Subject: Data Validation for Lab Report E1101152
Radford Army Ammunition Plant

From: Linda Thal
Data Validator, AQA

To: Mary Lou Rochotte
Kemron Environmental Services, Inc.

OVERVIEW

Columbia Analytical Services, Houston, Texas, received 10 field samples associated with the project work described in the *Radford Army Ammunition Plant Final SWMU 40 (RAAP-009) Landfill Nitro Area IMWP* (August 2011) (project QAPP) on November 20, 2011. The field samples were assigned laboratory sample delivery group (SDG) number E1101152 and included four normal water samples, one field duplicate water sample, one matrix spike pair, two equipment blanks and one field blank. The samples were analyzed for polychlorinated dibenzodioxins and polychlorinated dibenzofurans by HRGC/HRMS using EPA method 8290, *Polychlorinated Dibenzodioxins (PCDDs) and Polychlorinated Dibenzofurans (PCDFs) by High-Resolution Gas Chromatography/High-Resolution Mass Spectrometry (HRGC/HRMS)* (Revision 0, 1992).

SUMMARY

The samples were analyzed according to the quality control (QC) criteria of the applicable analytical method. The data for these samples were found to be compliant with the requirements of the project QAPP and/or EPA Region III's *Innovative Approaches to Data Validation* (June 1995) and *Dioxin/Furan Data Validation Guidance* (March, 1999) (Region III NFG, collectively), as applicable, and the results for all target analytes are considered usable.

MAJOR PROBLEMS

(Refer to Appendix B – Data Qualifier Summary)

- No major problems were noticed with the data package during validation.

MINOR PROBLEMS

(Refer to Appendix B – Data Qualifier Summary)

- 40MW7GW112011: OCDD 27.4 (B)
- 40MW5GW112011: OCDD 43.7 (B)
- 40DUPGW112011: OCDD 18.3 (B)
- 40112011 FB: OCDD 13.8 (J)
Total tetra furans 1.79 (B)
- 40EQR112011: OCDD 12.0 (J)
- 40MW6GW112111: OCDD 22.3 (B)
Total tetra furans 2.44 (B)
OCDF (UJ)

- 40EQR112111: 1,2,3,4,6,7,8-HpCDD 2.75 (J)
OCDD 15.4 (J)
- 40LFMW01GW112111: 1,2,3,4,6,7,8-HpCDD 6.17 (B)
Total tetra furans 8.50 (B)
OCDD 162 (J)
OCDF (UJ)

NOTES

(Refer to Appendix D – Support Documentation)

Sample Chain of Custody (COC) Records

- The samples were listed on COC #3546. Data were reported for all required analyses.
- One of two containers for sample 40EQR112011 was received broken, and the lid on the remaining container was broken. One container for sample 40MW5MSGW112011 and both containers for samples 40EQR112111 and 40LFMW01GW112111 were received with broken lids. Dioxins and furans are very stable compounds with low volatility at room temperature, and for tetra- through octa-chlorinated congeners (the target compounds), volatilization is of much less concern. The vapor pressure for each level of increasing chlorination decreases by roughly an order of magnitude, and all of the vapor pressures for these compounds are very low. Given this information, AQA believes that volatilization is not a substantial concern in this situation, particularly since the samples were kept cool. As far as cross-contamination is concerned, each sample jar was placed in an individually sealed plastic bag, thereby preventing any potential sample cross-contamination. It is therefore believed that the integrity of the samples was not compromised, and no data were qualified based on professional judgment.

Preservation and Holding Times

- The samples were correctly preserved and were analyzed within the method-specified holding time.

Instrument Tune

- The instrument tunes for the applicable analyses were within the criteria specified in the project QAPP and the Region III NFG.

Initial Calibration (ICAL)

- The ICAL percent relative standard deviations (%RSDs) and/or correlation coefficients, as applicable, for all analyses were within the criteria specified in the project QAPP and the Region III NFG.

- It should be noted that the instrument was not calibrated quarterly as specified in the QAPP.

Initial Calibration Verification (ICV)/Continuing Calibration Verification (CCV)

- There was no evidence in the data package that an ICV was performed.
- The CCV relative retention times (RRTs), ratios and percent differences (%Ds), for all target analytes were within the criteria specified in the project QAPP and the Region III NFG.

Field Blanks

- OCDD was detected in the equipment blanks and field blank. All associated sample results, excluding sample 40LFMW01GW112111, were detects <10X the highest blank concentration and, therefore, were **qualified B**. The OCDD result for sample 40LFMW01GW112111 was a detect >10X the highest blank concentration and, therefore, was not qualified
- 1,2,3,4,6,7,8-HPCDD was detected in both equipment blanks. The associated result for sample 40LFMW01GW112111 was a detect <5X the associated equipment blank concentration and was **qualified B**. The remaining associated sample results were non-detects and were not qualified.
- Total hepta dioxins were detected in the equipment blank, sample 40EQR112011. The associated results for the samples collected on 11/20/2011 were non-detects and were not qualified.

Laboratory Method Blanks

- Total tetra furans were detected in the method blank. The associated results for samples 40112011 FB, 40MW6GW112111 and 40LFMW01GW112111 were detects <5X the method blank concentration and were **qualified B**. The remaining associated sample results were non-detects and were not qualified.

Laboratory Calibration Blanks

- A method blank was performed in lieu of a calibration blank.

Laboratory Control Sample (LCS)

- The LCS recoveries met project QAPP- and Region III-specified QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Samples

- One MS/MSD pair was analyzed on sample 40MW5GW112011 and the recoveries met project QAPP- and Region III-specified QC acceptance criteria.

Laboratory Sample Duplicate

- An MSD was analyzed as the laboratory duplicate and met project QAPP- and Region III-specified QC acceptance criteria.

Field Sample Duplicate

- Sample 40MW5GW112011 was collected and analyzed in duplicate and the RPDs between the sample and duplicate results were within the project QAPP-specified control limits.

Analyte	40MW5GW112011		40DUPGW112011		RPD	>35%
	Result	RL	Result	RL		
OCDD	43.7	54.3	18.3	53.2	<RL	

Internal Standard/Recovery Standard Recoveries

- Internal and recovery standards were added to all field samples and were within the project QAPP-specified control limits with the following exceptions.

The ^{13}C -OCDD recoveries were < the QAPP-specified acceptance limit for samples 40MW6GW112111 and 40LFMW01GW112111. The associated OCDD results were detects and were **qualified J**. The associated OCDF results were non-detects and were **qualified UJ**.

Sample Results

- The samples were analyzed for the method requested on the COC. Estimated detection limits (EDLs) and method reporting limits (MRLs) were reported for all analyses. The EDLs are sample specific noise based estimates. The MRLs were slightly > than those listed in the QAPP due to limited sample volume.
- The ion abundance ratios for OCDD were >15% but <25% for samples 40MW5GW112011, 40112011 FB, 40EQR112011 and 40EQR112111. The associated sample results were **qualified J**. The ion abundance ratio for 1,2,3,4,6,7,8-HpCDD was >25% for sample 40EQR112111; therefore, the estimated possible concentration (EMPC) was reported by the laboratory.

Action Level Notification

- Action levels were not specified for dioxins/furans in the Region III NFG.

Usability Statement

- There were 200 field sample data points associated with the data package for SDG E1101152. Of these field sample data points, 185 (92.5% of the total) were assessed and

left unqualified, 8 (4.0% of the total) were assessed and qualified B, 5 (2.5% of the total) were assessed and qualified J and 2 (1% of the total) were assessed and qualified UJ.

- The field sample data points that were qualified B can be categorized as definitive data with a potentially falsely identified analyte whose concentration is only an estimate due to QC deficiencies, the field sample data points that were qualified J can be categorized as definitive data with positively identified analyte concentrations that are only estimates due to QC deficiencies and the field sample data points that were qualified UJ can be categorized as definitive data with nondetectable analyte concentrations that are only estimates and may be biased low due to QC deficiencies.
- The unqualified field sample data points can be categorized as definitive data with no associated QC deficiencies.

Report Content Statement

This report has been formatted for consistency with Appendix B, Region III Standard Operating Procedures for Data Validation Reports, contained in the guidance *EPA Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). The laboratory data were reviewed in accordance with the EPA Region III's *Innovative Approaches to Data Validation* (June 1995) and *Dioxin/Furan Data Validation Guidance* (March, 1999) (Region III NFG, collectively), the *Radford Army Ammunition Plant Final SWMU 40 (RAAP-009) Landfill Nitro Area IMWP* (August 2011) (project QAPP), and the applicable SW-846 methods. This report only addresses those problems and issues that may affect data usability.

Data Qualifier Codes

Codes Related to Identification

- U Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
- B Not detected substantially above the level reported in laboratory or field blanks.
- N Analyte is tentatively identified.
- R Unusable result. Analyte may or may not be present in the sample.

Codes Related to Quantitation

- I PCDPE interferences exist.
- J Analyte present. Reported value may or may not be accurate or precise.
- UJ Not detected. Quantitation limit may be inaccurate or imprecise.

Appendix B – Data Qualifier Summary

Data Qualifier Summary

Note: The results listed in this table are detects and qualified non-detects only. Unqualified non-detects are not listed.

Laboratory Results for: MR0669 SWMU 40 RFAAP

Dear Mary Lou:

Enclosed are the results of the sample(s) submitted to our laboratory on November 22, 2011. For your reference, these analyses have been assigned our service request number **E1101152**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current TNI standards, where applicable, and except as noted in the laboratory case narrative provided. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the final complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. In accordance to the TNI 2009 Standard, a statement on the estimated uncertainty of measurement of any quantitative analysis will be supplied upon request.

Please contact me if you have any questions. My extension is 2959. You may also contact me via email at AKodur@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Arthi Kodur
Project Manager

Service Request No.: E1101152
Date Received: 11/22/11

CASE NARRATIVE

All analyses were performed in adherence to the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier IV. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Eight water samples were received for analysis at Columbia Analytical Services on 11/22/11.

The samples were received at 1 and 2°C in good condition and are consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Data Validation Notes and Discussion

MS/MSD

EQ1100578: Laboratory Control Spike (LCS) sample was analyzed and reported in addition to an MS/MSD for this extraction batch. The batch quality control criteria were met.

Y flags – Labeled Standards

Samples that had recoveries of labeled standards outside the acceptance limits are flagged with 'Y' flags on the Labeled Compound summary pages. In all cases, the signal-to-noise ratios are greater than 10:1, making these data acceptable.

K flags

EMPC - When the ion abundance ratios associated with a particular compound are outside the QC limits, samples are flagged with a 'K' flag. A 'K' flag indicates an estimated maximum possible concentration for the associated compound.

Mass Spectrometer Resolution

Mass 454.9728 of U227529-U227541 Continuing Calibration image did not print out due to an automatic print-out program error.

Detection Limits

Detection limits are calculated for each analyte in each sample by measuring the height of the noise level for each quantitation ion for the associated labeled standard. The concentration equivalent to 2.5 times the height of the

noise is then calculated using the appropriate response factor and the weight of the sample. The calculated concentration equals the detection limit.

The MRL = DoD LOQ, but the EDL is not directly correlated to LOD. The LOD is instrument and prep-method specific. ND compounds are reported to the LOD. LOD information can be found in the tables accompanying this report.

Manual Integrations

For this type of instrumentation and software, manual integration may be required frequently to correct inaccurate integrations performed by the processing software. These manual integrations are indicated in the raw data with a before and after chromatogram and are stamped with the reason for integration.

