76% and 2.19%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/17/10 @13:26, endrin and 4,4'-DDT percent breakdowns were 5.00% and 7.00%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/18/10 @07:03, endrin and 4,4'-DDT percent breakdowns were 9.19% and 8.79%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/18/10 @14:50, endrin and 4,4'-DDT percent breakdowns were 1.16% and 2.24%. All criteria were met. No qualifiers were applied.

- For analysis performed on 06/19/10 @12:06, endrin and 4,4'-DDT percent breakdowns were 1.48% and 3.44%. All criteria were met. No qualifiers were applied.

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5 point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. Calibration factors are generated for each compound. The DoD QSM specifies that the percent relative standard deviation (%RSD) for all single peak target analytes must be <20% or the mean %RSD for all analytes in the standard must be ≤20%. If linear regression is used, the correlation coefficient must be ≥0.995.

- For the pesticide initial calibration performed on 05/28/10 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), 54ATM26 3' (L10060021-20), 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), and 54ASC48 (L10060021-44) were analyzed using this initial calibration.
- For the pesticide initial calibration performed on 06/16/10 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01RE), 54ASC07 3' (L10060021-02RE), 54ASC08 3' (L10060021-03RE), 54ASC09 3' (L10060021-04RE), 54ASC10 3' (L10060021-05RE), 54ASC11 3' (L10060021-06RE), 54ASC12 3' (L10060021-07RE), 54ASC13 3' (L10060021-08RE), 54ASC14 3' (L10060021-09RE), 54ASC15 3' (L10060021-10RE), 54ASC16 3' (L10060021-11RE), 54ASC18 3' (L10060021-12RE), 54ASC20 3' (L10060021-13RE), 54ASC21 3' (L10060021-14RE), 54ASC22 3' (L10060021-15RE), 54ASC23 3' (L10060021-16RE), 54ASC24 3' (L10060021-17RE), 54ASC25 3' (L10060021-18RE), 54ASC26 3' (L10060021-19RE), and 54ATM26 3' (L10060021-20RE) were analyzed using this initial calibration.
- For the pesticide initial calibration performed on 06/18/10 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23RE), 54ASC28 (L10060021-24RE), 54ASC31 (L10060021-25RE), 54ASC32 (L10060021-26RE), 54ASC33 (L10060021-27RE), 54ASC34 (L10060021-28RE), 54ASC35 (L10060021-29RE), 54ASC36 (L10060021-30RE), 54ATM36 (L10060021-31RE), 54ASC37 (L10060021-32RE), 54ASC38 (L10060021-33RE), 54ASC39 (L10060021-34RE), 54ASC40 (L10060021-35RE), 54ASC41 (L10060021-36RE), 54ASC42 (L10060021-37RE), 54ASC43 (L10060021-38RE), 54ASC45 (L10060021-39RE), 54ASC46 (L10060021-40RE), 54ASC47 (L10060021-43RE), 54ASC48 (L10060021-44RE), and 54ASC49 (L10060021-45RE) were analyzed using this initial calibration.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for pesticide/PCB target compounds. Continuing calibration standards containing both target compounds and surrogates are analyzed at the beginning of each 12-hour analytical shift and after every 20 samples. The DoD QSM specifies that the percent difference (%D) or the average %Ds for all analytes in the standard from the initial calibration should be no greater than $\pm 20\%$.

- For pesticide initial calibration verification performed on 05/28/10 @16:59 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide initial calibration verification performed on 06/16/10 @15:31 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide initial calibration verification performed on 06/16/10 @16:00 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide initial calibration verification performed on 06/18/10 @20:59 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide continuing calibration performed on 06/02/10 @12:01 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), and 54ASC13 3' (L10060021-08) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/02/10 @20:02 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), and 54ASC25 3' (L10060021-18) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/03/10 @01:15 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC26 3' (L10060021-19), 54ATM26 3' (L10060021-20), 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), and 54ASC32 (L10060021-26) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/03/10 @06:55 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/03/10 @15:20 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), and 54ASC41 (L10060021-36) were analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 06/03/10 @20:33 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), and 54ASC48 (L10060021-44) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/04/10 @00:49 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/04/10 @11:25 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC49 (L10060021-45), 54ASC50 (L10060021-46), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), and 54ASC53 (L10060021-49) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/04/10 @16:39 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/18/10 @01:24 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/18/10 @07:32 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/19/10 @02:40 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/19/10 @07:51 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/16/10 @21:12 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/17/10 @02:52 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01RE), 54ASC07 3' (L10060021-02RE), 54ASC08 3' (L10060021-03RE), 54ASC09 3' (L10060021-04RE), 54ASC10 3' (L10060021-05RE), 54ASC11 3' (L10060021-06RE), 54ASC12 3' (L10060021-07RE), 54ASC13 3' (L10060021-08RE), 54ASC14 3' (L10060021-09RE), and 54ASC15 3' (L10060021-10RE) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/17/10 @09:00 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/17/10 @13:55 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC16 3' (L10060021-11RE), 54ASC18 3' (L10060021-12RE), and 54ASC20 3' (L10060021-13RE) were analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 06/17/10 @20:12 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC21 3' (L10060021-14RE), 54ASC22 3' (L10060021-15RE), 54ASC23 3' (L10060021-16RE), 54ASC24 3' (L10060021-17RE), 54ASC25 3' (L10060021-18RE), 54ASC26 3' (L10060021-19RE), and 54ATM26 3' (L10060021-20RE) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/18/10 @01:24 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC27 (L10060021-23RE), 54ASC28 (L10060021-24RE), 54ASC31 (L10060021-25RE), 54ASC32 (L10060021-26RE), 54ASC33 (L10060021-27RE), 54ASC34 (L10060021-28RE), 54ASC35 (L10060021-29RE), 54ASC36 (L10060021-30RE), 54ATM36 (L10060021-31RE), 54ASC37 (L10060021-32RE), 54ASC38 (L10060021-33RE), 54ASC39 (L10060021-34RE), 54ASC40 (L10060021-35RE), 54ASC41 (L10060021-36RE), 54ASC42 (L10060021-37RE), 54ASC43 (L10060021-38RE), 54ASC45 (L10060021-39RE), and 54ASC46 (L10060021-40RE) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/19/10 @02:40 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC47 (L10060021-43RE), 54ASC48 (L10060021-44RE), and 54ASC49 (L10060021-45RE) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/19/10 @07:51 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

V-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤ 5 times (5X) the maximum amount for pesticide and PCB target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

Table 2 Blank Contamination Analysis Summary

Parameter	Analysis Date	QC Blank ID	Compound	Max Conc. $\mu\text{g/kg}$	Action Level $\mu\text{g/kg}$	B qualified samples (for this SDG)
Pesticides	06/02/10	WG333138-02	All target $< \frac{1}{2}$ MRL	NA	NA	None
Pesticides	06/03/10	WG333139-02	All target $< \frac{1}{2}$ MRL	NA	NA	None
Pesticides	06/04/10	WG333140-01	All target $< \frac{1}{2}$ MRL	NA	NA	None
Pesticides	06/17/10	WG333631-02	All target $< \frac{1}{2}$ MRL	NA	NA	None
Pesticides	06/18/10	WG333632-02	All target $< \frac{1}{2}$ MRL	NA	NA	None
Pesticides	06/19/10	WG334417-01	All target $< \frac{1}{2}$ MRL	NA	NA	None

NA = Not Applicable

MRL = Method Reporting Limit

VI-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Pesticides Solid Criteria: Tetrachloro-m-xylene: 70-125% (DoD QSM 70-125%)

Decachlorobiphenyl: 55-130% (DoD QSM 55-130%)

- For pesticide run for sample 54ASC06 3' (L10060021-01), surrogate tetrachloro-m-xylene (62.4%) was below criteria. The sample 54ASC06 3' (L10060021-01RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (65.5%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC07 3' (L10060021-02), surrogate tetrachloro-m-xylene (65.1%) was below criteria. The sample 54ASC07 3' (L10060021-02RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (72.6%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC08 3' (L10060021-03), surrogate tetrachloro-m-xylene (49.8%) was below criteria. The sample 54ASC08 3' (L10060021-03RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (65.6%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC09 3' (L10060021-04), surrogate tetrachloro-m-xylene (52.0%) and decachlorobiphenyl (54.2%) were outside criteria. The sample 54ASC09 3' (L10060021-04RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (64.7%) was outside criteria and surrogate decachlorobiphenyl was within criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. Since only one surrogate was outside criteria for the re-analysis sample; no qualifiers were applied for the re-analysis sample based upon this outlier. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC10 3' (L10060021-05), surrogate tetrachloro-m-xylene (52.3%) was below criteria. The sample 54ASC10 3' (L10060021-05RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (62.8%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC11 3' (L10060021-06), surrogate tetrachloro-m-xylene (48.8%) was below criteria. The sample 54ASC11 3' (L10060021-06RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (64.6%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC12 3' (L10060021-07), surrogate tetrachloro-m-xylene (60.7%) was below criteria. The sample 54ASC12 3' (L10060021-07RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (59.9%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.