The TEQ Summary results for each sample have been calculated by CAS/Houston to include:

- WHO-2005 TEFs, The 2005 World Health Organization Reevaluation of Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-Like Compounds (M. Van den Berg et al., Toxicological Sciences 93(2):223-241, 2006)
- Non-detected compounds reported as $ND = \frac{1}{2} * \text{Detection Limit}$

Use of Columbia Analytical Services, Inc. (CAS) Name. Client shall not use CAS's name or trademark in any marketing or reporting materials, press releases or in any other manner ("Materials") whatsoever and shall not attribute to CAS any test result, tolerance or specification derived from CAS's data ("Attribution") without CAS's prior written consent, which may be withheld by CAS for any reason in its sole discretion. To request CAS's consent, Client shall provide copies of the proposed Materials or Attribution and describe in writing Client's proposed use of such Materials or Attribution. If CAS has not provided written approval of the Materials or Attribution within ten (10) days of receipt from Client, Client's request to use CAS's name or trademark in any Materials or Attribution shall be deemed denied. CAS may, in its discretion, reasonably charge Client for its time in reviewing Materials or Attribution requests. Client acknowledges and agrees that the unauthorized use of CAS's name or trademark may cause CAS to incur irreparable harm for which the recovery of money damages will be inadequate. Accordingly, Client acknowledges and agrees that a violation shall justify preliminary injunctive relief. For questions contact the laboratory.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Subject: Data Validation for Lab Report L11110795
Radford Army Ammunition Plant

From: Linda Thal & Alison Felix
Organic Analyses & Perchlorate Metals Analyses
Senior Data Validator, AQA Senior Data Validator, AQA

To: Mary Lou Rochotte
Kemron Environmental Services, Inc.

OVERVIEW

Microbac Laboratories Inc., Marietta, Ohio, received 11 field samples associated with the project work described in the *Radford Army Ammunition Plant Final SWMU 40 (RAAP-009) Landfill Nitro Area IMWP* (August 2011) (project QAPP) on November 22, 2011. The field samples were assigned laboratory sample delivery group (SDG) number L11110795 and included four normal water samples, one field duplicate water sample, one matrix spike pair, two equipment blanks, one field blank, and one trip blank. All samples were analyzed for volatile organic compounds (VOCs) using EPA method 8260B. All samples excluding the trip blank were also analyzed for semi-volatile organic compounds (SVOCs) by EPA method 8270C; polynuclear aromatic hydrocarbons (PAHs) by EPA method 8270C SIM; perchlorates by EPA method 6850; pesticides by EPA method 8081A; and metals by EPA methods 6010B, 6020, and 7470A as detailed in *Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods (SW-846)*, Third Edition, Final Update III.

SUMMARY

The samples were analyzed according to the quality control (QC) criteria of the applicable analytical method. The data for these samples were found to be compliant with the requirements of the project QAPP and/or EPA Region III's *Innovative Approaches to Data Validation* (June 1995) and *EPA Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994) or *EPA Region III Modifications to the Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses* (April 1993) (Region III NFG, collectively), as applicable, and the results for all target analytes *except* 2-chloroethyl vinyl ether for all samples; acetone for all samples *except* 40MW7GW112011, 40EQR112011, 40TB112011, 40MW6GW112111 and 40EQR112111; and 4-methyl-2-pentanone for samples 40MW7GW112011, 40MW5GW112011, and 40DUPGW112011 are considered usable. The 2-chloroethyl vinyl ether results for all samples were rejected due to a matrix spike duplicate recovery of 0% on an acidified sample aliquot. The acetone results that were non-detects were rejected due to RRFs <0.05 in the initial and continuing calibrations. The 4-methyl-2-pentanone sample results were rejected due to a RRF <0.05 in a continuing calibration.

MAJOR PROBLEMS

(Refer to Appendix B – Data Qualifier Summary)

- The 2-chloroethyl vinyl ether results for all samples were rejected due to 0% matrix spike duplicate recovery on an acidified sample aliquot.
- The acetone results for all samples *except* 40MW7GW112011, 40EQR112011, 40TB112011, 40MW6GW112111 and 40EQR112111 were rejected due to RRFs <0.05 for the initial and continuing calibrations.
- The 4-methyl-2-pentanone results for samples 40MW7GW112011, 40MW5GW112011, and 40DUPGW112011 were rejected due to an RRF <0.05 for a continuing calibration.

NOTES

(Refer to Appendix D – Support Documentation)

Sample Chain of Custody (COC) Records

- The samples were listed on COC #3287. Data were reported for all required analyses.

Preservation and Holding Times

- The samples were correctly preserved and analyzed within the holding times specified in the project QAPP and the Region III NFG.

Instrument Tune

- The instrument tunes for all applicable analyses were within the criteria specified in the project QAPP and the Region III NFG with the following exception.
 - The perchlorate tune data were not included in the data package. The laboratory stated that the instrument was tuned after maintenance is performed and that the ion ratio was verified with every sample reported to demonstrate that the instrument was working properly.

Initial Calibration (ICAL)

- The ICAL relative standard deviations (%RSDs) and/or correlation coefficients, as applicable, for all analyses were within the criteria specified in the project QAPP and the Region III NFG.
- The relative response factor (RRF) for acetone was <0.05 for the ICAL performed on HPMS6. The associated results for all samples *except* 40MW7GW112011 were non-detects and were **qualified R**. The associated result for sample 40MW7GW112011 was a detect and was **qualified L**. Samples 40EQR112011, 40TB112011, 40MW6GW112111 and 40EQR112111 were not associated with HPMS6.
- The laboratory used re-calculated standard concentrations to calculate the perchlorate CCVs and sample results. Therefore, the associated sample results that were detects were **qualified J** and those that were non-detects were not qualified.

Initial Calibration Verification (ICV)/Continuing Calibration Verification (CCV)

- The ICV/CCV relative response factors (RRFs), percent differences (%Ds), and/or percent recoveries (%Rs), as applicable, for all analyses were within the criteria specified in the project QAPP and the Region III NFG with the following exceptions.
 - The RRFs for acetone were <0.05 for the ICV/CCVs performed on HPMS6. The associated results for all samples except 40MW7GW112011 were non-detects and were **qualified R**. The associated result for sample 40MW7GW112011 was a detect and was **qualified L**. Samples 40EQR112011, 40TB112011, 40MW6GW112111 and 40EQR112111 were not associated with HPMS6.
 - The RRF for 4-methyl-2-butanone was <0.05 for the CCV associated with samples 40MW7GW112011, 40MW5GW112011, and 40DUPGW112011. The associated sample results were non-detects and were **qualified R**.
 - The CCV %D for benzoic acid was >25% with negative bias. The associated sample results were non-detects and were **qualified UJ**.

Contract Required Detection Limit (CRDL)

- The perchlorate CRDL was analyzed at the reporting limit (RL) and not 2X the RL. No sample data were qualified as a result.
- The CRDL recoveries associated with the analysis of all samples except filtered sample 40MW5GW112011 were <90% for cadmium and thallium. All associated sample results were non-detects and were **qualified UL**.
- The CRDL recoveries associated with the analysis of all samples except filtered sample 40MW5GW112011 were >110% for antimony, arsenic, chromium, copper, and selenium. The total chromium results for samples 40MW5GW112011 and 40MW6GW112011, the dissolved chromium results for samples 40DUPGW112011 and 40LFMW01GW112111, the total arsenic result for sample 40MW7GW112011, and the total and dissolved selenium results for sample 40MW7GW112011 were detects <2X the RL and were **qualified L**. All other associated sample results were either detects >2X the RL or were non-detects and, therefore, were not qualified.
- The CRDL recoveries associated with the analysis of filtered sample 40MW5GW112011 were >110% for antimony and thallium. The associated sample results were non-detects and, therefore, were not qualified.
- The CRDL recovery associated with the analysis of filtered sample 40MW5GW112011 and all samples except the unfiltered and filtered aliquots of sample 40MW7GW112011 was >110% for selenium. The filtered and unfiltered selenium results for samples 40MW5GW112011 and 40DUPGW112011 and the total selenium result for sample 40MW6GW112011 were detects <2X the RL and were **qualified K**. The remaining associated sample results were non-detects and, therefore, were not qualified.

- CRDL analyses were not performed with the 6010B analyses. The concentrations of the low calibration standard were < the RL for all target analytes *except* beryllium. The total beryllium result for sample 40LFWM01GW112111 was a detect and was **qualified J** based on professional judgment. All other beryllium sample results were non-detects and were **qualified UJ** based on professional judgment. No other sample results were qualified, based on professional judgment.

Inductively Coupled Plasma (ICP) Interference Check Sample

- ICP interference check sample recoveries were within the project QAPP- and Region III-specified control limits. The results of the ICP-MS ICS A and ICS AB analyses were applicable to all samples because the concentrations of one or more of the interferents in those samples were > those in the ICS solutions. The results of the ICS A and ICS AB analyses were not applicable to the field blank samples because the concentrations of the interferents in those samples were < those in the ICS solutions. All non-spiked ICP-MS ICS A results were < the MDL.

Field Blanks

- Methylene chloride was detected in equipment blank 40EQR112011 and field blank 40112011FB. The associated sample results were non-detects and, therefore, were not qualified.
- Chloroform was detected in equipment blank 40EQR112111. The associated result for sample 40MW6GW112111 was non-detect and, therefore, was not qualified. The associated result for sample 40LFMW01GW112111 was a detect and, therefore, was **qualified B**.
- Total calcium was detected in equipment blank 40EQR112011. All associated sample results were detects >5X the equipment blank concentration and, therefore, were not qualified.
- Total zinc was detected in equipment blank 40EQR112111. The unfiltered zinc result for sample 40LFMW01GW112111 was a detect <5X the equipment blank concentration and, therefore, was **qualified B**. All remaining associated sample results were detects >5X the equipment blank concentration or were non-detects and therefore, were not qualified.
- Total manganese was detected in field blank 40112011FB. The filtered manganese results for sample 40MW7112011 and 40LFMW01GW112111 and the unfiltered manganese results for samples 40MW5GW112011 and 40DUPGW112011 were detects <5X the field blank concentration and, therefore, were **qualified B**. The remaining associated sample results were either detects >5X the equipment blank concentration or non-detects and, therefore, were not qualified.
- Total mercury was detected in field blank 40112011FB; however, the field blank concentration was qualified B due to the method blank and, therefore, the mercury field blank result was not applied to the field samples.

Laboratory Method Blanks

- bis(2-Ethylhexyl)phthalate was detected in the method blank. The associated result for sample 40MW7GW112011 was a detect <10X the method blank concentration and was **qualified B**. The remaining associated sample results were non-detects and were not qualified.
- Mercury was detected in the method blank associated with all samples. The filtered mercury results for samples 40DUPGW112011 and 40LMFW01GW112111 and the unfiltered mercury results for samples 40112011FB and 40LFMW01GW112111 were detects <5X the method blank concentration and were **qualified B**. All other associated sample results were either detects >5X the method blank concentration or were non-detects and were not qualified.
- The thallium result for the method blank associated with all samples *except* the filtered aliquot of sample 40MW5GW112011 was negative with an absolute value slightly > the MDL. Based on professional judgment, the associated sample results were not qualified.

Laboratory Calibration Blanks

- No target analytes were detected in the calibration blanks.

Laboratory Control Samples/Laboratory Control Sample Duplicates (LCSs/LCSDs)

- The LCS/LCSD recoveries met project QAPP- and Region III-specified QC acceptance criteria with the following exception.
 - The chloromethane recovery was > the upper acceptance limit for the LCS associated with samples 40MW7GW112011, 40MW5GW112011 and 40DUPGW112011. The associated sample results were non-detects unaffected by the positive bias and were not qualified based on professional judgment.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Samples

- One MS/MSD pair was analyzed on sample 40MW5GW112011 for all organic analyses, and two MS/MSD pairs were analyzed on sample 40MW5GW112011 for all metals.
 - The MSD recovery was 0% for 2-chloroethyl vinyl ether. The MS and MSD were performed on an acidified sample aliquot; however, highly reactive VOC compounds such as 2-chloroethyl vinyl ether can be lost due to acidification. This was confirmed by the acceptable 2-chloroethyl vinyl ether recovery for the unacidified LCS. VOC analysis was performed on acidified sample aliquots for all samples and, therefore, the 2-chloroethyl vinyl ether results for all samples were **qualified R** based on professional judgment.
 - The MS and/or MSD recoveries for 12 SVOC target analytes were > the upper acceptance limit. The associated sample results were non-detects unaffected by the high bias and were not qualified, based on professional judgment.