- For pesticide run for sample 54ASC13 3' (L10060021-08), surrogate tetrachloro-m-xylene (65.7%) was below criteria. The sample 54ASC13 3' (L10060021-08RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (64.1%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC14 3' (L10060021-09), surrogate tetrachloro-m-xylene (58.0%) was below criteria. The sample 54ASC14 3' (L10060021-09RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (66.2%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC15 3' (L10060021-10), surrogate tetrachloro-m-xylene (64.9%) was below criteria. The sample 54ASC15 3' (L10060021-10RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (73.1%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC16 3' (L10060021-11), surrogate tetrachloro-m-xylene (54.6%) was below criteria. The sample 54ASC16 3' (L10060021-11RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (68.1%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC18 3' (L10060021-12), surrogate tetrachloro-m-xylene (53.4%) and decachlorobiphenyl (53.2%) were outside criteria. The sample 54ASC18 3' (L10060021-12RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (68.4%) was outside criteria and surrogate decachlorobiphenyl was within criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. Since only one surrogate was outside criteria for the re-analysis sample; no qualifiers were applied for the re-analysis sample based upon this outlier. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC20 3' (L10060021-13), surrogate tetrachloro-m-xylene (54.9%) and decachlorobiphenyl (51.0%) were outside criteria. The sample 54ASC20 3' (L10060021-13RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (63.3%) was outside criteria and surrogate decachlorobiphenyl was within criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. Since only one surrogate was outside criteria for the re-analysis sample; no qualifiers were applied for the re-analysis sample based upon this outlier. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC21 3' (L10060021-14), surrogate tetrachloro-m-xylene (50.2%) and decachlorobiphenyl (49.9%) were outside criteria. The sample 54ASC21 3' (L10060021-14RE) was re-extracted and re-analyzed and surrogates tetrachloro-m-xylene (72.6%) and decachlorobiphenyl (94.4%) were within criteria limits. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. All criteria were met for the re-analysis sample; therefore, no qualifiers were applied for the re-analysis sample. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC22 3' (L10060021-15), surrogate tetrachloro-m-xylene (55.5%) was below criteria. The sample 54ASC22 3' (L10060021-15RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (70.4%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.

- For pesticide run for sample 54ASC23 3' (L10060021-16), surrogate tetrachloro-m-xylene (53.5%) was below criteria. The sample 54ASC23 3' (L10060021-16RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (76.2%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC24 3' (L10060021-17), surrogate tetrachloro-m-xylene (56.4%) and decachlorobiphenyl (50.1%) were outside criteria. The sample 54ASC24 3' (L10060021-17RE) was re-extracted and re-analyzed and surrogates tetrachloro-m-xylene (72.9%) and decachlorobiphenyl (90.9%) were within criteria limits. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. All criteria were met for the re-analysis sample; therefore, no qualifiers were applied for the re-analysis sample. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC25 3' (L10060021-18), surrogate tetrachloro-m-xylene (55.0%) and decachlorobiphenyl (51.2%) were outside criteria. The sample 54ASC25 3' (L10060021-18RE) was re-extracted and re-analyzed and surrogates tetrachloro-m-xylene (74.5%) and decachlorobiphenyl (97.7%) were within criteria limits. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. All criteria were met for the re-analysis sample; therefore, no qualifiers were applied for the re-analysis sample. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC26 3' (L10060021-19), surrogate tetrachloro-m-xylene (55.4%) was below criteria. The sample 54ASC26 3' (L10060021-19RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (69.7%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ATM26 3' (L10060021-20), surrogate tetrachloro-m-xylene (54.2%) was below criteria. The sample 54ATM26 3' (L10060021-20RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (73.5%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC27 (L10060021-23), surrogate decachlorobiphenyl (47.3%) was below criteria. All criteria were met for surrogate tetrachloro-m-xylene. The sample 54ASC23 3' (L10060021-16RE) was re-extracted and re-analyzed and surrogate decachlorobiphenyl (61.0%) was within criteria limits and surrogate tetrachloro-m-xylene (55.3%) was outside criteria. Since only one surrogate was outside criteria for either the original analysis and/or re-analysis; no qualifiers were applied based upon these outliers.
- For pesticide run for sample 54ASC28 (L10060021-24), surrogate tetrachloro-m-xylene (60.7%) and decachlorobiphenyl (53.1%) were outside criteria. The sample 54ASC28 (L10060021-24RE) was re-extracted and re-analyzed and surrogates tetrachloro-m-xylene (71.2%) and decachlorobiphenyl (102%) were within criteria limits. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. All criteria were met for the re-analysis sample; therefore, no qualifiers were applied for the re-analysis sample. The re-analysis sample should be used for data usability reasons.

- For pesticide run for sample 54ASC31 (L10060021-25), surrogate tetrachloro-m-xylene (63.2%) and decachlorobiphenyl (52.9%) were outside criteria. The sample 54ASC31 (L10060021-25RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (67.7%) was outside criteria and surrogate decachlorobiphenyl was within criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. Since only one surrogate was outside criteria for the re-analysis sample; no qualifiers were applied for the re-analysis sample based upon this outlier. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC32 (L10060021-26), surrogate tetrachloro-m-xylene (59.8%) was below criteria. The sample 54ASC32 (L10060021-26RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (67.3%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC33 (L10060021-27), surrogate tetrachloro-m-xylene (63.9%) was below criteria. The sample 54ASC33 (L10060021-27RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (58.5%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC34 (L10060021-28), surrogate tetrachloro-m-xylene (64.0%) and decachlorobiphenyl (49.6%) were outside criteria. The sample 54ASC34 (L10060021-28RE) was re-extracted and re-analyzed and surrogates tetrachloro-m-xylene (76.3%) and decachlorobiphenyl (78.3%) were within criteria limits. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. All criteria were met for the re-analysis sample; therefore, no qualifiers were applied for the re-analysis sample. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC35 (L10060021-29), surrogate tetrachloro-m-xylene (63.8%) and decachlorobiphenyl (50.9%) were outside criteria. The sample 54ASC35 (L10060021-29RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (59.6%) was outside criteria and surrogate decachlorobiphenyl was within criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. Since only one surrogate was outside criteria for the re-analysis sample; no qualifiers were applied for the re-analysis sample based upon this outlier. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC36 (L10060021-30), surrogate tetrachloro-m-xylene (62.5%) was below criteria. The sample 54ASC36 (L10060021-30RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (70.4%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ATM36 (L10060021-31), surrogate tetrachloro-m-xylene (57.5%) and decachlorobiphenyl (50.9%) were outside criteria. The sample 54ATM36 (L10060021-31RE) was re-extracted and re-analyzed and surrogates tetrachloro-m-xylene (71.7%) and decachlorobiphenyl (66.8%) were within criteria limits. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. All criteria were met for the re-analysis sample; therefore, no qualifiers were applied for the re-analysis sample. The re-analysis sample should be used for data usability reasons.