- The MSD recovery for perchlorate was 75%, which was outside of the current laboratory limits (80-120) but met the limits listed in the QAPP. Therefore, no sample results were qualified.
- The MS/MSD recoveries for endrin ketone were > the upper acceptance limit. The associated sample results were non-detects unaffected by the high bias and were not qualified, based on professional judgment.
- The MS/MSD recovery was <75% for total iron. The total iron results for samples 40112011FB, 40EQR112011, and 40EQR112111 were non-detects and therefore, were **qualified UL**. The remaining associated sample results were detects and, therefore, **were qualified L**.
- The MS/MSD recovery was <75% for total magnesium, and the MS/MSD recovery was >125% for dissolved calcium; however, the parent sample concentrations were >4X the spike concentrations and, therefore, the associated sample results were not qualified.
- The PS recoveries for Ca and Mg were <10%; however the parent sample concentrations were >4X the spike concentrations, therefore the associated sample results were not qualified.

ICP Serial Dilution Analyses

- The %D for barium was >10%, and the parent sample concentration was >50X the MDL for the serial dilution associated with the filtered aliquot of sample 40MW5GW112011. The dissolved barium result for sample 40MW5GW112011 was a detect and, therefore was **qualified J**.

Laboratory Sample Duplicate

- MSDs were analyzed as the laboratory duplicates for all analyses and met project QAPP- and Region III-specified QC acceptance criteria.

Field Sample Duplicate

- Sample 40MW5GW112011 was collected and analyzed in duplicate (sample 40DUPGW112011) for all analyses. The RPDs between the sample and duplicate results were within the project QAPP-specified control limits with the following exception.
 - The RPDs between the sample and duplicate results for unfiltered manganese and unfiltered iron were > the project QAPP-specified control limits; therefore, the parent and duplicate sample results were **qualified J**.

Analyte	40MW5GW112011		40DUPGW112011		RPD	>25%
	Result	RL	Result	RL		
Chloroform	3.17	1.00	3.33	1.00	4.92

Magnesium, Total	32.5	0.500	31.3	0.500	3.76	
Potassium, Total	1.37	1.00	1.37	1.00	0.00	
Sodium, Total	5.22	0.500	5.48	0.500	4.86	
Calcium, Dissolved	82.8	0.200	81.7	0.200	1.34	
Iron, Dissolved	0.0741	0.100	0.082	0.100	<RL	
Magnesium, Dissolved	29.8	0.500	29.6	0.500	0.67	
Potassium, Dissolved	1.08	1.00	1.06	1.00	1.87	
Sodium, Dissolved	5.35	0.500	5.33	0.500	0.37	
Barium, Total	0.0571	0.00600	0.0599	0.00600	4.79	
Chromium, Total	0.00389	0.00400	0.00422	0.00400	*	
Manganese, Total	0.0152	0.00400	0.00767	0.00400	65.85	J/UJ
Nickel, Total	0.00453	0.00800	0	0.00800	<RL	
Selenium, Total	0.00131	0.00200	0.00106	0.00200	<RL	
Barium, Dissolved	0.0554	0.00600	0.0532	0.00600	4.05	
Chromium, Dissolved	0.00176	0.00400	0.00299	0.00400	<RL	
Nickel, Dissolved	0.00383	0.00800	0	0.00800	<RL	
Selenium, Dissolved	0.00119	0.00200	0	0.00200	<RL	
Mercury, Dissolved	0	0.000200	0.000123	0.000200	<RL	

* The sample result was slightly < the RL, the duplicate result was slightly > the RL, and the absolute difference between the two results was < the RL; therefore, no data qualified based on professional judgment.

Sample Surrogate Spikes

- Surrogate spikes added to all field samples analyzed for VOCs, SVOCs, PAHs, and pesticides were within the project QAPP-specified control limits with the following exceptions.
 - The 2,4,6-tribromophenol recoveries were > the upper acceptance limit for samples 40DUPGW112011, 40MW5MSGW112011 and 40112011FB. The associated sample results were non-detects unaffected by the high bias, and because only one acid surrogate was outside of acceptance criteria, the results were not qualified.
 - The decachlorobiphenyl recoveries were < the lower acceptance limit but $\geq 10\%$ on both columns for samples 40MW7GW112011 and 40LFMW01GW112111. The associated sample results were non-detects and were **qualified UL**.

Sample Internal Standard Recoveries

- The internal standard recoveries for VOCs, SVOCs, and perchlorates were within the project QAPP- and Region III-specified control limits.
- The internal standard recoveries for metals by method 6020 were within the 60-125% limits provided in the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review* (NFG) (October 2004).

Sample Results

- 2-Chloroethyl vinyl ether was analyzed for on acidified aliquots for all samples. Highly reactive VOC compounds such as 2-chloroethyl vinyl ether can be lost due to acidification as illustrated by the MS/MSD recoveries. The associated sample results for the acidified samples were non-detects and, therefore, were **qualified R**.
- The samples were analyzed for the methods requested on the COC. Method detection limits (MDLs) and reporting limits (RLs) were reported for all analyses and met project-specified MDLs and RLs with the following exceptions.
 - The MDLs for method 6010B analytes unfiltered and filtered beryllium, iron, potassium, and vanadium and all method 6020 target analytes except selenium were > the MDLs specified in the project QAPP.
 - The reported RLs for total and dissolved cadmium were > the RLs specified in the project QAPP.
 - All samples except the filtered aliquot for sample 40MW5GW112011 were diluted 2X for ICP-MS analysis. The associated RLs were adjusted accordingly and, therefore, did not meet project-specified RLs.

Action Level Notification

- No results were above the action levels specified in the Region III NFG.

Usability Statement

- There were 1710 field sample data points associated with the data package for SDG L11110795. Of these field sample data points, 1575 (92.11% of the total) were assessed and left unqualified, 16 (0.94% of the total) were assessed and qualified R, 11 (0.64% of the total) were assessed and qualified B, 7 (0.41% of the total) were assessed and qualified J, 6 (0.35% of the total) were assessed and qualified L, 67 (3.92% of the total) were assessed and qualified UL, 19 (1.11% of the total) were assessed and qualified UJ, and 9 (0.53% of the total) were assessed and qualified K.
- *The field sample data points that were qualified R must be categorized as unusable data.*

- The field sample data points that were qualified B can be categorized as definitive data with a potentially falsely identified analyte whose concentration is only an estimate due to QC deficiencies, the field sample data points that were qualified J can be categorized as definitive data with positively identified analyte concentrations that are only estimates due to QC deficiencies, the field sample data points that were qualified L can be categorized as definitive data with positively identified analyte concentrations that are only estimates and may be qualified low due to QC deficiencies, the field sample data points that were assessed and qualified UL can be categorized as definitive data with nondetectable analyte concentrations that are only estimates and may be biased low due to QC deficiencies, the field sample data points that were assessed and qualified UJ can be categorized as definitive data with nondetectable analyte concentrations that are only estimates due to QC deficiencies, and the field sample data points that were qualified K can be categorized as definitive data with positively identified analyte concentrations that are only estimates and area biased high due to QC deficiencies.
- The unqualified field sample data points can be categorized as definitive data with no associated QC deficiencies.

Report Content Statement

This report has been formatted for consistency with Appendix B, Region III Standard Operating Procedures for Data Validation Reports, contained in the guidance *EPA Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). The laboratory data were reviewed in accordance with the EPA Region III's *Innovative Approaches to Data Validation* (June 1995) and *EPA Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994) or *EPA Region III Modifications to the Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses* (April 1993) (Region III NFG, collectively), as applicable; and the *Radford Army Ammunition Plant Final SWMU 40 (RAAP-009) Landfill Nitro Area IMWP* (August 2011) (project QAPP); and the applicable SW-846 methods. This report only addresses those problems and issues that may affect data usability.

Data Qualifier Codes

Codes Related to Identification

- U Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
- B Not detected substantially above the level reported in laboratory or field blanks.
- R Unusable result. Analyte may or may not be present in the sample.

Codes Related to Quantitation

- J Analyte present. Reported value may or may not be accurate or precise.
- K Analyte present. Reported value may be biased high. Actual value is expected to be lower.
- L Analyte present. Reported value may be biased low. Actual value is expected to be higher.
- UJ Not detected. Quantitation limit may be inaccurate or imprecise.
- UL The analyte was not detected, and the reported quantitation limit is probably higher than reported.

Appendix B – Data Qualifier Summary

Data Qualifier Summary

Note: The results listed in this table are detects and qualified non-detects only. Unqualified non-detects are not listed.

FIELD SAMPLE ID/ LAB SAMPLE ID	ANALYTE	FINAL VALIDATION QUALIFIER	INITIAL LAB QUALIFIER	REASON
40MW7GW112011 L11110795-01, -02	2-Chloroethyl vinyl ether	R	U	Matrix spike duplicate 0%R; acidified sample

	Total mercury	B	J	Blank contamination; >MDL, <RL
	Total iron	L		Matrix spike %R < LAL
	Dissolved cadmium	UL	U	CRDL %R <LAL
		B-8		

Data Qualifier Summary (Cont.)

FIELD SAMPLE ID/ LAB SAMPLE ID	ANALYTE	FINAL VALIDATION QUALIFIER	INITIAL LAB QUALIFIER	REASON
	Dissolved thallium	UL	U	CRDL %R <LAL
	Dissolved chromium	K	J	CRDL %R >UAL; >MDL, <RL
	Dissolved beryllium	UJ	U	No CRDL analyzed
	Dissolved mercury	B	J	Blank contamination; >MDL, <RL
	Dissolved manganese	B	J	Blank contamination; >MDL, <RL

Appendix C – Laboratory Report Results/Data Summary

Report Number: L11110795

Report Date : January 4, 2012

Sample Number: L11110795-01
 Client ID: 40MW7GW112011
 Matrix: Water
 Workgroup Number: WG383461
 Collect Date: 11/20/2011 12:05
 Sample Tag: 01

PrePrep Method: NONE
 Prep Method: 5030B/5030C/5035
 Analytical Method: 8260B
 Analyst: ADC
 Dilution: 1
 Units: ug/L

Instrument: HPMS6
 Prep Date: 12/01/2011 16:15
 Cal Date: 11/29/2011 18:52
 Run Date: 12/01/2011 16:15
 File ID: 6M104286

Analyte	CAS. Number	Result	Qual	LOQ	LOD
1,1,1,2-Tetrachloroethane	630-20-6		U	1.00	0.250

Appendix D – Support Documentation

Laboratory Report Number: L11110795 (Revised)

Mary Lou Rochette
Kemron Environmental Services
156 Starlite Drive
Marietta, OH 45750

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

This report was reviewed on January 04 2012

Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on January 04 2012

David Vandenberg – Managing Director

State of Origin: VA
Accrediting Authority: N/A ID:N/A

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

There were no discrepancies.

Discrepancy	Resolution
-------------	------------

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #
0016610	H	1.0		
0015982	H	0.0		
0016639	H	1.0		
0016620	H	0.0		
0016605	H	1.0		
0016621	H	1.0		
0016629	H	1.0		

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	NA
2	Were custody seals intact?	NA
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	Yes
12	Were VOA samples free of headspace (less than 6mm)?	Yes

METHOD

Preparation SW-846 5030C/5035A

Analysis SW-846 8260B

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Continuing Calibration and Tune: Recoveries out of range were observed for the following analytes: 2,2-Dichloropropane, Hexachlorobutadiene, n-Butylbenzene. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: Recoveries out of range were observed for the following analytes: Chloromethane. Please see the applicable QC report for a detailed presentation of the failures.

Matrix Spikes: Recoveries out of range were observed for the following analytes: 2-Chloroethyl vinyl ether. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Other: The pH of samples 06 and 09 could not be determined due to the dark matrix.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak. In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak. This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline. There are numerous situations in chromatography where the

system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous. Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

METHOD

Preparation 3510C

Analysis SW-846 8270C/40 CFR 264 App. IX

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: The percent difference was out of range for the following analytes: 2,4-Dinitrophenol. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recoveries out of range were observed for the following analytes: Benzoic Acid. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: Analytes were detected above the applicable reporting limit for the following analytes: bis(2-Ethylhexyl)phthalate. Please see the applicable QC report for a detailed presentation of the failures.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: Recoveries out of range were observed for the following analytes: 2,4,5-Trichlorophenol, Anthracene, Benzo(a)anthracene, Benzo(a)pyrene, Chrysene, Dibenzofuran, Fluoranthene, Fluorene, Hexachlorobenzene, Naphthalene, Pentachlorophenol, Phenanthrene. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Surrogates: Recoveries out of range were observed for the following surrogates: 2-Fluorobiphenyl, 2,4,6-Tribromophenol, p-Terphenyl-d14. Please see the applicable QC report for a detailed presentation of the failures.

Samples 01, 03REF, 05, 07MS, 09MSD and 11 were not re-extracted due to insufficient sample volume.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

METHOD

Preparation 3510C

Analysis SW-846 8270C

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Continuing Calibration and Tune: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: All acceptance criteria were met.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

INITIAL CALIBRATION SUMMARY

Login Number: L11110795
Analytical Method: 8270C
ICAL Workgroup: WG377412

Instrument ID: HPMS7
Initial Calibration Date: 29-SEP-11 11:08
Column ID: F

Analyte		AVG RF	% RSD	LINEAR (R)	QUAD (R ²)
Acenaphthene	CCC	1.219	7.60		
Benzo[a]pyrene	CCC	1.175	3.87		
Fluoranthene	CCC	1.266	4.89		
1-Methylnaphthalene		0.6823	6.39		
2-Methylnaphthalene		0.6689	4.93		
Acenaphthylene		1.608	8.28		
Anthracene		1.158	4.73		
Benzo[a]anthracene		1.165	4.45		
Benzo[b]fluoranthene		1.183	6.48		
Benzo[ghi]perylene		1.086	3.88		
Benzo[k]fluoranthene		1.209	11.5		
Chrysene		1.204	6.36		
Dibenz[ah]anthracene		1.074	3.83		
Fluorene		1.139	5.87		
Indeno[1,2,3-cd]pyrene		1.275	3.69		
Naphthalene		1.103	6.03		
Phenanthrene		1.102	3.46		
Pyrene		1.342	5.74		

R = Correlation coefficient; 0.995 minimum
R² = Coefficient of determination; 0.99 minimum

If the %RSD is greater than the limit specified by the method or project QAP, then linear or quadratic equations will be used.

METHOD

Analysis SW-846 6850

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Continuing Calibration and Tune: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: Recoveries out of range were observed for the following analytes: Perchlorate. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration

is not clearly covered by these four cases, then review and approval by the Laboratory Director or the QA/QC Supervisor will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

METHOD

Analysis SW-846 8081A

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 20%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Continuing Calibration and Tune: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: Recoveries out of range were observed for the following analytes: Endrin ketone. Please see the applicable QC report for a detailed presentation of the failures.

Matrix Spikes: Recoveries out of range were observed for the following analytes: Endrin ketone. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Samples: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Laboratory Director or the QA/QC Supervisor will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Narrative ID: 39391

Approved By: Eric Lawson

A handwritten signature in black ink, appearing to read "Eric C. Lawson", is written over a light gray rectangular background.

Analyst: Sheri Pfalzgraf

METHOD

Preparation: SW-846 3005

Analysis: SW-846 6010

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Interference Check Standards: All acceptance criteria were met.

Continuing Calibration Verification: All acceptance criteria were met.

Continuing Calibration Blank: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Serial Dilution/Post Digestion Spikes: WG383508 - All acceptance criteria were met.

Matrix Spikes: WG383508 - Sample 03 was chosen by the client for MS/MSD analysis. Samples 07(MS) and 09(MSD) yielded noncompliant recoveries for two analytes. Sample 04 was chosen by the client for MS/MSD analysis. Samples 08(MS) and 10(MSD) yielded noncompliant recoveries for one analyte.

SAMPLES

Samples: All acceptance criteria were met.

Narrative ID: 39575

Approved By: Sheri Pfalzgraf

A handwritten signature in black ink, appearing to read "Sheri L. Pfalzgraf".

Department: Metals
Analyst: Ji Hu

METHOD

Preparation: SW-846 3015

Analysis: SW-846 6020

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Interference Check Standards: All acceptance criteria were met.

Continuing Calibration: WG383211 - Due to continuing calibration verification failure for selenium on 01-Dec-2011 at 18:51, client samples 05, 06, 07, 09, 11, 12, and 14 through 17 were reanalyzed on a later calibration for selenium. For consistency with samples 07(MS) and 09(MSD), sample 03 was also reanalyzed for selenium.

Continuing Calibration Blank: WG383271 - The continuing calibration blank analyzed initially on 06-DEC-2011 at 10:06 yielded a noncompliant result for thallium. The continuing calibration blank was reanalyzed at 10:17 prior to sample analysis and was compliant for all analytes of concern.

Low Level Check: WG383211 - The low level initial calibration verification analyzed initially on 01-Dec-2011 at 12:57 yielded a noncompliant result for thallium. The low level calibration check was reanalyzed at 15:05 prior to sample analysis and was compliant for all analytes of concern.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Serial Dilution/Post Digestion Spikes: WG383271 - All acceptance criteria were met.

WG383211 - All acceptance criteria were met.

Matrix Spikes: WG383271 - Sample 04 was chosen by the client for MS/MSD analysis. Samples 08(MS) and 10(MSD) met all acceptance criteria.

WG383211 - Sample 03 was chosen by the client for MS/MSD analysis. Samples 07(MS) and 09(MSD) met all acceptance criteria.

SAMPLES

Samples: WG383271 - Due to high levels of nontarget analytes, all client samples were analyzed at dilutions for all analytes.

WG383211 - Due to high levels of nontarget analytes, all client samples were analyzed at dilutions for all analytes.

Microbac Laboratories Inc.
Serial Dilution Report

Login: L11110795 Worknum: WG383211
Instrument: ELAN-ICP Method: 6020
Serial Dil: WG383211-02 File ID: EL.120111.155644 Dil: 10 Units: ug/L
Sample: L11110851-01 File ID: EL.120111.152737 Dil: 2

Analyte	Sample	Qual	Serial Dil	Qual	% Diff	Q
Antimony	0.854	X	ND	U		
Arsenic	7.02	X	7.02	X	0.02	
Barium	32.8	X	29.4	X	10.10	
Cadmium	ND	U	ND	U		
Chromium	1.06	F	ND	U		
Cobalt	0.454	F	ND	U		
Copper	2.49	X	ND	U		
Lead	ND	U	ND	U		
Manganese	21.3	X	18.9	X	11.20	
Nickel	2.61	F	ND	U		
Selenium	0.938	X	ND	U		
Silver	ND	U	ND	U		
Thallium	0.628	X	0.404	F	35.60	

U = Result is below MDL.

F = Result is greater than or equal to MDL and less than the RL.

X = Result is greater than or equal to RL and less than 100 times the MDL.

E = %D exceeds control limit of 10% and initial sample result is greater than or equal to 100 times the MDL.

METHOD

Preparation: SW-846 7470

Analysis: SW-846 7470

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Interference Check Standards: All acceptance criteria were met.

Continuing Calibration Verification: All acceptance criteria were met.

Continuing Calibration Blank: All acceptance criteria were met.

BATCH QA/QC

Method Blank: WG383336 - The method blank analyzed on 30-NOV-2011 at 10:53 yielded a result for mercury that slightly exceeded the limit of detection. However, all client samples were less than the reporting limit. With permission from the project chemist, no further action was taken.

Laboratory Control Sample: All acceptance criteria were met.

Serial Dilution/Post Digestion Spikes: WG383336 - All acceptance criteria were met.

Matrix Spikes: WG383336 - Sample 03 was chosen by the client for MS/MSD analysis. Samples 07(MS) and 09(MSD) met all acceptance criteria. Sample 04 was chosen by the client for MS/MSD analysis. Samples 08(MS) and 10(MSD) met all acceptance criteria.

SAMPLES

Samples: All acceptance criteria were met.

Subject: Data Validation for Lab Report L12030257 Revised
Radford Army Ammunition Plant

From: Jeanne Peterson
Project Manager, AQA

To: Mary Lou Rochotte
Kemron Environmental Services, Inc.

OVERVIEW

This data validation report was revised to correct the target analyte lists for EPA methods 6010B and 6020.

Microbac Laboratories Inc., Marietta, Ohio, received 11 field samples associated with the project work described in the *Radford Army Ammunition Plant Final SWMU 40 (RAAP-009) Landfill Nitro Area IMWP* (August 2011) (project QAPP) on March 8, 2012. The field samples were assigned laboratory sample delivery group (SDG) number L12030257 and included four normal water samples, one field duplicate water sample, one matrix spike pair, two equipment blanks, one field blank, and one trip blank. All samples were analyzed for volatile organic compounds (VOCs) using EPA method 8260B. All samples excluding the trip blank were also analyzed for semi-volatile organic compounds (SVOCs) by EPA method 8270C; polynuclear aromatic hydrocarbons (PAHs) by EPA method 8270C SIM; perchlorates by EPA method 6850; pesticides by EPA method 8081A; and metals by EPA methods 6010B, 6020, and 7470A as detailed in *Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods (SW-846)*, Third Edition, Final Update III.

SUMMARY

The samples were analyzed according to the quality control (QC) criteria of the applicable analytical method. The data for these samples were found to be compliant with the requirements of the project QAPP and/or EPA Region III's *Innovative Approaches to Data Validation* (June 1995) and *EPA Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994) or *EPA Region III Modifications to the Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses* (April 1993) (Region III NFG, collectively), as applicable, and the results for all target analytes *except* 2-chloroethyl vinyl ether, acetone, and benzoic acid are considered usable. The 2-chloroethyl vinyl ether results for all samples were rejected due to 0% matrix spike recovery and analysis on acidified sample aliquots. The acetone results for all samples were rejected due to initial and continuing calibration relative response factors (RRFs) <0.05. The benzoic acid results for all samples were rejected due to high continuing calibration verification (CCV) negative bias, no matrix spike recovery, and poor replicate precision.

MAJOR PROBLEMS

(Refer to Appendix B – Data Qualifier Summary)

- The 2-chloroethyl vinyl ether results for all samples were rejected due to 0% matrix spike recovery and analysis on acidified sample aliquots.
- The acetone results for all samples were rejected due to initial and continuing calibration RRFs <0.05.
- The benzoic acid results for all samples were rejected due to high CCV negative bias, no matrix spike recovery, and poor replicate precision.

MINOR PROBLEMS

(Refer to Appendix B – Data Qualifier Summary)

- 40MW7GW030612: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Benzoic acid (R)
Vinyl acetate (UJ)
4-Methyl-2-pentanone (UJ)
Calcium 80.6 (J)
Selenium (UL)
Nickel 0.00554 (K)
- 40TB030612: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Vinyl acetate (UJ)
4-Methyl-2-pentanone (UJ)
- 40LFMW01GW030612: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Benzoic acid (R)
Vinyl acetate (UJ)
4-Methyl-2-pentanone (UJ)
Calcium 71.4 (J)
Selenium (UL)
Nickel 0.00322 (K)
- 40DUPGW030612: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Benzoic acid (R)
Vinyl acetate (UJ)
4-Methyl-2-pentanone (UJ)
Calcium 71.3 (J)
Selenium (UL)
Nickel 0.00421 (K)
- 40FB030612: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Benzoic acid (R)
Selenium (UL)
- 40EQR030612: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Benzoic acid (R)
Selenium (UL)

- 40MW5GW030712: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Benzoic acid (R)
Calcium 93.4 (J)
Selenium 0.000775 (L)
Nickel 0.00470 (K)
- 40EQR030712: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Benzoic acid (R)
Selenium (UL)
- 40MW6GW030712: 2-Chloroethyl vinyl ether (R)
Acetone (R)
Benzoic acid (R)
Calcium 98.4 (J)
Nickel 0.00292 (K)

NOTES

(Refer to Appendix D – Support Documentation)

Sample Chain of Custody (COC) Records

- The samples were listed on COC #3655. Data were reported for all required analyses.

Preservation and Holding Times

- The samples were correctly preserved and analyzed within the holding times specified in the project QAPP and the Region III NFG.