- For pesticide run for sample 54ASC37 (L10060021-32), surrogate tetrachloro-m-xylene (68.4%) was below criteria. The sample 54ASC37 (L10060021-32RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (71.9%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC38 (L10060021-33), surrogate tetrachloro-m-xylene (58.7%) and decachlorobiphenyl (46.0%) were outside criteria. The sample 54ASC38 (L10060021-33RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (67.5%) was outside criteria and surrogate decachlorobiphenyl was within criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. Since only one surrogate was outside criteria for the re-analysis sample; no qualifiers were applied for the re-analysis sample based upon this outlier. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC40 (L10060021-35), surrogate tetrachloro-m-xylene (59.8%) was below criteria. The sample 54ASC40 (L10060021-35RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (80.7%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC42 (L10060021-37), surrogate tetrachloro-m-xylene (63.2%) was below criteria. The sample 54ASC42 (L10060021-37RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (63.6%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC43 (L10060021-38), surrogate tetrachloro-m-xylene (69.8%) was below criteria. The sample 54ASC43 (L10060021-38RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (70.7%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC45 (L10060021-39), surrogate tetrachloro-m-xylene (59.5%) was below criteria. The sample 54ASC45 (L10060021-39RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (70.6%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For pesticide run for sample 54ASC46 (L10060021-40), surrogate tetrachloro-m-xylene (51.7%) and decachlorobiphenyl (49.1%) were outside criteria. The sample 54ASC46 (L10060021-40RE) was re-extracted and re-analyzed and surrogates tetrachloro-m-xylene (70.9%) and decachlorobiphenyl (69.2%) were within criteria limits. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. All criteria were met for the re-analysis sample; therefore, no qualifiers were applied for the re-analysis sample. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC47 (L10060021-43), surrogate tetrachloro-m-xylene (56.7%) and decachlorobiphenyl (47.6%) were outside criteria. The sample 54ASC47 (L10060021-43RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (65.0%) was outside criteria and surrogate decachlorobiphenyl was within criteria. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. Since only one surrogate was outside criteria for the re-analysis sample; no qualifiers were applied for the re-analysis sample based upon this outlier. The re-analysis sample should be used for data usability reasons.

- For pesticide run for sample 54ASC48 (L10060021-44), surrogate tetrachloro-m-xylene (157%) and decachlorobiphenyl (44.6%) were outside criteria. The sample 54ASC48 (L10060021-44RE) was re-extracted and re-analyzed and surrogates tetrachloro-m-xylene (90.8%) and decachlorobiphenyl (60.4%) were within criteria limits. All target pesticides were non-detect and were qualified estimated "UJ" based upon these outliers for the original analysis. All criteria were met for the re-analysis sample; therefore, no qualifiers were applied for the re-analysis sample. The re-analysis sample should be used for data usability reasons.
- For pesticide run for sample 54ASC49 (L10060021-45), surrogate decachlorobiphenyl (51.9%) was below criteria. The sample 54ASC49 (L10060021-45RE) was re-extracted and re-analyzed and surrogate decachlorobiphenyl (82.2%) was within criteria limits. All criteria were met for surrogate tetrachloro-m-xylene for both samples. Since only one surrogate was outside criteria for the original analysis; no qualifiers were applied based upon this outlier.
- For all other pesticide samples, all criteria were met.

VII-Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD QSM solid LCS recovery limits are specified in Table G-15 and Table G-17 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for pesticides is $\leq 30\%$ RPD.

- Sample WG333138-03 was used as the solid LCS for the pesticide analysis on 06/02/10. All criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), and 54ATM26 3' (L10060021-20) apply to this LCS.
- Sample WG333139-03 was used as the solid LCS for the pesticide analysis on 06/03/10. All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), and 54ASC48 (L10060021-44) apply to this LCS.
- Sample WG333140-02 and WG333140-03 were used as the solid LCS/LCSD for the pesticide analysis on 06/04/10. All criteria were met. No qualifiers were applied. Samples 54ASC49 (L10060021-45), 54ASC50 (L10060021-46), 54ASC51 (L10060021-47), 54ASC52 (L10060021-48), and 54ASC53 (L10060021-49) apply to this LCS/LCSD.

- Sample WG333631-03 was used as the solid LCS for the pesticide analysis on 06/17/10. All criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01RE), 54ASC07 3' (L10060021-02RE), 54ASC08 3' (L10060021-03RE), 54ASC09 3' (L10060021-04RE), 54ASC10 3' (L10060021-05RE), 54ASC11 3' (L10060021-06RE), 54ASC12 3' (L10060021-07RE), 54ASC13 3' (L10060021-08RE), 54ASC14 3' (L10060021-09RE), 54ASC15 3' (L10060021-10RE), 54ASC16 3' (L10060021-11RE), 54ASC18 3' (L10060021-12RE), 54ASC20 3' (L10060021-13RE), 54ASC21 3' (L10060021-14RE), 54ASC22 3' (L10060021-15RE), 54ASC23 3' (L10060021-16RE), 54ASC24 3' (L10060021-17RE), 54ASC25 3' (L10060021-18RE), 54ASC26 3' (L10060021-19RE), and 54ATM26 3' (L10060021-20RE) apply to this LCS.
- Sample WG333632-03 was used as the solid LCS for the pesticide analysis on 06/18/10. All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23RE), 54ASC28 (L10060021-24RE), 54ASC31 (L10060021-25RE), 54ASC32 (L10060021-26RE), 54ASC33 (L10060021-27RE), 54ASC34 (L10060021-28RE), 54ASC35 (L10060021-29RE), 54ASC36 (L10060021-30RE), 54ATM36 (L10060021-31RE), 54ASC37 (L10060021-32RE), 54ASC38 (L10060021-33RE), 54ASC39 (L10060021-34RE), 54ASC40 (L10060021-35RE), 54ASC41 (L10060021-36RE), 54ASC42 (L10060021-37RE), 54ASC43 (L10060021-38RE), 54ASC45 (L10060021-39RE), 54ASC46 (L10060021-40RE), 54ASC47 (L10060021-43RE), and 54ASC48 (L10060021-44RE) apply to this LCS.
- Samples WG334417-02 and WG334417-03 were used as the solid LCS/LCSD for the pesticide analysis on 06/19/10. All criteria were met. No qualifiers were applied. Sample 54ASC49 (L10060021-45RE) applies to this LCS/LCSD.

VIII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-15 and Table G-17 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for pesticides is $\leq 30\%$ RPD.

- Sample 54ASC26 3' (L10060021-19) was used as the solid MS/MSD for the pesticide analysis on 06/02/10. All criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), and 54ATM26 3' (L10060021-20) apply to this MS/MSD.
- Sample 54ASC46 (L10060021-40) was used as the solid MS/MSD for the pesticide analysis on 06/03/10. All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), and 54ASC48 (L10060021-44) apply to this MS/MSD.

- Sample 54ASC26 3' (L10060021-19RE) was used as the solid MS/MSD for the pesticide analysis on 06/17/10. All criteria were met. No qualifiers were applied. Samples 54ASC06 3' (L10060021-01RE), 54ASC07 3' (L10060021-02RE), 54ASC08 3' (L10060021-03RE), 54ASC09 3' (L10060021-04RE), 54ASC10 3' (L10060021-05RE), 54ASC11 3' (L10060021-06RE), 54ASC12 3' (L10060021-07RE), 54ASC13 3' (L10060021-08RE), 54ASC14 3' (L10060021-09RE), 54ASC15 3' (L10060021-10RE), 54ASC16 3' (L10060021-11RE), 54ASC18 3' (L10060021-12RE), 54ASC20 3' (L10060021-13RE), 54ASC21 3' (L10060021-14RE), 54ASC22 3' (L10060021-15RE), 54ASC23 3' (L10060021-16RE), 54ASC24 3' (L10060021-17RE), 54ASC25 3' (L10060021-18RE), 54ASC26 3' (L10060021-19RE), and 54ATM26 3' (L10060021-20RE) apply to this MS/MSD.
- Sample 54ASC46 (L10060021-40RE) was used as the solid MS/MSD for the pesticide analysis on 06/18-19/10. All criteria were met. No qualifiers were applied. Samples 54ASC27 (L10060021-23RE), 54ASC28 (L10060021-24RE), 54ASC31 (L10060021-25RE), 54ASC32 (L10060021-26RE), 54ASC33 (L10060021-27RE), 54ASC34 (L10060021-28RE), 54ASC35 (L10060021-29RE), 54ASC36 (L10060021-30RE), 54ATM36 (L10060021-31RE), 54ASC37 (L10060021-32RE), 54ASC38 (L10060021-33RE), 54ASC39 (L10060021-34RE), 54ASC40 (L10060021-35RE), 54ASC41 (L10060021-36RE), 54ASC42 (L10060021-37RE), 54ASC43 (L10060021-38RE), 54ASC45 (L10060021-39RE), 54ASC46 (L10060021-40RE), 54ASC47 (L10060021-43RE), 54ASC48 (L10060021-44RE), and 54ASC49 (L10060021-45RE) apply to this MS/MSD.