Instrument Tune

- The instrument tunes for all applicable analyses were within the criteria specified in the project QAPP and the Region III NFG with the following exception.
 - The perchlorate tune data were not included in the data package. The laboratory stated that the instrument was tuned after maintenance is performed and that the ion ratio was verified with every sample reported to demonstrate that the instrument was working properly. No sample data were qualified based on professional judgment.

Initial Calibration (ICAL)

- The initial calibration (ICAL) percent relative standard deviations (%RSDs) and/or correlation coefficients, as applicable, for all analyses were within the criteria specified in the project QAPP and the Region III NFG with the following exceptions.

- The ICAL RRFs associated with the higher concentration standards were <0.05 for acetone. The associated sample results were non-detects and, therefore, were **qualified R**.
- The ICAL RRF for the lowest concentration standard associated with batch WG392404 was <0.05 for 4-methyl-2-pentanone. The associated sample results were non-detects and, therefore, were **qualified UJ** based on professional judgment.

Initial Calibration Verification (ICV)/Continuing Calibration Verification (CCV)

- The initial and/or continuing calibration verification (ICV/CCV) RRFs, percent differences (%Ds), and/or recoveries, as applicable, for all analyses were within the criteria specified in the project QAPP and the Region III NFG with the following exceptions.
 - The ICV/CCV RRF associated with batch WG392260 was <0.05 for acetone. The associated sample results were non-detects and were **qualified R**.
 - The ICV %D associated with batch WG392404 was $>25\%$ with positive bias for dichlorodifluoromethane. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.
 - The ICV/CCV %Ds associated with batch WG392260 were $>25\%$ with positive bias for bromomethane, dichlorodifluoromethane, and vinyl acetate. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.
 - The CCV %D associated with batch WG392404 was $>25\%$ with negative bias for vinyl acetate. The associated sample results were non-detects and, therefore, were **qualified UJ**.
 - The CCV %D was $>25\%$ with negative bias for benzoic acid. The associated sample results were non-detects and, therefore, were **qualified UJ**.

Contract Required Detection Limit (CRDL)

- The perchlorate CRDL was analyzed at the reporting limit (RL) and not 2X the RL. No sample data were qualified as a result.
- The CRDL recovery associated with batch WG391810 was $<90\%$ but ≥ 75 for selenium. The selenium result for sample 40MW5GW030712 was a detect and, therefore, was **qualified L**. The remaining associated sample results were non-detects and, therefore, were **qualified UL**.
- The CRDL recoveries associated with batch WG391928 were $>110\%$ for selenium and thallium. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified.

- The CRDL recovery associated with batch WG391810 was >110% for selenium and thallium. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified.
- A CRDL standard was not analyzed for mercury. The low ICAL standard was at the RL and recalculated against the curve. The recovery for this standard was >110%. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified.

Inductively Coupled Plasma (ICP) Interference Check Sample

- ICP/ICP-MS interference check sample recoveries were within the project QAPP- and Region III-specified control limits, and all non-spiked ICS A results were < the MDL.
 - The ICP ICS A and ICS AB were analyzed at the beginning of the analytical sequence only for method 6010B; however, the results of the ICP ICS A and ICS AB analyses were not applicable because the concentrations of one or more of the interferents in all samples were < those in the ICS solutions.
 - The ICP-MS ICS A and ICS AB associated with batch WG391810 were analyzed at the beginning of the analytical sequence only; however, method 6020 requires the ICS analyses to be performed at the beginning of the sequence or every 12 hours, whichever is more frequent. Because the samples were analyzed within six hours, no sample data were qualified based on professional judgment.
 - The results of the ICP-MS ICS A and ICS AB analyses were applicable to all samples *except* field blank and equipment rinse samples because the concentrations of one or more of the interferents in those samples were > those in the ICS solutions.
 - The results of the ICP-MS ICS A and ICS AB analyses were not applicable to the field blank and equipment rinse samples because the concentrations of the interferents in those samples were < those in the ICS solutions.
 - Cadmium and nickel were detected in the ICS A associated with batch WG391810, and nickel was detected in the ICS A associated with batch WG391928. The nickel results for all associated samples were detects and, therefore, were **qualified K**. The associated cadmium results were non-detects and not affected by the high bias and, therefore, were not qualified.

Field Blanks

- Chloroform, methylene chloride, and toluene were detected in equipment blank 40EQR030612. The chloroform result for sample 40MW7GW030612 was a detect >5X the equipment blank concentration and, therefore, was not qualified. The remaining associated sample results were non-detects and, therefore, were not qualified.

Laboratory Method Blanks

- No target analytes were detected in the method blanks.

Laboratory Calibration Blanks

- No target analytes were detected in the calibration blanks.

Laboratory Control Samples/Laboratory Control Sample Duplicates (LCSs/LCSDs)

- The LCS/LCSD recoveries met project QAPP- and Region III-specified QC acceptance criteria with the following exception.
 - The vinyl acetate recovery was > the upper acceptance limit for the LCS associated with batch WG392260. The associated sample results were non-detects and not affected by the positive bias and, therefore, were not qualified based on professional judgment.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Samples

- One MS/MSD pair was analyzed on sample 40LFMW01GW030612 for all analyses.
 - The MS/MSD recoveries were 0% for 2-chloroethyl vinyl ether. The MS and MSD were performed on an acidified sample aliquot; however, highly reactive VOC compounds such as 2-chloroethyl vinyl ether can be lost due to acidification. This was confirmed by the acceptable 2-chloroethyl vinyl ether recovery for the unacidified LCS. VOC analysis was performed on acidified sample aliquots for all samples and, therefore, the 2-chloroethyl vinyl ether results for all samples were **qualified R** based on professional judgment.
 - The MS/MSD recoveries were > the upper acceptance limit for vinyl chloride. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.
 - The MS recovery was 0% for benzoic acid. The CCV %D had a high negative bias, and the relative percent difference between the MS and MSD was 200%. The associated sample results were non-detects and, therefore, were **qualified R** based on professional judgment.
 - The MS/MSD recoveries for perchlorate were <10%; however the parent sample concentrations were >4X the spike concentrations and, therefore, the associated sample results were not qualified.
 - The MS/MSD analyses were performed on a non-project sample for ICP-MS batch WG391928 and, therefore, were not reported in this data package. The recoveries were hand-calculated and for validation.

ICP Serial Dilution Analyses

- The serial dilution %Ds met project QAPP- and Region III-specified QC acceptance criteria with the following exception.
 - The ICP serial dilution was performed on a field blank. The associated calcium results for all field samples were detects within the linear range of the instrument but were >100X the RL and, therefore, were **qualified J**. The remaining associated sample results were either detects <100X the RL or non-detects and, therefore, were not qualified based on professional judgment.

Laboratory Sample Duplicate

- MSDs were analyzed as the laboratory duplicates for all analyses and met project QAPP- and Region III-specified QC acceptance criteria. In addition, a duplicate analysis was performed on a non-project sample for ICP-MS batch WG391928; project QAPP- and Region III-specified QC acceptance criteria were met.

Field Sample Duplicate

- Sample 40LFMW01GW30612 was collected and analyzed in duplicate (sample 40DUPGW030612) for all analyses. The RPDs between the sample and duplicate results were within the project QAPP-specified control limits.

Analyte	L12030257-03		L12030257-06		RPD	>35%
	Result	RL	Result	RL		
Perchlorate	8.88	0.2	8.93	0.2	0.56	
4,4'-DDD	0.0253	0.0543	0	0.05	<RL	
Aluminum	0.123	0.1	0.112	0.1	9.36	
Calcium	71.4	0.2	71.3	0.2	0.14	
Iron	0.093	0.1	0.0875	0.1	<RL	
Magnesium	28.1	0.5	27.8	0.5	1.07	
Potassium	0.885	1	0.943	1	<RL	
Sodium	7.69	0.5	7.86	0.5	2.19	
Barium	0.0941	0.003	0.0947	0.003	0.64	
Chromium	0.00374	0.002	0.00328	0.002	13.11	
Manganese	0.00152	0.002	0.00125	0.002	<RL	
Nickel	0.00322	0.004	0.00421	0.004	*	

*One result <RL and one result >RL; absolute difference <RL.

NOTE: All non-detect results were not listed in the table.

Sample Surrogate Spikes

- Surrogate spikes added to all field samples analyzed for VOCs, SVOCs, PAHs, and pesticides were within the project QAPP-specified control limits with the following exceptions.
 - The TCMX recoveries were $<$ the lower acceptance limit but $\geq 10\%$ on both columns for the LCS and on one column for the toxaphene LCS. The LCS samples are QC samples and, therefore, no sample data were qualified.

Sample Internal Standard Recoveries

- The internal standard recoveries for VOCs, SVOCs, and perchlorates were within the project QAPP- and Region III-specified control limits.
- The internal standard recoveries for metals by method 6020 were within the 60-125% limits provided in the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review* (NFG) (October 2004).

Sample Results

- 2-Chloroethyl vinyl ether was analyzed for on acidified aliquots for all samples. Highly reactive VOC compounds such as 2-chloroethyl vinyl ether can be lost due to acidification as illustrated by the MS/MSD recoveries. The associated sample results for the acidified samples were non-detects and, therefore, were **qualified R**.
- The samples were analyzed for the methods requested on the COC. Method detection limits (MDLs) and reporting limits (RLs) were reported for all analyses and met project-specified MDLs and RLs with the following exceptions.
 - The MDLs for method 6010B analytes chromium, cobalt, copper, iron, nickel, potassium, and zinc and method 6020 target analyte antimony were $>$ the MDLs specified in the project QAPP; however, the associated RLs were $\leq$ the RLs specified in the project QAPP.
- The samples were not diluted.

Action Level Notification

- No results were above the action levels specified in the Region III NFG.

Usability Statement

- There were 1619 field sample data points associated with the data package for SDG L12030257. Of these field sample data points, 1569 (96.91% of the total) were assessed and left unqualified, 26 (1.61% of the total) were assessed and qualified R, 4 (0.25% of the total) were assessed and qualified J, 5 (0.31% of the total) were assessed and qualified

K, 1 (0.06% of the total) was assessed and qualified L, 6 (0.37% of the total) were assessed and qualified UL, and 8 (0.49% of the total) were assessed and qualified UJ.

- *The field sample data points that were qualified R must be categorized as unusable data.*
- The field sample data points that were qualified J can be categorized as definitive data with positively identified analyte concentrations that are only estimates due to QC deficiencies, the field sample data points that were qualified K can be categorized as definitive data with positively identified analyte concentrations that are only estimates and may be qualified high due to QC deficiencies, the field sample data point that was qualified L can be categorized as definitive data with a positively identified analyte concentration that is only an estimate and may be qualified low due to QC deficiencies, the field sample data points that were assessed and qualified UL can be categorized as definitive data with nondetectable analyte concentrations that are only estimates and may be biased low due to QC deficiencies, and the field sample data points that were assessed and qualified UJ can be categorized as definitive data with nondetectable analyte concentrations that are only estimates due to QC deficiencies.
- The unqualified field sample data points can be categorized as definitive data with no associated QC deficiencies.

Report Content Statement

This report has been formatted for consistency with Appendix B, Region III Standard Operating Procedures for Data Validation Reports, contained in the guidance *EPA Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). The laboratory data were reviewed in accordance with the EPA Region III's *Innovative Approaches to Data Validation* (June 1995) and *EPA Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994) or *EPA Region III Modifications to the Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses* (April 1993) (Region III NFG, collectively), as applicable; and the *Radford Army Ammunition Plant Final SWMU 40 (RAAP-009) Landfill Nitro Area IMWP* (August 2011) (project QAPP); and the applicable SW-846 methods. This report only addresses those problems and issues that may affect data usability.

Data Qualifier Codes

Codes Related to Identification

- U Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
- B Not detected substantially above the level reported in laboratory or field blanks.
- R Unusable result. Analyte may or may not be present in the sample.

Codes Related to Quantitation

- J Analyte present. Reported value may or may not be accurate or precise.
- K Analyte present. Reported value may be biased high. Actual value is expected to be lower.
- L Analyte present. Reported value may be biased low. Actual value is expected to be higher.
- UJ Not detected. Quantitation limit may be inaccurate or imprecise.
- UL The analyte was not detected, and the reported quantitation limit is probably higher than reported.