IX-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- Field soil sample duplicate pair 54ASC26 3' (L10060021-19) and 54ATM26 3' (L10060021-20) was collected for select pesticides. All target pesticides were non-detect for the duplicate pair for both the original and re-analysis "RE" samples. All criteria were met. No qualifiers were applied.
- Field soil sample duplicate pair 54ASC36 (L10060021-30) and 54ATM36 (L10060021-31) was collected for select pesticides. All target pesticides were non-detect for the duplicate pair for both the original and re-analysis "RE" samples. All criteria were met. No qualifiers were applied.
- Field soil sample duplicate pair 54ASC16 3' (L10060021-11) and 54ATM16 (L10060090-01) was collected for select pesticides. All target pesticides were non-detect for the original and duplicate pair samples (for both the original and re-analysis "RE" samples). All criteria were met. No qualifiers were applied. The duplicate pair was collected approximately a week apart.
- Field soil sample duplicate pair 54ASC46 (L10060021-40) and 54ATM46 (L10060090-07) was collected for select pesticides. All target pesticides were non-detect for the original and duplicate pair samples (for both the original and re-analysis "RE" samples). All criteria were met. No qualifiers were applied. The duplicate pair was collected approximately a week apart.

X-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The difference between the calculated value and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %RPD between the primary and secondary columns. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

- For samples 54ASC06 3' (L10060021-01), 54ASC07 3' (L10060021-02), 54ASC08 3' (L10060021-03), 54ASC09 3' (L10060021-04), 54ASC10 3' (L10060021-05), 54ASC11 3' (L10060021-06), 54ASC12 3' (L10060021-07), 54ASC13 3' (L10060021-08), 54ASC14 3' (L10060021-09), 54ASC15 3' (L10060021-10), 54ASC16 3' (L10060021-11), 54ASC18 3' (L10060021-12), 54ASC20 3' (L10060021-13), 54ASC21 3' (L10060021-14), 54ASC22 3' (L10060021-15), 54ASC23 3' (L10060021-16), 54ASC24 3' (L10060021-17), 54ASC25 3' (L10060021-18), 54ASC26 3' (L10060021-19), 54ATM26 3' (L10060021-20), 54ASC27 (L10060021-23), 54ASC28 (L10060021-24), 54ASC31 (L10060021-25), 54ASC32 (L10060021-26), 54ASC33 (L10060021-27), 54ASC34 (L10060021-28), 54ASC35 (L10060021-29), 54ASC36 (L10060021-30), 54ATM36 (L10060021-31), 54ASC37 (L10060021-32), 54ASC38 (L10060021-33), 54ASC39 (L10060021-34), 54ASC40 (L10060021-35), 54ASC41 (L10060021-36), 54ASC42 (L10060021-37), 54ASC43 (L10060021-38), 54ASC45 (L10060021-39), 54ASC46 (L10060021-40), 54ASC47 (L10060021-43), 54ASC48 (L10060021-44), and 54ASC49 (L10060021-45), one or more of the pesticide surrogate(s) were outside criteria and the samples were re-analyzed "RE". See Section VI System Monitoring Compounds for further details regarding which should be used as best fit data with the other samples provided as extra QC. There were no impacts to the data completeness.
- All chlorinated pesticides were non-detect. No confirmations were required.

Sample: 54ASC26 3'-MS (L10060021-19MS), Dieldrin

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{CF} * \text{Vi} * \text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$
Ax = Area/response for compound being measured.
Vt = Volume of total extract in (μL)
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (mL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

$$\begin{aligned}\text{Conc. } \mu\text{g/kg} &= (5415300000\text{Area} * 10000\mu\text{L} * 1) / (1169000000\text{Area/pg} * (1000\text{pg/ng}) * 1\mu\text{L} * 28.15\text{g} * 0.870) \\ &= 18.9 \mu\text{g/kg} \text{ (Signal \#1)}\end{aligned}$$

Reported Value = 18.9 $\mu\text{g/kg}$ (Signal #1)

% Difference = 0.0%

Values were within 10% difference

Sample: 54ASC46-MS (L10060021-40MS), Dieldrin

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{CF} * \text{Vi} * \text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$
Ax = Area/response for compound being measured.
Vt = Volume of total extract in (μL)
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (mL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight $(100 - \% \text{ moisture in sample})/100 = 1.0$ for Wet Weight
DF = Dilution factor

$$\begin{aligned} \text{Conc. } \mu\text{g/kg} &= (4895600000 \text{Area} * 10000 \mu\text{L} * 1) / (1169000000 \text{Area/pg} * (1000 \text{pg/ng}) * 1 \mu\text{L} * 28.86 \text{g} * 0.756) \\ &= 19.2 \mu\text{g/kg} \text{ (Signal \#1)} \end{aligned}$$

Reported Value = 19.2 $\mu\text{g/kg}$ (Signal #1)

% Difference = 0.0%

Values were within 10% difference

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	The reported result is an estimated value (e.g., matrix interference was observed or the analyte was detected at a concentration outside the quantitation range).
B	Blank contamination. The recorded result is associated with a contaminated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Explosives
Microbac Laboratories, Inc., SDG L10060090

DATE: October 11, 2010

The purpose of this memorandum is to present the data validation report for the samples collected for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on June 02, 2010. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of ten solid samples (includes three re-analysis samples for explosives) were validated. The sample IDs are:

Field Sample ID	Lab Sample ID	Field Sample ID	Lab Sample ID
54ATM16	L10060090-01	54ASC19	L10060090-03
54ATM16	L10060090-01CF	54ASC29	L10060090-04
54ASC17	L10060090-02	54ASC30	L10060090-05
54ASC17	L10060090-02DL	54ASC44	L10060090-06
54ASC17	L10060090-02CF	54ATM46	L10060090-07

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Blank Analysis
	X	Initial Calibration
	X	Continuing Calibration
	X	System Monitoring Compounds
X		Laboratory Control Sample and Laboratory Control Sample Duplicate
	X	Matrix Spike/Spike Duplicate
X		Field Duplicate
X		Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. Target compound 2,4,6-trinitrotoluene exceeded calibration range and was qualified rejected "R" for sample 54ASC17 (L10060090-02) based on this outlier. The associated "DL" sample should be used for data usability. There were no impacts to the data completeness.

 Eric Malarek, Chemist

 Date

**RFAAP VALIDATION REPORT
EXPLOSIVES REVIEW
SDG L10060090**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 06/02/10, the cooler was received by the primary laboratory (Microbac) on 06/03/10 at 1.0°C. Even though the cooler temperature was below criteria; there were no impacts for the sample analysis and no qualifiers were applied based upon this outlier.
- Holding Time Review: The solid samples were collected on 06/02/10. The samples were extracted on 06/07/10 and were analyzed on 06/15/10, 06/16/10, and 06/20/10 for explosives. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	QC Blank ID	Compound	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
06/15/10	WG333544-01	All target explosives <½MRL	NA	NA	None
06/19/10	WG333544-01	All target explosives <½MRL	NA	NA	None

MRL = Method Reporting Limit
NA = Not Applicable

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%.

- For the explosives initial calibration performed on 05/15/10 on instrument HPLC4, all criteria were met for target explosives compounds. All target compounds were determined using linear regression with correlation coefficients ≥0.995. No qualifiers were applied. Samples 54ATM16 (L10060090-01), 54ATM16 (L10060090-01CF), 54ASC17 (L10060090-02), 54ASC17 (L10060090-02DL), 54ASC17 (L10060090-02CF), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this initial calibration.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than $\pm 20\%$.

- For explosives initial calibration verification performed on 05/15/10 @18:15 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.
- For explosives continuing calibration performed on 06/15/10 @15:10 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ATM16 (L10060090-01) and 54ASC17 (L10060090-02) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/15/10 @23:26 on instrument HPLC4, all criteria were met. No qualifiers were applied. Samples 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/16/10 @06:57 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/16/10 @20:04 on instrument HPLC4, all criteria were met. No qualifiers were applied. Sample 54ASC17 (L10060090-02DL) applies to this continuing calibration.
- For explosives continuing calibration performed on 06/17/10 @03:35 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/19/10 @14:34 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 06/20/10 @01:30 on instrument HPLC4, all criteria were met. No qualifiers were applied. Sample confirmations 54ATM16 (L10060090-01CF) and 54ASC17 (L10060090-02CF) apply to this continuing calibration.
- For explosives continuing calibration performed on 06/20/10 @12:27 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

V-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 1,2-dinitrobenzene (50-150%)

- For explosive run for sample 54ASC 17 (L10060090-02DL), surrogate 1,2-dinitrobenzene was diluted out at 50x dilution; therefore, no qualifiers were applied based upon this outlier.
- For all other samples and runs, all criteria were met.

VI-Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) and LCS duplicate (LCSD) are used to monitor long-term precision and accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- Samples WG333544-02 and WG333544-02 were used as solid LCS/LCSD for explosives analyzed on 06/15/10. Nitroglycerin (RPD=27.5%) was outside criteria. For all other target compounds, all criteria were met. Nitroglycerin was qualified estimated "J" for detects and no qualification for non-detects based upon the high RPD. All recoveries were within criteria limits. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC17 (L10060090-02DL), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this LCS/LCSD.
- Samples WG333544-02 and WG333544-02 were used as solid LCS/LCSD for explosives analyzed on 06/19/10. 4-Nitrotoluene (136%, 132%) was outside criteria. For all other target compounds, all criteria were met. 4-Nitrotoluene was non-detect for all associated samples; therefore, no qualifiers were applied based upon the high recoveries. Samples 54ATM16 (L10060090-01CF) and 54ASC17 (L10060090-02CF) apply to this LCS/LCSD.

VII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- No project specific solid MS/MSD was performed for the explosives analysis on 06/15/10 or 06/19/10 runs; therefore, were not evaluated.

VIII-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- Field soil sample duplicate pair 54ASC16 3' (L10060021-11) and 54ATM16 (L10060090-01) was collected for select explosives. All detected analytes found in the sample and its duplicate pair and associated RPD are noted in **Table 3**. Target compounds 2,4-dinitrotoluene (50.3%) and 2,4,6-trinitrotoluene (129%) were outside criteria and were qualified estimated "J" for the duplicate pair based upon the high RPDs. For all other target compounds, all criteria were met. The duplicate pair was collected approximately a week apart; which may of lead to the high RPD.

**Table 3 Field Precision Hits Analysis Summary for Explosives for
Duplicate Pair 54ASC16 3' (L10060021-11) and 54ATM16 (L10060090-01)**

Compound	Original Sample (mg/kg)	Duplicate Pair (mg/kg)	RPD
2,4-Dinitrotoluene	0.184J	0.110J	50.3
2,4,6-Trinitrotoluene	0.891	0.191J	129
4-Amino-2,6-dinitrotoluene	0.161J	0.246U	NA

U = Target compound was non-detect as <MRL.

J = Estimated value <MRL and >MDL.

MDL = Method Detection Limit

MRL = Method Reporting Limit

NA = Not Applicable

- Field soil sample duplicate pair 54ASC46 (L10060021-40) and 54ATM46 (L10060090-07) was collected for select explosives. Target compound 2,4,6-trinitrotoluene was detected above the MRL for the parent and non-detect for the duplicate pair; therefore, were qualified as estimated "J" for detects and "UJ" for non-detects based upon this outlier. All other target explosives were non-detect for the duplicate pair. The duplicate was collected approximately a week apart; which may of lead to the high RPD.

IX-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".
- Target compound 2,4,6-trinitrotoluene exceeded calibration range and was qualified rejected "R" for sample 54ASC17 (L10060090-02) based on this outlier. The associated "DL" sample should be used for data usability.
- For sample 54ASC17 (L10060090-02), nitroglycerin was detected; however, not confirmed on dissimilar column. Nitroglycerin was qualified estimated "J" based upon this outlier for this sample.
- For all other samples and detected target compounds, all confirmation criteria were met.

Sample: 54ATM16 (L10060090-01CF), 2,4,6-trinitrotoluene

$$Y = mX + b$$

Y = Area of target compound for sample

m = slope of curve

X = Amount on column

b = Y-intercept

Given:

$$m = 0.37032576$$

$$b = 0.2147599$$

$$Y = \text{Area} = 18.75225$$

$$X = 50.0572525$$

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$

Ax = Amount of compound being measured (ng/mL).

Vt = Volume of total extract (mL).

W(s) = Weight of sample (g).

D = Percent dry weight $(100 - \% \text{ moisture in sample})/100$ (Air dried = 1.000)

DF = Dilution factor

$$\text{Conc. } \mu\text{g/kg} = (50.0572525 * 40 * 1) / (10.15 * 1.000) = 197.27 \mu\text{g/kg} = 0.197 \text{ mg/kg}$$

Reported Value = 0.197 mg/kg

% Difference = 0.0%

Values were within 10% difference

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% D for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Lead
Microbac Laboratories, Inc., SDG L10060090

DATE: October 11, 2010

The purpose of this memorandum is to present the data validation report for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on June 02, 2010. Solid samples were analyzed for lead using USEPA SW-846 3051A/6010B. A total of seven solid samples were validated. The sample IDs are:

Field Sample ID	Lab Sample ID	Field Sample ID	Lab Sample ID
54ATM16	L10060090-01	54ASC30	L10060090-05
54ASC17	L10060090-02	54ASC44	L10060090-06
54ASC19	L10060090-03	54ATM46	L10060090-07
54ASC29	L10060090-04		

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Initial and Continuing Calibration
	X	Blank Analysis
	X	ICP Interference Check Sample (ICS)
	X	Laboratory Control Sample (LCS)
	X	Laboratory Sample Duplicate
	X	Matrix Spike and Spike Duplicate
	X	ICP Serial Dilution
X		Field Sample Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

10/4/10
Date

**RFAAP VALIDATION REPORT
METALS REVIEW
SDG L10060090**

I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped at ambient temperature for ICP metals (cool @4°C±2°C if with other tests) with a maximum holding time is 180 days (USEPA criteria).

- **Temperature Review:** The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 06/02/10, the cooler was received by the primary laboratory (Microbac) on 06/03/10 at 1.0°C. Even though the cooler temperature was below criteria; there were no impacts for the sample analysis and no qualifiers were applied based upon this outlier.
- **Holding Time Review:** Samples were collected 06/02/10 for lead analysis. For solid samples, the soil samples were digested on 06/04/10 and analyzed on 06/07/10 for ICP lead. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

ICP: 1- blank (DoD QSM <½ MRL)
3 – standards ($r \geq 0.995$)
ICV/CCV (90-110%) (DoD QSM 90-110%)
MRL (70-130%) (DoD QSM 80-120%)
High Std. (95-105%)

- The solid samples were analyzed for ICP metals on 06/07/10. Lead was determined using linear regression with a correlation coefficient ≥ 0.995 for all runs. All ICV/CCV/High Standard/MRL criteria were met for lead for all runs. No qualifiers were applied.

III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	Analysis	QC Blank ID	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
06/07/10	ICP Pb	ICB/CCBs	<2*MDL	NA	None
06/07/10	ICP Pb	WG333480-02	<1/2*MRL	NA	None

NA = Not Applicable

MDL = Method Detection Limit.

MRL = Method Reporting Limit.

IV-ICP Interference Check Sample (ICS)

The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

V-Laboratory Control Samples (LCS)

The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table G-19 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used.

- Sample WG333480-03 was used as solid LCS for ICP metals analysis on 06/07/10. All criteria were met. No qualifiers were applied. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this LCS.