Appendix B – Data Qualifier Summary

Data Qualifier Summary

Note: The results listed in this table are detects and qualified non-detects only. Unqualified non-detects are not listed.

FIELD SAMPLE ID/ LAB SAMPLE ID	ANALYTE	FINAL VALIDATION QUALIFIER	INITIAL LAB QUALIFIER	REASON
40MW7GW030612 L12030257-01	2-Chloroethyl vinyl ether	R	U	Matrix spike 0% recovery; acidified sample

Appendix D – Support Documentation

Laboratory Report Number: L12030257 (Revised)

Revised to report additional metals by 6020

Mary Lou Rochette
Kemron Environmental Services
156 Starlite Drive
Marietta, OH 45750

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on May 21 2012

David Vandenberg – Managing Director

State of Origin: VA
Accrediting Authority: N/A ID:N/A

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

There were no discrepancies.

Discrepancy	Resolution
-------------	------------

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #
0010295	H	0.0		
0013649	H	2.0		
0016642	H	1.0		
0016482	H	1.0		
0015747	H	0.0		
0013621	H	0.0		

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	NA
2	Were custody seals intact?	NA
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	Yes
12	Were VOA samples free of headspace (less than 6mm)?	Yes

METHOD

Preparation SW-846 5030C/5035A

Analysis SW-846 8260B

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: The percent difference was out of range for the following analytes: Dichlorodifluoromethane, Bromomethane, Vinyl Acetate. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recoveries out of range were observed for the following analytes: Vinyl Acetate. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: Recoveries out of range were observed for the following analytes: Vinyl Acetate. Please see the applicable QC report for a detailed presentation of the failures.

Matrix Spikes: Recoveries out of range were observed for the following analytes: 2-Chloroethyl vinyl ether, Vinyl acetate. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Other: None.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak. In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak. This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline. There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous. Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

METHOD

Preparation 3520C

Analysis SW-846 8270C/40 CFR 264 App. IX

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: The percent difference was out of range for the following analytes: 2,4-Dinitrophenol, 2-Chloronaphthalene, 4,6-Dinitro-2-Methylphenol, bis(2-Chloroisopropyl)ether, Pentachlorophenol. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recoveries out of range were observed for the following analytes: Benzoic Acid. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: RPDs out of range were observed for the following analyte: Benzoic acid. Please see the applicable QC report for a detailed presentation of the failure.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Nitrobenzene		0.4377	3.49		
Phenanthrene		1.171	4.27		
Pyrene		1.271	3.50		
bis (2-Chloroethoxy) methane		0.6266	2.04		
bis (2-Chloroethyl) ether		1.110	5.56		
bis (2-Chloroisopropyl) ether		1.400	5.19		
bis (2-Ethylhexyl) phthalate		0.7795	2.80		

R = Correlation coefficient; 0.995 minimum
R² = Coefficient of determination; 0.99 minimum

If the %RSD is greater than the limit specified by the method or project QAP, then linear or quadratic equations will be used.

METHOD

Preparation 3510C

Analysis SW-846 8270C

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Continuing Calibration and Tune: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: All acceptance criteria were met.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

INITIAL CALIBRATION SUMMARY

Login Number: L12030257
Analytical Method: 8270C
ICAL Workgroup: WG391135

Instrument ID: HPMS7
Initial Calibration Date: 13-MAR-12 10:25
Column ID: F

Analyte		AVG RF	% RSD	LINEAR (R)	QUAD (R ²)
Acenaphthene	CCC	1.248	7.82		
Benzo[a]pyrene	CCC	1.247	9.23		
Fluoranthene	CCC	1.385	13.3		
1-Methylnaphthalene		0.7895	10.8		
2-Methylnaphthalene		0.7348	7.71		
Acenaphthylene		1.875	7.25		
Anthracene		1.204	9.59		
Benzo[a]anthracene		1.173	6.61		
Benzo[b]fluoranthene		1.213	8.62		
Benzo[ghi]perylene		1.152	9.27		
Benzo[k]fluoranthene		1.530	14.4		
Chrysene		1.302	13.9		
Dibenz[ah]anthracene		1.132	7.96		
Fluorene		1.329	5.46		
Indeno[1,2,3-cd]pyrene		1.343	8.89		
Naphthalene		1.189	9.91		
Phenanthrene		1.139	7.55		
Pyrene		1.496	12.7		

R = Correlation coefficient; 0.995 minimum
R² = Coefficient of determination; 0.99 minimum

If the %RSD is greater than the limit specified by the method or project QAP, then linear or quadratic equations will be used.

METHOD

Analysis SW-846 6850

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Continuing Calibration and Tune: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: Perchlorate recoveries out of range were observed due to a high concentration of perchlorate in the parent sample. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration

is not clearly covered by these four cases, then review and approval by the Laboratory Director or the QA/QC Supervisor will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

METHOD

Analysis SW-846 8081A

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 20%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Continuing Calibration and Tune: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: All acceptance criteria were met.

SAMPLES

Samples: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Laboratory Director or the QA/QC Supervisor

will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Analyst: Ji Hu

METHOD

Preparation: SW-846 3015

Analysis: SW-846 6020

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Interference Check Standards: All acceptance criteria were met.

Continuing Calibration: WG391928 - Due to continuing calibration verification failure for bismuth, the internal standard associated with lead and thallium on 12-Mar-2012 at 19:01, client sample 11 was reanalyzed on a later calibration which was compliant for lead and thallium. Due to continuing calibration verification failure for chromium on 12-MAR-2012 at 17:16, all batch QA/QC and client sample 11 were reanalyzed on later calibrations which were compliant for chromium.

Continuing Calibration Blank: WG391928 - The continuing calibration blank analyzed on 12-Mar-2012 at 14:00 yielded a noncompliant result for thallium. The continuing calibration blank was reanalyzed at 16:15 prior to sample analysis and was compliant for all analytes of concern. The continuing calibration blank analyzed on 16-Mar-2012 at 10:20 yielded a noncompliant result for thallium. The continuing calibration blank was reanalyzed at 15:00 prior to sample analysis and was compliant for all analytes of concern.

Low Level Check: WG391928 - The low level initial calibration verification analyzed on 16-MAR-2012 at 09:49 yielded a noncompliant result for thallium. The low level calibration check was reanalyzed at 15:45 prior to sample analysis and was compliant for thallium.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Serial Dilution/Post Digestion Spikes: WG391810 - All acceptance criteria were met.

WG391928 - All acceptance criteria were met.

Matrix Spikes: WG391810 - Sample 03 was chosen by the client for MS/MSD analysis. Samples 04(MS) and 05(MSD) met all acceptance criteria.

SAMPLES

Samples: All acceptance criteria were met.

METHOD

Preparation: SW-846 7470

Analysis: SW-846 7470

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: All acceptance criteria were met.

Alternate Source Standards: All acceptance criteria were met.

Interference Check Standards: All acceptance criteria were met.

Continuing Calibration Verification: All acceptance criteria were met.

Continuing Calibration Blank: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Serial Dilution/Post Digestion Spikes: WG392134 - All acceptance criteria were met.

Matrix Spikes: WG392134 - Sample 03 was chosen by the client for MS/MSD analysis. Samples 04(MS) and 05(MSD) met all acceptance criteria.

SAMPLES

Samples: All acceptance criteria were met.

Narrative ID: 43417

Approved By: Sheri Pfalzgraf

Radford Army Ammunition Plant: Data Validation for Lab Report L12030257 D-322

Kemron–Radford Army Ammunition Plant Data Validation Summary Worksheet

SDG#: L12030257	Laboratory: Microbac	Validator: Jeanne Peterson	Validation Start Date: 04/05/2012
Site: Radford	AR/COC#: 3655		Validation Level: ☐ III ☒ IV
Matrix: Water	# of Samples: 9	Tracking docs present: See sample receipt and log-in documentation	
COCs present: yes	COCs signed: yes	COCs dated: yes	Sample Container Integrity: OK

Analyses:

☒ VOCs
 ☒ SVOCs
 ☒ PAHs
 ☐ GRO
 ☐ DRO
 ☒ Pests
 ☐ PCBs
 ☒ Metals
 ☐ Gen Chem

☒ Other: CLO4

Requested Analyses Not Reported

Subject: Data Validation for Lab Report L12030258
Radford Army Ammunition Plant

From: Jeanne Peterson
Project Manager, AQA

To: Mary Lou Rochotte
Kemron Environmental Services, Inc.

OVERVIEW

Microbac Laboratories Inc., Marietta, Ohio, received one field sample associated with the project work described in the *Radford Army Ammunition Plant Final SWMU 40 (RAAP-009) Landfill Nitro Area IMWP* (August 2011) (project QAPP) on March 8, 2012. The field sample was assigned laboratory sample delivery group (SDG) number L12030258 and included one normal water sample. The sample was analyzed for biochemical oxygen demand (BOD) by method SM5210B and chemical oxygen demand (COD) by EPA method 410.4 as detailed in *Standard Methods for the Examination of Water and Wastewater* (1999) and *Method for Chemical Analysis of Water and Wastes* (EPA-600/4-79-020, March 1983), respectively.

SUMMARY

The sample was analyzed according to the quality control (QC) criteria of the applicable analytical method. The data for this sample were found to be compliant with the requirements of the project QAPP and/or EPA Region III's *Innovative Approaches to Data Validation* (June 1995) and *EPA Region III Modifications to the Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses* (April 1993) (Region III NFG, collectively), and the results for all target analytes are considered usable.

MAJOR PROBLEMS

(Refer to Appendix B – Data Qualifier Summary)

- None

MINOR PROBLEMS

(Refer to Appendix B – Data Qualifier Summary)

- 40IDM030712: Biochemical oxygen demand 13.0 (J)

NOTES

(Refer to Appendix D – Support Documentation)

Sample Chain of Custody (COC) Records

- The sample was listed on COC #3656. Data were reported for all required analyses.

Preservation and Holding Times

- The sample was correctly preserved and analyzed within the holding times specified in the project QAPP and the Region III NFG.

Initial Calibration (ICAL)

- The ICAL correlation coefficient for COD was within the criteria specified in the project QAPP and the Region III NFG. ICAL criteria are not applicable to BOD.

Initial Calibration Verification (ICV)/Continuing Calibration Verification (CCV)

- The ICV/CCV percent differences (%Ds), and/or percent recoveries (%Rs), as applicable, for COD were within the criteria specified in the project QAPP and the Region III NFG. ICV/CCV criteria are not applicable to BOD.

Contract Required Detection Limit (CRDL)

- CRDL analysis is not applicable to the methods performed.

Field Blanks

- A field blank was not collected with the sample in this SDG.

Laboratory Method Blanks

- No target analytes were detected in the method blanks associated with the sample in this SDG.
- The unseeded and seeded blank dissolved oxygen uptakes were not within the method specified criteria for BOD. The associated results were not affected by the uptakes and, therefore, no sample data were qualified based on professional judgment.

Laboratory Control Samples/Laboratory Control Sample Duplicates (LCSs/LCSDs)

- The LCS/LCSD recoveries met project QAPP- and Region III-specified QC acceptance criteria with the following exceptions.
 - The LCS/LCSD recoveries were >110% for BOD. The associated sample result was a detect and, therefore, was qualified J.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Samples

- MS analyses were not performed with the sample in this SDG.

Laboratory Sample Duplicate

- LCSDs were analyzed as the laboratory duplicates for all analyses and met project QAPP- and Region III-specified QC acceptance criteria.

Field Sample Duplicate

- A field sample duplicate was not collected with the sample in this SDG.

Sample Results

- The samples were analyzed for the methods requested on the COC. Limits of Detection (LODs) and Limits of Qualification (LOQs) were reported for all analyses. Project-required LODs and LOQs were not provided in the project QAPP; however, the sample results were above the laboratory-reported LOQs.

Action Level Notification

- Action levels were not specified in the Region III NFG for the methods performed.

Usability Statement

- There were two field sample data points associated with the data package for SDG L12030258. Of these field sample data points, one (50.00% of the total) was assessed and left unqualified and 7 (50.00% of the total) was assessed and qualified J.
- The field sample data point that was qualified J can be categorized as definitive data with a positively identified analyte concentration that is only an estimate due to QC deficiencies.
- The unqualified field sample data point can be categorized as definitive data with no associated QC deficiencies.

Report Content Statement

This report has been formatted for consistency with Appendix B, Region III Standard Operating Procedures for Data Validation Reports, contained in the guidance *EPA Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). The laboratory data were reviewed in accordance with the EPA Region III's *Innovative Approaches to Data Validation* (June 1995) and *EPA Region III Modifications to the Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses* (April 1993) (Region III NFG, collectively), the *Radford Army Ammunition Plant Final SWMU 40 (RAAP-009) Landfill Nitro Area IMWP* (August 2011) (project QAPP), and the applicable SW-846 methods. This report only addresses those problems and issues that may affect data usability.

Data Qualifier Codes

Codes Related to Identification

- U Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
- B Not detected substantially above the level reported in laboratory or field blanks.
- R Unusable result. Analyte may or may not be present in the sample.

Codes Related to Quantitation

- J Analyte present. Reported value may or may not be accurate or precise.
- K Analyte present. Reported value may be biased high. Actual value is expected to be lower.
- L Analyte present. Reported value may be biased low. Actual value is expected to be higher.
- UJ Not detected. Quantitation limit may be inaccurate or imprecise.
- UL The analyte was not detected, and the reported quantitation limit is probably higher than reported.

Appendix B – Data Qualifier Summary

Data Qualifier Summary

Note: The results listed in this table are detects and qualified non-detects only. Unqualified non-detects are not listed.

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on March 19 2012

156 Starlite Drive
Marietta, OH 45750

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Stephanie Mossburg – Team Chemist/Data Specialist
(740) 373-4071
Stephanie.Mossburg@microbac.com

I certify that all test results meet all of the requirements of the DoD QSM and other applicable contract terms and conditions. Any exceptions are attached to this cover page or addressed in the method narratives presented in the report. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories, DoD ELAP certification number 2936.01. The reported results are related only to the samples analyzed as received.

This report was certified on June 28 2012

David Vandenberg – Managing Director

METHOD

Preparation SW-846 5030C/5035A

Analysis SW-846 8260B

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: The percent difference was out of range for the following analytes: Chloromethane, Dichlorodifluoromethane, n-Butylbenzene, Vinyl Acetate. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recoveries out of range were observed for the following analytes: 2,2-Dichloropropane, Acetone, Carbon Disulfide, Vinyl Acetate, n-Butylbenzene, trans-1,3-Dichloropropene. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: Recoveries out of range were observed for the following analytes: Acetone, Chloromethane, Vinyl Acetate. Please see the applicable QC report for a detailed presentation of the failures.

Matrix Spikes: Recoveries out of range were observed for the following analytes: 2-Chloroethyl vinyl ether, Chloromethane, 1,2-Dichloropropane. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Other: None.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak. In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak. This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline. There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous. Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

METHOD

Preparation 3520C

Analysis SW-846 8270C/40 CFR 264 App. IX

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: The percent difference was out of range for the following analytes: 2,4-Dinitrophenol, 4,6-Dinitro-2-Methylphenol, Benzoic Acid. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recoveries out of range were observed for the following analytes: 2-Nitroaniline, bis(2-Chloroisopropyl)ether, n-Nitrosodipropylamine. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: Recoveries out of range were observed for the following analytes: 3,3'-Dichlorobenzidine, 4-Nitroaniline, 4-Nitrophenol, Benzo[ghi]perylene, Butyl Benzyl Phthalate, Chrysene, Pentachlorophenol, Phenol. Please see the applicable QC report for a detailed presentation of the failures.

With the exception of Phenol all hits in the LCS were biased high; there were no hits found in the samples associated with the LCS.

Matrix Spikes: Recoveries out of range were observed for 23 analytes. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Surrogates: Recoveries out of range were observed for the following surrogates: 2,4,6-Tribromophenol, p-Terphenyl-d14. Please see the applicable QC report for a detailed presentation of the failures.

Sample 01 was not re-extracted due to insufficient hold time. No analytes were detected in the samples with high surrogate recoveries.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak

completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

Continuing Calibration and Tune: All acceptance criteria were met.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: Recoveries out of range were observed for the following analytes: Perchlorate. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration

is not clearly covered by these four cases, then review and approval by the Laboratory Director or the QA/QC Supervisor will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

2.0 Full Sample Data Package

2.1 Volatiles Data

2.1.1 Volatiles GCMS Data (8260)

2.1.1.1 Summary Data

Login Number: L12060445

Department: Volatiles

Analyst: Franci Bolden

METHOD

Preparation SW-846 5030C/5035A

Analysis SW-846 8260B

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: The percent difference was out of range for the following analytes: Chloromethane, Dichlorodifluoromethane, n-Butylbenzene, Vinyl Acetate. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recoveries out of range were observed for the following analytes: 2,2-Dichloropropane, Acetone, Carbon Disulfide, Vinyl Acetate, n-Butylbenzene, trans-1,3-Dichloropropene. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: Recoveries out of range were observed for the following analytes: Acetone, Chloromethane, Vinyl Acetate. Please see the applicable QC report for a detailed presentation of the failures.

Matrix Spikes: Recoveries out of range were observed for the following analytes: 2-Chloroethyl vinyl ether, Chloromethane, 1,2-Dichloropropane. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Other: None.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak. In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak. This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline. There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous. Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

$$RF = [(Ax) (Cis)] / [(Ais) (Cx)]$$

Example

where:

Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100

RF = Calculated Response Factor	1.0039
---------------------------------	---------------

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

$$Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]$$

Example

where:

Ax = Area of the characteristic ion for the compound being measured	3122498
Cis = Concentration of the specific internal standard (ug/L)	25
D = Dilution factor for sample as a multiplier (10x = 10)	1
Ais = Area of the characteristic ion of the specific internal standard	611048
RF = Average RF from the ICAL	1.004
Vs = Purge volume of sample (mL)	10
Vn = Nominal purge volume of sample (mL) (10.0 mL)	10
Cx = Concentration of the compound in the sample being measured (ug/L)	127.2428

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

$$Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]$$

Example

where:

Ax = Area of the characteristic ion for the compound being measured	3122498
Cis = Concentration of the specific internal standard (ug/L)	25
D = Dilution factor for sample as a multiplier (10x = 10)	1
Ais = Area of the characteristic ion of the specific internal standard	611048
RF = Average RF from the ICAL	1.004
Ws = Weight of sample purged (g)	5
Wn = Nominal purge weight (g) (5.0 g)	5
Cx = Concentration of the compound in the sample being measured (ug/L)	127.2428

Dry weight correction:

Percent solids (PCT_S)	50
Cd = (Cx) (100)/PCT_S	254.4856

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, $y = mx + b$

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

$$y = 86550/593147 = 0.1459$$

Step 3: Solve for x

$$x = (y - b)/m = [(0.1459 - (-0.00642))/0.213] = 0.7152$$

Step 4: Solve for analyte concentration Cx

$$Cx = Cis (x) = (25.0)(0.7152) = 17.88$$

Example Spreadsheet Calculation:

Slope from curve, m:	0.213
Intercept from curve, b:	-0.00642
Area of analyte, Ax:	86550
Area of Internal Standard, Ais:	593147
Concentration of IS, Cis	25.00
Response Ratio:	0.145917
Amount Ratio:	0.715195
Concentration:	17.87988
Units of Internal Standard:	ug/L

5.0 Concentration from Quadratic Regression**Step 1 - Retrieve Curve Data from Plot, $y = Ax^2 + Bx + C$**

Where:

$$Ax^2 + Bx + (C - y) = 0$$

A, B, C = constants from the ICAL quadratic regression

y = Response ratio = Area of analyte/Area of internal standard (IS)

x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

$$y = Ax/Ais$$

Step 3: Solve for x using the quadratic formula

$$Ax^2 + Bx + C - y = 0$$

$$x = \frac{b \pm \sqrt{(b^2 - 4a(c - y))}}{2a} \quad (\text{Two possible solutions})$$

Step 4: Solve for analyte concentration Cx

$$Cx = (Cis)(\text{Amount ratio})$$

Example Spreadsheet Calculation:

Value of A from plot:	-0.00629
Value of B from plot:	0.511
Value of C from plot:	-0.0276
Area of unknown from quantitation report:	293821
Area of IS from quantitation report:	784848
Response ratio, y:	0.374367
C - y:	-0.40197
Root 1 - Computed amount ratio, X1:	80.44567
Root 2 - Computed amount ratio, X2:	0.794396 use this solution
Concentration of IS, Cis:	25.00
Concentration of analyte, Cx:	19.86 ug/L

Spiked Amount	25.000	Range	86 - 118	Recovery	=	411.68%#
43) 1,2-Dichloroethane-d4	9.93	65	593828	100.3012	ug/L	0.01
Spiked Amount	25.000	Range	80 - 120	Recovery	=	401.20%#
58) Toluene-d8	12.17	98	2241381	104.1608	ug/L	0.00
Spiked Amount	25.000	Range	88 - 110	Recovery	=	416.64%#
80) p-Bromofluorobenzene	15.33	95	818664	102.8417	ug/L	0.00
Spiked Amount	25.000	Range	86 - 115	Recovery	=	411.36%#

Target Compounds

						Qvalue
2) Dichlorodifluoromethane	3.05	85	1294453	197.5723	ug/L	100
3) Chloromethane	3.50	50	2239815	199.0574	ug/L	99
4) Vinyl Chloride	3.69	62	1615332	Below Cal		99
5) 1,3-Butadiene	3.73	54	558404	99.0961	ug/L	98
6) Bromomethane	4.55	94	745022	206.4741	ug/L	100
7) Chloroethane	4.70	64	806049	207.8826	ug/L	99
8) Trichlorofluoromethane	5.17	101	2395450	218.8091	ug/L	100
9) Diethyl ether	5.72	59	11977	3.0993	ug/L	# 49
10) Isoprene	5.73	67	1909743	224.2088	ug/L	100
11) Acrolein	5.94	56	114195	425.4492	ug/L	98
12) 1,1,2-Trichloro-1,2,2-Trif	5.95	101	1274910	224.5923	ug/L	99
13) Acetone	6.05	43	195342	210.8152	ug/L	99
14) 1,1-Dichloroethene	6.25	61	1724593	223.7601	ug/L	100
15) Tert-Butyl Alcohol	6.41	59	2252	8.7956	ug/L	# 72
16) Dimethyl Sulfide	6.50	62	1427360	226.1172	ug/L	100
17) Iodomethane	6.74	142	1545241	196.0456	ug/L	99
18) Methyl acetate	6.77	43	703874	214.6329	ug/L	97
19) Methylene Chloride	7.00	84	1192308	217.6621	ug/L	98
20) Carbon Disulfide	7.03	76	3629186	230.9741	ug/L	100
21) Acrylonitrile	7.19	53	255978	228.8053	ug/L	99
22) Methyl Tert Butyl Ether	7.22	73	2744145	214.4198	ug/L	100
23) trans-1,2-Dichloroethene	7.43	96	1260397	229.0489	ug/L	99
24) n-Hexane	7.52	57	1231696	221.5480	ug/L	99
25) Diisopropyl ether	7.88	45	3184	0.1976	ug/L	# 67
26) Vinyl Acetate	8.01	43	640489	190.2072	ug/L	99
27) 1,1-Dichloroethane	8.03	63	2056553	223.0229	ug/L	100
28) Ethyl-Tert-Butyl ether	8.42	59	4179	0.2655	ug/L	81
29) 2-Butanone	8.58	43	253505	194.0206	ug/L	98
31) 2,2-Dichloropropane	8.78	77	1715139	230.1207	ug/L	100
32) cis-1,2-Dichloroethene	8.84	96	1336710	224.1642	ug/L	98
33) Chloroform	9.04	83	2126281	218.1042	ug/L	99
34) 1-Bromopropane	9.17	122	250779	224.8807	ug/L	100
35) Bromochloromethane	9.26	130	849150	224.1545	ug/L	99
36) Tetrahydrofuran	9.31	42	1677	1.9775	ug/L	# 64
38) 1,1,1-Trichloroethane	9.54	97	2179319	238.2917	ug/L	98
39) Cyclohexane	9.57	56	1703984	231.2561	ug/L	100
40) 1,1-Dichloropropene	9.73	75	1658024	227.9920	ug/L	100
41) Carbon Tetrachloride	9.87	117	1988503	203.4255	ug/L	100
42) Tert-Amyl-Methyl ether	9.84	73	6016	0.4181	ug/L	# 99
45) 1,2-Dichloroethane	10.04	62	1535255	223.9920	ug/L	98

2.2 Semivolatiles Data

2.2.1 Semivolatiles GC/MS Data (8270)

2.2.1.1 Summary Data

Login Number: L12060445
Department: Semivolatiles
Analyst: Mike Cochran

METHOD

Preparation 3520C

Analysis SW-846 8270C/40 CFR 264 App. IX

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: The percent difference was out of range for the following analytes: 2,4-Dinitrophenol, 4,6-Dinitro-2-Methylphenol, Benzoic Acid. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recoveries out of range were observed for the following analytes: 2-Nitroaniline, bis(2-Chloroisopropyl)ether, n-Nitrosodipropylamine. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: Recoveries out of range were observed for the following analytes: 3,3'-Dichlorobenzidine, 4-Nitroaniline, 4-Nitrophenol, Benzo[ghi]perylene, Butyl Benzyl Phthalate, Chrysene, Pentachlorophenol, Phenol. Please see the applicable QC report for a detailed presentation of the failures.