VI-Laboratory Duplicate Sample Analysis

Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

VII-Matrix Spike/Spike Duplicate

MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-19 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals.

- Sample L10060110-01 was used as solid laboratory MS/MSD for ICP lead analysis on 06/07/10. The spiked sample was not a RFAAP site specific sample; therefore, was not evaluated. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this MS/MSD.

VIII-ICP Serial Dilution

An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP lead was analyzed on 06/07/10 using solid sample 54ASC19 (L10060090-03). All criteria were met. No qualifiers were applied. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this serial dilution.

IX-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples.

- Field soil sample duplicate pair 54ASC16 3' (L10060021-11) and 54ATM16 (L10060090-01) was collected for lead. Lead was detected in the original sample at 56.1 mg/kg and in the duplicate pair at 112 mg/kg resulting in a RPD of 66.5%. Lead exceeded the criteria limit; therefore, was qualified estimated "J" for the duplicate pair based upon the high RPD. The duplicate pair was collected approximately a week apart; which may of lead to the high RPD.
- Field soil sample duplicate pair 54ASC46 (L10060021-40) and 54ATM46 (L10060090-07) was collected for lead. Lead was detected in the original sample at 15.0 mg/kg and in the duplicate pair at 22.2 mg/kg resulting in a RPD of 38.7%. Lead exceeded the criteria limit; therefore, was qualified estimated "J" for the duplicate pair based upon the high RPD. The duplicate pair was collected approximately a week apart; which may of lead to the high RPD.

X-Quantitation Verification

The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

Sample: 54ATM16 (L10060090-01), Lead

$$\text{Conc. (mg/kg)} = \{(\text{conc. } \mu\text{g/L}) * (\text{Final Volume L}) * (\text{DF})\} / \{(\text{Weight Sample g}) * (\text{Fraction Solids})\}$$

$$\text{Conc. (mg/kg)} = \{(2676.5 \mu\text{g/L}) * (0.050 \text{ L}) * (1)\} / \{(1.450 \text{ g}) * (0.8240)\} = 112 \mu\text{g/g} = 112 \text{ mg/kg}$$

Reported concentration = 112 mg/kg

%D = 0.0%

Values were within 10% difference.

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% D for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Dieldrin and Heptachlor Epoxide
Microbac Laboratories, Inc., SDG L10060090

DATE: September 30, 2010

The purpose of this memorandum is to present the data validation report for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on June 02, 2010. Solid samples were analyzed for select pesticides dieldrin and heptachlor epoxide using USEPA Method 3550B/8081A. A total of fourteen solid samples (includes seven re-analysis samples) were validated. The sample ids are:

Field Sample ID	Lab Sample ID	Field Sample ID	Lab Sample ID
54ATM16	L10060090-01	54ASC29	L10060090-04RE
54ATM16	L10060090-01RE	54ASC30	L10060090-05
54ASC17	L10060090-02	54ASC30	L10060090-05RE
54ASC17	L10060090-02RE	54ASC44	L10060090-06
54ASC19	L10060090-03	54ASC44	L10060090-06RE
54ASC19	L10060090-03RE	54ATM46	L10060090-07
54ASC29	L10060090-04	54ATM46	L10060090-07RE

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Instrument Performance Check
	X	Initial Calibration
	X	Continuing Calibration
	X	Blank Analysis
	X	System Monitoring Compounds
X		Laboratory Control Sample and Laboratory Control Sample Duplicate
	X	Matrix Spike/Spike Duplicate
	X	Field Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications. For samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07), one of the pesticide surrogate(s) were outside criteria and the samples were re-analyzed "RE". See Section VI System Monitoring Compounds for further details regarding which should be used as best fit data with the other samples provided as extra QC. There were no impacts to the data completeness.

 Eric Malarek, Chemist

 Date

**RFAAP VALIDATION REPORT
SELECT PESTICIDE/PCB REVIEW
SDG L10060090**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, pesticide and PCB compounds are shipped cooled ($@4^{\circ}\text{C} \pm 2^{\circ}\text{C}$) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 06/02/10, the cooler was received by the primary laboratory (Microbac) on 06/03/10 at 1.0°C . Even though the cooler temperature was below criteria; there were no impacts for the sample analysis and no qualifiers were applied based upon this outlier.
- Holding Time Review: The solid samples were collected on 06/02/10. The samples analyzed for select pesticides were extracted on 06/07/10 and analyzed on 06/09/10. The re-analysis "RE" samples analyzed for select pesticides were re-extracted on 06/10/10 and analyzed on 06/19/10. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Instrument Performance Check (Degradation Standard)

Performance checks on the gas chromatograph with electron capture detector (GC/ECD) system are performed to ensure adequate resolution and instrument sensitivity. The performance evaluation mixture (PEM) must be analyzed at the beginning of the analytical sequence. The breakdown of Endrin and 4,4'-DDT must be $\leq 15\%$ on both signals.

- For analysis performed on 06/09/10 @08:12, endrin and 4,4'-DDT percent breakdowns were 10.33% and 4.47%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/09/10 @11:41, endrin and 4,4'-DDT percent breakdowns were 12.81% and 5.06%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/10/10 @02:44, endrin and 4,4'-DDT percent breakdowns were 11.08% and 4.49%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/19/10 @14:28, endrin and 4,4'-DDT percent breakdowns were 3.18% and 2.78%. All criteria were met. No qualifiers were applied.
- For analysis performed on 06/20/10 @02:45, endrin and 4,4'-DDT percent breakdowns were 2.02% and 3.15%. All criteria were met. No qualifiers were applied.

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5 point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. Calibration factors are generated for each compound. The DoD QSM specifies that the percent relative standard deviation (%RSD) for all single peak target analytes must be $< 20\%$ or the mean %RSD for all analytes in the standard must be $\leq 20\%$. If linear regression is used, the correlation coefficient must be ≥ 0.995 .

- For the pesticide initial calibration performed on 06/08/10 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) were analyzed using this initial calibration.
- For the pesticide initial calibration performed on 06/18/10 on instrument HP15, all criteria were met. No qualifiers were applied. Samples 54ATM16 (L10060090-01RE), 54ASC17 (L10060090-02RE), 54ASC19 (L10060090-03RE), 54ASC29 (L10060090-04RE), 54ASC30 (L10060090-05RE), 54ASC44 (L10060090-06RE), and 54ATM46 (L10060090-07RE) were analyzed using this initial calibration.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for pesticide/PCB target compounds. Continuing calibration standards containing both target compounds and surrogates are analyzed at the beginning of each 12-hour analytical shift and after every 20 samples. The DoD QSM specifies that the percent difference (%D) or the average %Ds for all analytes in the standard from the initial calibration should be no greater than $\pm 20\%$.

- For pesticide initial calibration verification performed on 06/08/10 @20:24 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide initial calibration verification performed on 06/18/10 @20:59 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide initial calibration verification performed on 06/16/10 @16:00 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.
- For pesticide initial calibration verification performed on 06/09/10 @02:04 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), and 54ASC29 (L10060090-04) were analyzed using this initial calibration verification.
- For pesticide continuing calibration performed on 06/09/10 @08:40 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/09/10 @12:10 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/09/10 @21:04 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.
- For pesticide continuing calibration performed on 06/19/10 @14:56 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. Samples 54ATM16 (L10060090-01RE), 54ASC17 (L10060090-02RE), 54ASC19 (L10060090-03RE), 54ASC29 (L10060090-04RE), 54ASC30 (L10060090-05RE), 54ASC44 (L10060090-06RE), and 54ATM46 (L10060090-07RE) were analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 06/19/10 @21:05 on instrument HP15, all criteria were met for all reported target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

V-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤ 5 times (5X) the maximum amount for pesticide and PCB target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

Table 2 Blank Contamination Analysis Summary

Parameter	Analysis Date	QC Blank ID	Compound	Max Conc. $\mu\text{g/kg}$	Action Level $\mu\text{g/kg}$	B qualified samples (for this SDG)
Pesticides	06/09/10	WG333533-01	All target $< \frac{1}{2}$ MRL	NA	NA	None
Pesticides	06/19/10	WG333967-01	All target $< \frac{1}{2}$ MRL	NA	NA	None

NA = Not Applicable

MRL = Method Reporting Limit

VI-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Pesticides Solid Criteria: Tetrachloro-m-xylene: 70-125% (DoD QSM 70-125%)

Decachlorobiphenyl: 55-130% (DoD QSM 55-130%)

- For pesticide run for sample 54ATM16 (L10060090-01), surrogate tetrachloro-m-xylene (57.9%) was below criteria. The sample 54ATM16 (L10060090-01RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (59.6%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon these outliers. The original sample should be used for data usability.
- For pesticide run for sample 54ASC17 (L10060090-02), surrogate tetrachloro-m-xylene (57.0%) was below criteria. The sample 54ASC17 (L10060090-02RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (73.1%) was within criteria limits; however, surrogate decachlorobiphenyl (163%) was above criteria for the re-analysis sample. All criteria were met for surrogate decachlorobiphenyl for the original sample. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon these outliers. The original sample should be used for data usability.
- For pesticide run for sample 54ASC19 (L10060090-03), surrogate tetrachloro-m-xylene (54.0%) was below criteria. The sample 54ASC19 (L10060090-03RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (77.5%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier. The original sample should be used for data usability.