With the exception of Phenol all hits in the LCS were biased high; there were no hits found in the samples associated with the LCS.

Matrix Spikes: Recoveries out of range were observed for 23 analytes. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Samples: All acceptance criteria were met.

Internal Standards: All acceptance criteria were met.

Surrogates: Recoveries out of range were observed for the following surrogates: 2,4,6-Tribromophenol, p-Terphenyl-d14. Please see the applicable QC report for a detailed presentation of the failures.

Sample 01 was not re-extracted due to insufficient hold time. No analytes were detected in the samples with high surrogate recoveries.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak

completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

2.2.1.2 QC Summary Data

Example 8270 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

$$RF = [(Ax) (Cis)] / [(Ais) (Cx)]$$

where:

Ax = Area of the characteristic ion for the compound being measured:	1261197
Cis = Concentration of the specific internal standard (ug/mL)	40
Ais = Area of the characteristic ion of the specific internal standard	608044
Cx = Concentration of the compound in the standard being measured (ug/mL)	50
RF = Calculated Response Factor	1.65935

Example

2.0 Calculating the concentration (C) of a compound in water using the data from the prep log and quantitation report: *

$$Cx = [(Ax) (Cis) (Vf) (D)] / [(Ais) (RF) (Vi)]$$

where:

Ax = Area of the characteristic ion for the compound being measured	367250
Cis = Concentration of the specific internal standard (ug/mL)	40
Vf = Final volume of sample extract from prep log (mL)	1
D = Dilution factor for sample as a multiplier (10x = 10)	1
Ais = Area of the characteristic ion of the specific internal standard	511641
RF = Average RF from the ICAL	1.65935
Vi = Initial volume of sample extracted from prep log (mL)	1021
Cx = Concentration of the compound in the sample being measured (ug/mL)	0.016947
Cx = Concentration of the compound in the sample being measured (ug/L)	16.947

Example

3.0 Calculating the concentration (C) of a compound in soil using the data from the prep log and quantitation report: *

$$Cx = [(Ax) (Cis) (Vf) (D)] / [(Ais) (RF) (Wi)]$$

where:

Ax = Area of the characteristic ion for the compound being measured	367250
Cis = Concentration of the specific internal standard (ug/mL)	40
Vf = Final volume of sample extract from prep log (mL)	1
D = Dilution factor for sample as a multiplier (10x = 10)	1
Ais = Area of the characteristic ion of the specific internal standard	511641
RF = Average RF from the ICAL	1.65935
Wi = Initial weight of sample extracted (g) from prep log	30
Cx = Concentration of the compound in the sample being measured (ug/g)	0.576763
Cx = Concentration of the compound in the sample being measured (ug/kg)	576.7627

Example

Dry weight correction:

Percent solids (PCT_S)	50
Cd = (Cx) (100)/PCT_S	1153.525 ug/kg

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, $y = mx + b$

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve plot

b = intercept from curve plot

Step 2: Calculate y from Quantitation Report

y = 16790/784838 = 0.02139

Step 3: Solve for x

$$x = (y - b)/m = [(0.02139 - (-0.0435))/0.0783] = 0.829$$

Step 4: Solve for analyte concentration Cx

$$Cx = Cis (x) = (25.0)(0.829) = 20.72 \text{ ug/L}$$

Example Spreadsheet Calculation:

Slope from curve, m:	0.0783
Intercept from curve, b:	-0.0435
Area of analyte, Ax:	16790
Area of Internal Standard, Ais:	784484
Concentration of IS, Cis	25.00 ug/L
Response Ratio (y) :	0.021403
Amount Ratio:	0.828897
Concentration (Cx):	20.72241 ug/L

5.0 Concentration from Quadratic Regression**Step 1 - Retrieve Curve Data from Plot, $y = Ax^2 + Bx + C$**

Where:

$$Ax^2 + Bx + (C - y) = 0$$

A, B, C = constants from the ICAL quadratic regression

y = Response ratio = Area of analyte/Area of internal standard (IS)

x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

$$y = Ax/Ais$$

Step 3: Solve for x using the quadratic formula

$$Ax^2 + Bx + C - y = 0$$

$$x = \frac{b \pm \sqrt{b^2 - 4a(c - y)}}{2a} \quad (\text{Two possible solutions})$$

Step 4: Solve for analyte concentration Cx

$$Cx = (Cis)(\text{Amount ratio})$$

Example Spreadsheet Calculation:

Value of A from plot:	0.0259
Value of B from plot:	0.0596
Value of C from plot:	-0.0165
Area of analyte from quantitation report:	203233
Area of IS from quantitation report:	1425653
Response ratio, y:	0.142554
C - y:	-0.15905
Root 1 - Computed amount ratio, X1:	-3.88278
Root 2 - Computed amount ratio, X2:	1.581623 use this solution
Concentration of IS, Cis:	40.00
Concentration of analyte, Cx:	63.26 ug/L

Microbac Laboratories Inc.
INITIAL CALIBRATION SUMMARY

Login Number: L12060445
Analytical Method: 8270C
ICAL Workgroup: WG400053

Instrument ID: HPMS12
Initial Calibration Date: 07-JUN-12 15:27
Column ID: F

Analyte	AVG RF	% RSD	LINEAR (R)	QUAD (R ²)
Di-n-Butyl Phthalate	1.167	6.65		
Dibenz[ah]anthracene	0.9026	6.03		
Dibenzofuran	1.565	9.21		
Diethylphthalate	1.249	6.27		
Dimethylphthalate	1.296	6.53		
Fluorene	1.321	7.40		
Hexachlorobenzene	0.2115	7.24		
Hexachloroethane	0.5442	2.18		
Indeno[1,2,3-cd]pyrene	1.073	6.31		
Isophorone	0.6364	6.74		
Naphthalene	1.042	7.81		
Nitrobenzene	0.3409	5.27		
Phenanthrene	1.044	7.59		
Pyrene	1.218	6.27		
bis(2-Chloroethoxy)methane	0.4887	9.77		
bis(2-Chloroethyl)ether	0.9008	7.40		
bis(2-Chloroisopropyl)ether	1.740	8.00		
bis(2-Ethylhexyl)phthalate	0.7465	4.92		

R = Correlation coefficient; 0.995 minimum
R² = Coefficient of determination; 0.99 minimum

If the %RSD is greater than the limit specified by the method or project QAP, then linear or quadratic equations will be used.

87) Phenanthrene-d10	11.958	188	889934	40.0000	ug/ml	0.000
113) Chrysene-d12	15.516	240	846742	40.0000	ug/ml	0.000
128) Perylene-d12	17.877	264	833014	40.0000	ug/ml	0.000
System Monitoring Compounds						
8) 2-Fluorophenol	6.087	112	487033	64.1812912	ug/ml	-0.01
Spiked Amount 100.000	Range 21 - 100		Recovery =	64.18%		
12) Phenol-d5	6.963	99	644529	70.2903334	ug/ml	0.00
Spiked Amount 100.000	Range 10 - 94		Recovery =	70.29%		
31) Nitrobenzene-d5	7.903	82	296212	34.6027325	ug/ml	0.00
Spiked Amount 50.000	Range 35 - 114		Recovery =	69.21%		
59) 2-Fluorobiphenyl	9.693	172	630789	37.7307627	ug/ml	0.00
Spiked Amount 50.000	Range 43 - 116		Recovery =	75.46%		
86) 2,4,6-Tribromophenol	11.226	330	214864	101.0533647	ug/ml	0.00
Spiked Amount 100.000	Range 10 - 123		Recovery =	101.05%		
117) p-Terphenyl-d14	13.918	244	792781	50.5432455	ug/ml	0.00
Spiked Amount 50.000	Range 33 - 141		Recovery =	101.09%		
Target Compounds						
3) n-Nitrosodimethylamine	4.55	74	182930	40.8119	ug/ml	86
4) Pyridine	4.55	79	244011	30.9665	ug/ml	93
11) Aniline	7.03	93	379713	32.9625	ug/ml	94
13) Phenol	6.97	94	365449	38.5920	ug/ml	89
14) bis(2-Chloroethyl)ether	7.06	63	214220	40.0459	ug/ml	91
16) 2-Chlorophenol	7.16	128	298057	37.2744	ug/ml	97
17) 1,3-Dichlorobenzene	7.30	146	214964	23.5787	ug/ml	99
18) 1,4-Dichlorobenzene	7.35	146	226933	24.6426	ug/ml	98
19) Benzyl Alcohol	7.45	108	209280	41.8878	ug/ml	96
20) 1,2-Dichlorobenzene	7.55	146	218355	25.1610	ug/ml	98
21) 2-Methylphenol	7.56	107	249372	39.9451	ug/ml	97
22) bis(2-Chloroisopropyl)ethe	7.60	45	470529	45.5326	ug/ml	91
23) 3-,4-Methylphenol	7.69	107	329481	41.1505	ug/ml	98
25) n-Nitrosodipropylamine	7.74	70	227013	47.0593	ug/ml#	65
26) Acetophenone	7.74	105	376459	39.3619	ug/ml	96
27) n-Nitrosomorpholine	7.74	56	16654	3.6962	ug/ml#	43
28) o-Toluidine	7.74	106	29113	2.3853	ug/ml#	1
29) Hexachloroethane	7.85	117	76308	23.6095	ug/ml	99
32) Nitrobenzene	7.92	77	313793	36.4382	ug/ml	96
34) Isophorone	8.14	82	619411	38.5253	ug/ml	98
35) 2-Nitrophenol	8.24	139	173931	34.4940	ug/ml	93
36) 2,4-Dimethylphenol	8.23	122	276163	33.7923	ug/ml	96
38) bis(2-Chloroethoxy)methane	8.33	93	348657	28.2360	ug/ml	88
39) Benzoic Acid	8.28	105	50095	30.3271	ug/ml#	58
40) 2,4-Dichlorophenol	8.47	162	257130	34.6359	ug/ml	97
42) 1,2,4-Trichlorobenzene	8.57	180	206603	24.0579	ug/ml	98
43) Naphthalene	8.64	128	849798	32.2719	ug/ml	100
44) 4-Chloroaniline	8.68	127	374081	34.6469	ug/ml	98
47) Hexachlorobutadiene	8.80	225	109087	24.7746	ug/ml	99
49) p-Phenylenediamine	9.13	108	23738	20.0913	ug/ml#	1
50) 4-Chloro-3-Methylphenol	9.13	107	304580	41.6557	ug/ml	96
52) 2-Methylnaphthalene	9.33	142	553296	31.1247	ug/ml	99
53) 1-Methylnaphthalene	9.45	142	534538	32.2360	ug/ml	98