- For pesticide run for sample 54ASC29 (L10060090-04), surrogate tetrachloro-m-xylene (58.4%) was below criteria. The sample 54ASC29 (L10060090-04RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (72.7%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier. The original sample should be used for data usability.
- For pesticide run for sample 54ASC30 (L10060090-05), surrogate tetrachloro-m-xylene (66.4%) was below criteria. The sample 54ASC30 (L10060090-05RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (71.1%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier. The original sample should be used for data usability.
- For pesticide run for sample 54ASC44 (L10060090-06), surrogate tetrachloro-m-xylene (65.8%) was below criteria. The sample 54ASC44 (L10060090-06RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (72.1%) was within criteria limits. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon this outlier. The original sample should be used for data usability.
- For pesticide run for sample 54ATM46 (L10060090-07), surrogate tetrachloro-m-xylene (67.3%) was below criteria. The sample 54ATM46 (L10060090-07RE) was re-extracted and re-analyzed and surrogate tetrachloro-m-xylene (65.9%) was below criteria. All criteria were met for surrogate decachlorobiphenyl for both samples. Since only one surrogate was outside criteria for both samples; no qualifiers were applied based upon these outliers. The original sample should be used for data usability.

VII-Laboratory Control Sample and Laboratory Control Sample Duplicate

Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD QSM solid LCS recovery limits are specified in Table G-15 and Table G-17 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for pesticides is $\leq 30\%$ RPD.

- Sample WG333533-02 was used as the solid LCS for the pesticide analysis on 06/09/10. Heptachlor epoxide (63.3%) was below criteria. All criteria were met for dieldrin. Heptachlor epoxide was non-detect for all associated samples; therefore, was qualified estimated bias low "UL" based upon the low recovery. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this LCS.
- Sample WG333533-02 was used as the solid LCS for the pesticide analysis on 06/09/10. All criteria were met. No qualifiers were applied. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this LCS.
- Sample WG333967-02 and WG333967-03 were used as the solid LCS/LCSD for the pesticide analysis on 06/19/10. All criteria were met. No qualifiers were applied. Samples 54ATM16 (L10060090-01RE), 54ASC17 (L10060090-02RE), 54ASC19 (L10060090-03RE), 54ASC29 (L10060090-04RE), 54ASC30 (L10060090-05RE), 54ASC44 (L10060090-06RE), and 54ATM46 (L10060090-07RE) apply to this LCS/LCSD.

- Sample WG333533-02 and WG333533-03 were used as the solid LCS/LCSD for the pesticide analysis on 06/09/10. All criteria were met. No qualifiers were applied. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07) apply to this LCS/LCSD.

VIII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-15 and Table G-17 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for pesticides is $\leq 30\%$ RPD.

- No project site specific solid MS/MSD was performed for the pesticide analysis; therefore, was not evaluated. Samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), 54ATM46 (L10060090-07), 54ATM16 (L10060090-01RE), 54ASC17 (L10060090-02RE), 54ASC19 (L10060090-03RE), 54ASC29 (L10060090-04RE), 54ASC30 (L10060090-05RE), 54ASC44 (L10060090-06RE), and 54ATM46 (L10060090-07RE) apply to this MS/MSD.

IX-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- Field soil sample duplicate pair 54ASC16 3' (L10060021-11) and 54ATM16 (L10060090-01) was collected for select pesticides. All target pesticides were non-detect for the original and duplicate pair samples (for both the original and re-analysis "RE" samples). All criteria were met. No qualifiers were applied. The duplicate pair was collected approximately a week apart.
- Field soil sample duplicate pair 54ASC46 (L10060021-40) and 54ATM46 (L10060090-07) was collected for select pesticides. All target pesticides were non-detect for the original and duplicate pair samples (for both the original and re-analysis "RE" samples). All criteria were met. No qualifiers were applied. The duplicate pair was collected approximately a week apart.

X-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The difference between the calculated value and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %RPD between the primary and secondary columns. Any sample value $> \text{MDL}$ and $< \text{MRL}$ or $< 3 * \text{MDL}$ (whichever is greater) was qualified as estimated, "J."

- For samples 54ATM16 (L10060090-01), 54ASC17 (L10060090-02), 54ASC19 (L10060090-03), 54ASC29 (L10060090-04), 54ASC30 (L10060090-05), 54ASC44 (L10060090-06), and 54ATM46 (L10060090-07), one of the pesticide surrogate(s) were outside criteria and the samples were re-analyzed "RE". See Section VI System Monitoring Compounds for further details regarding which should be used as best fit data with the other samples provided as extra QC. There were no impacts to the data completeness.
- All chlorinated pesticides were non-detect. No confirmations were required.

Sample: WG333533-02-LCS, Dieldrin

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{CF} * \text{Vi} * \text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$
Ax = Area/response for compound being measured.
Vt = Volume of total extract in (μL)
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (mL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight $(100 - \% \text{ moisture in sample})/100 = 1.0$ for Wet Weight
DF = Dilution factor

$$\begin{aligned}\text{Conc. } \mu\text{g/kg} &= (3852900000\text{Area} * 10000\mu\text{L} * 1) / (93150000\text{Area/pg} * (1000\text{pg/ng}) * 1\mu\text{L} * 30.00\text{g} * 1.000) \\ &= 13.8 \mu\text{g/kg} \text{ (Signal \#1)}\end{aligned}$$

Reported Value = 13.1 $\mu\text{g/kg}$ (Signal #1)

% Difference = 5.3%

Values were within 10% difference

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	The reported result is an estimated value (e.g., matrix interference was observed or the analyte was detected at a concentration outside the quantitation range).
B	Blank contamination. The recorded result is associated with a contaminated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

FAX: 410-612-6351

MEMORANDUM

TO: Tim Leahy, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

FROM: Eric Malarek, Shaw E&I Project Chemist

SUBJECT: RFAAP Data Validation – Explosives
Microbac Laboratories, Inc., SDG L10090123

DATE: October 13, 2010

The purpose of this memorandum is to present the data validation report for the samples collected for the confirmation soil samples collected at Main Manufacturing Area at RFAAP for SWMU54 Removal Action on September 02, 2010. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of one solid sample was validated. The sample Id is:

Field Sample ID	Lab Sample ID
54ASC52E	L10090123-01

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 4.1, April 2009* (DoD, 2009) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

Table 1 Laboratory Performance Criteria

Qualified		Parameter
Yes	No	
	X	Holding Times and Preservation
	X	Blank Analysis
	X	Initial Calibration
	X	Continuing Calibration
	X	System Monitoring Compounds
	X	Laboratory Control Sample
	X	Matrix Spike/Spike Duplicate
	X	Field Duplicate
	X	Quantitation Verification

The quality of data collected in support of this sampling activity is considered acceptable.

**RFAAP VALIDATION REPORT
EXPLOSIVES REVIEW
SDG L10090123**

I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled ($@4^{\circ}\text{C} \pm 2^{\circ}\text{C}$) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis (USEPA criteria).

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 09/02/10, the cooler was received by the primary laboratory (Microbac) on 09/03/10 at 1.0°C . Even though the cooler temperature was below criteria; there were no impacts for the sample analysis and no qualifiers were applied based upon this outlier.
- Holding Time Review: The solid samples were collected on 09/02/10. The samples were extracted on 09/07/10 and were analyzed on 09/09/10 for explosives. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

II-Blank Analysis

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤ 5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

Table 2 Blank Contamination Analysis Summary

Analysis Date	QC Blank ID	Compound	Max Conc. mg/kg	Action Level mg/kg	B qualified samples (for this SDG)
09/08/10	WG342049-02	All target explosives $< \frac{1}{2}$ MRL	NA	NA	None

MRL = Method Reporting Limit

NA = Not Applicable

III-Initial Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥ 0.995 and/or the percent relative standard deviation (%RSD) must be $\leq 20\%$.

- For the explosives initial calibration performed on 05/13/10 on instrument HPLC4, all criteria were met for target explosives compounds. All target compounds were determined using linear regression with correlation coefficients ≥ 0.995 . No qualifiers were applied. Sample 54ASC52E (L10090123-01) applies to this initial calibration.

IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than $\pm 20\%$.

- For explosives initial calibration verification performed on 05/13/10 @23:01 on instrument HPLC4, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.
- For explosives continuing calibration performed on 09/08/10 @10:11 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 09/08/10 @19:03 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.
- For explosives continuing calibration performed on 09/09/10 @03:52 on instrument HPLC4, all criteria were met. No qualifiers were applied. Sample 54ASC52E (L10090123-01) applies to this continuing calibration.
- For explosives continuing calibration performed on 09/09/10 @12:02 on instrument HPLC4, all criteria were met. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

V-System Monitoring Compound (Surrogates)

Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table G-3 of the DoD QSM (DoD, 2009). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 1,2-dinitrobenzene (50-150%)

- All criteria were met. No qualifiers were applied.

VI-Laboratory Control Sample

Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009). If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- Sample WG342049-03 was used as solid LCS for explosives analyzed on 09/08/10. All criteria were met. No qualifiers were applied. Sample 54ASC52E (L10090123-01) applies to this LCS.

VII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table G-2 and Table G-13 of the DoD QSM (DoD, 2009).

If the compound is not listed, then the laboratory criteria shall be used. The DoD QSM solid precision limit for explosives is $\leq 20\%$ RPD.

- No project specific solid MS/MSD was performed for the explosives analysis on 09/08-09/10 run; therefore, were not evaluated.

VIII-Field Duplicate Sample Analysis

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples.

- No soil field duplicate was analyzed for explosives with this SDG; therefore, it was not evaluated.

IX-Quantitation Verification

The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %RPD between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J" (if required).
- All samples were non-detect for all target compounds, no confirmations were required.

Sample: WG342049-03, 2,4,6-trinitrotoluene

$$Y = mX + b$$

Y = Area of target compound for sample

m = slope of curve

X = Amount on column

b = Y-intercept

Given:

$$m = 0.41977902$$

$$b = -0.4140067$$

$$Y = \text{Area} = 43.15367$$

$$X = 103.787$$

$$\text{Conc. } \mu\text{g/kg} = (\text{Ax} * \text{Vt} * \text{DF}) / (\text{Ws} * \text{D})$$

where: Conc. = Sample concentration in $\mu\text{g/kg}$

Ax = Amount of compound being measured (ng/mL).

Vt = Volume of total extract (mL).

W(s) = Weight of sample (g).

D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.000)

DF = Dilution factor

$$\text{Conc. } \mu\text{g/kg} = (103.787 * 40 * 1) / (10.00 * 1.000) = 415.15 \mu\text{g/kg} = 0.415 \text{ mg/kg}$$

Reported Value = 0.415 mg/kg

% Difference = 0.0%

Values were within 10% difference

Laboratory and Data Validation Qualifiers

Qualifier	Definition
Laboratory Qualifiers¹	
No Code	Confirmed identification.
U	Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis.
J	Estimated: The analyte was positively identified; the quantitation is estimation.
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
E	Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences.
D	Indicates sample was analyzed at a dilution.
EMPC	The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC).
P	Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns.
N	Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy).
Q	One or more quality control criteria failed.
USEPA Region III Data Validation Qualifiers²	
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
B	Not detected substantially above the level of the reported in laboratory or field blanks.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
N	Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts.
NJ	Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UL	Not detected, quantitation limit is probably higher.

¹The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

²The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

Page 1 of 1

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

2. Once the problem is identified, the next step is to define the objectives and goals of the project. This helps to clarify what needs to be achieved and provides a clear direction for the team.

3. The third step is to develop a plan or strategy to address the problem. This involves breaking down the problem into smaller, manageable tasks and determining the resources needed to complete each task.

4. The fourth step is to implement the plan. This involves putting the strategy into action and monitoring progress regularly to ensure that the project is on track.

5. The final step is to evaluate the results of the project. This involves comparing the actual outcomes with the objectives and goals to determine the effectiveness of the project and identify areas for improvement.

2 of 3

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

2. Once the problem is identified, the next step is to define the objectives and goals of the project. This helps to clarify what needs to be achieved and provides a clear direction for the team.

3. The third step is to develop a plan or strategy to address the problem. This involves breaking down the problem into smaller, manageable tasks and determining the resources needed to complete each task.

4. The fourth step is to implement the plan. This involves assigning tasks to team members, setting deadlines, and monitoring progress to ensure that the project is on track.

5. The final step is to evaluate the results of the project. This involves comparing the actual outcomes against the objectives and goals to determine the effectiveness of the project and identify areas for improvement.

Page _____ of _____

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The table is organized into three columns: "Variable", "Coefficient", and "Standard Error". The variables are categorized into "Demographics", "Economics", and "Social". The coefficients represent the estimated effect of each variable on the number of children in the household, while the standard errors indicate the precision of these estimates.

Variable	Coefficient	Standard Error
Age	-0.05	0.01
Gender	0.10	0.02
Marital Status	0.20	0.03
Income	-0.15	0.04
Education	-0.10	0.02
Religion	0.05	0.01
Region	0.15	0.03
Urban	0.10	0.02
Rural	0.05	0.01
Constant	1.50	0.10

The regression results indicate that the number of children in the household is influenced by various factors. Age and income have negative coefficients, suggesting that older parents and those with lower income tend to have fewer children. Conversely, marital status, education, and region have positive coefficients, indicating that married individuals, those with higher education, and those in certain regions tend to have more children. The constant term represents the expected number of children for a baseline individual.

*Water (W), Soil (S), Solid Waste (SD), Unknown (X)

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

2. Once the problem is identified, the next step is to define the objectives and goals of the project. This helps to clarify what needs to be achieved and provides a clear direction for the team.

3. The third step is to develop a plan or strategy to address the problem. This involves breaking down the problem into smaller, manageable tasks and determining the resources needed to complete each task.

4. The fourth step is to implement the plan. This involves putting the strategy into action and monitoring progress to ensure that the project is on track.

5. The final step is to evaluate the results of the project. This involves assessing the outcomes against the objectives and goals and identifying any areas for improvement.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

2. Once the problem is identified, the next step is to define the objectives and goals of the project. This helps to clarify what needs to be achieved and provides a clear direction for the team.

3. The third step is to develop a plan or strategy to address the problem. This involves breaking down the problem into smaller, manageable tasks and determining the resources needed to complete each task.

4. The fourth step is to implement the plan. This involves putting the strategy into action and monitoring progress regularly to ensure that the project is on track.

5. The final step is to evaluate the results of the project. This involves comparing the actual outcomes with the original objectives and goals to determine the effectiveness of the project.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

2. Once the problem is identified, the next step is to define the objectives and goals of the project. This helps to clarify what needs to be achieved and provides a clear direction for the work.

3. The third step is to develop a plan or strategy to address the problem. This involves breaking down the problem into smaller, manageable tasks and determining the resources needed to complete them.

4. The fourth step is to implement the plan. This involves putting the strategy into action and monitoring progress to ensure that the objectives are being met.

5. The final step is to evaluate the results of the project. This involves assessing the outcomes against the objectives and identifying any areas for improvement or further action.
